in a great variety of mythical forms. Moses realizes that he has unconsciously found the source of life and then lost it again, which we might well regard as a remarkable intuition. The fish they had intended to eat is a content of the unconscious, by which the connection with the origin is re-established. He is the reborn one, who has awakened to new life. This came to pass, as the commentaries say, through the contact with the water of life: by slipping back into the sea, the fish once more becomes a content of the unconscious, and its offspring are distinguished by having only one eye and half a head.[10]

[246] The alchemists, too, speak of a strange fish in the sea, the "round fish lacking bones and skin,"[11] which symbolizes the "round element," the germ of the "animate stone," of the *filius philosophorum*. The water of life has its parallel in the *aqua permanens* of alchemy. This water is extolled as "vivifying," besides which it has the property of dissolving all solids and coagulating all liquids. The Koran commentaries state that, on the spot where the fish disappeared, the sea was turned to solid ground, whereon the tracks of the fish could still be seen.[12] On the island thus formed Khidr was sitting, in the place of the middle. A mystical interpretation says that he was sitting "on a throne consisting of light, between the upper and the lower sea,"[13] again in the middle position. The appearance of Khidr seems to be mysteriously connected with the disappearance of the fish. It looks almost as if he himself had been the fish. This conjecture is supported by the fact that the commentaries relegate the source of life to the "place of darkness."[14] The depths of the sea are dark (*mare tenebrositatis*). The darkness has its parallel in the alchemical *nigredo*, which occurs after the *coniunctio*, when the female takes the male into herself.[15] From the *nigredo* issues the Stone, the symbol of the immortal self; moreover, its first appearance is likened to "fish eyes."[16]

[247] Khidr may well be a symbol of the self. His qualities signalize him as such: he is said to have been born in a cave, i.e., in darkness. He is the "Long-lived One," who continually renews himself, like Elijah. Like Osiris, he is dismembered at the end of time, by Antichrist, but is able to restore himself to life. He is analogous to the Second Adam, with whom

the reanimated fish is identified;[17] he is a counsellor, a Paraclete, "Brother Khidr." Anyway Moses accepts him as a higher consciousness and looks up to him for instruction. Then follow those incomprehensible deeds which show how ego-consciousness reacts to the superior guidance of the self through the twists and turns of fate. To the initiate who is capable of transformation it is a comforting tale; to the obedient believer, an exhortation not to murmur against Allah's incomprehensible omnipotence. Khidr symbolizes not only the higher wisdom but also a way of acting which is in accord with this wisdom and transcends reason.

[248] Anyone hearing such a mystery tale will recognize himself in the questing Moses and the forgetful Joshua, and the tale shows him how the immortality-bringing rebirth comes about. Characteristically, it is neither Moses nor Joshua who is transformed, but the forgotten fish. Where the fish disappears, there is the birthplace of Khidr. The immortal being issues from something humble and forgotten, indeed, from a wholly improbable source. This is the familiar motif of the hero's birth and need not be documented here.[18] Anyone who knows the Bible will think of Isaiah 53:2ff., where the "servant of God" is described, and of the gospel stories of the Nativity. The nourishing character of the transformative substance or deity is borne out by numerous cult-legends: Christ is the bread, Osiris the wheat, Mondamin the maize,[19] etc. These symbols coincide with a psychic fact which obviously, from the point of view of consciousness, has the significance merely of something to be assimilated, but whose real nature is overlooked. The fish symbol shows immediately what this is: it is the "nourishing" influence of unconscious contents, which maintain the vitality of consciousness by a continual influx of energy; for consciousness does not produce its energy by itself. What is capable of transformation is just this root of consciousness, which—inconspicuous and almost invisible (i.e., unconscious) though it is—provides consciousness with all its energy. Since the unconscious gives us the feeling that it is something alien, a non-ego, it is quite natural that it should be symbolized by an alien figure. Thus, on the one hand, it is the most insignificant of things, while on the other, so far as it potentially contains that "round" wholeness which consciousness lacks, it is the most significant of all. This "round" thing is the great treasure that

lies hidden in the cave of the unconscious, and its personification is this personal being who represents the higher unity of conscious and unconscious. It is a figure comparable to Hiranyagarbha, Purusha, Atman, and the mystic Buddha. For this reason I have elected to call it the “self,” by which I understand a psychic totality and at the same time a centre, neither of which coincides with the ego but includes it, just as a larger circle encloses a smaller one.

[249] The intuition of immortality which makes itself felt during the transformation is connected with the peculiar nature of the unconscious. It is, in a sense, non-spatial and non-temporal. The empirical proof of this is the occurrence of so-called telepathic phenomena, which are still denied by hypersceptical critics, although in reality they are much more common than is generally supposed.[20] The feeling of immortality, it seems to me, has its origin in a peculiar feeling of extension in space and time, and I am inclined to regard the deification rites in the mysteries as a projection of this same psychic phenomenon.

[250] The character of the self as a personality comes out very plainly in the Khidr legend. This feature is most strikingly expressed in the non-Koranic stories about Khidr, of which Vollers gives some telling examples. During my trip through Kenya, the headman of our safari was a Somali who had been brought up in the Sufi faith. To him Khidr was in every way a living person, and he assured me that I might at any time meet Khidr, because I was, as he put it, a *M’tu-ya-kitabu,*[21] a ‘man of the Book,’ meaning the Koran. He had gathered from our talks that I knew the Koran better than he did himself (which was, by the way, not saying a great deal). For this reason he regarded me as “islamu.” He told me I might meet Khidr in the street in the shape of a man, or he might appear to me during the night as a pure white light, or—he smilingly picked a blade of grass—the Verdant One might even look like that. He said he himself had once been comforted and helped by Khidr, when he could not find a job after the war and was suffering want. One night, while he slept, he dreamt he saw a bright white light near the door and he knew it was Khidr. Quickly leaping to his feet (in the dream), he reverentially saluted him with the words *salem aleikum*, ‘peace be with you,’ and then he knew that his wish would be fulfilled. He added that a few days later

he was offered the post as headman of a safari by a firm of outfitters in Nairobi.

[251] This shows that, even in our own day, Khidr still lives on in the religion of the people, as friend, adviser, comforter, and teacher of revealed wisdom. The position assigned to him by dogma was, according to my Somali, that of *maleika kwanza-ya-mungu*, ‘First Angel of God’—a sort of “Angel of the Face,” an *angelos* in the true sense of the word, a messenger.

[252] Khidr’s character as a friend explains the subsequent part of the Eighteenth Sura, which reads as follows:

> They will ask you about Dhulqarnein. Say: “I will give you an account of him.
>
> “We made him mighty in the land and gave him means to achieve all things. He journeyed on a certain road until he reached the West and saw the sun setting in a pool of black mud. Hard by he found a certain people.
>
> “‘Dhulqarnein,’ We said, ‘you must either punish them or show them kindness.’
>
> “He replied: ‘The wicked We shall surely punish. Then they shall return to their Lord and be sternly punished by Him. As for those that have faith and do good works, we shall bestow on them a rich reward and deal indulgently with them.’
>
> “He then journeyed along another road until he reached the East and saw the sun rising upon a people whom We had utterly exposed to its flaming rays. So he did; and We had full knowledge of all the forces at his command.
>
> “Then he followed yet another route until he came between the Two Mountains and found a people who could barely understand a word. ‘Dhulqarnein,’ they said, ‘Gog and Magog are ravaging this land. Build us a rampart against them and we will pay you tribute.’
>
> “He replied: ‘The power which my Lord has given me is better than any tribute. Lend me a force of labourers, and I will raise a rampart between you and them. Come, bring me blocks of iron.’

“He dammed up the valley between the Two Mountains, and said: ‘Ply your bellows.’ And when the iron blocks were red with heat, he said: ‘Bring me molten brass to pour on them.’

“Gog and Magog could not scale it, nor could they dig their way through it. He said: ‘This is a blessing from my Lord. But when my Lord’s promise is fulfilled, He will level it to dust. The promise of my Lord is true.’”

On that day We will let them come in tumultuous throngs. The Trumpet shall be sounded and We will gather them all together.

On that day Hell shall be laid bare before the unbelievers, who have turned a blind eye to My admonition and a deaf ear to My warning.

[253] We see here another instance of that lack of coherence which is not uncommon in the Koran. How are we to account for this apparently abrupt transition to Dhulqarnein, the Two-horned One, that is to say, Alexander the Great? Apart from the unheard-of anachronism (Mohammed’s chronology in general leaves much to be desired), one does not quite understand why Alexander is brought in here at all. But it has to be borne in mind that Khidr and Dhulqarnein are *the* great pair of friends, altogether comparable to the Dioscuri, as Vollers rightly emphasizes. The psychological connection may therefore be presumed to be as follows: Moses has had a profoundly moving experience of the self, which brought unconscious processes before his eyes with overwhelming clarity. Afterwards, when he comes to his people, the Jews, who are counted among the infidels, and wants to tell them about his experience, he prefers to use the form of a mystery legend. Instead of speaking about himself, he speaks about the Two-horned One. Since Moses himself is also “horned,” the substitution of Dhulqarnein appears plausible. Then he has to relate the history of this friendship and describe how Khidr helped his friend. Dhulqarnein makes his way to the setting of the sun and then to its rising. That is, he describes the way of the renewal of the sun, through death and darkness to a new resurrection. All this again indicates that it is Khidr who not only stands by man in his bodily needs but also helps him to attain rebirth.[22] The Koran, it is true, makes no distinction in this narrative between Allah, who is speaking in the first person plural, and Khidr. But it is clear that this section is simply a continuation of the helpful actions described previously, from which it is evident that Khidr

is a symbolization or “incarnation” of Allah. The friendship between Khidr and Alexander plays an especially prominent part in the commentaries, as does also the connection with the prophet Elijah. Vollers does not hesitate to extend the comparison to that other pair of friends, Gilgamesh and Enkidu.[23]

[254] To sum up, then: Moses has to recount the deeds of the two friends to his people in the manner of an impersonal mystery legend. Psychologically this means that the transformation has to be described or felt as happening to the “other.” Although it is Moses himself who, in his experience with Khidr, stands in Dhulqarnein’s place, he has to name the latter instead of himself in telling the story. This can hardly be accidental, for the great psychic danger which is always connected with individuation, or the development of the self, lies in the identification of ego-consciousness with the self. This produces an inflation which threatens consciousness with dissolution. All the more primitive or older cultures show a fine sense for the “perils of the soul” and for the dangerousness and general unreliability of the gods. That is, they have not yet lost their psychic instinct for the barely perceptible and yet vital processes going on in the background, which can hardly be said of our modern culture. To be sure, we have before our eyes as a warning just such a pair of friends distorted by inflation—Nietzsche and Zarathustra—but the warning has not been heeded. And what are we to make of Faust and Mephistopheles? The Faustian hybris is already the first step towards madness. The fact that the unimpressive beginning of the transformation in *Faust* is a dog and not an edible fish, and that the transformed figure is the devil and not a wise friend, “endowed with Our grace and Our wisdom,” might, I am inclined to think, offer a key to our understanding of the highly enigmatic Germanic soul.

[255] Without entering into other details of the text, I would like to draw attention to one more point: the building of the rampart against Gog and Magog (also known as Yajuj and Majuj). This motif is a repetition of Khidr’s last deed in the previous episode, the rebuilding of the town wall. But this time the wall is to be a strong defence against Gog and Magog. The passage may possibly refer to Revelation 20:7f. (AV):

> And when the thousand years are expired, Satan shall be loosed out of his prison, and shall go out to deceive the nations which are in the four quarters of the earth, Gog and Magog, to gather them together for battle: the number of whom is as the sand of the sea. And they went up on the breadth of the earth, and compassed the camp of the saints about, and the beloved city.

[256] Here Dhulqarnein takes over the role of Khidr and builds an unscalable rampart for the people living "between Two Mountains." This is obviously the same place in the middle which is to be protected against Gog and Magog, the featureless, hostile masses. Psychologically, it is again a question of the self, enthroned in the place of the middle, and referred to in Revelation as the beloved city (Jerusalem, the centre of the earth). The self is the hero, threatened already at birth by envious collective forces; the jewel that is coveted by all and arouses jealous strife; and finally the god who is dismembered by the old, evil power of darkness. In its psychological meaning, individuation is an *opus contra naturam*, which creates a *horror vacui* in the collective layer and is only too likely to collapse under the impact of the collective forces of the psyche. The mystery legend of the two helpful friends promises protection[24] to him who has found the jewel on his quest. But there will come a time when, in accordance with Allah's providence, even the iron rampart will fall to pieces, namely, on the day when the world comes to an end, or psychologically speaking, when individual consciousness is extinguished in the waters of darkness, that is to say when a *subjective* end of the world is experienced. By this is meant the moment when consciousness sinks back into the darkness from which it originally emerged, like Khidr's island: the moment of death.

[257] The legend then continues along eschatological lines: on that day (the day of the Last Judgment) the light returns to eternal light and the darkness to eternal darkness. The opposites are separated and a timeless state of permanence sets in, which, because of the absolute separation of opposites, is nevertheless one of supreme tension and therefore corresponds to the improbable initial state. This is in contrast to the view which sees the end as a *complexio oppositorum*.

[258] With this prospect of eternity, Paradise, and Hell the Eighteenth Sura comes to an end. In spite of its apparently disconnected and allusive character, it gives an almost perfect picture of a psychic transformation or rebirth which today, with our greater psychological insight, we would recognize as an individuation process. Because of the great age of the legend and the Islamic prophet's primitive cast of mind, the process takes place entirely outside the sphere of consciousness and is projected in the form of a mystery legend of a friend or a pair of friends and the deeds they perform. That is why it is all so allusive and lacking in logical sequence. Nevertheless, the legend expresses the obscure archetype of transformation so admirably that the passionate religious *eros* of the Arab finds it completely satisfying. It is for this reason that the figure of Khidr plays such an important part in Islamic mysticism.

IV

THE PSYCHOLOGY OF THE CHILD ARCHETYPE

THE PSYCHOLOGICAL ASPECTS OF THE KORE

[These two studies were first published, under the respective titles "Zur Psychologie des Kind-Archetypus" and "Zum psychologischen Aspekt der Kore-Figur," in two small volumes: *Das göttliche Kind* (Albae Vigiliae VI/VII, Amsterdam and Leipzig, 1940) and *Das göttliche Mädchen* (same series, VIII/IX, 1941). Each volume contained a companion essay by K. Kerényi. The two volumes were united, with additional material by Professor Kerényi, under the title *Einführung in das Wesen der Mythologie* (Amsterdam, Leipzig, and Zurich, 1941). This combined volume was translated by R. F. C. Hull as *Essays on a Science of Mythology* (Bollingen Series XXII; New York, 1949), of which the London (1950) edition was titled *Introduction to a Science of Mythology;* the text of the two studies here presented is a revision of that of 1949/50. The complete German volume was published in a new edition in 1951. In 1963, the English version appeared in Harper Torchbooks (New York; paperback), with the present Jung translation and a revised Kerényi translation.—EDITORS.]

THE PSYCHOLOGY OF THE CHILD ARCHETYPE

I. INTRODUCTION

[259] The author of the companion essay[1] on the mythology of the "child" or the child god has asked me for a psychological commentary on the subject of his investigations. I am glad to accede to his request, although the undertaking seems to me no small venture in view of the great significance of the child motif in mythology. Kerényi himself has enlarged upon the occurrence of this motif in Greece and Rome, with parallels drawn from Indian, Finnish, 'and other sources, thus indicating that the presentation of the theme would allow of yet further extensions. Though a comprehensive description would contribute nothing decisive in principle, it would nevertheless produce an overwhelming impression of the world-wide incidence and frequency of the motif. The customary treatment of mythological motifs so far in separate departments of science, such as philology, ethnology, the history of civilization, and comparative religion, was not exactly a help to us in recognizing their universality; and the psychological problems raised by this universality could easily be shelved by hypotheses of migration. Consequently Adolf Bastian's[2] ideas met with little success in their day. Even then there was sufficient empirical material available to permit far-reaching psychological conclusions, but the necessary premises were lacking. Although the psychological knowledge of that time included myth-formation in its province—witness Wundt's *Völkerpsychologie*—it was not in a position to demonstrate this same process as a living function actually present in the psyche of civilized man, any more than it could understand mythological motifs as structural elements of the psyche. True to its history, when psychology was metaphysics first of all, then the study of the senses and their functions, and then of the conscious mind and *its* functions, psychology identified its proper subject with the

conscious psyche and its contents and thus completely overlooked the existence of a nonconscious psyche. Although various philosophers, among them Leibniz, Kant, and Schelling, had already pointed very clearly to the problem of the dark side of the psyche, it was a physician who felt impelled, from his scientific and medical experience, to point to the *unconscious* as the essential basis of the psyche. This was C. G. Carus,[3] the authority whom Eduard von Hartmann followed. In recent times it was, once again, medical psychology that approached the problem of the unconscious without philosophical preconceptions. It became clear from many separate investigations that the psychopathology of the neuroses and of many psychoses cannot dispense with the hypothesis of a dark side of the psyche, i.e., the unconscious. It is the same with the psychology of dreams, which is really the *terra intermedia* between normal and pathological psychology. In the dream, as in the products of psychoses, there are numberless interconnections to which one can find parallels only in mythological associations of ideas (or perhaps in certain poetic creations which are often characterized by a borrowing, not always conscious, from myths). Had thorough investigation shown that in the majority of such cases it was simply a matter of forgotten knowledge, the physician would not have gone to the trouble of making extensive researches into individual and collective parallels. But, in point of fact, typical mythologems were observed among individuals to whom all knowledge of this kind was absolutely out of the question, and where indirect derivation from religious ideas that might have been known to them, or from popular figures of speech, was impossible.[4] Such conclusions forced us to assume that we must be dealing with "autochthonous" revivals independent of all tradition, and, consequently, that "myth-forming" structural elements must be present in the unconscious psyche.[5]

[260] These products are never (or at least very seldom) myths with a definite form, but rather mythological components which, because of their typical nature, we can call "motifs," "primordial images," types or —as I have named them—*archetypes*. The child archetype is an excellent example. Today we can hazard the formula that the archetypes appear in myths and fairytales just as they do in dreams and in the products of

psychotic fantasy. The medium in which they are embedded is, in the former case, an ordered and for the most part immediately understandable context, but in the latter case a generally unintelligible, irrational, not to say delirious sequence of images which nonetheless does not lack a certain hidden coherence. In the individual, the archetypes appear as involuntary manifestations of unconscious processes whose existence and meaning can only be inferred, whereas the myth deals with traditional forms of incalculable age. They hark back to a prehistoric world whose spiritual preconceptions and general conditions we can still observe today among existing primitives. Myths on this level are as a rule tribal history handed down from generation to generation by word of mouth. Primitive mentality differs from the civilized chiefly in that the conscious mind is far less developed in scope and intensity. Functions such as thinking, willing, etc. are not yet differentiated; they are pre-conscious, and in the case of thinking, for instance, this shows itself in the circumstance that the primitive does not think *consciously*, but that thoughts *appear*. The primitive cannot assert that he thinks; it is rather that "something thinks in him." The spontaneity of the act of thinking does not lie, causally, in his conscious mind, but in his unconscious. Moreover, he is incapable of any conscious effort of will; he must put himself beforehand into the "mood of willing," or let himself be put—hence his *rites d'entrée et de sortie*. His consciousness is menaced by an almighty unconscious: hence his fear of magical influences which may cross his path at any moment; and for this reason, too, he is surrounded by unknown forces and must adjust himself to them as best he can. Owing to the chronic twilight state of his consciousness, it is often next to impossible to find out whether he merely dreamed something or whether he really experienced it. The spontaneous manifestation of the unconscious and its archetypes intrudes everywhere into his conscious mind, and the mythical world of his ancestors—for instance, the *alchera* or *bugari* of the Australian aborigines—is a reality equal if not superior to the material world.[6] It is not the world as we know it that speaks out of his unconscious, but the unknown world of the psyche, of which we know that it mirrors our empirical world only in part, and that, for the other part, it moulds this empirical world in accordance with its own psychic assumptions. The archetype does not proceed from physical facts, but describes how the psyche experiences the physical fact, and in so doing the psyche often behaves so autocratically that it denies tangible reality or makes statements that fly in the face of it.

[261] The primitive mentality does not *invent* myths, it *experiences* them. Myths are original revelations of the preconscious psyche, involuntary statements about unconscious psychic happenings, and anything but allegories of physical processes.[7] Such allegories would be an idle amusement for an unscientific intellect. Myths, on the contrary, have a vital meaning. Not merely do they represent, they *are* the psychic life of the primitive tribe, which immediately falls to pieces and decays when it loses its mythological heritage, like a man who has lost his soul. A tribe's mythology is its living religion, whose loss is always and everywhere, even among the civilized, a moral catastrophe. But religion is a vital link with psychic processes independent of and beyond consciousness, in the dark hinterland of the psyche. Many of these unconscious processes may be indirectly occasioned by consciousness, but never by conscious choice. Others appear to arise spontaneously, that is to say, from no discernible or demonstrable conscious cause.

[262] Modern psychology treats the products of unconscious fantasy-activity as self-portraits of what is going on in the unconscious, or as statements of the unconscious psyche about itself. They fall into two categories. First, fantasies (including dreams) of a personal character, which go back unquestionably to personal experiences, things forgotten or repressed, and can thus be completely explained by individual anamnesis. Second, fantasies (including dreams) of an impersonal character, which cannot be reduced to experiences in the individual's past, and thus cannot be explained as something individually acquired. These fantasy-images undoubtedly have their closest analogues in mythological types. We must therefore assume that they correspond to certain *collective* (and not personal) structural elements of the human psyche in general, and, like the morphological elements of the human body, are *inherited*. Although tradition and transmission by migration certainly play a part, there are, as we have said, very many cases that

cannot be accounted for in this way and drive us to the hypothesis of “autochthonous revival.” These cases are so numerous that we are obliged to assume the existence of a collective psychic substratum. I have called this the *collective unconscious*.

[263] The products of this second category resemble the types of structures to be met with in myth and fairytale so much that we must regard them as related. It is therefore wholly within the realm of possibility that both, the mythological types as well as the individual types, arise under quite similar conditions. As already mentioned, the fantasy-products of the second category (as also those of the first) arise in a state of reduced intensity of consciousness (in dreams, delirium, reveries, visions, etc.). In all these states the check put upon unconscious contents by the concentration of the conscious mind ceases, so that the hitherto unconscious material streams, as though from opened side-sluices, into the field of consciousness. This mode of origination is the general rule.[8]

[264] Reduced intensity of consciousness and absence of concentration and attention, Janet’s *abaissement du niveau mental*, correspond pretty exactly to the primitive state of consciousness in which, we must suppose, myths were originally formed. It is therefore exceedingly probable that the mythological archetypes, too, made their appearance in much the same manner as the manifestations of archetypal structures among individuals today.

[265] The methodological principle in accordance with which psychology treats the products of the unconscious is this: Contents of an archetypal character are manifestations of processes in the collective unconscious. Hence they do not refer to anything that is or has been conscious, but to something essentially unconscious. In the last analysis, therefore, it is impossible to say what they refer to. Every interpretation necessarily remains an “as-if.” The ultimate core of meaning may be circumscribed, but not described. Even so, the bare circumscription denotes an essential step forward in our knowledge of the pre-conscious structure of the psyche, which was already in existence when there was as yet no unity of personality (even today the primitive is not securely possessed of it) and no consciousness at all. We can also observe this pre-conscious state in

early childhood, and as a matter of fact it is the dreams of this early period that not infrequently bring extremely remarkable archetypal contents to light.[9]

[266] If, then, we proceed in accordance with the above principle, there is no longer any question whether a myth refers to the sun or the moon, the father or the mother, sexuality or fire or water; all it does is to circumscribe and give an approximate description of an *unconscious core of meaning*. The ultimate meaning of this nucleus was never conscious and never will be. It was, and still is, only interpreted, and every interpretation that comes anywhere near the hidden sense (or, from the point of view of scientific intellect, nonsense, which comes to the same thing) has always, right from the beginning, laid claim not only to absolute truth and validity but to instant reverence and religious devotion. Archetypes were, and still are, living psychic forces that demand to be taken seriously, and they have a strange way of making sure of their effect. Always they were the bringers of protection and salvation, and their violation has as its consequence the “perils of the soul” known to us from the psychology of primitives. Moreover, they are the unfailing causes of neurotic and even psychotic disorders, behaving exactly like neglected or maltreated physical organs or organic functional systems.

[267] An archetypal content expresses itself, first and foremost, in metaphors. If such a content should speak of the sun and identify with it the lion, the king, the hoard of gold guarded by the dragon, or the power that makes for the life and health of man, it is neither the one thing nor the other, but the unknown third thing that finds more or less adequate expression in all these similes, yet—to the perpetual vexation of the intellect—remains unknown and not to be fitted into a formula. For this reason the scientific intellect is always inclined to put on airs of enlightenment in the hope of banishing the spectre once and for all. Whether its endeavours were called euhemerism, or Christian apologetics, or Enlightenment in the narrow sense, or Positivism, there was always a myth hiding behind it, in new and disconcerting garb, which then, following the ancient and venerable pattern, gave itself out as ultimate truth. In reality we can never legitimately cut loose from our archetypal foundations unless we are prepared to pay the price of a

neurosis, any more than we can rid ourselves of our body and its organs without committing suicide. If we cannot deny the archetypes or otherwise neutralize them, we are confronted, at every new stage in the differentiation of consciousness to which civilization attains, with the task of finding a new *interpretation* appropriate to this stage, in order to connect the life of the past that still exists in us with the life of the present, which threatens to slip away from it. If this link-up does not take place, a kind of rootless consciousness comes into being no longer oriented to the past, a consciousness which succumbs helplessly to all manner of suggestions and, in practice, is susceptible to psychic epidemics. With the loss of the past, now become "insignificant," devalued, and incapable of revaluation, the saviour is lost too, for the saviour is either the insignificant thing itself or else arises out of it. Over and over again in the "metamorphosis of the gods" he rises up as the prophet or first-born of a new generation and appears unexpectedly in the unlikeliest places (sprung from a stone, tree, furrow, water, etc.) and in ambiguous form (Tom Thumb, dwarf, child, animal, and so on).

[268] This archetype of the "child god" is extremely widespread and intimately bound up with all the other mythological aspects of the child motif. It is hardly necessary to allude to the still living "Christ-child," who, in the legend of Saint Christopher, also has the typical feature of being "smaller than small and bigger than big." In folklore the child motif appears in the guise of the *dwarf* or the *elf* as personifications of the hidden forces of nature. To this sphere also belongs the little metal man of late antiquity, the *άνθρωπάριον*,[10] who, till far into the Middle Ages, on the one hand inhabited the mine-shafts,[11] and on the other represented the alchemical metals,[12] above all Mercurius reborn in perfect form (as the hermaphrodite, *filius sapientiae*, or *in-fans noster*).[13] Thanks to the religious interpretation of the "child," a fair amount of evidence has come down to us from the Middle Ages showing that the "child" was not merely a traditional figure, but a vision spontaneously experienced (as a so-called "irruption of the unconscious"). I would mention Meister Eckhart's vision of the "naked boy" and the dream of Brother Eustachius.[14] Interesting accounts of these spontaneous experiences are also to be found in English ghost-stories, where we read

of the vision of a "Radiant Boy" said to have been seen in a place where there are Roman remains.[15] This apparition was supposed to be of evil omen. It almost looks as though we were dealing with the figure of a *puer aeternus* who had become inauspicious through "metamorphosis," or in other words had shared the fate of the classical and the Germanic gods, who have all become bugbears. The mystical character of the experience is also confirmed in Part II of Goethe's *Faust*, where Faust himself is transformed into a boy and admitted into the "choir of blessed youths," this being the "larval stage" of Doctor Marianus.[16]

[269] In the strange tale called *Das Reich ohne Raum*, by Bruno Goetz, a *puer aeternus* named Fo (= Buddha) appears with whole troops of "unholy" boys of evil significance. (Contemporary parallels are better let alone.) I mention this instance only to demonstrate the enduring vitality of the child archetype.

[270] The child motif not infrequently occurs in the field of psychopathology. The "imaginary" child is common among women with mental disorders and is usually interpreted in a Christian sense. Homunculi also appear, as in the famous Schreber case,[17] where they come in swarms and plague the sufferer. But the clearest and most significant manifestation of the child motif in the therapy of neuroses is in the maturation process of personality induced by the analysis of the unconscious, which I have termed the process of *individuation*.[18] Here we are confronted with preconscious processes which, in the form of more or less well-formed fantasies, gradually pass over into the conscious mind, or become conscious as dreams, or, lastly, are made conscious through the method of active imagination.[19] This material is rich in archetypal motifs, among them frequently that of the child. Often the child is formed after the Christian model; more often, though, it develops from earlier, altogether non-Christian levels—that is to say, out of chthonic animals such as crocodiles, dragons, serpents, or monkeys. Sometimes the child appears in the cup of a flower, or out of a golden egg, or as the centre of a mandala. In dreams it often appears as the dreamer's son or daughter or as a boy, youth, or young girl; occasionally it seems to be of exotic origin, Indian or Chinese, with a dusky skin, or,

appearing more cosmically, surrounded by stars or with a starry coronet; or as the king's son or the witch's child with daemonic attributes. Seen as a special instance of "the treasure hard to attain" motif,[20] the child motif is extremely variable and assumes all manner of shapes, such as the jewel, the pearl, the flower, the chalice, the golden egg, the quaternity, the golden ball, and so on. It can be interchanged with these and similar images almost without limit.

II. THE PSYCHOLOGY OF THE CHILD ARCHETYPE

1. *The Archetype as a Link with the Past*

[271] As to the *psychology* of our theme I must point out that every statement going beyond the purely phenomenal aspects of an archetype lays itself open to the criticism we have expressed above. Not for a moment dare we succumb to the illusion that an archetype can be finally explained and disposed of. Even the best attempts at explanation are only more or less successful translations into another metaphorical language. (Indeed, language itself is only an image.) The most we can do is to *dream the myth onwards* and give it a modern dress. And whatever explanation or interpretation does to it, we do to our own souls as well, with corresponding results for our own well-being. The archetype—let us never forget this—is a psychic organ present in all of us. A bad explanation means a correspondingly bad attitude to this organ, which may thus be injured. But the ultimate sufferer is the bad interpreter himself. Hence the "explanation" should always be such that the functional significance of the archetype remains unimpaired, so that an adequate and meaningful connection between the conscious mind and the archetypes is assured. For the archetype is an element of our psychic structure and thus a vital and necessary component in our psychic economy. It represents or personifies certain instinctive data of the dark, primitive psyche, the real but invisible roots of consciousness. Of what elementary importance the connection with these roots is, we see from the preoccupation of the primitive mentality with certain "magic" factors, which are nothing less than what we would call archetypes. This original form of *religio* ("linking back") is the essence, the working basis of all

religious life even today, and always will be, whatever future form this life may take.

[272] There is no “rational” substitute for the archetype any more than there is for the cerebellum or the kidneys. We can examine the physical organs anatomically, histologically, and embryologically. This would correspond to an outline of archetypal phenomenology and its presentation in terms of comparative history. But we only arrive at the *meaning* of a physical organ when we begin to ask teleological questions. Hence the query arises: What is the biological purpose of the archetype? Just as physiology answers such a question for the body, so it is the business of psychology to answer it for the archetype.

[273] Statements like “The child motif is a vestigial memory of one’s own childhood” and similar explanations merely beg the question. But if, giving this proposition a slight twist, we were to say, “The child motif is a picture of certain *forgotten* things in our childhood,” we are getting closer to the truth. Since, however, the archetype is always an image belonging to the whole human race and not merely to the individual, we might put it better this way: “The child motif represents the preconscious, childhood aspect of the collective psyche.”[21]

[274] We shall not go wrong if we take this statement for the time being *historically*, on the analogy of certain psychological experiences which show that certain phases in an individual’s life can become autonomous, can personify themselves to the extent that they result in a *vision of oneself*—for instance, one sees oneself as a child. Visionary experiences of this kind, whether they occur in dreams or in the waking state, are, as we know, conditional on a dissociation having previously taken place between past and present. Such dissociations come about because of various incompatibilities; for instance, a man’s present state may have come into conflict with his childhood state, or he may have violently sundered himself from his original character in the interests of some arbitrary persona[22] more in keeping with his ambitions. He has thus become unchildlike and artificial, and has lost his roots. All this presents a favourable opportunity for an equally vehement confrontation with the primary truth.

[275] In view of the fact that men have not yet ceased to make statements about the child god, we may perhaps extend the individual analogy to the life of mankind and say in conclusion that humanity, too, probably always comes into conflict with its childhood conditions, that is, with its original, unconscious, and instinctive state, and that the danger of the kind of conflict which induces the vision of the "child" actually exists. Religious observances, i.e., the retelling and ritual repetition of the mythical event, consequently serve the purpose of bringing the image of childhood, and everything connected with it, again and again before the eyes of the conscious mind so that the link with the original condition may not be broken.

2. *The Function of the Archetype*

[276] The child motif represents not only something that existed in the distant past but also something that exists *now*; that is to say, it is not just a vestige but a system functioning in the present whose purpose is to compensate or correct, in a meaningful manner, the inevitable one-sidednesses and extravagances of the conscious mind. It is in the nature of the conscious mind to concentrate on relatively few contents and to raise them to the highest pitch of clarity. A necessary result and precondition is the exclusion of other potential contents of consciousness. The exclusion is bound to bring about a certain one-sidedness of the conscious contents. Since the differentiated consciousness of civilized man has been granted an effective instrument for the practical realization of its contents through the dynamics of his will, there is all the more danger, the more he trains his will, of his getting lost in one-sidedness and deviating further and further from the laws and roots of his being. This means, on the one hand, the possibility of human freedom, but on the other it is a source of endless transgressions against one's instincts. Accordingly, primitive man, being closer to his instincts, like the animal, is characterized by fear of novelty and adherence to tradition. To our way of thinking he is painfully backward, whereas we exalt progress. But our progressiveness, though it may result in a great many delightful wish-fulfilments, piles up an equally gigantic Promethean debt which has to be paid off from time to time in the form of hideous catastrophes. For ages

man has dreamed of flying, and all we have got for it is saturation bombing! We smile today at the Christian hope of a life beyond the grave, and yet we often fall into chiliasms a hundred times more ridiculous than the notion of a happy Hereafter. Our differentiated consciousness is in continual danger of being uprooted; hence it needs compensation through the still existing state of childhood.

[277] The symptoms of compensation are described, from the progressive point of view, in scarcely flattering terms. Since, to the superficial eye, it looks like a retarding operation, people speak of inertia, backwardness, scepticism, fault-finding, conservatism, timidity, pettiness, and so on. But inasmuch as man has, in high degree, the capacity for cutting himself off from his own roots, he may also be swept uncritically to catastrophe by his dangerous one-sidedness. The retarding ideal is always more primitive, more natural (in the good sense as in the bad), and more “moral” in that it keeps faith with law and tradition. The progressive ideal is always more abstract, more unnatural, and less “moral” in that it demands disloyalty to tradition. Progress enforced by will is always *convulsive*. Backwardness may be closer to naturalness, but in its turn it is always menaced by painful awakenings. The older view of things realized that progress is only possible *Deo concedente*, thus proving itself conscious of the opposites and repeating the age-old *rites d’entrée et de sortie* on a higher plane. The more differentiated consciousness becomes, the greater the danger of severance from the root-condition. Complete severance comes when the *Deo concedente* is forgotten. Now it is an axiom of psychology that when a part of the psyche is split off from consciousness it is only *apparently* inactivated; in actual fact it brings about a possession of the personality, with the result that the individual’s aims are falsified in the interests of the split-off part. If, then, the childhood state of the collective psyche is repressed to the point of total exclusion, the unconscious content overwhelms the conscious aim and inhibits, falsifies, even destroys its realization. Viable progress only comes from the co-operation of both.

3. *The Futurity of the Archetype*

[278] One of the essential features of the child motif is its futurity. The child is potential future. Hence the occurrence of the child motif in the psychology of the individual signifies as a rule an anticipation of future developments, even though at first sight it may seem like a retrospective configuration. Life is a flux, a flowing into the future, and not a stoppage or a backwash. It is therefore not surprising that so many of the mythological saviours are child gods. This agrees exactly with our experience of the psychology of the individual, which shows that the "child" paves the way for a future change of personality. In the individuation process, it anticipates the figure that comes from the synthesis of conscious and unconscious elements in the personality. It is therefore a symbol which unites the opposites;[23] a mediator, bringer of healing, that is, one who makes whole. Because it has this meaning, the child motif is capable of the numerous transformations mentioned above: it can be expressed by roundness, the circle or sphere, or else by the quaternity as another form of wholeness.[24] I have called this wholeness that transcends consciousness the "self."[25] The goal of the individuation process is the synthesis of the self. From another point of view the term "entelechy" might be preferable to "synthesis." There is an empirical reason why "entelechy" is, in certain conditions, more fitting: the symbols of wholeness frequently occur at the beginning of the individuation process, indeed they can often be observed in the first dreams of early infancy. This observation says much for the *a priori* existence of potential wholeness,[26] and on this account the idea of *entelechy* instantly recommends itself. But in so far as the individuation process occurs, empirically speaking, as a synthesis, it looks, paradoxically enough, as if something already existent were being put together. From this point of view, the term "synthesis" is also applicable.

4. *Unity and Plurality of the Child Motif*

[279] In the manifold phenomenology of the "child" we have to distinguish between the *unity* and *plurality* of its respective manifestations. Where, for instance, numerous homunculi, dwarfs, boys, etc., appear, having no individual characteristics at all, there is the probability of a *dissociation*. Such forms are therefore found especially in schizophrenia, which is

essentially a fragmentation of personality. The many children then represent the products of its dissolution. But if the plurality occurs in normal people, then it is the representation of an as yet incomplete synthesis of personality. The personality (viz., the "self") is still in the *plural stage*, i.e., an ego may be present, but it cannot experience its wholeness within the framework of its own personality, only within the community of the family, tribe, or nation; it is still in the stage of unconscious identification with the plurality of the group. The Church takes due account of this widespread condition in her doctrine of the *corpus mysticum*, of which the individual is by nature a member.

[280] If, however, the child motif appears in the form of a unity, we are dealing with an unconscious and provisionally complete synthesis of the personality, which in practice, like everything unconscious, signifies no more than a possibility.

5. *Child God and Child Hero*

[281] Sometimes the "child" looks more like a *child god*, sometimes more like a young *hero*. Common to both types is the miraculous birth and the adversities of early childhood—abandonment and danger through persecution. The god is by nature wholly supernatural; the hero's nature is human but raised to the limit of the supernatural—he is "semi-divine." While the god, especially in his close affinity with the symbolic animal, personifies the collective unconscious which is not yet integrated into a human being, the hero's supernaturalness includes human nature and thus represents a synthesis of the ("divine," i.e., not yet humanized) unconscious and human consciousness. Consequently he signifies the potential anticipation of an individuation process which is approaching wholeness.

[282] For this reason the various "child"-fates may be regarded as illustrating the kind of psychic events that occur in the entelechy or genesis of the "self." The "miraculous birth" tries to depict the way in which this genesis is experienced. Since it is a psychic genesis, everything must happen non-empirically, e.g., by means of a virgin birth, or by miraculous conception, or by birth from unnatural organs. The

motifs of "insignificance," exposure, abandonment, danger, etc. try to show how precarious is the psychic possibility of wholeness, that is, the enormous difficulties to be met with in attaining this "highest good." They also signify the powerlessness and helplessness of the life-urge which subjects every growing thing to the law of maximum self-fulfilment, while at the same time the environmental influences place all sorts of insuperable obstacles in the way of individuation. More especially the threat to one's inmost self from dragons and serpents points to the danger of the newly acquired consciousness being swallowed up again by the instinctive psyche, the unconscious. The lower vertebrates have from earliest times been favourite symbols of the collective psychic substratum,[27] which is localized anatomically in the subcortical centres, the cerebellum and the spinal cord. These organs constitute the snake.[28] Snake-dreams usually occur, therefore, when the conscious mind is deviating from its instinctual basis.

[283] The motif of "smaller than small yet bigger than big" complements the impotence of the child by means of its equally miraculous deeds. This paradox is the essence of the hero and runs through his whole destiny like a red thread. He can cope with the greatest perils, yet, in the end, something quite insignificant is his undoing: Baldur perishes because of the mistletoe, Maui because of the laughter of a little bird, Siegfried because of his one vulnerable spot, Heracles because of his wife's gift, others because of common treachery, and so on.

[284] The hero's main feat is to overcome the monster of darkness: it is the long-hoped-for and expected triumph of consciousness over the unconscious. Day and light are synonyms for consciousness, night and dark for the unconscious. The coming of consciousness was probably the most tremendous experience of primeval times, for with it a world came into being whose existence no one had suspected before. "And God said: 'Let there be light!'" is the projection of that immemorial experience of the separation of the conscious from the unconscious. Even among primitives today the possession of a soul is a precarious thing, and the "loss of soul" a typical psychic malady which drives primitive medicine to all sorts of psychotherapeutic measures. Hence the "child" distinguishes itself by deeds which point to the conquest of the dark.

III. THE SPECIAL PHENOMENOLOGY OF THE CHILD ARCHETYPE

1. *The Abandonment of the Child*

[285] Abandonment, exposure, danger, etc. are all elaborations of the "child's" insignificant beginnings and of its mysterious and miraculous birth. This statement describes a certain psychic experience of a creative nature, whose object is the emergence of a new and as yet unknown content. In the psychology of the individual there is always, at such moments, an agonizing situation of conflict from which there seems to be no way out—at least for the conscious mind, since as far as this is concerned, *tertium non datur*. But out of this collision of opposites the unconscious psyche always creates a third thing of an irrational nature,[29] which the conscious mind neither expects nor understands. It presents itself in a form that is neither a straight "yes" nor a straight "no," and is consequently rejected by both. For the conscious mind knows nothing beyond the opposites and, as a result, has no knowledge of the thing that unites them. Since, however, the solution of the conflict through the union of opposites is of vital importance, and is moreover the very thing that the conscious mind is longing for, some inkling of the creative act, and of the significance of it, nevertheless gets through. From this comes the numinous character of the "child." A meaningful but unknown content always has a secret fascination for the conscious mind. The new configuration is a nascent whole; it is on the way to wholeness, at least in so far as it excels in "wholeness" the conscious mind when torn by opposites and surpasses it in completeness. For this reason all uniting symbols have a redemptive significance.

[286] Out of this situation the "child" emerges as a symbolic content, manifestly separated or even isolated from its background (the mother), but sometimes including the mother in its perilous situation, threatened on the one hand by the negative attitude of the conscious mind and on the other by the *horror vacui* of the unconscious, which is quite ready to swallow up all its progeny, since it produces them only in play, and destruction is an inescapable part of its play. Nothing in all the world welcomes this new birth, although it is the most precious fruit of Mother Nature herself, the most pregnant with the future, signifying a higher

stage of self-realization. That is why Nature, the world of the instincts, takes the "child" under its wing: it is nourished or protected by animals.

[287] "Child" means something evolving towards independence. This it cannot do without detaching itself from its origins: abandonment is therefore a necessary condition, not just a concomitant symptom. The conflict is not to be overcome by the conscious mind remaining caught between the opposites, and for this very reason it needs a symbol to point out the necessity of detaching itself from its origins. Because the symbol of the "child" fascinates and grips the conscious mind, its redemptive effect passes over into consciousness and brings about that separation from the conflict-situation which the conscious mind by itself was unable to achieve. The symbol anticipates a nascent state of consciousness. So long as this is not actually in being, the "child" remains a mythological projection which requires religious repetition and renewal by ritual. The Christ Child, for instance, is a religious necessity only so long as the majority of men are incapable of giving psychological reality to the saying: "Except ye become as little children…." Since all such developments and transitions are extraordinarily difficult and dangerous, it is no wonder that figures of this kind persist for hundreds or even thousands of years. Everything that man should, and yet cannot, be or do—be it in a positive or negative sense—lives on as a mythological figure and anticipation alongside his consciousness, either as a religious projection or—what is still more dangerous—as unconscious contents which then project themselves spontaneously into incongruous objects, e.g., hygienic and other "salvationist" doctrines or practices. All these are so many rationalized substitutes for mythology, and their unnaturalness does more harm than good.

[288] The conflict-situation that offers no way out, the sort of situation that produces the "child" as the irrational third, is of course a formula appropriate only to a psychological, that is, modern stage of development. It is not strictly applicable to the psychic life of primitives, if only because primitive man's childlike range of consciousness still excludes a whole world of possible psychic experiences. Seen on the nature-level of the primitive, our modern *moral* conflict is still an *objective* calamity that threatens life itself. Hence not a few child-figures

are culture-heroes and thus identified with things that promote culture, e.g., fire,[30] metal, corn, maize, etc. As bringers of light, that is, enlargers of consciousness, they overcome darkness, which is to say that they overcome the earlier unconscious state. Higher consciousness, or knowledge going beyond our present-day consciousness, is equivalent to being *all alone in the world*. This loneliness expresses the conflict between the bearer or symbol of higher consciousness and his surroundings. The conquerors of darkness go far back into primeval times, and, together with many other legends, prove that there once existed a state of *original psychic distress*, namely *unconsciousness*. Hence in all probability the "irrational" fear which primitive man has of the dark even today. I found a form of religion among a tribe living on Mount Elgon that corresponded to pantheistic optimism. Their optimistic mood was, however, always in abeyance between six o'clock in the evening and six o'clock in the morning, during which time it was replaced by fear, for in the night the dark being Ayik has his dominion—the "Maker of Fear." During the daytime there were no monster snakes anywhere in the vicinity, but at night they were lurking on every path. At night the whole of mythology was let loose.

2. *The Invincibility of the Child*

[289] It is a striking paradox in all child myths that the "child" is on the one hand delivered helpless into the power of terrible enemies and in continual danger of extinction, while on the other he possesses powers far exceeding those of ordinary humanity. This is closely related to the psychological fact that though the child may be "insignificant," unknown, "a mere child," he is also divine. From the conscious standpoint we seem to be dealing with an insignificant content that has no releasing, let alone redeeming, character. The conscious mind is caught in its conflict-situation, and the combatant forces seem so overwhelming that the "child" as an isolated content bears no relation to the conscious factors. It is therefore easily overlooked and falls back into the unconscious. At least, this is what we should have to fear if things turned out according to our conscious expectations. Myth, however, emphasizes that it is not so, but that the "child" is endowed with superior

powers and, despite all dangers, will unexpectedly pull through. The "child" is born out of the womb of the unconscious, begotten out of the depths of human nature, or rather out of living Nature herself. It is a personification of vital forces quite outside the limited range of our conscious mind; of ways and possibilities of which our one-sided conscious mind knows nothing; a wholeness which embraces the very depths of Nature. It represents the strongest, the most ineluctable urge in every being, namely the urge to realize itself. It is, as it were, an incarnation of *the inability to do otherwise*, equipped with all the powers of nature and instinct, whereas the conscious mind is always getting caught up in its supposed ability to do otherwise. The urge and compulsion to self-realization is a law of nature and thus of invincible power, even though its effect, at the start, is insignificant and improbable. Its power is revealed in the miraculous deeds of the child hero, and later in the *athla* ('works') of the bondsman or thrall (of the Heracles type), where, although the hero has outgrown the impotence of the "child," he is still in a menial position. The figure of the thrall generally leads up to the real epiphany of the semi-divine hero. Oddly enough, we have a similar modulation of themes in alchemy—in the synonyms for the *lapis*. As the *materia prima*, it is the *lapis exilis et vilis*. As a substance in process of transmutation, it is *servus rubeus* or *fugitivus*; and finally, in its true apotheosis, it attains the dignity of a *filius sapientiae* or *deus terrenus*, a "light above all lights," a power that contains in itself all the powers of the upper and nether regions. It becomes a *corpus glorificatum* which enjoys everlasting incorruptibility and is therefore a panacea ("bringer of healing").[31] The size and invincibility of the "child" are bound up in Hindu speculation with the nature of the atman, which corresponds to the "smaller than small yet bigger than big" motif. As an individual phenomenon, the self is "smaller than small"; as the equivalent of the cosmos, it is "bigger than big." The self, regarded as the counter-pole of the world, its "absolutely other," is the *sine qua non* of all empirical knowledge and consciousness of subject and object. Only because of this psychic "otherness" is consciousness possible at all. Identity does not make consciousness possible; it is only separation, detachment, and agonizing confrontation through opposition that produce consciousness and insight. Hindu introspection recognized this psychological fact very early and consequently equated the subject of cognition with the subject of ontology in general. In accordance with the predominantly introverted attitude of Indian thinking, the object lost the attribute of absolute reality and, in some systems, became a mere illusion. The Greek-Occidental type of mind could not free itself from the conviction of the world's absolute existence—at the cost, however, of the cosmic significance of the self. Even today Western man finds it hard to see the psychological necessity for a transcendental subject of cognition as the counter-pole of the empirical universe, although the postulate of a world-confronting self, at least as a *point of reflection*, is a logical necessity. Regardless of philosophy's perpetual attitude of dissent or only half-hearted assent, there is always a compensating tendency in our unconscious psyche to produce a symbol of the self in its cosmic significance. These efforts take on the archetypal forms of the hero myth such as can be observed in almost any individuation process.

[290] The phenomenology of the "child's" birth always points back to an original psychological state of non-recognition, i.e., of darkness or twilight, of non-differentiation between subject and object, of unconscious identity of man and the universe. This phase of non-differentiation produces the *golden egg,* which is both man and universe and yet neither, but an irrational third. To the twilight consciousness of primitive man it seems as if the egg came out of the womb of the wide world and were, accordingly, a cosmic, objective, external occurrence. To a differentiated consciousness, on the other hand, it seems evident that this egg is nothing but a symbol thrown up by the psyche or—what is even worse—a fanciful speculation and therefore "nothing but" a primitive phantasm to which no "reality" of any kind attaches. Present-day medical psychology, however, thinks somewhat differently about these "phantasms." It knows only too well what dire disturbances of the bodily functions and what devastating psychic consequences can flow from "mere" fantasies. "Fantasies" are the natural expressions of the life of the unconscious. But since the unconscious is the psyche of all the body's autonomous functional complexes, its "fantasies" have an aetiological significance that is not to be despised. From the

psychopathology of the individuation process we know that the formation of symbols is frequently associated with physical disorders of a psychic origin, which in some cases are felt as decidedly "real." In medicine, fantasies are *real things* with which the psychotherapist has to reckon very seriously indeed. He cannot therefore deprive of all justification those primitive phantasms whose content is so real that it is projected upon the external world. In the last analysis the human body, too, is built of the stuff of the world, the very stuff wherein fantasies become visible; indeed, without it they could not be experienced at all. Without this stuff they would be like a sort of abstract crystalline lattice in a solution where the crystallization process had not yet started.

[291] The symbols of the self arise in the depths of the body and they express its materiality every bit as much as the structure of the perceiving consciousness. The symbol is thus a living body, *corpus et anima*; hence the "child" is such an apt formula for the symbol. The uniqueness of the psyche can never enter wholly into reality, it can only be realized approximately, though it still remains the absolute basis of all consciousness. The deeper "layers" of the psyche lose their individual uniqueness as they retreat farther and farther into darkness. "Lower down," that is to say as they approach the autonomous functional systems, they become increasingly collective until they are universalized and extinguished in the body's materiality, i.e., in chemical substances. The body's carbon is simply carbon. Hence "at bottom" the psyche is simply "world." In this sense I hold Kerényi to be absolutely right when he says that in the symbol the *world itself* is speaking. The more archaic and "deeper," that is the more *physiological*, the symbol is, the more collective and universal, the more "material" it is. The more abstract, differentiated, and specific it is, and the more its nature approximates to conscious uniqueness and individuality, the more it sloughs off its universal character. Having finally attained full consciousness, it runs the risk of becoming a mere allegory which nowhere oversteps the bounds of conscious comprehension, and is then exposed to all sorts of attempts at rationalistic and therefore inadequate explanation.

3. *The Hermaphroditism of the Child*

[292] It is a remarkable fact that perhaps the majority of cosmogonic gods are of a bisexual nature. The hermaphrodite means nothing less than a union of the strongest and most striking opposites. In the first place this union refers back to a primitive state of mind, a twilight where differences and contrasts were either barely separated or completely merged. With increasing clarity of consciousness, however, the opposites draw more and more distinctly and irreconcilably apart. If, therefore, the hermaphrodite were only a product of primitive non-differentiation, we would have to expect that it would soon be eliminated with increasing civilization. This is by no means the case; on the contrary, man's imagination has been preoccupied with this idea over and over again on the high and even the highest levels of culture, as we can see from the late Greek and syncretic philosophy of Gnosticism. The hermaphroditic *rebis* has an important part to play in the natural philosophy of the Middle Ages. And in our own day we hear of Christ's androgyny in Catholic mysticism.[32]

[293] We can no longer be dealing, then, with the continued existence of a primitive phantasm, or with an original contamination of opposites. Rather, as we can see from medieval writings,[33] the primordial idea has become a *symbol of the creative union of opposites*, a "uniting symbol" in the literal sense. In its functional significance the symbol no longer points back, but forward to a goal not yet reached. Notwithstanding its monstrosity, the hermaphrodite has gradually turned into a subduer of conflicts and a bringer of healing, and it acquired this meaning in relatively early phases of civilization. This vital meaning explains why the image of the hermaphrodite did not fade out in primeval times but, on the contrary, was able to assert itself with increasing profundity of symbolic content for thousands of years. The fact that an idea so utterly archaic could rise to such exalted heights of meaning not only points to the vitality of archetypal ideas, it also demonstrates the rightness of the principle that the archetype, because of its power to unite opposites, mediates between the unconscious substratum and the conscious mind. It throws a bridge between present-day consciousness, always in danger of losing its roots, and the natural, unconscious, instinctive wholeness of primeval times. Through this mediation the uniqueness, peculiarity, and

one-sidedness of our present individual consciousness are linked up again with its natural, racial roots. Progress and development are ideals not lightly to be rejected, but they lose all meaning if man only arrives at his new state as a fragment of himself, having left his essential hinterland behind him in the shadow of the unconscious, in a state of primitivity or, indeed, barbarism. The conscious mind, split off from its origins, incapable of realizing the meaning of the new state, then relapses all too easily into a situation far worse than the one from which the innovation was intended to free it—*exempla sunt odiosa!* It was Friedrich Schiller who first had an inkling of this problem; but neither his contemporaries nor his successors were capable of drawing any conclusions. Instead, people incline more than ever to educate *children* and nothing more. I therefore suspect that the *furor paedogogicus* is a god-sent method of by-passing the central problem touched on by Schiller, namely the *education of the educator*. Children are educated by what the grownup *is* and not by what he *says*. The popular faith in words is a veritable disease of the mind, for a superstition of this sort always leads farther and farther away from man's foundations and seduces people into a disastrous identification of the personality with whatever slogan may be in vogue. Meanwhile everything that has been overcome and left behind by so-called "progress" sinks deeper and deeper into the unconscious, from which there re-emerges in the end the primitive condition of *identity with the mass*. Instead of the expected progress, this condition now becomes reality.

[294] As civilization develops, the bisexual primordial being turns into a symbol of the unity of personality, a symbol of the self, where the war of opposites finds peace. In this way the primordial being becomes the distant goal of man's self-development, having been from the very beginning a projection of his unconscious wholeness. Wholeness consists in the union of the conscious and the unconscious personality. Just as every individual derives from masculine and feminine genes, and the sex is determined by the predominance of the corresponding genes, so in the psyche it is only the conscious mind, in a man, that has the masculine sign, while the unconscious is by nature feminine. The reverse is true in

the case of a woman. All I have done in my anima theory is to rediscover and reformulate this fact.[34] It had long been known.

[295] The idea of the *coniunctio* of male and female, which became almost a technical term in Hermetic philosophy, appears in Gnosticism as the *mysterium iniquitatis*, probably not uninfluenced by the Old Testament "divine marriage" as performed, for instance, by Hosea.[35] Such things are hinted at not only by certain traditional customs,[36] but by the quotation from the Gospel according to the Egyptians in the second epistle of Clement: "When the two shall be one, the outside as the inside, and the male with the female neither male nor female."[37] Clement of Alexandria introduces this logion with the words: "When ye have trampled on the garment of shame (with thy feet)…,"[38] which probably refers to the body; for Clement as well as Cassian (from whom the quotation was taken over), and the pseudo-Clement, too, interpreted the words in a spiritual sense, in contrast to the Gnostics, who would seem to have taken the *coniunctio* all too literally. They took care, however, through the practice of abortion and other restrictions, that the biological meaning of their acts did not swamp the religious significance of the rite. While, in Church mysticism, the primordial image of the *hieros gamos* was sublimated on a lofty plane and only occasionally—as for instance with Mechthild of Magdeburg[39]—approached the physical sphere in emotional intensity, for the rest of the world it remained very much alive and continued to be the object of especial psychic preoccupation. In this respect the symbolical drawings of Opicinus de Canistris[40] afford us an interesting glimpse of the way in which this primordial image was instrumental in uniting opposites, even in a pathological state. On the other hand, in the Hermetic philosophy that throve in the Middle Ages the *coniunctio* was performed wholly in the physical realm in the admittedly abstract theory of the *coniugium solis et lunae*, which despite this drawback gave the creative imagination much occasion for anthropomorphic flights.

[296] Such being the state of affairs, it is readily understandable that the primordial image of the hermaphrodite should reappear in modern psychology in the guise of the male-female antithesis, in other words as

male consciousness and personified *female* unconscious. But the psychological process of bringing things to consciousness has complicated the picture considerably. Whereas the old science was almost exclusively a field in which only the man's unconscious could project itself, the new psychology had to acknowledge the existence of an autonomous female psyche as well. Here the case is reversed, and a feminine consciousness confronts a masculine personification of the unconscious, which can no longer be called *anima* but *animus*. This discovery also complicates the problem of the *coniunctio*.

[297] Originally this archetype played its part entirely in the field of fertility magic and thus remained for a very long time a purely biological phenomenon with no other purpose than that of fecundation. But even in early antiquity the symbolical meaning of the act seems to have increased. Thus, for example, the physical performance of the *hieros gamos* as a sacred rite not only became a mystery—it faded to a mere conjecture.[41] As we have seen, Gnosticism, too, endeavoured in all seriousness to subordinate the physiological to the metaphysical. Finally, the Church severed the *coniunctio* from the physical realm altogether, and natural philosophy turned it into an abstract *theoria*. These developments meant the gradual transformation of the archetype into a psychological process which, in theory, we can call a combination of conscious and unconscious processes. In practice, however, it is not so simple, because as a rule the feminine unconscious of a man is projected upon a feminine partner, and the masculine unconscious of a woman is projected upon a man. The elucidation of these problems is a special branch of psychology and has no part in a discussion of the mythological hermaphrodite.

4. *The Child as Beginning and End*

[298] Faust, after his death, is received as a boy into the "choir of blessed youths." I do not know whether Goethe was referring, with this peculiar idea, to the *cupids* on antique grave-stones. It is not unthinkable. The figure of the *cucullatus* points to the hooded, that is, the *invisible* one, the genius of the departed, who reappears in the child-like frolics of a new

life, surrounded by the sea-forms of dolphins and tritons. The sea is the favourite symbol for the unconscious, the mother of all that lives. Just as the “child” is, in certain circumstances (e.g., in the case of Hermes and the Dactyls), closely related to the phallus, symbol of the begetter, so it comes up again in the sepulchral phallus, symbol of a renewed begetting.

[299] The “child” is therefore *renatus in novam infantiam*. It is thus both beginning and end, an initial and a terminal creature. The initial creature existed before man was, and the terminal creature will be when man is not. Psychologically speaking, this means that the “child” symbolizes the pre-conscious and the post-conscious essence of man. His pre-conscious essence is the unconscious state of earliest childhood; his post-conscious essence is an anticipation by analogy of life after death. In this idea the all-embracing nature of psychic wholeness is expressed. Wholeness is never comprised within the compass of the conscious mind—it includes the indefinite and indefinable extent of the unconscious as well. Wholeness, empirically speaking, is therefore of immeasurable extent, older and younger than consciousness and enfolding it in time and space. This is no speculation, but an immediate psychic experience. Not only is the conscious process continually accompanied, it is often guided, helped, or interrupted, by unconscious happenings. The child had a psychic life before it had consciousness. Even the adult still says and does things whose significance he realizes only later, if ever. And yet he said them and did them as if he knew what they meant. Our dreams are continually saying things beyond our conscious comprehension (which is why they are so useful in the therapy of neuroses). We have intimations and intuitions from unknown sources. Fears, moods, plans, and hopes come to us with no visible causation. These concrete experiences are at the bottom of our feeling that we know ourselves very little; at the bottom, too, of the painful conjecture that we might have surprises in store for ourselves.

[300] Primitive man is no puzzle to himself. The question “What is man?” is the question that man has always kept until last. Primitive man has so much psyche outside his conscious mind that the experience of something psychic outside him is far more familiar to him than to us. Consciousness hedged about by psychic powers, sustained or threatened

or deluded by them, is the age-old experience of mankind. This experience has projected itself into the archetype of the child, which expresses man’s wholeness. The “child” is all that is abandoned and exposed and at the same time divinely powerful; the insignificant, dubious beginning, and the triumphal end. The “eternal child” in man is an indescribable experience, an incongruity, a handicap, and a divine prerogative; an imponderable that determines the ultimate worth or worthlessness of a personality.

IV. CONCLUSION

[301] I am aware that a psychological commentary on the child archetype without detailed documentation must remain a mere sketch. But since this is virgin territory for the psychologist, my main endeavour has been to stake out the possible extent of the problems raised by our archetype and to describe, at least cursorily, its different aspects. Clear-cut distinctions and strict formulations are quite impossible in this field, seeing that a kind of fluid interpenetration belongs to the very nature of all archetypes. They can only be roughly circumscribed at best. Their living meaning comes out more from their presentation as a whole than from a single formulation. Every attempt to focus them more sharply is immediately punished by the intangible core of meaning losing its luminosity. No archetype can be reduced to a simple formula. It is a vessel which we can never empty, and never fill. It has a potential existence only, and when it takes shape in matter it is no longer what it was. It persists throughout the ages and requires interpreting ever anew. The archetypes are the imperishable elements of the unconscious, but they change their shape continually.

[302] It is a well-nigh hopeless undertaking to tear a single archetype out of the living tissue of the psyche; but despite their interwovenness they do form units of meaning that can be apprehended intuitively. Psychology, as one of the many expressions of psychic life, operates with ideas which in their turn are derived from archetypal structures and thus generate a somewhat more abstract kind of myth. Psychology therefore translates the archaic speech of myth into a modern mythologem—not yet, of course, recognized as such—which constitutes one element of the myth

"science." This seemingly hopeless undertaking is a *living and lived myth*, satisfying to persons of a corresponding temperament, indeed beneficial in so far as they have been cut off from their psychic origins by neurotic dissociation.

[303] As a matter of experience, we meet the child archetype in spontaneous and in therapeutically induced individuation processes. The first manifestation of the "child" is as a rule a totally unconscious phenomenon. Here the patient identifies himself with his personal infantilism. Then, under the influence of therapy, we get a more or less gradual separation from and objectification of the "child," that is, the identity breaks down and is accompanied by an intensification (sometimes technically induced) of fantasy, with the result that archaic or mythological features become increasingly apparent. Further transformations run true to the hero myth. The theme of "mighty feats" is generally absent, but on the other hand the mythical dangers play all the greater part. At this stage there is usually another identification, this time with the hero, whose role is attractive for a variety of reasons. The identification is often extremely stubborn and dangerous to the psychic equilibrium. If it can be broken down and if consciousness can be reduced to human proportions, the figure of the hero can gradually be differentiated into a symbol of the self.

[304] In practical reality, however, it is of course not enough for the patient merely to *know about* such developments; what counts is his experience of the various transformations. The initial stage of personal infantilism presents the picture of an "abandoned" or "misunderstood" and unjustly treated child with overweening pretensions. The epiphany of the hero (the second identification) shows itself in a corresponding inflation: the colossal pretension grows into a conviction that one is something extraordinary, or else the impossibility of the pretension ever being fulfilled only proves one's own inferiority, which is favourable to the role of the heroic sufferer (a negative inflation). In spite of their contradictoriness, both forms are identical, because conscious megalomania is balanced by unconscious compensatory inferiority and conscious inferiority by unconscious megalomania (you never get one without the other). Once the reef of the second identification has been

successfully circumnavigated, conscious processes can be cleanly separated from the unconscious, and the latter observed objectively. This leads to the possibility of an accommodation with the unconscious, and thus to a possible synthesis of the conscious and unconscious elements of knowledge and action. This in turn leads to a shifting of the centre of personality from the ego to the self.[42]

[305] In this psychological framework the motifs of abandonment, invincibility, hermaphroditism, and beginning and end take their place as distinct categories of experience and understanding.

THE PSYCHOLOGICAL ASPECTS OF THE KORE

[306] Not only is the figure of Demeter and the Kore in its threefold aspect as maiden, mother, and Hecate not unknown to the psychology of the unconscious, it is even something of a practical problem. The “Kore” has her psychological counterpart in those archetypes which I have called the *self* or *supraordinate personality* on the one hand, and the *anima* on the other. In order to explain these figures, with which I cannot assume all readers to be familiar, I must begin with some remarks of a general nature.

[307] The psychologist has to contend with the same difficulties as the mythologist when an exact definition or clear and concise information is demanded of him. The picture is concrete, clear, and subject to no misunderstandings only when it is seen in its habitual context. In this form it tells us everything it contains. But as soon as one tries to abstract the “real essence” of the picture, the whole thing becomes cloudy and indistinct. In order to understand its living function, we must let it remain an organic thing in all its complexity and not try to examine the anatomy of its corpse in the manner of the scientist, or the archaeology of its ruins in the manner of the historian. Naturally this is not to deny the justification of such methods when applied in their proper place.

[308] In view of the enormous complexity of psychic phenomena, a purely phenomenological point of view is, and will be for a long time, the only possible one and the only one with any prospect of success. “Whence” things come and “what” they are, these, particularly in the field of psychology, are questions which are apt to call forth untimely attempts at explanation. Such speculations are moreover based far more on unconscious philosophical premises than on the nature of the phenomena themselves. Psychic phenomena occasioned by unconscious processes are so rich and so multifarious that I prefer to *describe* my findings and

observations and, where possible, to classify them—that is, to arrange them under certain definite types. That is the method of natural science, and it is applied wherever we have to do with multifarious and still unorganized material. One may question the utility or the appropriateness of the categories or types used in the arrangement, but not the correctness of the method itself.

[309] Since for years I have been observing and investigating the products of the unconscious in the widest sense of the word, namely dreams, fantasies, visions, and delusions of the insane, I have not been able to avoid recognizing certain regularities, that is, *types*. There are types of *situations* and types of *figures* that repeat themselves frequently and have a corresponding meaning. I therefore employ the term "motif" to designate these repetitions. Thus there are not only typical dreams but typical motifs in the dreams. These may, as we have said, be situations or figures. Among the latter there are human figures that can be arranged under a series of archetypes, the chief of them being, according to my suggestion,[1] the *shadow*, the *wise old man*, the *child* (including the child hero), the *mother* ("Primordial Mother" and "Earth Mother") as a supraordinate personality ("daemonic" because supraordinate), and her counterpart the *maiden*, and lastly the *anima* in man and the *animus* in woman.

[310] The above types are far from exhausting all the statistical regularities in this respect. The figure of the Kore that interests us here belongs, when observed in a man, to the *anima* type; and when observed in a woman to the type of *supraordinate personality*. It is an essential characteristic of psychic figures that they are duplex or at least capable of duplication; at all events they are bipolar and oscillate between their positive and negative meanings. Thus the "supraordinate" personality can appear in a despicable and distorted form, like for instance Mephistopheles, who is really more positive as a personality than the vapid and unthinking careerist Faust. Another negative figure is the Tom Thumb or Tom Dumb of the folktales. The figure corresponding to the Kore in a woman is generally a double one, i.e., a mother and a maiden, which is to say that she appears now as the one, now as the other. From this I would conclude, for a start, that in the formation of the Demeter-Kore myth the

feminine influence so far outweighed the masculine that the latter had practically no significance. The man's role in the Demeter myth is really only that of seducer or conqueror.

[311] As a matter of practical observation, the Kore often appears in woman as an *unknown young girl*, not infrequently as Gretchen or the unmarried mother.[2] Another frequent modulation is the *dancer*, who is often formed by borrowings from classical knowledge, in which case the "maiden" appears as the *corybant, maenad*, or *nymph*. An occasional variant is the nixie or water-sprite, who betrays her superhuman nature by her fishtail. Sometimes the Kore- and mother-figures slither down altogether to the animal kingdom, the favourite representatives then being the *cat* or the *snake* or the *bear*, or else some black monster of the underworld like the crocodile, or other salamander-like, saurian creatures.[3] The maiden's helplessness exposes her to all sorts of *dangers*, for instance of being devoured by reptiles or ritually slaughtered like a beast of sacrifice. Often there are bloody, cruel, and even obscene *orgies* to which the innocent child falls victim. Sometimes it is a true *nekyia*, a descent into Hades and a quest for the "treasure hard to attain," occasionally connected with orgiastic sexual rites or offerings of menstrual blood to the moon. Oddly enough, the various tortures and obscenities are carried out by an "Earth Mother." There are *drinkings of blood* and *bathings in blood,*[4] also crucifixions. The maiden who crops up in case histories differs not inconsiderably from the vaguely flower-like Kore in that the modern figure is more sharply delineated and not nearly so "unconscious," as the following examples will show.

[312] The figures corresponding to Demeter and Hecate are supra-ordinate, not to say over-life-size "Mothers" ranging from the Pietà type to the Baubo type. The unconscious, which acts as a counterbalance to woman's conventional innocuousness, proves to be highly inventive in this latter respect. I can recall only very few cases where Demeter's own noble figure in its pure form breaks through as an image rising spontaneously from the unconscious. I remember a case, in fact, where a maiden-goddess appears clad all in purest white, but carrying a black monkey in her arms. The Earth Mother is always chthonic and is

occasionally related to the moon, either through the blood-sacrifice already mentioned, or through a child-sacrifice, or else because she is adorned with a sickle moon.[5] In pictorial or plastic representations the Mother is dark deepening to *black*, or *red* (these being her principal colours), and with a primitive or animal expression of face; in form she not infrequently resembles the *neolithic ideal* of the “Venus” of Brassempouy or that of Willendorf, or again the sleeper of Hal Saflieni.[6] Now and then I have come across *multiple breasts*, arranged like those of a sow. The Earth Mother plays an important part in the woman’s unconscious, for all her manifestations are described as “powerful.” This shows that in such cases the Earth Mother element in the conscious mind is abnormally weak and requires strengthening.

[313] In view of all this it is, I admit, hardly understandable why such figures should be reckoned as belonging to the type of “supraordinate personality.” In a scientific investigation, however, one has to disregard moral or aesthetic prejudices and let the facts speak for themselves. The *maiden* is often described as not altogether human in the usual sense; she is either of unknown or peculiar origin, or she looks strange or undergoes strange experiences, from which one is forced to infer the maiden’s extraordinary, myth-like nature. Equally and still more strikingly, the Earth Mother is a divine being—in the classical sense. Moreover, she does not by any means always appear in the guise of Baubo, but, for instance, more like Queen Venus in the *Hypnerotomachia Poliphili*, though she is invariably heavy with destiny. The often unaesthetic forms of the Earth Mother are in keeping with a prejudice of the modern feminine unconscious; this prejudice was lacking in antiquity. The underworld nature of Hecate, who is closely connected with Demeter, and Persephone’s fate both point nevertheless to the dark side of the human psyche, though not to the same extent as the modern material.

[314] The “supraordinate personality” is the total man, i.e., man as he really is, not as he appears to himself. To this wholeness the unconscious psyche also belongs, which has its requirements and needs just as consciousness has. I do not want to interpret the unconscious personalistically and assert, for instance, that fantasy-images like those described above are the “wish-fulfilments” due to repression. These

images were as such never conscious and consequently could never have been repressed. I understand the unconscious rather as an *impersonal* psyche common to all men, even though it expresses itself through a personal consciousness. When anyone breathes, his breathing is not a phenomenon to be interpreted personally. The mythological images belong to the structure of the unconscious and are an impersonal possession; in fact, the great majority of men are far more *possessed by* them than possessing them. Images like those described above give rise under certain conditions to corresponding disturbances and symptoms, and it is then the task of medical therapy to find out whether and how and to what extent these impulses can be integrated with the conscious personality, or whether they are a secondary phenomenon which some defective orientation of consciousness has brought out of its normal potential state into actuality. Both possibilities exist in practice.

[315] I usually describe the supraordinate personality as the "self," thus making a sharp distinction between the ego, which, as is well known, extends only as far as the conscious mind, and the *whole* of the personality, which includes the unconscious as well as the conscious component. The ego is thus related to the self as part to whole. To that extent the self is supraordinate. Moreover, the self is felt empirically not as subject but as object, and this by reason of its unconscious component, which can only come to consciousness indirectly, by way of projection. Because of its unconscious component the self is so far removed from the conscious mind that it can only be partially expressed by human figures; the other part of it has to be expressed by objective, abstract symbols. The human figures are father and son, mother and daughter, king and queen, god and goddess. Theriomorphic symbols are the dragon, snake, elephant, lion, bear, and other powerful animals, or again the spider, crab, butterfly, beetle, worm, etc. Plant symbols are generally flowers (lotus and rose). These lead on to geometrical figures like the circle, the sphere, the square, the quaternity, the clock, the firmament, and so on.[7] The indefinite extent of the unconscious component makes a comprehensive description of the human personality impossible. Accordingly, the unconscious supplements the picture with living figures ranging from the animal to the divine, as the two extremes outside man, and rounds out the

animal extreme, through the addition of vegetable and inorganic abstractions, into a microcosm. These addenda have a high frequency in anthropomorphic divinities, where they appear as "attributes."

[316] Demeter and Kore, mother and daughter, extend the feminine consciousness both upwards and downwards. They add an "older and younger," "stronger and weaker" dimension to it and widen out the narrowly limited conscious mind bound in space and time, giving it intimations of a greater and more comprehensive personality which has a share in the eternal course of things. We can hardly suppose that myth and mystery were invented for any conscious purpose; it seems much more likely that they were the involuntary revelation of a psychic, but unconscious, pre-condition. The psyche pre-existent to consciousness (e.g., in the child) participates in the maternal psyche on the one hand, while on the other it reaches across to the daughter psyche. We could therefore say that every mother contains her daughter in herself and every daughter her mother, and that every woman extends backwards into her mother and forwards into her daughter. This participation and intermingling give rise to that peculiar uncertainty as regards *time*: a woman lives earlier as a mother, later as a daughter. The conscious experience of these ties produces the feeling that her life is spread out over generations—the first step towards the immediate experience and conviction of being outside time, which brings with it a feeling of *immortality*. The individual's life is elevated into a type, indeed it becomes the archetype of woman's fate in general. This leads to a restoration or *apocatastasis* of the lives of her ancestors, who now, through the bridge of the momentary individual, pass down into the generations of the future. An experience of this kind gives the individual a place and a meaning in the life of the generations, so that all unnecessary obstacles are cleared out of the way of the life-stream that is to flow through her. At the same time the individual is rescued from her isolation and restored to wholeness. All ritual preoccupation with archetypes ultimately has this aim and this result.

[317] It is immediately clear to the psychologist what cathartic and at the same rejuvenating effects must flow from the Demeter cult into the feminine psyche, and what a lack of psychic hygiene characterizes our

culture, which no longer knows the kind of wholesome experience afforded by Eleusinian emotions.

[318] I take full account of the fact that not only the psychologically minded layman but the professional psychologist and psychiatrist as well, and even the psychotherapist, do not possess an adequate knowledge of their patients' archetypal material, in so far as they have not specially investigated this aspect of the phenomenology of the unconscious. For it is precisely in the field of psychiatric and psychotherapeutic observation that we frequently meet with cases characterized by a rich crop of archetypal symbols.[8] Since the necessary historical knowledge is lacking to the physician observing them, he is not in a position to perceive the parallelism between his observations and the findings of anthropology and the humane sciences in general. Conversely, an expert in mythology and comparative religion is as a rule no psychiatrist and consequently does not know that his mythologems are still fresh and living—for instance, in dreams and visions—in the hidden recesses of our most personal life, which we would on no account deliver up to scientific dissection. The archetypal material is therefore the great unknown, and it requires special study and preparation even to collect such material.

[319] It does not seem to me superfluous to give a number of examples from my case histories which bring out the occurrence of archetypal images in dreams or fantasies. Time and again with my public I come across the difficulty that they imagine illustration by "a few examples" to be the simplest thing in the world. In actual fact it is almost impossible, with a few words and one or two images torn out of their context, to demonstrate anything. This only works when dealing with an expert. What Perseus has to do with the Gorgon's head would never occur to anyone who did not know the myth. So it is with the individual images: they need a context, and the context is not only a myth but an individual anamnesis. Such contexts, however, are of enormous extent. Anything like a complete series of images would require for its proper presentation a book of about two hundred pages. My own investigation of the Miller fantasies gives some idea of this.[9] It is therefore with the greatest hesitation that I make the attempt to illustrate from case-histories. The material I shall use comes partly from normal, partly from slightly

neurotic, persons. It is part dream, part vision, or dream mixed with vision. These “visions” are far from being hallucinations or ecstatic states; they are spontaneous, visual images of fantasy or so-called *active imagination*. The latter is a method (devised by myself) of introspection for observing the stream of interior images. One concentrates one’s attention on some impressive but unintelligible dream-image, or on a spontaneous visual impression, and observes the changes taking place in it. Meanwhile, of course, all criticism must be suspended and the happenings observed and noted with absolute objectivity. Obviously, too, the objection that the whole thing is “arbitrary” or “thought up” must be set aside, since it springs from the anxiety of an ego-consciousness which brooks no master besides itself in its own house. In other words, it is the inhibition exerted by the conscious mind on the unconscious.

[320] Under these conditions, long and often very dramatic series of fantasies ensue. The advantage of this method is that it brings a mass of unconscious material to light. Drawing, painting, and modelling can be used to the same end. Once a visual series has become dramatic, it can easily pass over into the auditive or linguistic sphere and give rise to dialogues and the like. With slightly pathological individuals, and particularly in the not infrequent cases of latent schizophrenia, the method may, in certain circumstances, prove to be rather dangerous and therefore requires medical control. It is based on a deliberate weakening of the conscious mind and its inhibiting effect, which either limits or suppresses the unconscious. The aim of the method is naturally therapeutic in the first place, while in the second it also furnishes rich empirical material. Some of our examples are taken from this. They differ from dreams only by reason of their better form, which comes from the fact that the contents were perceived not by a dreaming but by a waking consciousness. The examples are from women in middle life.

1. *Case X (spontaneous visual impressions, in chronological order*)

[321] i. “*I saw a white bird with outstretched wings. It alighted on the figure of a woman, clad in blue, who sat there like an* antique statue. *The*

bird perched on her hand, and in it she held a grain of wheat. *The bird took it in its beak and flew into the sky again*."

[322] For this X painted a picture: a blue-clad, archaically simple "Mother"-figure on a white marble base. Her maternity is emphasized by the large breasts.

[323] ii. *A bull lifts a child up from the ground and carries it to the antique statue of a woman. A naked young girl with a wreath of flowers in her hair appears, riding on a white bull. She takes the child and throws it into the air like a ball and catches it again. The white bull carries them both to a temple. The girl lays the child on the ground, and so on (initiation follows*).

[324] In this picture the *maiden* appears, rather in the form of Europa. (Here a certain school knowledge is being made use of.) Her nakedness and the wreath of flowers point to Dionysian abandonment. The game of ball with the child is the motif of some secret rite which always has to do with "child-sacrifice." (Cf. the accusations of ritual murder levelled by the pagans against the Christians and by the Christians against the Jews and Gnostics; also the Phoenician child-sacrifices, rumours about the Black Mass, etc., and "the ball-game in church.")[10]

[325] iii. "*I saw a golden* pig *on a pedestal. Beast-like beings* danced *round it in a circle. We made haste to dig* a hole in the ground. *I reached in and found* water. *Then a man appeared* in a golden carriage. *He jumped into the hole and began swaying back and forth, as if dancing…. I swayed in rhythm with him. Then he suddenly leaped out of the hole, raped me, and got me with child.*"

[326] X is identical with the young girl, who often appears as a *youth*, too. This youth is an animus-figure, the embodiment of the masculine element in a woman. Youth and young girl together form a syzygy or *coniunctio* which symbolizes the essence of wholeness (as also does the Platonic hermaphrodite, who later became the symbol of perfected wholeness in alchemical philosophy). X evidently dances with the rest, hence "*we* made haste." The parallel with the motifs stressed by Kerényi seems to me remarkable.

[327] iv. *“I saw a beautiful youth with golden cymbals, dancing and leaping in joy and abandonment…. Finally he fell to the ground and buried his face in the flowers. Then he sank into the lap of a* very old mother. *After a time he got up and jumped into the water, where he sported like a* dolphin…. *I saw that his hair was golden. Now we were leaping together, hand in hand. So we came to a* gorge….” *In leaping the gorge the youth falls into the chasm. X is left alone and comes to a river where a white* sea-horse *is waiting for her with a golden boat*.

[328] In this scene X is the youth; therefore he disappears later, leaving her the sole heroine of the story. She is the child of the “very old mother,” and is also the dolphin, the youth lost in the gorge, and the bride evidently expected by Poseidon. The peculiar overlapping and displacement of motifs in all this individual material is about the same as in the mythological variants. X found the youth in the lap of the mother so impressive that she painted a picture of it. The figure is the same as in item i; only, instead of the grain of wheat in her hand, there is the body of the youth lying completely exhausted in the lap of the gigantic mother.

[329] v. *There now follows a sacrifice of sheep, during which a game of ball is likewise played with the sacrificial animal. The participants* smear themselves with the sacrificial blood, *and afterwards bathe in the pulsing gore. X is thereupon transformed into a* plant.

[330] vi. *After that X comes to a* den of snakes, *and the snakes wind all round her*.

[331] vii. *In a den of snakes beneath the sea there is a* divine woman, *asleep*. (She is shown in the picture as much larger than the others.) *She is wearing a blood-red garment that covers only the lower half of her body. She has a dark skin, full red lips, and seems to be of great physical strength. She kisses X, who is obviously in the role of the young girl, and hands her as a present to the many men who are standing by, etc*.

[332] This chthonic goddess is the typical Earth Mother as she appears in so many modern fantasies.

[333] viii. *As X emerged from the depths and saw the light again, she experienced a kind of illumination: white flames played about her head*

as she walked through waving fields of grain.

[334] With this picture the Mother-episode ended. Although there is not the slightest trace of any known myth being repeated, the motifs and the connections between them are all familiar to us from mythology. These images present themselves spontaneously and are based on no conscious knowledge whatever. I have applied the method of active imagination to myself over a long time and have observed numerous symbols and symbolic associations which in many cases I was only able to verify years afterwards in texts of whose existence I was totally ignorant. It is the same with dreams. Some years ago I dreamed for example that: *I was climbing slowly and toilsomely up a mountain. When I had reached, as I imagined, the top, I found that I was standing on the edge of a plateau. The crest that represented the real top of the mountain only rose far off in the distance. Night was coming on, and I saw, on the dark slope opposite, a brook flowing down with a metallic shimmer, and two paths leading upwards, one to the left, the other to the right, winding like serpents. On the crest, to the right, there was a hotel. Down below, the brook ran to the left with a bridge leading across.*

[335] Not long afterwards I discovered the following “allegory” in an obscure alchemical treatise. In his *Speculativae philosophiae*[11] the Frankfurt physician Gerard Dorn, who lived in the second half of the sixteenth century, describes the “Mundi peregrinatio, quam erroris viam appellamus” (Tour of the world, which we call the way of error) on the one hand and the “Via veritatis” on the other. Of the first way the author says:

> The human race, whose nature it is to resist God, does not cease to ask how it may, by its own efforts, escape the pitfalls which it has laid for itself. But it does not ask help from Him on whom alone depends every gift of mercy. Hence it has come about that men have built for themselves a great Workshop on the left-hand side of the road … presided over by Industry. After this has been attained, they turn aside from Industry and bend their steps towards the *second region of the world*, making their crossing *on the bridge of infirmity*…. But because the good God desires to draw them back. He allows their infirmities to

rule over them; then, seeking as before a remedy in themselves [industry!], they flock *to the great Hospital likewise built on the left*, presided over by Medicine. Here there is a great multitude of apothecaries, surgeons, and physicians, [etc.].[12]

[336] Of the "way of truth," which is the "right" way, our author says: "… you will come to the camp of Wisdom and on being received there, you will be refreshed with food far more powerful than before." Even the brook is there: "… a stream of living water flowing with such wonderful artifice from the mountain peak. (From the Fountain of Wisdom the waters gush forth.)"[13]

[337] An important difference, compared with my dream, is that here, apart from the situation of the hotel being reversed, the river of Wisdom is on the right and not, as in my dream, in the middle of the picture.

[338] It is evident that in my dream we are not dealing with any known "myth" but with a group of ideas which might easily have been regarded as "individual," i.e., unique. A thorough analysis, however, could show without difficulty that it is an archetypal image such as can be reproduced over and over again in any age and any place. But I must admit that the archetypal nature of the dream-image only became clear to me when I read Dorn. These and similar incidents I have observed repeatedly not only in myself but in my patients. But, as this example shows, it needs special attention if such parallels are not to be missed.

[339] The antique Mother-image is not exhausted with the figure of Demeter. It also expresses itself in Cybele-Artemis. The next case points in this direction.

2. *Case Y (dreams)*

[340] i. *"I am wandering over a great mountain; the way is lonely, wild, and difficult. A woman comes down from the sky to accompany and help me. She is all bright with light hair and shining eyes. Now and then she vanishes. After going on for some time alone I notice that I have left my stick somewhere, and must turn back to fetch it. To do this I have to pass a terrible monster, an enormous bear. When I came this way the first time*

I had to pass it, but then the sky-woman protected me. Just as I am passing the beast and he is about to come at me, she stands beside me again, and at her look the bear lies down quietly and lets us pass. Then the sky-woman vanishes.”

[341] Here we have a maternally protective goddess related to bears, a kind of Diana or the Gallo-Roman Dea Artio. The sky-woman is the positive, the bear the negative aspect of the “supraordinate personality,” which extends the conscious human being upwards into the celestial and downwards into the animal regions.

[342] ii. “*We go through a door into a tower-like room, where we climb a long flight of steps. On one of the topmost steps I read an inscription:* ‘Vis ut sis.’ *The steps end in a temple situated on the crest of a wooded mountain, and there is no other approach. It is the shrine of* Ursanna, *the bear-goddess and Mother of God in one. The temple is of red stone. Bloody sacrifices are offered there. Animals are standing about the altar. In order to enter the temple precincts one has to be transformed into an animal—a beast of the forest. The temple has the form of a cross with equal arms and a circular space in the middle, which is not roofed, so that one can look straight up at the sky and the constellation of the Bear. On the altar in the middle of the open space there stands the moon-bowl, from which smoke or vapour continually rises. There is also a huge image of the goddess, but it cannot be seen clearly. The worshippers, who have been changed into animals and to whom I also belong, have to touch the goddess’s foot with their own foot, whereupon the image gives them a sign or an oracular utterance like* ‘Vis ut sis.’”

[343] In this dream the bear-goddess emerges plainly, although her statue “cannot be seen clearly.” The relationship to the self, the supraordinate personality, is indicated not only by the oracle “Vis ut sis” but by the quaternity and the circular central precinct of the temple. From ancient times any relationship to the stars has always symbolized eternity. The soul comes “from the stars” and returns to the stellar regions. “Ursanna’s” relation to the moon is indicated by the “moon-bowl.”

[344] The moon-goddess also appears in children’s dreams. A girl who grew up in peculiarly difficult psychic circumstances had a recurrent

dream between her seventh and tenth years: “*The moon-lady was always waiting for me down by the water at the landing-stage, to take me to her island*.” Unfortunately she could never remember what happened there, but it was so beautiful that she often prayed she might have this dream again. Although, as is evident, the two dreamers are not identical, the *island motif* also occurred in the previous dream as the inaccessible mountain crest.

[345] Thirty years later, the dreamer of the moon-lady had a dramatic fantasy:

[346] “*I am climbing a steep dark mountain, on top of which stands a domed castle. I enter and go up a winding stairway to the left. Arriving inside the dome, I find myself in the presence of a woman wearing a head-dress of cow’s horns. I recognize her immediately as the* moon-lady *of my childhood dreams. At her behest I look to the* right *and see a dazzlingly bright sun shining on the other side of a deep chasm. Over the chasm stretches a narrow, transparent bridge, upon which I step, conscious of the fact that in no circumstances must I look down. An uncanny fear seizes me, and I hesitate. Treachery seems to be in the air, but at last I go across and stand before the sun. The sun speaks: ‘If you can approach me nine times without being burned, all will be well.’ But I grow more and more afraid, finally I do look down, and I see a black tentacle like that of an octopus groping towards me from underneath the sun. I step back in fright and plunge into the abyss. But instead of being dashed to pieces I lie in the arms of the Earth Mother. When I try to look into her face, she turns to clay, and I find myself lying on the earth.*”

[347] It is remarkable how the beginning of this fantasy agrees with the dream. The moon-lady above is clearly distinguished from the Earth Mother below. The former urges the dreamer to her somewhat perilous adventure with the sun; the latter catches her protectively in her maternal arms. The dreamer, as the one in danger, would therefore seem to be in the role of the Kore.

[348] Let us now turn back to our dream-series:

[349] iii. *Y sees two pictures in a dream, painted by the Scandinavian painter Hermann Christian Lund.*

> I. *"The first picture is of a Scandinavian peasant room. Peasant girls in gay costumes are walking about arm in arm (that is, in a row). The middle one is smaller than the rest and, besides this, has a hump and keeps turning her head back. This, together with her peculiar glance, gives her a witchlike look."*
>
> II. *"The second picture shows a dragon with its neck stretched out over the whole picture and especially over a girl, who is in the dragon's power and cannot move, for as soon as she moves, the dragon, which can make its body big or little at will, moves too; and when the girl wants to get away it simply stretches out its neck over her, and so catches her again. Strangely enough, the girl has no face, at least I couldn't see it."*

[350] The painter is an invention of the dream. The animus often appears as a painter or has some kind of projection apparatus, or is a cinema-operator or owner of a picture-gallery. All this refers to the animus as the function mediating between conscious and unconscious: the unconscious contains pictures which are transmitted, that is, made manifest, by the animus, either as fantasies or, unconsciously, in the patient's own life and actions. The animus-projection gives rise to fantasied relations of love and hatred for "heroes" or "demons." The favourite victims are tenors, artists, movie-stars, athletic champions, etc. In the first picture the maiden is characterized as demonic, with a hump and an evil look "over her shoulder." (Hence amulets against the evil eye are often worn by primitives on the nape of the neck, for the vulnerable spot is at the back, where you can't see.)

[351] In the second picture the "maiden" is portrayed as the innocent victim of the monster. Just as before there was a relationship of identity between the sky-woman and the bear, so here between the young girl and the dragon—which in practical life is often rather more than just a bad joke. Here it signifies a widening of the conscious personality, i.e., through the helplessness of the victim on the one hand and the dangers of the humpback's evil eye and the dragon's might on the other.

[352] iv (part dream, part visual imagination). *"A magician is demonstrating his tricks to an Indian prince. He produces a beautiful young girl from under a cloth. She is a dancer, who has the power to change her shape or at least hold her audience spell-bound by faultless illusion. During the dance she dissolves with the music into a swarm of bees. Then she changes into a leopard, then into a jet of water, then into an octopus that has twined itself about a young pearl-fisher. Between times, she takes human form again at the dramatic moment. She appears as a she-ass bearing two baskets of wonderful fruits. Then she becomes a many-coloured peacock. The prince is beside himself with delight and calls her to him. But she dances on, now naked, and even tears the skin from her body, and finally falls down—a naked skeleton. This is buried, but at night a lily grows out of the grave, and from its cup there rises a* white lady, *who floats slowly up to the sky."*

[353] This piece describes the successive transformations of the illusionist (artistry in illusion being a specifically feminine talent) until she becomes a transfigured personality. The fantasy was not invented as a sort of allegory; it was part dream, part spontaneous imagery.

[354] v. *"I am in a church made of grey sandstone. The apse is built rather high. Near the tabernacle a girl in a red dress is hanging on the stone cross of the window. (Suicide?)"*

[355] Just as in the preceding cases the sacrifice of a child or a sheep played a part, so here the sacrifice of the maiden hanging on the "cross." The death of the dancer is also to be understood in this sense, for these maidens are always doomed to die, because their exclusive domination of the feminine psyche hinders the individuation process, that is, the maturation of personality. The "maiden" corresponds to the anima of the man and makes use of it to gain her natural ends, in which illusion plays the greatest role imaginable. But as long as a woman is content to be a *femme à homme*, she has no feminine individuality. She is empty and merely glitters—a welcome vessel for masculine projections. Woman as a personality, however, is a very different thing: here illusion no longer works. So that when the question of personality arises, which is as a rule

the painful fact of the second half of life, the childish form of the self disappears too.

[356] All that remains for me now is to describe the Kore as observable in man, the *anima*. Since a man's wholeness, in so far as he is not constitutionally homosexual, can only be a masculine personality, the feminine figure of the anima cannot be catalogued as a type of supraordinate personality but requires a different evaluation and position. In the products of unconscious activity, the anima appears equally as maiden and mother, which is why a personalistic interpretation always reduces her to the personal mother or some other female person. The real meaning of the figure naturally gets lost in the process, as is inevitably the case with all these reductive interpretations whether in the sphere of the psychology of the unconscious or of mythology. The innumerable attempts that have been made in the sphere of mythology to interpret gods and heroes in a solar, lunar, astral, or meteorological sense contribute nothing of importance to the understanding of them; on the contrary, they all put us on a false track. When, therefore, in dreams and other spontaneous products, we meet with an unknown female figure whose significance oscillates between the extremes of goddess and whore, it is advisable to let her keep her independence and not reduce her arbitrarily to something known. If the unconscious shows her as an "unknown," this attribute should not be got rid of by main force with a view to arriving at a "rational" interpretation. Like the "supraordinate personality," the anima is bipolar and can therefore appear positive one moment and negative the next; now young, now old; now mother, now maiden; now a good fairy, now a witch; now a saint, now a whore. Besides this ambivalence, the anima also has "occult" connections with "mysteries," with the world of darkness in general, and for that reason she often has a religious tinge. Whenever she emerges with some degree of clarity, she always has a peculiar relationship to *time:* as a rule she is more or less immortal, because outside time. Writers who have tried their hand at this figure have never failed to stress the anima's peculiarity in this respect. I would refer to the classic descriptions in Rider Haggard's *She* and *The Return of She*, in Pierre Benoît's *L'Atlantide*, and above all in the novel of the young American author, William M. Sloane, *To Walk*

the Night. In all these accounts, the anima is outside time as we know it and consequently immensely old or a being who belongs to a different order of things.

[357] Since we can no longer or only partially express the archetypes of the unconscious by means of figures in which we religiously believe, they lapse into unconsciousness again and hence are unconsciously projected upon more or less suitable human personalities. To the young boy a clearly discernible anima-form appears in his mother, and this lends her the radiance of power and superiority or else a daemonic aura of even greater fascination. But because of the anima's ambivalence, the projection can be entirely negative. Much of the fear which the female sex arouses in men is due to the projection of the anima-image. An infantile man generally has a maternal anima; an adult man, the figure of a younger woman. The senile man finds compensation in a very young girl, or even a child.

[3. *Case* Z]

[358] The anima also has affinities with animals, which symbolize her characteristics. Thus she can appear as a snake or a tiger or a bird. I quote by way of example a dream-series that contains transformations of this kind:[14]

[359] i. *A white bird perches on a table. Suddenly it changes into a fair-haired seven-year-old girl and just as suddenly back into a bird, which now speaks with a human voice*.

[360] ii. *In an underground house, which is really the underworld, there lives an old magician and prophet with his "daughter." She is, however, not really his daughter; she is a dancer, a very loose person, but is blind and seeks healing*.

[361] iii. *A lonely house in a wood, where an old scholar is living. Suddenly his daughter appears, a kind of ghost, complaining that people only look upon her as a figment of fancy*.

[362] iv. *On the façade of a church there is a Gothic Madonna, who is alive and is the "unknown and yet known woman." Instead of a child, she*

holds in her arms a sort of flame or a snake or a dragon.

[363] v. *A black-clad "countess" kneels in a dark chapel. Her dress is hung with costly pearls. She has red hair, and there is something uncanny about her. Moreover, she is surrounded by the spirits of the dead*.

[364] vi. *A female snake comports herself tenderly and insinuatingly, speaking with a human voice. She is only "accidentally" shaped like a snake*.

[365] vii. *A bird speaks with the same voice, but shows herself helpful by trying to rescue the dreamer from a dangerous situation*.

[366] viii. *The unknown woman sits, like the dreamer, on the tip of a church-spire and stares at him uncannily across the abyss*.

[367] ix. *The unknown woman suddenly appears as an old female attendant in an underground public lavatory with a temperature of 40° below zero*.

[368] x. *The unknown woman leaves the house as a* petite bourgeoise *with a female relation, and in her place there is suddenly an over-life-size goddess clad in blue, looking like Athene*.

[369] xi. *Then she appears in a church, taking the place of the altar, still over-life-size but with veiled face*.

[370] In all these dreams[15] the central figure is a mysterious feminine being with qualities like those of no woman known to the dreamer. The unknown is described as such in the dreams themselves, and reveals her extraordinary nature firstly by her power to change shape and secondly by her paradoxical ambivalence. Every conceivable shade of meaning glitters in her, from the highest to the lowest.

[371] *Dream i* shows the anima as elflike, i.e., only partially human. She can just as well be a bird, which means that she may belong wholly to nature and can vanish (i.e., become unconscious) from the human sphere (i.e., consciousness).

[372] *Dream ii* shows the unknown woman as a mythological figure from the beyond (the unconscious). She is the *soror* or *filia mystica* of a hierophant or "philosopher," evidently a parallel to those mystic syzygies

which are to be met with in the figures of Simon Magus and Helen, Zosimus and Theosebeia, Comarius and Cleopatra, etc. Our dream-figure fits in best with Helen. A really admirable description of anima-psychology in a woman is to be found in Erskine's *Helen of Troy*.

[373] *Dream iii* presents the same theme, but on a more "fairytale-like" plane. Here the anima is shown as rather spookish.

[374] *Dream iv* brings the anima nearer to the Mother of God. The "child" refers to the mystic speculations on the subject of the redemptive serpent and the "fiery" nature of the redeemer.

[375] In *dream v*, the anima is visualized somewhat romantically as the "distinguished" fascinating woman, who nevertheless has dealings with spirits.

[376] *Dreams vi and vii* bring theriomorphic variations. The anima's identity is at once apparent to the dreamer because of the voice and what it says. The anima has "accidentally" taken the form of a snake, just as in *dream i* she changed with the greatest ease into a bird and back again. As a snake, she is playing the negative role, as a bird the positive.

[377] *Dream viii* shows the dreamer confronted with his anima. This takes place high above the ground (i.e., above human reality). Obviously it is a case of dangerous fascination by the anima.

[378] *Dream ix* signifies the anima's deep plunge into an extremely "subordinate" position, where the last trace of fascination has gone and only human sympathy is left.

[379] *Dream x* shows the paradoxical double nature of the anima: banal mediocrity and Olympian divinity.

[380] *Dream xi* restores the anima to the Christian church, not as an icon but as the altar itself. The altar is the place of sacrifice and also the receptacle for consecrated relics.

[381] To throw even a moderate light on all these anima associations would require special and very extensive investigation, which would be out of place here because, as we have already said, the anima has only an indirect bearing on the interpretation of the Kore figure. I have presented

this dream-series simply for the purpose of giving the reader some idea of the empirical material on which the idea of the anima is based.[16] From this series and others like it we get an average picture of that strange factor which has such an important part to play in the masculine psyche, and which naïve presumption invariably identifies with certain women, imputing to them all the illusions that swarm in the male Eros.

[382] It seems clear enough that the man's anima found occasion for projection in the Demeter cult. The Kore doomed to her subterranean fate, the two-faced mother, and the theriomorphic aspects of both afforded the anima ample opportunity to reflect herself, shimmering and equivocal, in the Eleusinian cult, or rather to experience herself there and fill the celebrants with her unearthly essence, to their lasting gain. For a man, anima experiences are always of immense and abiding significance.

[383] But the Demeter-Kore myth is far too feminine to have been merely the result of an anima-projection. Although the anima can, as we have said, experience herself in Demeter-Kore, she is yet of a wholly different nature. She is in the highest degree *femme à homme*, whereas Demeter-Kore exists on the plane of mother-daughter experience, which is alien to man and shuts him out. In fact, the psychology of the Demeter cult bears all the features of a matriarchal order of society, where the man is an indispensable but on the whole disturbing factor.

V

THE PHENOMENOLOGY OF THE SPIRIT IN FAIRYTALES

ON THE PSYCHOLOGY OF THE TRICKSTER-FIGURE

THE PHENOMENOLOGY OF THE SPIRIT IN FAIRYTALES[1]

[384] One of the unbreakable rules in scientific research is to take an object as known only so far as the inquirer is in a position to make scientifically valid statements about it. "Valid" in this sense simply means what can be verified by facts. The object of inquiry is the natural phenomenon. Now in psychology, one of the most important phenomena is the *statement*, and in particular its form and content, the latter aspect being perhaps the more significant with regard to the nature of the psyche. The first task that ordinarily presents itself is the description and arrangement of events, then comes the closer examination into the laws of their living behaviour. To inquire into the *substance* of what has been observed is possible in natural science only where there is an Archimedean point outside. For the psyche, no such outside standpoint exists—only the psyche can observe the psyche. Consequently, knowledge of the psychic substance is impossible for us, at least with the means at present available. This does not rule out the possibility that the atomic physics of the future may supply us with the said Archimedean point. For the time being, however, our subtlest lucubrations can establish no more than is expressed in the statement: this is how the psyche behaves. The honest investigator will piously refrain from meddling with questions of substance. I do not think it superfluous to acquaint my reader with the necessary limitations that psychology voluntarily imposes on itself, for he will then be in a position to appreciate the phenomenological standpoint of modern psychology, which is not always understood. This standpoint does not exclude the existence of faith, conviction, and experienced certainties of whatever description, nor does it contest their possible validity. Great as is their importance for the individual and for collective life, psychology completely lacks the means to prove their validity in the scientific sense. One may lament this incapacity on the part of science, but that does not enable it to jump over its own shadow.

I. CONCERNING THE WORD ‘SPIRIT’

[385] The word “spirit” possesses such a wide range of application that it requires considerable effort to make clear to oneself all the things it can mean. Spirit, we say, is the principle that stands in opposition to matter. By this we understand an immaterial substance or form of existence which on the highest and most universal level is called “God.” We imagine this immaterial substance also as the vehicle of psychic phenomena or even of life itself. In contradiction to this view there stands the antithesis: spirit and nature. Here the concept of spirit is restricted to the supernatural or anti-natural, and has lost its substantial connection with psyche and life. A similar restriction is implied in Spinoza’s view that spirit is an attribute of the One Substance. Hylozoism goes even further, taking spirit to be a quality of matter.

[386] A very widespread view conceives spirit as a higher and psyche as a lower principle of activity, and conversely the alchemists thought of spirit as the *ligamentum animae et corporis*, obviously regarding it as a *spiritus vegetativus* (the later life-spirit or nerve-spirit). Equally common is the view that spirit and psyche are essentially the same and can be separated only arbitrarily. Wundt takes spirit as “the inner being, regardless of any connection with an outer being.” Others restrict spirit to certain psychic capacities or functions or qualities, such as the capacity to think and reason in contradistinction to the more “soulful” sentiments. Here spirit means the sum-total of all the phenomena of rational thought, or of the intellect, including the will, memory, imagination, creative power, and aspirations motivated by ideals. Spirit has the further connotation of *sprightliness*, as when we say that a person is “spirited,” meaning that he is versatile and full of ideas, with a brilliant, witty, and surprising turn of mind. Again, spirit denotes a certain attitude or the principle underlying it, for instance, one is “educated in the spirit of Pestalozzi,” or one says that the “spirit of Weimar is the immortal German heritage.” A special instance is the time-spirit, or spirit of the age, which stands for the principle and motive force behind certain views, judgments, and actions of a collective nature. Then there is the “objective spirit,”[2] by which is meant the whole stock of man’s cultural possessions with particular regard to his intellectual and religious achievements.

[387] As linguistic usage shows, spirit in the sense of an attitude has unmistakable leanings towards personification: the spirit of Pestalozzi can also be taken concretistically as his ghost or imago, just as the spirits of Weimar are the personal spectres of Goethe and Schiller; for spirit still has the spookish meaning of the soul of one departed. The "cold breath of the spirits" points on the one hand to the ancient affinity of *ψυχή* with ψυχός and ψῡχος, which both mean 'cold,' and on the other hand to the original meaning of *πνεῡμα*, which simply denoted 'air in motion'; and in the same way animus and anima were connected with *άνεμος*, 'wind.' The German word *Geist* probably has more to do with something frothing, effervescing, or fermenting; hence affinities with *Gischt* (foam), *Gäscht* (yeast), *ghost*, and also with the emotional *ghastly* and *aghast*, are not to be rejected. From time immemorial emotion has been regarded as possession, which is why we still say today, of a hot-tempered person, that he is possessed of a devil or that an evil spirit has entered into him.[3] Just as, according to the old view, the spirits or souls of the dead are of a subtle disposition like a vapour or a smoke, so to the alchemist *spiritus* was a subtle, volatile, active, and vivifying essence, such as alcohol was understood to be, and all the arcane substances. On this level, spirit includes spirits of salts, spirits of ammonia, formic spirit, etc.

[388] This score or so of meanings and shades of meaning attributable to the word "spirit" make it difficult for the psychologist to delimit his subject conceptually, but on the other hand they lighten the task of describing it, since the many different aspects go to form a vivid and concrete picture of the phenomenon in question. We are concerned with a functional complex which originally, on the primitive level, was felt as an invisible, breathlike "presence." William James has given us a lively account of this primordial phenomenon in his *Varieties of Religious Experience*. Another well-known example is the wind of the Pentecostal miracle. The primitive mentality finds it quite natural to personify the invisible presence as a ghost or demon. The souls or spirits of the dead are identical with the psychic activity of the living; they merely continue it. The view that the psyche is a spirit is implicit in this. When therefore something psychic happens in the individual which he feels as belonging to himself, that something is his own spirit. But if anything psychic

happens which seems to him strange, then it is somebody else's spirit, and it may be causing a possession. The spirit in the first case corresponds to the subjective attitude, in the latter case to public opinion, to the time-spirit, or to the original, not yet human, anthropoid disposition which we also call the *unconscious*.

[389] In keeping with its original wind-nature, spirit is always an active, winged, swift-moving being as well as that which vivifies, stimulates, incites, fires, and inspires. To put it in modern language, spirit is the dynamic principle, forming for that very reason the classical antithesis of matter—the antithesis, that is, of its stasis and inertia. Basically it is the contrast between life and death The subsequent differentiation of this contrast leads to the actually very remarkable opposition of spirit and nature. Even though spirit is regarded as essentially alive and enlivening, one cannot really feel nature as unspiritual and dead. We must therefore be dealing here with the (Christian) postulate of a spirit whose life is so vastly superior to the life of nature that in comparison with it the latter is no better than death.

[390] This special development in man's idea of spirit rests on the recognition that its invisible presence is a psychic phenomenon, i.e., one's own spirit, and that this consists not only of uprushes of life but of formal products too. Among the first, the most prominent are the images and shadowy presentations that occupy our inner field of vision; among the second, thinking and reason, which organize the world of images. In this way a transcendent spirit superimposed itself upon the original, natural life-spirit and even swung over to the opposite position, as though the latter were merely naturalistic. The transcendent spirit became the supranatural and transmundane cosmic principle of order and as such was given the name of "God," or at least it became an attribute of the One Substance (as in Spinoza) or one Person of the Godhead (as in Christianity).

[391] The corresponding development of spirit in the reverse, hylozoistic direction—a *maiori ad minus*—took place under anti-Christian auspices in materialism. The premise underlying this reaction is the exclusive certainty of the spirit's identity with psychic functions, whose

dependence upon brain and metabolism became increasingly clear. One had only to give the One Substance another name and call it “matter” to produce the idea of a spirit which was entirely dependent on nutrition and environment, and whose highest form was the intellect or reason. This meant that the original pneumatic presence had taken up its abode in man’s physiology, and a writer like Klages could arraign the spirit as the “adversary of the soul.”[4] For it was into this latter concept that the original spontaneity of the spirit withdrew after it had been degraded to a servile attribute of matter. Somewhere or other the *deus ex machina* quality of spirit had to be preserved—if not in the spirit itself, then in its synonym the soul, that glancing, Aeolian[5] thing, elusive as a butterfly (anima, *ψυχή*).

[392] Even though the materialistic conception of the spirit did not prevail everywhere, it still persisted, outside the sphere of religion, in the realm of conscious phenomena. Spirit as “subjective spirit” came to mean a purely endopsychic phenomenon, while “objective spirit” did not mean the universal spirit, or God, but merely the sum total of intellectual and cultural possessions which make up our human institutions and the content of our libraries. Spirit had forfeited its original nature, its autonomy and spontaneity over a very wide area, with the solitary exception of the religious field, where, at least in principle, its pristine character remained unimpaired.

In this résumé we have described an entity which presents itself to us as an immediate psychic phenomenon distinguished from other psychisms whose existence is naïvely believed to be causally dependent upon physical influences. A connection between spirit and physical conditions is not immediately apparent, and for this reason it was credited with immateriality to a much higher degree than was the case with psychic phenomena in the narrower sense. Not only is a certain physical dependence attributed to the latter, but they are themselves thought of as possessing a kind of materiality, as the idea of the subtle body and the Chinese *kuei-soul* clearly show. In view of the intimate connection that exists between certain psychic processes and their physical parallels we cannot very well accept the total immateriality of the psyche. As against this, the *consensus omnium* insists on the immateriality of spirit, though not everyone would agree that it also has a reality of its own. It is, however, not easy to see why our hypothetical “matter,” which looks quite different from what it did even thirty years ago, alone should be real, and spirit not. Although the idea of immateriality does not in itself exclude that of reality, popular opinion invariably associates reality with materiality. Spirit and matter may well be forms of one and the same transcendental being. For instance the Tantrists, with as much right, say that matter is nothing other than the concreteness of God’s thoughts. The sole immediate reality is the psychic reality of conscious contents, which are as it were labelled with a spiritual or material origin as the case may be.

[393] The hallmarks of spirit are, firstly, the principle of spontaneous movement and activity; secondly, the spontaneous capacity to produce images independently of sense perception; and thirdly, the autonomous and sovereign manipulation of these images. This spiritual entity approaches primitive man from outside; but with increasing development it gets lodged in man’s consciousness and becomes a subordinate function, thus apparently forfeiting its original character of autonomy. That character is now retained only in the most conservative views, namely in the religions. The descent of spirit into the sphere of human consciousness is expressed in the myth of the divine *νοῡς* caught in the embrace of *φύσις*. This process, continuing over the ages, is probably an unavoidable necessity, and the religions would find themselves in a very forlorn situation if they believed in the attempt to hold up evolution. Their task, if they are well advised, is not to impede the ineluctable march of events, but to guide it in such a way that it can proceed without fatal injury to the soul. The religions should therefore constantly recall to us the origin and original character of the spirit, lest man should forget what he is drawing into himself and with what he is filling his consciousness. He himself did not create the spirit, rather the spirit makes *him* creative, always spurring him on, giving him lucky ideas, staying power, “enthusiasm” and “inspiration.” So much, indeed, does it permeate his whole being that he is in gravest danger of thinking that he actually created the spirit and that he “has” it. In reality, however, the primordial phenomenon of the spirit takes possession of *him*, and, while

appearing to be the willing object of human intentions, it binds his freedom, just as the physical world does, with a thousand chains and becomes an obsessive *idée-force*. Spirit threatens the naïve-minded man with inflation, of which our own times have given us the most horribly instructive examples. The danger becomes all the greater the more our interest fastens upon external objects and the more we forget that the differentiation of our relation to nature should go hand in hand with a correspondingly differentiated relation to the spirit, so as to establish the necessary balance. If the outer object is not offset by an inner, unbridled materialism results, coupled with maniacal arrogance or else the extinction of the autonomous personality, which is in any case the ideal of the totalitarian mass state.

[394] As can readily be seen, the common modern idea of spirit ill accords with the Christian view, which regards it as the *sum-mum bonum*, as God himself. To be sure, there is also the idea of an evil spirit. But the modern idea cannot be equated with that either, since for us spirit is not necessarily evil; we would have to call it morally indifferent or neutral. When the Bible says “God is spirit,” it sounds more like the definition of a substance, or like a qualification. But the devil too, it seems, is endowed with the same peculiar spiritual substance, albeit an evil and corrupt one. The original identity of substance is still expressed in the idea of the fallen angel, as well as in the close connection between Jehovah and Satan in the Old Testament. There may be an echo of this primitive connection in the Lord’s Prayer, where we say “Lead us not into temptation”—for is not this really the business of the *tempter*, the devil himself?

[395] This brings us to a point we have not considered at all in the course of our observations so far. We have availed ourselves of cultural and everyday conceptions which are the product of human consciousness and its reflections, in order to form a picture of the psychic modes of manifestation of the factor “spirit.” But we have yet to consider that because of its original autonomy,[6] about which there can be no doubt in the psychological sense, the spirit is quite capable of staging its own manifestations spontaneously.

II. SELF-REPRESENTATION OF THE SPIRIT IN DREAMS

[396] The psychic manifestations of the spirit indicate at once that they are of an archetypal nature—in other words, the phenomenon we call spirit depends on the existence of an autonomous primordial image which is universally present in the preconscious makeup of the human psyche. As usual, I first came up against this problem when investigating the dreams of my patients. It struck me that a certain kind of father-complex has a "spiritual" character, so to speak, in the sense that the father-image gives rise to statements, actions, tendencies, impulses, opinions, etc., to which one could hardly deny the attribute "spiritual." In men, a positive father-complex very often produces a certain credulity with regard to authority and a distinct willingness to bow down before all spiritual dogmas and values; while in women, it induces the liveliest spiritual aspirations and interests. In dreams, it is always the father-figure from whom the decisive convictions, prohibitions, and wise counsels emanate. The invisibility of this source is frequently emphasized by the fact that it consists simply of an authoritative voice which passes final judgments.[7] Mostly, therefore, it is the figure of a "wise old man" who symbolizes the spiritual factor. Sometimes the part is played by a "real" spirit, namely the ghost of one dead, or, more rarely, by grotesque gnomelike figures or talking animals. The dwarf forms are found, at least in my experience, mainly in women; hence it seems to me logical that in Ernst Barlach's play *Der tote Tag* (1912), the gnomelike figure of Steissbart ("Rumpbeard") is associated with the mother, just as Bes is associated with the mother-goddess at Karnak. In both sexes the spirit can also take the form of a boy or a youth. In women he corresponds to the so-called "positive" animus who indicates the possibility of conscious spiritual effort. In men his meaning is not so simple. He can be positive, in which case he signifies the "higher" personality, the self or *filius regius* as conceived by the alchemists.[8] But he can also be negative, and then he signifies the infantile shadow.[9] In both cases the boy means some form of spirit.[10] Graybeard and boy belong together. The pair of them play a considerable role in alchemy as symbols of Mercurius.

[397] It can never be established with one-hundred-per-cent certainty whether the spirit-figures in dreams are morally good. Very often they

show all the signs of duplicity, if not of outright malice. I must emphasize, however, that the grand plan on which the unconscious life of the psyche is constructed is so inaccessible to our understanding that we can never know what evil may not be necessary in order to produce good by enantiodromia, and what good may very possibly lead to evil. Sometimes the *probate spiritus* recommended by John cannot, with the best will in the world, be anything other than a cautious and patient waiting to see how things will finally turn out.

[398] The figure of the wise old man can appear so plastically, not only in dreams but also in visionary meditation (or what we call active imagination”), that, as is sometimes apparently the case in India, it takes over the role of a guru.[11] The wise old man appears in dreams in the guise of a magician, doctor, priest, teacher, professor, grandfather, or any other person possessing authority. The archetype of spirit in the shape of a man, hobgoblin, or animal always appears in a situation where insight, understanding, good advice, determination, planning, etc., are needed but cannot be mustered on one’s own resources. The archetype compensates this state of spiritual deficiency by contents designed to fill the gap. An excellent example of this is the dream about the white and black magicians, which tried to compensate the spiritual difficulties of a young theological student. I did not know the dreamer myself, so the question of my personal influence is ruled out. He dreamed *he was standing in the presence of a sublime hieratic figure called the “white magician,” who was nevertheless clothed in a long black robe. This magician had just ended a lengthy discourse with the words “And for that we require the help of the black magician.” Then the door suddenly opened and another old man came in, the “black magician,” who however was dressed in a white robe. He too looked noble and sublime. The black magician evidently wanted to speak with the white, but hesitated to do so in the presence of the dreamer. At that the white magician, pointing to the dreamer, said, “Speak, he is an innocent.” So the black magician began to relate a strange story of how he had found the lost keys of Paradise and did not know how to use them. He had, he said, come to the white magician for an explanation of the secret of the keys. He told him that the king of the country in which he lived was seeking a suitable tomb for*

himself. His subjects had chanced to dig up an old sarcophagus containing the mortal remains of a virgin. The king opened the sarcophagus, threw away the bones, and had the empty sarcophagus buried again for later use. But no sooner had the bones seen the light of day than the being to whom they once had belonged—the virgin—changed into a black horse that galloped off into the desert. The black magician pursued it across the sandy wastes and beyond, and there after many vicissitudes and difficulties he found the lost keys of Paradise. That was the end of his story, and also, unfortunately, of the dream.

[399] Here the compensation certainly did not fall out as the dreamer would wish, by handing him a solution on a plate; rather it confronted him with a problem to which I have already alluded, and one which life is always bringing us up against: namely, the uncertainty of all moral valuation, the bewildering interplay of good and evil, and the remorseless concatenation of guilt, suffering, and redemption. This path to the primordial religious experience is the right one, but how many can recognize it? It is like a still small voice, and it sounds from afar. It is ambiguous, questionable, dark, presaging danger and hazardous adventure; a razor-edged path, to be trodden for God’s sake only, without assurance and without sanction.

III. THE SPIRIT IN FAIRYTALES

[400] I would gladly present the reader with some more modern dream-material, but I fear that the individualism of dreams would make too high a demand upon our exposition and would claim more space than is here at our disposal. We shall therefore turn to folklore, where we need not get involved in the grim confrontations and entanglements of individual case histories and can observe the variations of the spirit motif without having to consider conditions that are more or less unique. In myths and fairytales, as in dreams, the psyche tells its own story, and the interplay of the archetypes is revealed in its natural setting as “formation, transformation / the eternal Mind’s eternal recreation.”

[401] The frequency with which the spirit-type appears as an old man is about the same in fairytales as in dreams.[12] The old man always appears

when the hero is in a hopeless and desperate situation from which only profound reflection or a lucky idea—in other words, a spiritual function or an endopsychic automatism of some kind—can extricate him. But since, for internal and external reasons, the hero cannot accomplish this himself, the knowledge needed to compensate the deficiency comes in the form of a personified thought, i.e., in the shape of this sagacious and helpful old man. An Estonian fairytale,[13] for instance, tells how an ill-treated little orphan boy who had let a cow escape was afraid to return home again for fear of more punishment. So he ran away, chancing to luck. He naturally got himself into a hopeless situation, with no visible way out. Exhausted, he fell into a deep sleep. When he awoke, "it seemed to him that he had something liquid in his mouth, and he saw a little old man with a long grey beard standing before him, who was in the act of replacing the stopper in his little milk-flask. 'Give me some more to drink,' begged the boy. 'You have had enough for today,' replied the old man. 'If my path had not chanced to lead me to you, that would assuredly have been your last sleep, for when I found you, you were half dead.' Then the old man asked the boy who he was and where he wanted to go. The boy recounted everything he could remember happening to him up to the beating he had received the previous evening. 'My dear child,' said the old man, 'you are no better and no worse off than many others whose dear protectors and comforters rest in their coffins under the earth. You can no longer turn back. Now that you have run away, you must seek a new fortune in the world. As I have neither house nor home, nor wife nor child, I cannot take further care of you, but I will give you some good advice for nothing.'"

[402] So far the old man has been expressing no more than what the boy, the hero of the tale, could have thought out for himself. Having given way to the stress of emotion and simply run off like that into the blue, he would at least have had to reflect that he needed food. It would also have been necessary, at such a moment, to consider his position. The whole story of his life up to the recent past would then have passed before his mind, as is usual in such cases. An anamnesis of this kind is a purposeful process whose aim is to gather the assets of the whole personality together at the critical moment, when all one's spiritual and physical

forces are challenged, and with this united strength to fling open the door of the future. No one can help the boy to do this; he has to rely entirely on himself. There is no going back. This realization will give the necessary resolution to his actions. By forcing him to face the issue, the old man saves him the trouble of making up his mind. Indeed the old man is himself this purposeful reflection and concentration of moral and physical forces that comes about spontaneously in the psychic space outside consciousness when conscious thought is not yet—or is no longer—possible. The concentration and tension of psychic forces have something about them that always looks like magic: they develop an unexpected power of endurance which is often superior to the conscious effort of will. One can observe this experimentally in the artificial concentration induced by hypnosis: in my demonstrations I used regularly to put an hysteric, of weak bodily build, into a deep hypnotic sleep and then get her to lie with the back of her head on one chair and her heels resting on another, stiff as a board, and leave her there for about a minute. Her pulse would gradually go up to 90. A husky young athlete among the students tried in vain to imitate this feat with a conscious effort of will. He collapsed in the middle with his pulse racing at 120.

[403] When the clever old man had brought the boy to this point he could begin his good advice, i.e., the situation no longer looked hopeless. He advised him to continue his wanderings, always to the eastward, where after seven years he would reach the great mountain that betokened his good fortune. The bigness and tallness of the mountain are allusions to his adult personality.[14] Concentration of his powers brings assurance and is therefore the best guarantee of success.[15] From now on he will lack for nothing. “Take my scrip and my flask,” says the old man, “and each day you will find in them all the food and drink you need.” At the same time he gave him a burdock leaf that could change into a boat whenever the boy had to cross water.

[404] Often the old man in fairytales asks questions like who? why? whence? and whither?[16] for the purpose of inducing self-reflection and mobilizing the moral forces, and more often still he gives the necessary magical talisman,[17] the unexpected and improbable power to succeed,

which is one of the peculiarities of the unified personality in good or bad alike. But the intervention of the old man—the spontaneous objectivation of the archetype—would seem to be equally indispensable, since the conscious will by itself is hardly ever capable of uniting the personality to the point where it acquires this extraordinary power to succeed. For that, not only in fairytales but in life generally, the objective intervention of the archetype is needed, which checks the purely affective reactions with a chain of inner confrontations and realizations. These cause the who? where? how? why? to emerge clearly and in this wise bring knowledge of the immediate situation as well as of the goal. The resultant enlightenment and untying of the fatal tangle often has something positively magical about it—an experience not unknown to the psychotherapist.

[405] The tendency of the old man to set one thinking also takes the form of urging people to "sleep on it." Thus he says to the girl who is searching for her lost brothers: "Lie down: morning is cleverer than evening."[18] He also sees through the gloomy situation of the hero who has got himself into trouble, or at least can give him such information as will help him on his journey. To this end he makes ready use of animals, particularly birds. To the prince who has gone in search of the kingdom of heaven the old hermit says: "I have lived here for three hundred years, but never yet has anybody asked me about the kingdom of heaven. I cannot tell you myself; but up there, on another floor of the house, live all kinds of birds, and they can surely tell you."[19] The old man knows what roads lead to the goal and points them out to the hero.[20] He warns of dangers to come and supplies the means of meeting them effectively. For instance, he tells the boy who has gone to fetch the silver water that the well is guarded by a lion who has the deceptive trick of sleeping with his eyes open and watching with his eyes shut;[21] or he counsels the youth who is riding to a magic fountain in order to fetch the healing draught for the king, only to draw the water at a trot because of the lurking witches who lasso everybody that comes to the fountain.[22] He charges the princess whose lover has been changed into a werewolf to make a fire and put a cauldron of tar over it. Then she must plunge her beloved white lily into the boiling tar, and when the werewolf comes, she must empty

the cauldron over its head, which will release her lover from the spell.[23] Occasionally the old man is a very critical old man, as in the Caucasian tale of the youngest prince who wanted to build a flawless church for his father, so as to inherit the kingdom. This he does, and nobody can discover a single flaw, but then an old man comes along and says, “That’s a fine church you’ve built, to be sure! What a pity the main wall is a bit crooked!” The prince has the church pulled down again and builds a new one, but here too the old man discovers a flaw, and so on for the third time.[24]

[406] The old man thus represents knowledge, reflection, insight, wisdom, cleverness, and intuition on the one hand, and on the other, moral qualities such as goodwill and readiness to help, which make his “spiritual” character sufficiently plain. Since the archetype is an autonomous content of the unconscious, the fairytale, which usually concretizes the archetypes, can cause the old man to appear in a dream in much the same way as happens in modern dreams. In a Balkan tale the old man appears to the hard-pressed hero in a dream and gives him good advice about accomplishing the impossible tasks that have been imposed upon him.[25] His relation to the unconscious is clearly expressed in one Russian fairytale, where he is called the “King of the Forest.” As the peasant sat down wearily on a tree stump, a little old man crept out: “all wrinkled he was and a green beard hung down to his knees.” “Who are you?” asked the peasant. “I am Och, King of the Forest,” said the manikin. The peasant hired out his profligate son to him, “and the King of the Forest departed with the young man, and conducted him to that other world under the earth and brought him to a green hut. … In the hut everything was green: the walls were green and the benches, Och’s wife was green and the children were green … and the little water-women who waited on him were as green as rue.” Even the food was green. The King of the Forest is here a vegetation or tree numen who reigns in the woods and, through the nixies, also has connections with water, which clearly shows his relation to the unconscious since the latter is frequently expressed through wood and water symbols.

[407] There is equally a connection with the unconscious when the old man appears as a dwarf. The fairytale about the princess who was searching for her lover says: “Night came and the darkness, and still the princess sat in the same place and wept. As she sat there lost in thought, she heard a voice greeting her: ‘Good evening, pretty maid! Why are you sitting here so lonely and sad?’ She sprang up hastily and felt very confused, and that was no wonder. But when she looked round there was only a tiny little old man standing before her, who nodded his head at her and looked so kind and simple.” In a Swiss fairytale, the peasant’s son who wants to bring the king’s daughter a basket of apples encounters “es chlis isigs Männdli, das frogt-ne, was er do i dem Chratte häig?” (a little iron man who asked what he had there in the basket). In another passage the “Männdli” has “es isigs Chlaidli a” (iron clothes on). By “isig” presumably “eisern” (iron) is meant, which is more probable than “eisig” (icy). In the latter case it would have to be “es Chlaidli vo Is” (clothes of ice).[26] There are indeed little ice men, and little metal men too; in fact, in a modern dream I have even come across a little black iron man who appeared at a critical juncture, like the one in this fairytale of the country bumpkin who wanted to marry the princess.

[408] In a modern series of visions in which the figure of the wise old man occurred several times, he was on one occasion of normal size and appeared at the very bottom of a crater surrounded by high rocky walls; on another occasion he was a tiny figure on the top of a mountain, inside a low, stony enclosure. We find the same motif in Goethe’s tale of the dwarf princess who lived in a casket.[27] In this connection we might also mention the Anthroparion, the little leaden man of the Zosimos vision,[28] as well as the metallic men who dwell in the mines, the crafty dactyls of antiquity, the homunculi of the alchemists, and the gnomic throng of hobgoblins, brownies, gremlins, etc. How “real” such conceptions are became clear to me on the occasion of a serious mountaineering accident: after the catastrophe two of the climbers had the collective vision, in broad daylight, of a little hooded man who scrambled out of an inaccessible crevasse in the ice face and passed across the glacier, creating a regular panic in the two beholders. I have often encountered motifs which made me think that the unconscious must be the world of

the infinitesimally small. Such an idea could be derived rationalistically from the obscure feeling that in all these visions we are dealing with something endopsychic, the inference being that a thing must be exceedingly small in order to fit inside the head. I am no friend of any such "rational" conjectures, though I would not say that they are all beside the mark. It seems to me more probable that this liking for diminutives on the one hand and for superlatives—giants, etc.—on the other is connected with the queer uncertainty of spatial and temporal relations in the unconscious.[29] Man's sense of proportion, his rational conception of big and small, is distinctly anthropomorphic, and it loses its validity not only in the realm of physical phenomena but also in those parts of the collective unconscious beyond the range of the specifically human. The atman is "smaller than small and bigger than big," he is "the size of a thumb" yet he "encompasses the earth on every side and rules over the ten-finger space." And of the Cabiri Goethe says: "little in length / mighty in strength." In the same way, the archetype of the wise old man is quite tiny, almost imperceptible, and yet it possesses a fateful potency, as anyone can see when he gets down to fundamentals. The archetypes have this peculiarity in common with the atomic world, which is demonstrating before our eyes that the more deeply the in vestigator penetrates into the universe of microphysics the more devastating are the explosive forces he finds enchained there. That the greatest effects come from the smallest causes has become patently clear not only in physics but in the field of psychological research as well. How often in the critical moments of life everything hangs on what appears to be a mere nothing!

[409] In certain primitive fairytales, the illuminating quality of our archetype is expressed by the fact that the old man is identified with the sun. He brings a firebrand with him which he uses for roasting a pumpkin. After he has eaten, he takes the fire away again, which causes mankind to steal it from him.[30] In a North American Indian tale, the old man is a witch-doctor who owns the fire.[31] Spirit too has a fiery aspect, as we know from the language of the Old Testament and from the story of the Pentecostal miracle.

[410] Apart from his cleverness, wisdom, and insight, the old man, as we have already mentioned, is also notable for his moral qualities; what is more, he even tests the moral qualities of others and makes his gifts dependent on this test. There is a particularly instructive example of this in the Estonian fairytale of the stepdaughter and the real daughter. The former is an orphan distinguished for her obedience and good behaviour. The story begins with her distaff falling into a well. She jumps in after it, but does not drown, and comes to a magic country where, continuing her quest, she meets a cow, a ram, and an apple tree whose wishes she fulfils. She now comes to a wash-house where a dirty old man is sitting who wants her to wash him. The following dialogue develops: “Pretty maid, pretty maid, wash me, do, it is hard for me to be so dirty!” “What shall I heat the stove with?” “Collect wooden pegs and crows’ dung and make a fire with that.” But she fetches sticks, and asks, “Where shall I get the bath-water?” “Under the barn there stands a white mare. Get her to piss into the tub!” But she takes clean water, and asks, “Where shall I get a bath-switch?” “Cut off the white mare’s tail and make a bath-switch of that!” But she makes one out of birch-twigs, and asks, “Where shall I get soap?” “Take a pumice-stone and scrub me with that!” But she fetches soap from the village and with that she washes the old man.

[411] As a reward he gives her a bag full of gold and precious stones. The daughter of the house naturally becomes jealous, throws her distaff into the well, where she finds it again instantly. Nevertheless she goes on and does everything wrong that the stepdaughter had done right, and is rewarded accordingly. The frequency of this motif makes further examples superfluous.

[412] The figure of the superior and helpful old man tempts one to connect him somehow or other with God. In the German tale of the soldier and the black princess[32] it is related how the princess, on whom a curse has been laid, creeps out of her iron coffin every night and devours the soldier standing guard over the tomb. One soldier, when his turn came, tried to escape. “That evening he stole away, fled over the fields and mountains, and came to a beautiful meadow. Suddenly a little man stood before him with a long grey beard, but it was none other than the Lord God himself, who could no longer go on looking at all the mischief the

devil wrought every night. ‘Whither away?’ said the little grey man, ‘may I come with you?’ And because the little old man looked so friendly the soldier told him that he had run away and why he had done so.” Good advice follows, as always. In this story the old man is taken for God in the same naïve way that the English alchemist, Sir George Ripley,[33] describes the “old king” as “antiquus dierum”—“the Ancient of Days.”

[413] Just as all archetypes have a positive, favourable, bright side that points upwards, so also they have one that points downwards, partly negative and unfavourable, partly chthonic, but for the rest merely neutral. To this the spirit archetype is no exception. Even his dwarf form implies a kind of limitation and suggests a naturalistic vegetation-numen sprung from the underworld. In one Balkan tale, the old man is handicapped by the loss of an eye. It has been gouged out by the Vili, a species of winged demon, and the hero is charged with the task of getting them to restore it to him. The old man has therefore lost part of his eyesight—that is, his insight and enlightenment—to the daemonic world of darkness; this handicap is reminiscent of the fate of Osiris, who lost an eye at the sight of a black pig (his wicked brother Set), or again of Wotan, who sacrificed his eye at the spring of Mimir. Characteristically enough, the animal ridden by the old man in our fairytale is a goat, a sign that he himself has a dark side. In a Siberian tale, he appears as a one-legged, one-handed, and one-eyed greybeard who wakens a dead man with an iron staff. In the course of the story the latter, after being brought back to life several times, kills the old man by a mistake, and thus throws away his good fortune. The story is entitled “The One-sided Old Man,” and in truth his handicap shows that he consists of one half only. The other half is invisible, but appears in the shape of a murderer who seeks the hero’s life. Eventually the hero succeeds in killing his persistent murderer, but in the struggle he also kills the one-sided old man, so that the identity of the two victims is clearly revealed. It is thus possible that the old man is his own opposite, a life-bringer as well as a death-dealer—“ad utrumque peritus” (skilled in both), as is said of Hermes.[34]

[414] In these circumstances, whenever the “simple” and “kindly” old man appears, it is advisable for heuristic and other reasons to scrutinize the

context with some care. For instance, in the Estonian tale we first mentioned, about the hired boy who lost the cow, there is a suspicion that the helpful old man who happened to be on the spot so opportunely had surreptitiously made away with the cow beforehand in order to give his protégé an excellent reason for taking to flight. This may very well be, for everyday experience shows that it is quite possible for a superior, though subliminal, foreknowledge of fate to contrive some annoying incident for the sole purpose of bullying our Simple Simon of an ego-consciousness into the way he should go, which for sheer stupidity he would never have found by himself. Had our orphan guessed that it was the old man who had whisked off his cow as if by magic, he would have seemed like a spiteful troll or a devil. And indeed the old man has a wicked aspect too, just as the primitive medicine-man is a healer and helper and also the dreaded concocter of poisons. The very word *φάρμακον* means ‘poison’ as well as ‘antidote,’ and poison can in fact be both.

[415] The old man, then, has an ambiguous elfin character—witness the extremely instructive figure of Merlin—seeming, in certain of his forms, to be good incarnate and in others an aspect of evil. Then again, he is the wicked magician who, from sheer egoism, does evil for evil’s sake. In a Siberian fairytale, he is an evil spirit “on whose head were two lakes with two ducks swimming in them.” He feeds on human flesh. The story relates how the hero and his companions go to a feast in the next village, leaving their dogs at home. These, acting on the principle “when the cat’s away the mice do play,” also arrange a feast, at the climax of which they all hurl themselves on the stores of meat. The men return home and chase out the dogs, who dash off into the wilderness. “Then the Creator spoke to Ememqut [the hero of the tale]: ‘Go and look for the dogs with your wife.’” But he gets caught in a terrible snow-storm and has to seek shelter in the hut of the evil spirit. There now follows the well-known motif of the biter bit. The “Creator” is Ememqut’s father, but the father of the Creator is called the “Self-created” because he created himself. Although we are nowhere told that the old man with the two lakes on his head lured the hero and his wife into the hut in order to satisfy his hunger, it may be conjectured that a very peculiar spirit must have got

into the dogs to cause them to celebrate a feast like the men and afterwards—contrary to their nature—to run away, so that Ememqut had to go out and look for them; and that the hero was then caught in a snowstorm in order to drive him into the arms of the wicked old man. The fact that the Creator, son of the Self-created, was a party to the advice raises a knotty problem whose solution we had best leave to the Siberian theologians.

[416] In a Balkan fairytale the old man gives the childless Czarina a magic apple to eat, from which she becomes pregnant and bears a son, it being stipulated that the old man shall be his godfather. The boy, however, grows up into a horrid little tough who bullies all the children and slaughters the cattle. For ten years he is given no name. Then the old man appears, sticks a knife into his leg, and calls him the “Knife Prince.” The boy now wants to set forth on his adventures, which his father, after long hesitation, finally allows him to do. The knife in his leg is of vital importance: If he draws it out himself, he will live; if anybody else does so, he will die. In the end the knife becomes his doom, for an old witch pulls it out when he is asleep. He dies, but is restored to life by the friends he has won.[35] Here the old man is a helper, but also the contriver of a dangerous fate which might just as easily have turned out for the bad. The evil showed itself early and plainly in the boy’s villainous character.

[417] In another Balkan tale, there is a variant of our motif that is worth mentioning: A king is looking for his sister who has been abducted by a stranger. His wanderings bring him to the hut of an old woman, who warns him against continuing the search. But a tree laden with fruit, ever receding before him, lures him away from the hut. When at last the tree comes to a halt, an old man climbs down from the branches. He regales the king and takes him to a castle, where the sister is living with the old man as his wife. She tells her brother that the old man is a wicked spirit who will kill him. And sure enough, three days afterwards, the king vanishes without trace. His younger brother now takes up the search and kills the wicked spirit in the form of a dragon. A handsome young man is thereby released from the spell and forthwith marries the sister. The old man, appearing at first as a tree-numen, is obviously connected with the

sister. He is a murderer. In an interpolated episode, he is accused of enchanting a whole city by turning it to iron, i.e., making it immovable, rigid, and locked up.[36] He also holds the king's sister a captive and will not let her return to her relatives. This amounts to saying that the sister is animus-possessed. The old man is therefore to be regarded as her animus. But the manner in which the king is drawn into this possession, and the way he seeks for his sister, make us think that she has an anima significance for her brother. The fateful archetype of the old man has accordingly first taken possession of the king's anima—in other words, robbed him of the archetype of life which the anima personifies—and forced him to go in search of the lost charm, the "treasure hard to attain," thus making him the mythical hero, the higher personality who is an expression of the self. Meanwhile, the old man acts the part of the villain and has to be forcibly removed, only to appear at the end as the husband of the sister-anima, or more properly as the bridegroom of the soul, who celebrates the sacred incest that symbolizes the union of opposites and equals. This bold enantiodromia, a very common occurrence, not only signifies the rejuvenation and transformation of the old man, but hints at a secret inner relation of evil to good and vice versa.

[418] So in this story we see the archetype of the old man in the guise of an evil-doer, caught up in all the twists and turns of an individuation process that ends suggestively with the *hieros gamos*. Conversely, in the Russian tale of the Forest King, he starts by being helpful and benevolent, but then refuses to let his hired boy go, so that the main episodes in the story deal with the boy's repeated attempts to escape from the clutches of the magician. Instead of the quest we have flight, which nonetheless appears to win the same reward as adventures valiantly sought, for in the end the hero marries the king's daughter. The magician, however, must rest content with the role of the biter bit.

IV. THERIOMORPHIC SPIRIT SYMBOLISM IN FAIRYTALES

[419] The description of our archetype would not be complete if we omitted to consider one special form of its manifestation, namely its animal form. This belongs essentially to the theriomorphism of gods and demons and has the same psychological significance. The animal form

shows that the contents and functions in question are still in the extrahuman sphere, i.e., on a plane beyond human consciousness, and consequently have a share on the one hand in the daemonically superhuman and on the other in the bestially subhuman. It must be remembered, however, that this division is only true within the sphere of consciousness, where it is a necessary condition of thought. Logic says *tertium non datur*, meaning that we cannot envisage the opposites in their oneness. In other words, while the abolition of an obstinate antinomy can be no more than a postulate for us, this is by no means so for the unconscious, whose contents are without exception paradoxical or antinomial by nature, not excluding the category of being. If anyone unacquainted with the psychology of the unconscious wants to get a working knowledge of these matters, I would recommend a study of Christian mysticism and Indian philosophy, where he will find the clearest elaboration of the antinomies of the unconscious.

[420] Although the old man has, up to now, looked and behaved more or less like a human being, his magical powers and his spiritual superiority suggest that, in good and bad alike, he is outside, or above, or below the human level. Neither for the primitive nor for the unconscious does his animal aspect imply any devaluation, for in certain respects the animal is superior to man. It has not yet blundered into consciousness nor pitted a self-willed ego against the power from which it lives; on the contrary, it fulfils the will that actuates it in a well-nigh perfect manner. Were it conscious, it would be morally better than man. There is deep doctrine in the legend of the fall: it is the expression of a dim presentiment that the emancipation of ego-consciousness was a Luciferian deed. Man's whole history consists from the very beginning in a conflict between his feeling of inferiority and his arrogance. Wisdom seeks the middle path and pays for this audacity by a dubious affinity with daemon and beast, and so is open to moral misinterpretation.

[421] Again and again in fairytales we encounter the motif of helpful animals. These act like humans, speak a human language, and display a sagacity and a knowledge superior to man's. In these circumstances we can say with some justification that the archetype of the spirit is being expressed through an animal form. A German fairytale[37] relates how a

young man, while searching for his lost princess, meets a wolf, who says, “Do not be afraid! But tell me, where is your way leading you?” The young man recounts his story, whereupon the wolf gives him as a magic gift a few of his hairs, with which the young man can summon his help at any time. This intermezzo proceeds exactly like the meeting with the helpful old man. In the same story, the archetype also displays its other, wicked side. In order to make this clear I shall give a summary of the story:

[422] While the young man is watching his pigs in the wood, he discovers a large tree, whose branches lose themselves in the clouds. “How would it be,” says he to himself, “if you were to look at the world from the top of that great tree?” So he climbs up, all day long he climbs, without even reaching the branches. Evening comes, and he has to pass the night in a fork of the tree. Next day he goes on climbing and by noon has reached the foliage. Only towards evening does he come to a village nestling in the branches. The peasants who live there give him food and shelter for the night. In the morning he climbs still further. Towards noon, he reaches a castle in which a young girl lives. Here he finds that the tree goes no higher. She is a king’s daughter, held prisoner by a wicked magician. So the young man stays with the princess, and she allows him to go into all the rooms of the castle: one room alone she forbids him to enter. But curiosity is too strong. He unlocks the door, and there in the room he finds a raven fixed to the wall with three nails. One nail goes through his throat, the two others through the wings. The raven complains of thirst and the young man, moved by pity, gives him water to drink. At each sip a nail falls out, and at the third sip the raven is free and flies out at the window. When the princess hears of it she is very frightened and says, “That was the devil who enchanted me! It won’t be long now before he fetches me again.” And one fine morning she has indeed vanished.

[423] The young man now sets out in search of her and, as we have described above, meets the wolf. In the same way he meets a bear and a lion, who also give him some hairs. In addition the lion informs him that the princess is imprisoned nearby in a hunting-lodge. The young man finds the house and the princess, but is told that flight is impossible,

because the hunter possesses a three-legged white horse that knows everything and would infallibly warn its master. Despite that, the young man tries to flee away with her, but in vain. The hunter overtakes him but, because he had saved his life as a raven, lets him go and rides off again with the princess. When the hunter has disappeared into the wood, the young man creeps back to the house and persuades the princess to wheedle from the hunter the secret of how he obtained his clever white horse. This she successfully does in the night, and the young man, who has hidden himself under the bed, learns that about an hour's journey from the hunting-lodge there dwells a witch who breeds magic horses. Whoever was able to guard the foals for three days might choose a horse as a reward. In former times, said the hunter, she used to make a gift of twelve lambs into the bargain, in order to satisfy the hunger of the twelve wolves who lived in the woods near the farmstead, and prevent them from attacking; but to him she gave no lambs. So the wolves followed him as he rode away, and while crossing the borders of her domain they succeeded in tearing off one of his horse's hoofs. That was why it had only three legs.

[424] Then the young man made haste to seek out the witch and agreed to serve her on condition that she gave him not only a horse of his own choosing but twelve lambs as well. To this she consented. Instantly she commanded the foals to run away, and, to make him sleepy, she gave him brandy. He drinks, falls asleep, and the foals escape. On the first day he catches them with the help of the wolf, on the second day the bear helps him, and on the third the lion. He can now go and choose his reward. The witch's little daughter tells him which horse her mother rides. This is naturally the best horse, and it too is white. Hardly has he got it out of the stall when the witch pierces the four hoofs and sucks the marrow out of the bones. From this she bakes a cake and gives it to the young man for his journey. The horse grows deathly weak, but the young man feeds it on the cake, whereupon the horse recovers its former strength. He gets out of the woods unscathed after quieting the twelve wolves with the twelve lambs. He then fetches the princess and rides away with her. But the three-legged horse calls out to the hunter, who sets off in pursuit and quickly catches up with them, because the four-legged horse refuses to

gallop. As the hunter approaches, the four-legged horse cries out to the three-legged, "Sister, throw him off!" The magician is thrown and trampled to pieces by the two horses. The young man sets the princess on the three-legged horse, and the pair of them ride away to her father's kingdom, where they get married. The four-legged horse begs him to cut off both their heads, for otherwise they would bring disaster upon him. This he does, and the horses are transformed into a handsome prince and a wonderfully beautiful princess, who after a while repair "to their own kingdom." They had been changed into horses by the hunter, long ago.

[425] Apart from the theriomorphic spirit symbolism in this tale, it is especially interesting to note that the function of knowing and intuition is represented by a riding-animal. This is as much as to say that the spirit can be somebody's property. The three-legged white horse is thus the property of the demonic hunter, and the four-legged one the property of the witch. Spirit is here partly a function, which like any other object (horse) can change its owner, and partly an autonomous subject (magician as owner of the horse). By obtaining the four-legged horse from the witch, the young man frees a spirit or a thought of some special kind from the grip of the unconscious. Here as elsewhere, the witch stands for a *mater natura* or the original "matriarchal" state of the unconscious, indicating a psychic constitution in which the unconscious is opposed only by a feeble and still-dependent consciousness. The four-legged horse shows itself superior to the three-legged, since it can command the latter. And since the quaternity is a symbol of wholeness and wholeness plays a considerable role in the picture-world of the unconscious,[38] the victory of four-leggedness over three-leggedness is not altogether unexpected. But what is the meaning of the opposition between threeness and fourness, or rather, what does threeness mean as compared with wholeness? In alchemy this problem is known as the axiom of Maria and runs all through alchemical philosophy for more than a thousand years, finally to be taken up again in the Cabiri scene in *Faust*. The earliest literary version of it is to be found in the opening words of Plato's *Timaeus*[39] of which Goethe gives us a reminder. Among the alchemists we can see clearly how the divine Trinity has its counterpart in a lower, chthonic triad (similar to Dante's three-headed

devil). This represents a principle which, by reason of its symbolism, betrays affinities with evil, though it is by no means certain that it expresses nothing but evil. Everything points rather to the fact that evil, or its familiar symbolism, belongs to the family of figures which describe the dark, nocturnal, lower, chthonic element. In this symbolism the lower stands to the higher as a correspondence[40] in reverse; that is to say it is conceived, like the upper, as a triad. Three, being a masculine number, is logically correlated with the wicked hunter, who can be thought of alchemically as the lower triad. Four, a feminine number, is assigned to the old woman. The two horses are miraculous animals that talk and know and thus represent the unconscious spirit, which in one case is subordinated to the wicked magician and in the other to the old witch.

[426] Between the three and the four there exists the primary opposition of male and female, but whereas fourness is a symbol of wholeness, threeness is not. The latter, according to alchemy, denotes polarity, since one triad always presupposes another, just as high presupposes low, lightness darkness, good evil. In terms of energy, polarity means a potential, and wherever a potential exists there is the possibility of a current, a flow of events, for the tension of opposites strives for balance. If one imagines the quaternity as a square divided into two halves by a diagonal, one gets two triangles whose apices point in opposite directions. One could therefore say metaphorically that if the wholeness symbolized by the quaternity is divided into equal halves, it produces two opposing triads. This simple reflection shows how three can be derived from four, and in the same way the hunter of the captured princess explains how his horse, from being four-legged, became three-legged, through having one hoof torn off by the twelve wolves. The three-leggedness is due to an accident, therefore, which occurred at the very moment when the horse was leaving the territory of the dark mother. In psychological language we should say that when the unconscious wholeness becomes manifest, i.e., leaves the unconscious and crosses over into the sphere of consciousness, one of the four remains behind, held fast by the *horror vacui* of the unconscious. There thus arises a triad, which as we know—not from the fairytale but from the history of symbolism—constellates a corresponding triad in opposition to it[41]—in

other words, a conflict ensues. Here too we could ask with Socrates, “One, two, three—but, my dear Timaeus, of those who yesterday were the banqueters and today are the banquet-givers, where is the fourth?”[42] He has remained in the realm of the dark mother, caught by the wolfish greed of the unconscious, which is unwilling to let anything escape from its magic circle save at the cost of a sacrifice.

[427] The hunter or old magician and the witch correspond to the negative parental imagos in the magic world of the unconscious. The hunter first appears in the story as a black raven. He has stolen away the princess and holds her a prisoner. She describes him as “the devil.” But it is exceedingly odd that he himself is locked up in the one forbidden room of the castle and fixed to the wall with three nails, as though *crucified*. He is imprisoned, like all jailers, in his own prison, and bound like all who curse. The prison of both is a magic castle at the top of a gigantic tree, presumably the world-tree. The princess belongs to the upper region of light near the sun. Sitting there in captivity on the world-tree, she is a kind of *anima mundi* who has got herself into the power of darkness. But this catch does not seem to have done the latter much good either, seeing that the captor is crucified and moreover with three nails. The crucifixion evidently betokens a state of agonizing bondage and suspension, fit punishment for one foolhardy enough to venture like a Prometheus into the orbit of the opposing principle. This was what the raven, who is identical with the hunter, did when he ravished a precious soul from the upper world of light; and so, as a punishment, he is nailed to the wall in that upper world. That this is an inverted reflection of the primordial Christian image should be obvious enough. The Saviour who freed the soul of humanity from the dominion of the prince of this world was nailed to a cross down below on earth, just as the thieving raven is nailed to the wall in the celestial branches of the world-tree for his presumptuous meddling. In our fairytale, the peculiar instrument of the magic spell is the triad of nails. Who it was that made the raven captive is not told in the tale, but it sounds as if a spell had been laid upon him in the triune name.[43]

[428] Having climbed up the world-tree and penetrated into the magic castle where he is to rescue the princess, our young hero is permitted to

enter all the rooms but one, the very room in which the raven is imprisoned. Just as in paradise there was one tree of which it was forbidden to eat, so here there is one room that is not to be opened, with the natural result that it is entered at once. Nothing excites our interest more than a prohibition. It is the surest way of provoking disobedience. Obviously there is some secret scheme afoot to free not so much the princess as the raven. As soon as the hero catches sight of him, the raven begins to cry piteously and to complain of thirst,[44] and the young man, moved by the virtue of compassion, slakes it, not with hyssop and gall, but with quickening water, whereupon the three nails fall out and the raven escapes through the open window. Thus the evil spirit regains his freedom, changes into the hunter, steals the princess for the second time, but this time locks her up in his hunting-lodge on earth. The secret scheme is partially unveiled: the princess must be brought down from the upper world to the world of men, which was evidently not possible without the help of the evil spirit and man's disobedience.

[429] But since in the human world, too, the hunter of souls is the princess's master, the hero has to intervene anew, to which end, as we have seen, he filches the four-legged horse from the witch and breaks the three-legged spell of the magician. It was the triad that first transfixed the raven, and the triad also represents the power of the evil spirit. These are the two triads that point in opposite directions.

[430] Turning now to quite another field, the realm of psychological experience, we know that three of the four functions of consciousness can become differentiated, i.e., conscious, while the other remains connected with the matrix, the unconscious, and is known as the "inferior" function. It is the Achilles heel of even the most heroic consciousness: somewhere the strong man is weak, the clever man foolish, the good man bad, and the reverse is also true. In our fairytale the triad appears as a mutilated quaternity. If only one leg could be added to the other three, it would make a whole. The enigmatic axiom of Maria runs: "… from the third comes the one as the fourth" (*ἔκ τοῦ̄ τρίτου τὸ ἓ̀ν τἔταρτον*) —which presumably means, when the third produces the fourth it at once produces unity. The lost component which is in the possession of the wolves belonging to the Great Mother is indeed only a quarter, but,

together with the three, it makes a whole which does away with division and conflict.

[431] But how is it that a quarter, on the evidence of symbolism, is at the same time a triad? Here the symbolism of our fairytale leaves us in the lurch, and we are obliged to have recourse to the facts of psychology. I have said previously that three functions can become differentiated, and only one remains under the spell of the unconscious. This statement must be defined more closely. It is an empirical fact that only *one* function becomes more or less successfully differentiated, which on that account is known as the superior or main function, and together with extraversion or introversion constitutes the type of conscious attitude. This function has associated with it one or two partially differentiated auxiliary functions which hardly ever attain the same degree of differentiation as the main function, that is, the same degree of applicability by the will. Accordingly they possess a higher degree of spontaneity than the main function, which displays a large measure of reliability and is amenable to our intentions. The fourth, inferior function proves on the other hand to be inaccessible to our will. It appears now as a teasing and distracting imp, now as a *deus ex machina*. But always it comes and goes of its own volition. From this it is clear that even the differentiated functions have only partially freed themselves from the unconscious; for the rest they are still rooted in it and to that extent they operate under its rule. Hence the three "differentiated" functions at the disposal of the ego have three corresponding unconscious components that have not yet broken loose from the unconscious.[45] And just as the three conscious and differentiated parts of these functions are confronted by a fourth, undifferentiated function which acts as a painfully disturbing factor, so also the superior function seems to have its worst enemy in the unconscious. Nor should we omit to mention one final turn of the screw: like the devil who delights in disguising himself as an angel of light, the inferior function secretly and mischievously influences the superior function most of all, just as the latter represses the former most strongly.[46]

[432] These unfortunately somewhat abstract formulations are necessary in order to throw some light on the tricky and allusive associations in our—

save the mark!—“childishly simple” fairytale. The two antithetical triads, the one banning and the other representing the power of evil, tally to a hair’s breadth with the functional structure of the conscious and unconscious psyche. Being a spontaneous, naïve, and uncontrived product of the psyche, the fairytale cannot very well express anything except what the psyche actually is. It is not only *our* fairytale that depicts these structural psychic relations, but countless other fairytales do the same.[47]

[433] Our fairytale reveals with unusual clarity the essentially antithetical nature of the spirit archetype, while on the other hand it shows the bewildering play of antinomies all aiming at the great goal of higher consciousness. The young swineherd who climbs from the animal level up to the top of the giant world-tree and there, in the upper world of light, discovers his captive anima, the high-born princess, symbolizes the ascent of consciousness, rising from almost bestial regions to a lofty perch with a broad outlook, which is a singularly appropriate image for the enlargement of the conscious horizon.[48] Once the masculine consciousness has attained this height, it comes face to face with its feminine counterpart, the anima.[49] She is a personification of the unconscious. The meeting shows how inept it is to designate the latter as the “subconscious”: it is not merely “below” consciousness but also above it, so far above it indeed that the hero has to climb up to it with considerable effort. This “upper” unconscious, however, is far from being a “supercon-conscious” in the sense that anyone who reaches it, like our hero, would stand as high above the “subconscious” as above the earth’s surface. On the contrary, he makes the disagreeable discovery that his high and mighty anima, the Princess Soul, is bewitched up there and no freer than a bird in a golden cage. He may pat himself on the back for having soared up from the flatlands and from almost bestial stupidity, but his soul is in the power of an evil spirit, a sinister father-imago of subterrene nature in the guise of a raven, the celebrated theriomorphic figure of the devil. What use now is his lofty perch and his wide horizon, when his own dear soul is languishing in prison? Worse, she plays the game of the underworld and ostensibly tries to stop the young man from discovering the secret of her imprisonment, by forbidding him to enter

that one room. But secretly she leads him to it by the very fact of her veto. It is as though the unconscious had two hands of which one always does the opposite of the other. The princess wants and does not want to be rescued. But the evil spirit too has got himself into a fix, by all accounts: he wanted to filch a fine soul from the shining upper world—which he could easily do as a winged being—but had not bargained on being shut up there himself. Black spirit though he is, he longs for the light. That is his secret justification, just as his being spellbound is a punishment for his transgression. But so long as the evil spirit is caught in the upper world, the princess cannot get down to earth either, and the hero remains lost in paradise. So now he commits the sin of disobedience and thereby enables the robber to escape, thus causing the abduction of the princess for the second time—a whole chain of calamities. In the result, however, the princess comes down to earth and the devilish raven assumes the human shape of the hunter. The other-worldly anima and the evil principle both descend to the human sphere, that is, they dwindle to human proportions and thus become approachable. The three-legged, all-knowing horse represents the hunter's own power: it corresponds to the unconscious components of the differentiated functions.[50] The hunter himself personifies the inferior function, which also manifests itself in the hero as his inquisitiveness and love of adventure. As the story unfolds, he becomes more and more like the hunter: he too obtains his horse from the witch. But, unlike him, the hunter omitted to obtain the twelve lambs in order to feed the wolves, who then injured his horse. He forgot to pay tribute to the chthonic powers because he was nothing but a robber. Through this omission the hero learns that the unconscious lets its creatures go only at the cost of sacrifice.[51] The number 12 is presumably a time symbol, with the subsidiary meaning of the twelve labours (ἆθλα)[52] that have to be performed for the unconscious before one can get free.[53] The hunter looks like a previous unsuccessful attempt of the hero to gain possession of his soul through robbery and violence. But the conquest of the soul is in reality a work of patience, self-sacrifice, and devotion. By gaining possession of the four-legged horse the hero steps right into the shoes of the hunter and carries off the princess as well. The quaternity in our tale proves to be the greater power, for it integrates into its totality that which it still needed in order to become whole.

[434] The archetype of the spirit in this, be it said, by no means primitive fairytale is expressed theriomorphically as a system of three functions which is subordinated to a unity, the evil spirit, in the same way that some unnamed authority has crucified the raven with a triad of three nails. The two supraordinate unities correspond in the first case to the inferior function which is the arch-enemy of the main function, namely to the hunter; and in the second case to the main function, namely to the hero. Hunter and hero are ultimately equated with one another, so that the hunter's function is resolved in the hero. As a matter of fact, the hero lies dormant in the hunter from the very beginning, egging him on, with all the unmoral means at his disposal, to carry out the rape of the soul, and then causing him to play her into the hero's hands against the hunter's will. On the surface a furious conflict rages between them, but down below the one goes about the other's business. The knot is unravelled directly the hero succeeds in capturing the quaternity—or in psychological language, when he assimilates the inferior function into the ternary system. That puts an end to the conflict at one blow, and the figure of the hunter melts into thin air. After this victory, the hero sets his princess upon the three-legged steed and together they ride away to her father's kingdom. From now on she rules and personifies the realm of spirit that formerly served the wicked hunter. Thus the anima is and remains the representative of that part of the unconscious which can never be assimilated into a humanly attainable whole.

[435] *Postscript*. Only after the completion of my manuscript was my attention drawn by a friend to a Russian variant of our story. It bears the title "Maria Morevna."[54] The hero of the story is no swineherd, but Czarevitch Ivan. There is an interesting explanation of the three helpful animals: they correspond to Ivan's three sisters and their husbands, who are really birds. The three sisters represent an unconscious triad of functions related to both the animal and spiritual realms. The bird-men are a species of angel and emphasize the auxiliary nature of the unconscious functions. In the story they intervene at the critical moment when the hero—unlike his German counterpart—gets into the power of

the evil spirit and is killed and dismembered (the typical fate of the God-man!).[55] The evil spirit is an old man who is often shown naked and is called Koschei[56] the Deathless. The corresponding witch is the well-known Baba Yaga. The three helpful animals of the German variant are doubled here, appearing first as the bird-men and then as the lion, the strange bird, and the bees. The princess is Queen Maria Morevna, a redoubtable martial leader—Mary the queen of heaven is lauded in the Russian Orthodox hymnal as “leader of hosts”!—who has chained up the evil spirit with twelve chains in the forbidden room in her castle. When Ivan slakes the old devil’s thirst he makes off with the queen. The magic riding animals do not in the end turn into human beings. This Russian story has a distinctly more primitive character.

V. SUPPLEMENT

[436] The following remarks lay no claim to general interest, being in the main technical. I wanted at first to delete them from this revised version of my essay, but then I changed my mind and appended them in a supplement. The reader who is not specifically interested in psychology can safely skip this section. For, in what follows, I have dealt with the abstruse-looking problem of the three- and four-leggedness of the magic horses, and presented my reflections in such a way as to demonstrate the method I have employed. This piece of psychological reasoning rests firstly on the irrational data of the material, that is, of the fairytale, myth, or dream, and secondly on the conscious realization of the “latent” rational connections which these data have with one another. That such connections exist at all is something of a hypothesis, like that which asserts that dreams have a meaning. The truth of this assumption is not established *a priori:* its usefulness can only be proved by application. It therefore remains to be seen whether its methodical application to irrational material enables one to interpret the latter in a meaningful way. Its application consists in approaching the material as if it had a coherent inner meaning. For this purpose most of the data require a certain amplification, that is, they need to be clarified, generalized, and approximated to a more or less general concept in accordance with Cardan’s rule of interpretation. For instance, the three-leggedness, in

order to be recognized for what it is, has first to be separated from the horse and then approximated to its specific principle—the principle of threeness. Likewise, the four-leggedness in the fairytale, when raised to the level of a general concept, enters into relationship with the threeness, and as a result we have the enigma mentioned in the *Timaeus*, the problem of three and four. Triads and tetrads represent archetypal structures that play a significant part in all symbolism and are equally important for the investigation of myths and dreams. By raising the irrational datum (three-leggedness and four-leggedness) to the level of a general concept we elicit the universal meaning of this motif and encourage the inquiring mind to tackle the problem seriously. This task involves a series of reflections and deductions of a technical nature which I would not wish to withhold from the psychologically interested reader and especially from the professional, the less so as this labour of the intellect represents a typical unravelling of symbols and is indispensable for an adequate understanding of the products of the unconscious. Only in this way can the nexus of unconscious relationships be made to yield their own meaning, in contrast to those deductive interpretations derived from a preconceived theory, e.g., interpretations based on astronomy, meteorology, mythology, and—last but not least—the sexual theory.

[437] The three-legged and four-legged horses are in truth a recondite matter worthy of closer examination. The three and the four remind us not only of the dilemma we have already met in the theory of psychological functions, but also of the axiom of Maria Prophetissa, which plays a considerable role in alchemy. It may therefore be rewarding to examine more closely the meaning of the miraculous horses.

[438] The first thing that seems to me worthy of note is that the three-legged horse which is assigned to the princess as her mount is a mare, and is moreover herself a bewitched princess. Threeness is unmistakably connected here with femininity, whereas from the dominating religious standpoint of consciousness it is an exclusively masculine affair, quite apart from the fact that 3, as an uneven number, is masculine in the first place. One could therefore translate threeness as “masculinity” outright,

this being all the more significant when one remembers the ancient Egyptian triunity of God, Ka-mutef,[57] and Pharaoh.

[439] Three-leggedness, as the attribute of some animal, denotes the unconscious masculinity immanent in a female creature. In a real woman it would correspond to the animus who, like the magic horse, represents "spirit." In the case of the anima, however, threeness does not coincide with any Christian idea of the Trinity but with the "lower triangle," the inferior function triad that constitutes the "shadow." The inferior half of the personality is for the greater part unconscious. It does not denote the whole of the unconscious, but only the personal segment of it. The anima, on the other hand, so far as she is distinguished from the shadow, personifies the collective unconscious. If threeness is assigned to her as a riding-animal, it means that she "rides" the shadow, is related to it as the *mar*.[58] In that case she possesses the shadow. But if she herself is the horse, then she has lost her dominating position as a personification of the collective unconscious and is "ridden"—possessed—by Princess A, spouse of the hero. As the fairytale rightly says, she has been changed by witchcraft into the three-legged horse (Princess B).

We can sort out this imbroglio more or less as follows:

[440] 1. Princess A is the anima[59] of the hero. She rides—that is, possesses—the three-legged horse, who is the shadow, the inferior function-triad of her later spouse. To put it more simply: she has taken possession of the inferior half of the hero's personality. She has caught him on his weak side, as so often happens in ordinary life, for where one is weak one needs support and completion. In fact, a woman's place is on the weak side of a man. This is how we would have to formulate the situation if we regarded the hero and Princess A as two ordinary people. But since it is a fairy-story played out mainly in the world of magic, we are probably more correct in interpreting Princess A as the hero's anima. In that case the hero has been wafted out of the profane world through his encounter with the anima, like Merlin by his fairy: as an ordinary man he is like one caught in a marvellous dream, viewing the world through a veil of mist.

[441] 2. The matter is now considerably complicated by the unexpected fact that the three-legged horse is a mare, an equivalent of Princess A.

She (the mare) is Princess B, who in the shape of a horse corresponds to Princess A's shadow (i.e., her inferior function-triad). Princess B, however, differs from Princess A in that, unlike her, she does not ride the horse but is contained in it: she is bewitched and has thus come under the spell of a masculine triad. Therefore, she is possessed by a shadow.

[442] 3. The question now is, *whose* shadow? It cannot be the shadow of the hero, for this is already taken up by the latter's anima. The fairytale gives us the answer: it is the hunter or magician who has bewitched her. As we have seen, the hunter is somehow connected with the hero, since the latter gradually puts himself in his shoes. Hence one could easily arrive at the conjecture that the hunter is at bottom none other than the shadow of the hero. But this supposition is contradicted by the fact that the hunter stands for a formidable power which extends not only to the hero's anima but much further, namely to the royal brother-sister pair of whose existence the hero and his anima have no notion, and who appear very much out of the blue in the story itself. The power that extends beyond the orbit of the individual has a more than individual character and cannot therefore be identified with the shadow, if we conceive and define this as the dark half of the personality. As a supra-individual factor the numen of the hunter is a dominant of the collective unconscious, and its characteristic features-hunter, magician, raven, miraculous horse, crucifixion or suspension high up in the boughs of the world-tree[60]—touch the Germanic psyche very closely. Hence the Christian *Weltanschauung*, when reflected in the ocean of the (Germanic) unconscious, logically takes on the features of Wotan.[61] In the figure of the hunter we meet an *imago dei*, a God-image, for Wotan is also a god of winds and spirits, on which account the Romans fittingly interpreted him as Mercury.

[443] 4. The Prince and his sister, Princess B, have therefore been seized by a pagan god and changed into horses, i.e., thrust down to the animal level, into the realm of the unconscious. The inference is that in their proper human shape the pair of them once belonged to the sphere of collective consciousness. But who are they?

[444] In order to answer this question we must proceed from the fact that these two are an undoubted counterpart of the hero and Princess A. They are connected with the latter also because they serve as their mounts, and in consequence they appear as their lower, animal halves. Because of its almost total unconsciousness, the animal has always symbolized the psychic sphere in man which lies hidden in the darkness of the body's instinctual life. The hero rides the stallion, characterized by the even (feminine) number 4; Princess A rides the mare who has only three legs (3 = a masculine number). These numbers make it clear that the transformation into animals has brought with it a modification of sex character: the stallion has a feminine attribute, the mare a masculine one. Psychology can confirm this development as follows: to the degree that a man is overpowered by the (collective) unconscious there is not only a more unbridled intrusion of the instinctual sphere, but a certain feminine character also makes its appearance, which I have suggested should be called "anima." If, on the other hand, a woman comes under the domination of the unconscious, the darker side of her feminine nature emerges all the more strongly, coupled with markedly masculine traits. These latter are comprised under the term "animus."[62]

[445] 5. According to the fairytale, however, the animal form of the brother-sister pair is "unreal" and due simply to the magic influence of the pagan hunter-god. If they were nothing but animals, we could rest content with this interpretation. But that would be to pass over in unmerited silence the singular allusion to a modification of sex character. The white horses are no ordinary horses: they are miraculous beasts with supernatural powers. Therefore the human figures out of which the horses were magically conjured must likewise have had something supernatural about them. The fairytale makes no comment here, but if our assumption is correct that the two animal forms correspond to the subhuman components of hero and princess, then it follows that the human forms—Prince and Princess B—must correspond to their superhuman components. The superhuman quality of the original swineherd is shown by the fact that he becomes a hero, practically a half-god, since he does not stay with his swine but climbs the world-tree, where he is very nearly made its prisoner, like Wotan. Similarly, he could

not have become like the hunter if he did not have a certain resemblance to him in the first place. In the same way the imprisonment of Princess A on the top of the world-tree proves her electness, and in so far as she shares the hunter’s bed, as stated by the tale, she is actually the bride of God.

[446] It is these extraordinary forces of heroism and election, bordering on the superhuman, which involve two quite ordinary humans in a superhuman fate. Accordingly, in the profane world a swineherd becomes a king, and a princess gets an agreeable husband. But since, for fairytales, there is not only a profane but also a magical world, human fate does not have the final word. The fairytale therefore does not omit to point out what happens in the world of magic. There too a prince and princess have got into the power of the evil spirit, who is himself in a tight corner from which he cannot extricate himself without extraneous help. So the human fate that befalls the swineherd and Princess A is paralleled in the world of magic. But in so far as the hunter is a pagan God-image and thus exalted above the world of heroes and paramours of the gods, the parallelism goes beyond the merely magical into a divine and spiritual sphere, where the evil spirit, the Devil himself—or at least *a* devil—is bound by the spell of an equally mighty or even mightier counter-principle indicated by the three nails. This supreme tension of opposites, the mainspring of the whole drama, is obviously the conflict between the upper and lower triads, or, to put it in theological terms, between the Christian God and the devil who has assumed the features of Wotan.[63]

[447] 6. We must, it seems, start from this highest level if we want to understand the story correctly, for the drama takes its rise from the initial transgression of the evil spirit. The immediate consequence of this is his crucifixion. In that distressing situation he needs outside help, and as it is not forthcoming from above, it can only be summoned from below. A young swineherd, possessed with the boyish spirit of adventure, is reckless and inquisitive enough to climb the world-tree. Had he fallen and broken his neck, no doubt everybody would have said, “What evil spirit could have given him the crazy idea of climbing up an enormous tree like that!” Nor would they have been altogether wrong, for that is precisely what the evil spirit was after. The capture of Princess A was a

transgression in the profane world, and the bewitching of the—as we may suppose—semidivine brother-sister pair was just such an enormity in the magical world. We do not know, but it is possible, that this heinous crime was committed before the bewitching of Princess A. At any rate, both episodes point to a transgression of the evil spirit in the magical world as well as in the profane.

[448] It is assuredly not without a deeper meaning that the rescuer or redeemer should be a swineherd, like the Prodigal Son. He is of lowly origin and has this much in common with the curious conception of the redeemer in alchemy. His first liberating act is to deliver the evil spirit from the divine punishment meted out to him. It is from this act, representing the first stage of the lysis, that the whole dramatic tangle develops.

[449] 7. The moral of this story is in truth exceedingly odd. The finale satisfies in so far as the swineherd and Princess A are married and become the royal pair. Prince and Princess B likewise celebrate their wedding, but this—in accordance with the archaic prerogative of kings—takes the form of incest, which, though somewhat repellent, must be regarded as more or less habitual in semidivine circles.[64] But what, we may ask, happens to the evil spirit, whose rescue from condign punishment sets the whole thing in motion? The wicked hunter is trampled to pieces by the horses, which presumably does no lasting damage to a spirit. Apparently he vanishes without trace, but only apparently, for he does after all leave a trace behind him, namely a hard-won happiness in both the profane and the magical world. Two halves of the quaternity, represented on one side by the swineherd and Princess A and on the other by Prince and Princess B, have each come together and united: two marriage-pairs now confront one another, parallel but otherwise divided, inasmuch as the one pair belongs to the profane and the other to the magical world. But in spite of this indubitable division, secret psychological connections, as we have seen, exist between them which allow us to derive the one pair from the other.

[450] Speaking in the spirit of the fairytale, which unfolds its drama from the highest point, one would have to say that the world of half-gods is

anterior to the profane world and produces it out of itself, just as the world of half-gods must be thought of as proceeding from the world of gods. Conceived in this way, the swineherd and Princess A are nothing less than earthly simulacra of Prince and Princess B, who in their turn would be the descendants of divine prototypes. Nor should we forget that the horse-breeding witch belongs to the hunter as his female counterpart, rather like an ancient Epona (the Celtic goddess of horses). Unfortunately we are not told how the magical conjuration into horses happened. But it is evident that the witch had a hand in the game because both the horses were raised from her stock and are thus, in a sense, her productions. Hunter and witch form a pair—the reflection, in the nocturnalchthonic part of the magical world, of a divine parental pair. The latter is easily recognized in the central Christian idea of *sponsus et sponsa*, Christ and his bride, the Church.

[451] If we wanted to explain the fairytale personalistically, the attempt would founder on the fact that archetypes are not whimsical inventions but autonomous elements of the unconscious psyche which were there before any invention was thought of. They represent the unalterable structure of a psychic world whose "reality" is attested by the determining effects it has upon the conscious mind. Thus, it is a significant psychic reality that the human pair[65] is matched by another pair in the unconscious, the latter pair being only in appearance a reflection of the first. In reality the royal pair invariably comes first, as an *a priori*, so that the human pair has far more the significance of an individual concretization, in space and time, of an eternal and primordial image—at least in its mental structure, which is imprinted upon the biological continuum.

[452] We could say, then, that the swineherd stands for the "animal" man who has a soul-mate somewhere in the upper world. By her royal birth she betrays her connection with the pre-existent, semidivine pair. Looked at from this angle, the latter stands for everything a man can become if only he climbs high enough up the world-tree.[66] For to the degree that the young swineherd gains possession of the patrician, feminine half of himself, he approximates to the pair of half-gods and lifts himself into the sphere of royalty, which means universal validity. We come across the

same theme in Christian Rosencreutz’s *Chymical Wedding,* where the king’s son must first free his bride from the power of a Moor, to whom she has voluntarily given herself as a concubine. The Moor represents the alchemical *nigredo* in which the arcane substance lies hidden, an idea that forms yet another parallel to our mythologem, or, as we would say in psychological language, another variant of this archetype.

[453] As in alchemy, our fairytale describes the unconscious processes that compensate the conscious, Christian situation. It depicts the workings of a spirit who carries our Christian thinking beyond the boundaries set by ecclesiastical concepts, seeking an answer to questions which neither the Middle Ages nor the present day have been able to solve. It is not difficult to see in the image of the second royal pair a correspondence to the ecclesiastical conception of bridegroom and bride, and in that of the hunter and witch a distortion of it, veering towards an atavistic, unconscious Wotanism. The fact that it is a *German* fairytale makes the position particularly interesting, since this same Wotanism was the psychological godfather of National Socialism, a phenomenon which carried the distortion to the lowest pitch before the eyes of the world.[67] On the other hand, the fairytale makes it clear that it is possible for a man to attain totality, to become whole, only with the co-operation of the spirit of darkness, indeed that the latter is actually a *causa instrumentalis* of redemption and individuation. In utter perversion of this goal of spiritual development, to which all nature aspires and which is also prefigured in Christian doctrine, National Socialism destroyed man’s moral autonomy and set up the nonsensical totalitarianism of the State. The fairytale tells us how to proceed if we want to overcome the power of darkness: we must turn his own weapons against him, which naturally cannot be done if the magical underworld of the hunter remains unconscious, and if the best men in the nation would rather preach dogmatisms and platitudes than take the human psyche seriously.

VI. CONCLUSION

[454] When we consider the spirit in its archetypal form as it appears to us in fairytales and dreams, it presents a picture that differs strangely from the conscious idea of spirit, which is split up into so many meanings.

Spirit was originally a spirit in human or animal form, a *daimonion* that came upon man from without. But our material already shows traces of an expansion of consciousness which has gradually begun to occupy that originally unconscious territory and to transform those *daimonia*, at least partially, into voluntary acts. Man conquers not only nature, but spirit also, without realizing what he is doing. To the man of enlightened intellect it seems like the correction of a fallacy when he recognizes that what he took to be spirits is simply the human spirit and ultimately his own spirit. All the superhuman things, whether good or bad, that former ages predicated of the *daimonia*, are reduced to “reasonable” proportions as though they were pure exaggeration, and everything seems to be in the best possible order. But were the unanimous convictions of the past really and truly only exaggerations? If they were not, then the integration of the spirit means nothing less than its demonization, since the superhuman spiritual agencies that were formerly tied up in nature are introjected into human nature, thus endowing it with a power which extends the bounds of the personality *ad infinitum*, in the most perilous way. I put it to the enlightened rationalist: has his rational reduction led to the beneficial control of matter and spirit? He will point proudly to the advances in physics and medicine, to the freeing of the mind from medieval stupidity and—as a well-meaning Christian—to our deliverance from the fear of demons. But we continue to ask: what have all our other cultural achievements led to? The fearful answer is there before our eyes: man has been delivered from no fear, a hideous nightmare lies upon the world. So far reason has failed lamentably, and the very thing that everybody wanted to avoid rolls on in ghastly progression. Man has achieved a wealth of useful gadgets, but, to offset that, he has torn open the abyss, and what will become of him now—where can he make a halt? After the last World War we hoped for reason: we go on hoping. But already we are fascinated by the possibilities of atomic fission and promise ourselves a Golden Age—the surest guarantee that the abomination of desolation will grow to limitless dimensions. And who or what is it that causes all this? It is none other than that harmless (!), ingenious, inventive, and sweetly reasonable human spirit who unfortunately is abysmally unconscious of the demonism that still clings to him. Worse, this spirit does everything to avoid looking himself in the face, and we all help him like mad. Only, heaven preserve us from psychology—*that* depravity might lead to self-knowledge I Rather let us have wars, for which somebody else is always to blame, nobody seeing that all the world is driven to do just what all the world flees from in terror.

[455] It seems to me, frankly, that former ages did not exaggerate, that the spirit has not sloughed off its demonisms, and that mankind, because of its scientific and technological development, has in increasing measure delivered itself over to the danger of possession. True, the archetype of the spirit is capable of working for good as well as for evil, but it depends upon man's free—i.e., conscious—decision whether the good also will be perverted into something satanic. Man's worst sin is unconsciousness, but it is indulged in with the greatest piety even by those who should serve mankind as teachers and examples. When shall we stop taking man for granted in this barbarous manner and in all seriousness seek ways and means to exorcize him, to rescue him from possession and unconsciousness, and make this the most vital task of civilization? Can we not understand that all the outward tinkerings and improvements do not touch man's inner nature, and that everything ultimately depends upon whether the man who wields the science and the technics is capable of responsibility or not? Christianity has shown us the way, but, as the facts bear witness, it has not penetrated deeply enough below the surface. What depths of despair are still needed to open the eyes of the world's responsible leaders, so that at least they can refrain from leading themselves into temptation?

ON THE PSYCHOLOGY OF THE TRICKSTER-FIGURE[1]

[456] It is no light task for me to write about the figure of the trickster in American Indian mythology within the confined space of a commentary. When I first came across Adolf Bandelier's classic on this subject, *The Delight Makers*, many years ago, I was struck by the European analogy of the carnival in the medieval Church, with its reversal of the hierarchic order, which is still continued in the carnivals held by student societies today. Something of this contradictoriness also inheres in the medieval description of the devil as *simia dei* (the ape of God), and in his characterization in folklore as the "simpleton" who is "fooled" or "cheated." A curious combination of typical trickster motifs can be found in the alchemical figure of Mercurius; for instance, his fondness for sly jokes and malicious pranks, his powers as a shape-shifter, his dual nature, half animal, half divine, his exposure to all kinds of tortures, and—last but not least—his approximation to the figure of a saviour. These qualities make Mercurius seem like a daemonic being resurrected from primitive times, older even than the Greek Hermes. His rogueries relate him in some measure to various figures met with in folklore and universally known in fairytales: Tom Thumb, Stupid Hans, or the buffoon-like Hanswurst, who is an altogether negative hero and yet manages to achieve through his stupidity what others fail to accomplish with their best efforts. In Grimm's fairytale, the "Spirit Mercurius" lets himself be outwitted by a peasant lad, and then has to buy his freedom with the precious gift of healing.

[457] Since all mythical figures correspond to inner psychic experiences and originally sprang from them, it is not surprising to find certain phenomena in the field of parapsychology which remind us of the trickster. These are the phenomena connected with poltergeists, and they occur at all times and places in the ambience of pre-adolescent children.

The malicious tricks played by the poltergeist are as well known as the low level of his intelligence and the fatuity of his "communications." Ability to change his shape seems also to be one of his characteristics, as there are not a few reports of his appearance in animal form. Since he has on occasion described himself as a soul in hell, the motif of subjective suffering would seem not to be lacking either. His universality is co-extensive, so to speak, with that of shamanism, to which, as we know, the whole phenomenology of spiritualism belongs. There is something of the trickster in the character of the shaman and medicine-man, for he, too, often plays malicious jokes on people, only to fall victim in his turn to the vengeance of those whom he has injured. For this reason, his profession sometimes puts him in peril of his life. Besides that, the shamanistic techniques in themselves often cause the medicine-man a good deal of discomfort, if not actual pain. At all events the "making of a medicine-man" involves, in many parts of the world, so much agony of body and soul that permanent psychic injuries may result. His "approximation to the saviour" is an obvious consequence of this, in confirmation of the mythological truth that the wounded wounder is the agent of healing, and that the sufferer takes away suffering.

[458] These mythological features extend even to the highest regions of man's spiritual development. If we consider, for example, the daemonic features exhibited by Yahweh in the Old Testament, we shall find in them not a few reminders of the unpredictable behaviour of the trickster, of his senseless orgies of destruction and his self-imposed sufferings, together with the same gradual development into a saviour and his simultaneous humanization. It is just this transformation of the meaningless into the meaningful that reveals the trickster's compensatory relation to the "saint." In the early Middle Ages, this led to some strange ecclesiastical customs based on memories of the ancient saturnalia. Mostly they were celebrated on the days immediately following the birth of Christ—that is, in the New Year—with singing and dancing. The dances were the originally harmless *tripudia* of the priests, lower clergy, children, and subdeacons and took place in church. An *episcopus puerorum* (children's bishop) was elected on Innocents' Day and dressed in pontifical robes. Amid uproarious rejoicings he paid an official visit to the palace of the

archbishop and bestowed the episcopal blessing from one of the windows. The same thing happened at the *tripudium hypodiaconorum*, and at the dances for other priestly grades. By the end of the twelfth century, the subdeacons' dance had degenerated into a real *festum stultorum* (fools' feast). A report from the year 1198 says that at the Feast of the Circumcision in Notre Dame, Paris, "so many abominations and shameful deeds" were committed that the holy place was desecrated "not only by smutty jokes, but even by the shedding of blood." In vain did Pope Innocent III inveigh against the "jests and madness that make the clergy a mockery," and the "shameless frenzy of their play-acting." Two hundred and fifty years later (March 12, 1444), a letter from the Theological Faculty of Paris to all the French bishops was still fulminating against these festivals, at which "even the priests and clerics elected an archbishop or a bishop or pope, and named him the Fools' Pope" (*fatuorum papam*). "In the very midst of divine service masqueraders with grotesque faces, disguised as women, lions, and mummers, performed their dances, sang indecent songs in the choir, ate their greasy food from a corner of the altar near the priest celebrating mass, got out their games of dice, burned a stinking incense made of old shoe leather, and ran and hopped about all over the church."[2]

[459] It is not surprising that this veritable witches' sabbath was uncommonly popular, and that it required considerable time and effort to free the Church from this pagan heritage.[3]

[460] In certain localities even the priests seem to have adhered to the "libertas decembrica," as the Fools' Holiday was called, in spite (or perhaps because?) of the fact that the older level of consciousness could let itself rip on this happy occasion with all the wildness, wantonness, and irresponsibility of paganism.[4] These ceremonies, which still reveal the spirit of the trickster in his original form, seem to have died out by the beginning of the sixteenth century. At any rate, the various conciliar decrees issued from 1581 to 1585 forbade only the *festum puerorum* and the election of an *episcopus puerorum*.

[461] Finally, we must also mention in this connection the *festum asinorum*, which, so far as I know, was celebrated mainly in France.

Although considered a harmless festival in memory of Mary’s flight into Egypt, it was celebrated in a somewhat curious manner which might easily have given rise to misunderstandings. In Beauvais, the ass procession went right into the church.[5] At the conclusion of each part (Introit, Kyrie, Gloria, etc.) of the high mass that followed, the whole congregation *brayed*, that is, they all went “Y-a” like a donkey (“hac modulatione hinham concludebantur”). A codex dating apparently from the eleventh century says: “At the end of the mass, instead of the words ‘Ite missa est,’ the priest shall bray three times (*ter hinhamabit*), and instead of the words ‘Deo gratias,’ the congregation shall answer ‘Y-a’ (*hinham*) three times.”

[462] Du Cange cites a hymn from this festival:

Orientis partibus
Adventavit Asinus
Pulcher et fortissimus
Sarcinis aptissimus.

Each verse was followed by the French refrain:

Hez, Sire Asnes, car chantez
Belle bouche rechignez
Vous aurez du foin assez
Et de l’avoine à plantez.

The hymn had nine verses, the last of which was:

Amen, dicas, Asine (*hie genuflectebatur*)
Jam satur de gramine.
Amen, amen, itera
Aspernare vetera.[6]

[463] Du Cange says that the more ridiculous this rite seemed, the greater the enthusiasm with which it was celebrated. In other places the ass was decked with a golden canopy whose corners were held “by distinguished canons”; the others present had to “don suitably festive garments, as at Christmas.” Since there were certain tendencies to bring the ass into symbolic relationship with Christ, and since, from ancient times, the god of the Jews was vulgarly conceived to be an ass—a prejudice which extended to Christ himself,[7] as is shown by the mock crucifixion

scratched on the wall of the Imperial Cadet School on the Palatine[8]—the danger of theriomorphism lay uncomfortably close. Even the bishops could do nothing to stamp out this custom, until finally it had to be suppressed by the "auctoritas supremi Senatus." The suspicion of blasphemy becomes quite open in Nietzsche's "Ass Festival," which is a deliberately blasphemous parody of the mass.[9]

[464] These medieval customs demonstrate the role of the trickster to perfection, and, when they vanished from the precincts of the Church, they appeared again on the profane level of Italian theatricals, as those comic types who, often adorned with enormous ithyphallic emblems, entertained the far from prudish public with ribaldries in true Rabelaisian style. Callot's engravings have preserved these classical figures for posterity—the Pulcinellas, Cucorognas, Chico Sgarras, and the like.[10]

[465] In picaresque tales, in carnivals and revels, in magic rites of healing, in man's religious fears and exaltations, this phantom of the trickster haunts the mythology of all ages, sometimes in quite unmistakable form, sometimes in strangely modulated guise.[11] He is obviously a "psychologem," an archetypal psychic structure of extreme antiquity. In his clearest manifestations he is a faithful reflection of an absolutely undifferentiated human consciousness, corresponding to a psyche that has hardly left the animal level. That this is how the trickster figure originated can hardly be contested if we look at it from the causal and historical angle. In psychology as in biology we cannot afford to overlook or underestimate this question of origins, although the answer usually tells us nothing about the functional meaning. For this reason biology should never forget the question of purpose, for only by answering that can we get at the meaning of a phenomenon. Even in pathology, where we are concerned with lesions which have no meaning in themselves, the exclusively causal approach proves to be inadequate, since there are a number of pathological phenomena which only give up their meaning when we inquire into their purpose. And where we are concerned with the normal phenomena of life, this question of purpose takes undisputed precedence.

[466] When, therefore, a primitive or barbarous consciousness forms a picture of itself on a much earlier level of development and continues to do so for hundreds or even thousands of years, undeterred by the contamination of its archaic qualities with differentiated, highly developed mental products, then the causal explanation is that the older the archaic qualities are, the more conservative and pertinacious is their behaviour. One simply cannot shake off the memory-image of things as they were, and drags it along like a senseless appendage.

[467] This explanation, which is facile enough to satisfy the rationalistic requirements of our age, would certainly not meet with the approval of the Winnebagos, the nearest possessors of the trickster cycle. For them the myth is not in any sense a remnant—it is far too amusing for that, and an object of undivided enjoyment. For them it still "functions," provided that they have not been spoiled by civilization. For them there is no earthly reason to theorize about the meaning and purpose of myths, just as the Christmas-tree seems no problem at all to the naïve European. For the thoughtful observer, however, both trickster and Christmas-tree afford reason enough for reflection. Naturally it depends very much on the mentality of the observer what he thinks about these things. Considering the crude primitivity of the trickster cycle, it would not be surprising if one saw in this myth simply the reflection of an earlier, rudimentary stage of consciousness, which is what the trickster obviously seems to be.[12]

[468] The only question that would need answering is whether such personified reflections exist at all in empirical psychology. As a matter of fact they do, and these experiences of split or double personality actually form the core of the earliest psychopathological investigations. The peculiar thing about these dissociations is that the split-off personality is not just a random one, but stands in a complementary or compensatory relationship to the ego-personality. It is a personification of traits of character which are sometimes worse and sometimes better than those the ego-personality possesses. A collective personification like the trickster is the product of an aggregate of individuals and is welcomed by each individual as something known to him, which would not be the case if it were just an individual outgrowth.

[469] Now if the myth were nothing but an historical remnant, one would have to ask why it has not long since vanished into the great rubbish-heap of the past, and why it continues to make its influence felt on the highest levels of civilization, even where, on account of his stupidity and grotesque scurrility, the trickster no longer plays the role of a "delight-maker." In many cultures his figure seems like an old river-bed in which the water still flows. One can see this best of all from the fact that the trickster motif does not crop up only in its mythical form but appears just as naïvely and authentically in the unsuspecting modern man—whenever, in fact, he feels himself at the mercy of annoying "accidents" which thwart his will and his actions with apparently malicious intent. He then speaks of "hoodoos" and "jinxes" or of the "mischievousness of the object." Here the trickster is represented by counter-tendencies in the unconscious, and in certain cases by a sort of second personality, of a puerile and inferior character, not unlike the personalities who announce themselves at spiritualistic séances and cause all those ineffably childish phenomena so typical of poltergeists. I have, I think, found a suitable designation for this character-component when I called it the *shadow*.[13] On the civilized level, it is regarded as a personal "gaffe," "slip," "faux pas," etc., which are then chalked up as defects of the conscious personality. We are no longer aware that in carnival customs and the like there are remnants of a collective shadow figure which prove that the personal shadow is in part descended from a numinous collective figure. This collective figure gradually breaks up under the impact of civilization, leaving traces in folklore which are difficult to recognize. But the main part of him gets personalized and is made an object of personal responsibility.

[470] Radin's trickster cycle preserves the shadow in its pristine mythological form, and thus points back to a very much earlier stage of consciousness which existed before the birth of the myth, when the Indian was still groping about in a similar mental darkness. Only when his consciousness reached a higher level could he detach the earlier state from himself and objectify it, that is, say anything about it. So long as his consciousness was itself trickster-like, such a confrontation could obviously not take place. It was possible only when the attainment of a

newer and higher level of consciousness enabled him to look back on a lower and inferior state. It was only to be expected that a good deal of mockery and contempt should mingle with this retrospect, thus casting an even thicker pall over man’s memories of the past, which were pretty unedifying anyway. This phenomenon must have repeated itself innumerable times in the history of his mental development. The sovereign contempt with which our modern age looks back on the taste and intelligence of earlier centuries is a classic example of this, and there is an unmistakable allusion to the same phenomenon in the New Testament, where we are told in Acts 17:30 that God looked down from above (*ὑυπεριδῴυ, despiciens*) on the *Χρόυοί τῆς ἀγυοίας*, the times of ignorance (or unconsciousness).

[471] This attitude contrasts strangely with the still commoner and more striking idealization of the past, which is praised not merely as the “good old days” but as the Golden Age—and not just by uneducated and superstitious people, but by all those legions of theosophical enthusiasts who resolutely believe in the former existence and lofty civilization of Atlantis.

[472] Anyone who belongs to a sphere of culture that seeks the perfect state somewhere in the past must feel very queerly indeed when confronted by the figure of the trickster. He is a forerunner of the saviour, and, like him, God, man, and animal at once. He is both subhuman and superhuman, a bestial and divine being, whose chief and most alarming characteristic is his unconsciousness. Because of it he is deserted by his (evidently human) companions, which seems to indicate that he has fallen below their level of consciousness. He is so unconscious of himself that his body is not a unity, and his two hands fight each other. He takes his anus off and entrusts it with a special task. Even his sex is optional despite its phallic qualities: he can turn himself into a woman and bear children. From his penis he makes all kinds of useful plants. This is a reference to his original nature as a Creator, for the world is made from the body of a god.

[473] On the other hand he is in many respects stupider than the animals, and gets into one ridiculous scrape after another. Although he is not

really evil, he does the most atrocious things from sheer unconsciousness and unrelatedness. His imprisonment in animal unconsciousness is suggested by the episode where he gets his head caught inside the skull of an elk, and the next episode shows how he overcomes this condition by imprisoning the head of a hawk inside his own rectum. True, he sinks back into the former condition immediately afterwards, by falling under the ice, and is outwitted time after time by the animals, but in the end he succeeds in tricking the cunning coyote, and this brings back to him his saviour nature. The trickster is a primitive "cosmic" being of *divine-animal* nature, on the one hand superior to man because of his superhuman qualities, and on the other hand inferior to him because of his unreason and unconsciousness. He is no match for the animals either, because of his extraordinary clumsiness and lack of instinct. These defects are the marks of his *human* nature, which is not so well adapted to the environment as the animal's but, instead, has prospects of a much higher development of consciousness based on a considerable eagerness to learn, as is duly emphasized in the myth.

[474] What the repeated telling of the myth signifies is the therapeutic anamnesis of contents which, for reasons still to be discussed, should never be forgotten for long. If they were nothing but the remnants of an inferior state it would be understandable if man turned his attention away from them, feeling that their reappearance was a nuisance. This is evidently by no means the case, since the trickster has been a source of amusement right down to civilized times, where he can still be recognized in the carnival figures of Pulcinella and the clown. That is one important reason for his still continuing to function. But it is not the only one, and certainly not the reason why this reflection of an extremely primitive state of consciousness solidified into a mythological personage. Mere vestiges of an early state that is dying out usually lose their energy at an increasing rate, otherwise they would never disappear. The last thing we would expect is that they would have the strength to solidify into a mythological figure with its own cycle of legends—unless, of course, they received energy from outside, in this case from a higher level of consciousness or from sources in the unconscious which are not yet exhausted. To take a legitimate parallel from the psychology of the

individual, namely the appearance of an impressive shadow figure antagonistically confronting a personal consciousness: this figure does not appear merely because it *still* exists in the individual, but because it rests on a dynamism whose existence can only be explained in terms of his actual situation, for instance because the shadow is so disagreeable to his ego-consciousness that it has to be repressed into the unconscious. This explanation does not quite meet the case here, because the trickster obviously represents a vanishing level of consciousness which increasingly lacks the power to take express and assert itself. Furthermore, repression would prevent it from vanishing, because repressed contents are the very ones that have the best chance of survival, as we know from experience that nothing is corrected in the unconscious. Lastly, the story of the trickster is not in the least disagreeable to the Winnebago consciousness or incompatible with it but, on the contrary, pleasurable and therefore not conducive to repression. It looks, therefore, as if the myth were actively sustained and fostered by consciousness. This may well be so, since that is the best and most successful method of keeping the shadow figure conscious and subjecting it to conscious criticism. Although, to begin with, this criticism has more the character of a positive evaluation, we may expect that with the progressive development of consciousness the cruder aspects of the myth will gradually fall away, even if the danger of its rapid disappearance under the stress of white civilization did not exist. We have often seen how certain customs, originally cruel or obscene, became mere vestiges in the course of time.[14]

[475] The process of rendering this motif harmless takes an extremely long time, as its history shows; one can still detect traces of it even at a high level of civilization. Its longevity could also be explained by the strength and vitality of the state of consciousness described in the myth, and by the secret attraction and fascination this has for the conscious mind. Although purely causal hypotheses in the biological sphere are not as a rule very satisfactory, due weight must nevertheless be given to the fact that in the case of the trickster a higher level of consciousness has covered up a lower one, and that the latter was already in retreat. His recollection, however, is mainly due to the interest which the conscious

mind brings to bear on him, the inevitable concomitant being, as we have seen, the gradual civilizing, i.e., assimilation, of a primitive daemonic figure who was originally autonomous and even capable of causing possession.

[476] To supplement the causal approach by a final one therefore enables us to arrive at more meaningful interpretations not only in medical psychology, where we are concerned with individual fantasies originating in the unconscious, but also in the case of collective fantasies, that is myths and fairytales.

[477] As Radin points out, the civilizing process begins within the framework of the trickster cycle itself, and this is a clear indication that the original state has been overcome. At any rate the marks of deepest unconsciousness fall away from him; instead of acting in a brutal, savage, stupid, and senseless fashion, the trickster's behaviour towards the end of the cycle becomes quite useful and sensible. The devaluation of his earlier unconsciousness is apparent even in the myth, and one wonders what has happened to his evil qualities. The naïve reader may imagine that when the dark aspects disappear they are no longer there in reality. But that is not the case at all, as experience shows. What actually happens is that the conscious mind is then able to free itself from the fascination of evil and is no longer obliged to live it compulsively. The darkness and the evil have not gone up in smoke, they have merely withdrawn into the unconscious owing to loss of energy, where they remain unconscious so long as all is well with the conscious. But if the conscious should find itself in a critical or doubtful situation, then it soon becomes apparent that the shadow has not dissolved into nothing but is only waiting for a favourable opportunity to reappear as a projection upon one's neighbour. If this trick is successful, there is immediately created between them that world of primordial darkness where everything that is characteristic of the trickster can happen—even on the highest plane of civilization. The best examples of these "monkey tricks," as popular speech aptly and truthfully sums up this state of affairs in which everything goes wrong and nothing intelligent happens except by mistake at the last moment, are naturally to be found in politics.

[478] The so-called civilized man has forgotten the trickster. He remembers him only figuratively and metaphorically, when, irritated by his own ineptitude, he speaks of fate playing tricks on him or of things being bewitched. He never suspects that his own hidden and apparently harmless shadow has qualities whose dangerousness exceeds his wildest dreams. As soon as people get together in masses and submerge the individual, the shadow is mobilized, and, as history shows, may even be personified and incarnated.

[479] The disastrous idea that everything comes to the human psyche from outside and that it is born a *tabula rasa* is responsible for the erroneous belief that under normal circumstances the individual is in perfect order. He then looks to the State for salvation, and makes society pay for his inefficiency. He thinks the meaning of existence would be discovered if food and clothing were delivered to him gratis on his own doorstep, or if everybody possessed an automobile. Such are the puerilities that rise up in place of an unconscious shadow and keep it unconscious. As a result of these prejudices, the individual feels totally dependent on his environment and loses all capacity for introspection. In this way his code of ethics is replaced by a knowledge of what is permitted or forbidden or ordered. How, under these circumstances, can one expect a soldier to subject an order received from a superior to ethical scrutiny? He has not yet made the discovery that he might be capable of spontaneous ethical impulses, and of performing them—even when no one is looking.

[480] From this point of view we can see why the myth of the trickster was preserved and developed: like many other myths, it was supposed to have a therapeutic effect. It holds the earlier low intellectual and moral level before the eyes of the more highly developed individual, so that he shall not forget how things looked yesterday. We like to imagine that something which we do not understand does not help us in any way. But that is not always so. Seldom does a man understand with his head alone, least of all when he is a primitive. Because of its numinosity the myth has a direct effect on the unconscious, no matter whether it is understood or not. The fact that its repeated telling has not long since become obsolete can, I believe, be explained by its usefulness. The explanation is rather difficult because two contrary tendencies are at work: the desire on the

one hand to get out of the earlier condition and on the other hand not to forget it.[15] Apparently Radin has also felt this difficulty, for he says: "Viewed psychologically, it might be contended that the history of civilization is largely the account of the attempts of man to forget his transformation from an animal into a human being."[16] A few pages further on he says (with reference to the Golden Age): "So stubborn a refusal to forget is not an accident."[17] And it is also no accident that we are forced to contradict ourselves as soon as we try to formulate man's paradoxical attitude to myth. Even the most enlightened of us will set up a Christmas-tree for his children without having the least idea what this custom means, and is invariably disposed to nip any attempt at interpretation in the bud. It is really astonishing to see how many so-called superstitions are rampant nowadays in town and country alike, but if one took hold of the individual and asked him, loudly and clearly, "Do you believe in ghosts? in witches? in spells and magic?" he would deny it indignantly. It is a hundred to one he has never heard of such things and thinks it all rubbish. But in secret he is all for it, just like a jungle-dweller. The public knows very little of these things anyway, for everyone is convinced that in our enlightened society that kind of superstition has long since been eradicated, and it is part of the general convention to act as though one had never heard of such things, not to mention believing in them.

[481] But nothing is ever lost, not even the blood pact with the devil. Outwardly it is forgotten, but inwardly not at all. We act like the natives on the southern slopes of Mount Elgon, in East Africa, one of whom accompanied me part of the way into the bush. At a fork in the path we came upon a brand new "ghost trap," beautifully got up like a little hut, near the cave where he lived with his family. I asked him if he had made it. He denied it with all the signs of extreme agitation, asserting that only children would make such a "ju-ju." Whereupon he gave the hut a kick, and the whole thing fell to pieces.

[482] This is exactly the reaction we can observe in Europe today. Outwardly people are more or less civilized, but inwardly they are still primitives. Something in man is profoundly disinclined to give up his

beginnings, and something else believes it has long since got beyond all that. This contradiction was once brought home to me in the most drastic manner when I was watching a “Strudel” (a sort of local witch-doctor) taking the spell off a stable. The stable was situated immediately beside the Gotthard railway line, and several international expresses sped past during the ceremony. Their occupants would hardly have suspected that a primitive ritual was being performed a few yards away.

[483] The conflict between the two dimensions of consciousness is simply an expression of the polaristic structure of the psyche, which like any other energic system is dependent on the tension of opposites. That is also why there are no general psychological propositions which could not just as well be reversed; indeed, their reversibility proves their validity. We should never forget that in any psychological discussion we are not saying anything *about* the psyche, but that the psyche is always speaking about *itself*. It is no use thinking we can ever get beyond the psyche by means of the “mind,” even though the mind asserts that it is not dependent on the psyche. How could it prove that? We can say, if we like, that one statement comes from the psyche, is psychic and nothing but psychic, and that another comes from the mind, is “spiritual” and therefore superior to the psychic one. Both are mere assertions based on the postulates of belief.

[484] The fact is, that this old trichotomous hierarchy of psychic contents (hylic, psychic, and pneumatic) represents the polaristic structure of the psyche, which is the only immediate object of experience. The unity of our psychic nature lies in the middle, just as the living unity of the waterfall appears in the dynamic connection between above and below. Thus, the living effect of the myth is experienced when a higher consciousness, rejoicing in its freedom and independence, is confronted by the autonomy of a mythological figure and yet cannot flee from its fascination, but must pay tribute to the overwhelming impression. The figure works, because secretly it participates in the observer’s psyche and appears as its reflection, though it is not recognized as such. It is split off from his consciousness and consequently behaves like an autonomous personality. The trickster is a collective shadow figure, a summation of all the inferior traits of character in individuals. And since the individual

shadow is never absent as a component of personality, the collective figure can construct itself out of it continually. Not always, of course, as a mythological figure, but, in consequence of the increasing repression and neglect of the original mythologems, as a corresponding projection on other social groups and nations.

[485] If we take the trickster as a parallel of the individual shadow, then the question arises whether that trend towards meaning, which we saw in the trickster myth, can also be observed in the subjective and personal shadow. Since this shadow frequently appears in the phenomenology of dreams as a well-defined figure, we can answer this question positively: the shadow, although by definition a negative figure, sometimes has certain clearly discernible traits and associations which point to a quite different background. It is as though he were hiding meaningful contents under an unprepossessing exterior. Experience confirms this; and what is more important, the things that are hidden usually consist of increasingly numinous figures. The one standing closest behind the shadow is the anima,[18] who is endowed with considerable powers of fascination and possession. She often appears in rather too youthful form, and hides in her turn the powerful archetype of the wise old man (sage, magician, king, etc.). The series could be extended, but it would be pointless to do so, as psychologically one only understands what one has experienced oneself. The concepts of complex psychology are, in essence, not intellectual formulations but names for certain areas of experience, and though they can be described they remain dead and irrepresentable to anyone who has not experienced them. Thus, I have noticed that people usually have not much difficulty in picturing to themselves what is meant by the shadow, even if they would have preferred instead a bit of Latin or Greek jargon that sounds more “scientific.” But it costs them enormous difficulties to understand what the anima is. They accept her easily enough when she appears in novels or as a film star, but she is not understood at all when it comes to seeing the role she plays in their own lives, because she sums up everything that a man can never get the better of and never finishes coping with. Therefore it remains in a perpetual state of emotionality which must not be touched. The degree of unconsciousness one meets with in this connection is, to put it mildly,

astounding. Hence it is practically impossible to get a man who is afraid of his own femininity to understand what is meant by the anima.

[486] Actually, it is not surprising that this should be so, since even the most rudimentary insight into the shadow sometimes causes the greatest difficulties for the modern European. But since the shadow is the figure nearest his consciousness and the least explosive one, it is also the first component of personality to come up in an analysis of the unconscious. A minatory and ridiculous figure, he stands at the very beginning of the way of individuation, posing the deceptively easy riddle of the Sphinx, or grimly demanding answer to a “quaestio crocodilina.”[19]

[487] If, at the end of the trickster myth, the saviour is hinted at, this comforting premonition or hope means that some calamity or other has happened and been consciously understood. Only out of disaster can the longing for the saviour arise—in other words, the recognition and unavoidable integration of the shadow create such a harrowing situation that nobody but a saviour can undo the tangled web of fate. In the case of the individual, the problem constellated by the shadow is answered on the plane of the anima, that is, through relatedness. In the history of the collective as in the history of the individual, everything depends on the development of consciousness. This gradually brings liberation from imprisonment in *ἀγνοία*, ‘unconsciousness,’[20] and is therefore a bringer of light as well as of healing.

[488] As in its collective, mythological form, so also the individual shadow contains within it the seed of an enantiodromia, of a conversion into its opposite.

VI

CONSCIOUS, UNCONSCIOUS, AND INDIVIDUATION

A STUDY IN THE PROCESS OF INDIVIDUATION

CONCERNING MANDALA SYMBOLISM

CONSCIOUS, UNCONSCIOUS, AND INDIVIDUATION[1]

[489] The relation between the conscious and the unconscious on the one hand, and the individuation process on the other, are problems that arise almost regularly during the later stages of analytical treatment. By "analytical" I mean a procedure that takes account of the existence of the unconscious. These problems do not arise in a procedure based on suggestion. A few preliminary words may not be out of place in order to explain what is meant by "individuation."

[490] I use the term "individuation" to denote the process by which a person becomes a psychological "in-dividual," that is, a separate, indivisible unity or "whole."[2] It is generally assumed that consciousness is the whole of the psychological individual. But knowledge of the phenomena that can only be explained on the hypothesis of unconscious psychic processes makes it doubtful whether the ego and its contents are in fact identical with the "whole." If unconscious processes exist at all, they must surely belong to the totality of the individual, even though they are not components of the conscious ego. If they were part of the ego they would necessarily be conscious, because everything that is directly related to the ego is conscious. Consciousness can even be equated with the relation between the ego and the psychic contents. But unconscious phenomena are so little related to the ego that most people do not hesitate to deny their existence outright. Nevertheless, they manifest themselves in an individual's behaviour. An attentive observer can detect them without difficulty, while the observed person remains quite unaware of the fact that he is betraying his most secret thoughts or even things he has never thought consciously. It is, however, a great prejudice to suppose that something we have never thought consciously does not exist in the psyche. There is plenty of evidence to show that consciousness is very far from covering the psyche in its totality. Many things occur

semiconsciously, and a great many more remain entirely unconscious. Thorough investigation of the phenomena of dual and multiple personalities, for instance, has brought to light a mass of material with observations to prove this point. (I would refer the reader to the writings of Pierre Janet, Théodore Flournoy, Morton Prince, and others.[3])

[491] The importance of such phenomena has made a deep impression on medical psychology, because they give rise to all sorts of psychic and physiological symptoms. In these circumstances, the assumption that the ego expresses the totality of the psyche has become untenable. It is, on the contrary, evident that the whole must necessarily include not only consciousness but the illimitable field of unconscious occurrences as well, and that the ego can be no more than the centre of the field of consciousness.

[492] You will naturally ask whether the unconscious possesses a centre too. I would hardly venture to assume that there is in the unconscious a ruling principle analogous to the ego. As a matter of fact, everything points to the contrary. If there were such a centre, we could expect almost regular signs of its existence. Cases of dual personality would then be frequent occurrences instead of rare curiosities. As a rule, unconscious phenomena manifest themselves in fairly chaotic and unsystematic form. Dreams, for instance, show no apparent order and no tendency to systematization, as they would have to do if there were a personal consciousness at the back of them. The philosophers Carus and von Hartmann treat the unconscious as a metaphysical principle, a sort of universal mind, without any trace of personality or ego-consciousness, and similarly Schopenhauer’s “Will” is without an ego. Modern psychologists, too, regard the unconscious as an egoless function below the threshold of consciousness. Unlike the philosophers, they tend to derive its subliminal functions from the conscious mind. Janet thinks that there is a certain weakness of consciousness which is unable to hold all the psychic processes together. Freud, on the other hand, favours the idea of conscious factors that suppress certain incompatible tendencies. Much can be said for both theories, since there are numerous cases where a weakness of consciousness actually causes certain contents to fall below the threshold, or where disagreeable contents are repressed. It is obvious

that such careful observers as Janet and Freud would not have constructed theories deriving the unconscious mainly from conscious sources had they been able to discover traces of an independent personality or of an autonomous will in the manifestations of the unconscious.

[493] If it were true that the unconscious consists of nothing but contents accidentally deprived of consciousness but otherwise indistinguishable from the conscious material, then one could identify the ego more or less with the totality of the psyche. But actually the situation is not quite so simple. Both theories are based mainly on observations in the field of neurosis. Neither Janet nor Freud had any specifically psychiatric experience. If they had, they would surely have been struck by the fact that the unconscious displays contents that are utterly different from conscious ones, so strange, indeed, that nobody can understand them, neither the patient himself nor his doctors. The patient is inundated by a flood of thoughts that are as strange to him as they are to a normal person. That is why we call him “crazy”: we cannot understand his ideas. We understand something only if we have the necessary premises for doing so. But here the premises are just as remote from our consciousness as they were from the mind of the patient before he went mad. Otherwise he would never have become insane.

[494] There is, in fact, no field directly known to us from which we could derive certain pathological ideas. It is not a question of more or less normal contents that became unconscious just by accident. They are, on the contrary, products whose nature is at first completely baffling. They differ in every respect from neurotic material, which cannot be said to be at all bizarre. The material of a neurosis is understandable in human terms, but that of a psychosis is not.[4]

[495] This peculiar psychotic material cannot be derived from the conscious mind, because the latter lacks the premises which would help to explain the strangeness of the ideas. Neurotic contents can be integrated without appreciable injury to the ego, but psychotic ideas cannot. They remain inaccessible, and ego-consciousness is more or less

swamped by them. They even show a distinct tendency to draw the ego into their "system."

[496] Such cases indicate that under certain conditions the unconscious is capable of taking over the role of the ego. The consequence of this exchange is insanity and confusion, because the unconscious is not a second personality with organized and centralized functions but in all probability a decentralized congeries of psychic processes. However, nothing produced by the human mind lies absolutely outside the psychic realm. Even the craziest idea must correspond to something in the psyche. We cannot suppose that certain minds contain elements that do not exist at all in other minds. Nor can we assume that the unconscious is capable of becoming autonomous only in certain people, namely in those predisposed to insanity. It is very much more likely that the tendency to autonomy is a more or less general peculiarity of the unconscious. Mental disorder is, in a sense, only one outstanding example of a hidden but none the less general condition. This tendency to autonomy shows itself above all in affective states, including those of normal people. When in a state of violent affect one says or does things which exceed the ordinary. Not much is needed: love and hate, joy and grief, are often enough to make the ego and the unconscious change places. Very strange ideas indeed can take possession of otherwise healthy people on such occasions. Groups, communities, and even whole nations can be seized in this way by psychic epidemics.

[497] The autonomy of the unconscious therefore begins where emotions are generated. Emotions are instinctive, involuntary reactions which upset the rational order of consciousness by their elemental outbursts. Affects are not "made" or wilfully produced; they simply happen. In a state of affect a trait of character sometimes appears which is strange even to the person concerned, or hidden contents may irrupt involuntarily. The more violent an affect the closer it comes to the pathological, to a condition in which the ego-consciousness is thrust aside by autonomous contents that were unconscious before. So long as the unconscious is in a dormant condition, it seems as if there were absolutely nothing in this hidden region. Hence we are continually surprised when something unknown suddenly appears "from nowhere."

Afterwards, of course, the psychologist comes along and shows that things had to happen as they did for this or that reason. But who could have said so beforehand?

[498] We call the unconscious "nothing," and yet it is a reality *in potentia*. The thought we shall think, the deed we shall do, even the fate we shall lament tomorrow, all lie unconscious in our today. The unknown in us which the affect uncovers was always there and sooner or later would have presented itself to consciousness. Hence we must always reckon with the presence of things not yet discovered. These, as I have said, may be unknown quirks of character. But possibilities of future development may also come to light in this way, perhaps in just such an outburst of affect which sometimes radically alters the whole situation. The unconscious has a Janus-face: on one side its contents point back to a preconscious, prehistoric world of instinct, while on the other side it potentially anticipates the future—precisely because of the instinctive readiness for action of the factors that determine man's fate. If we had complete knowledge of the ground plan lying dormant in an individual from the beginning, his fate would be in large measure predictable.

[499] Now, to the extent that unconscious tendencies—be they backward-looking images or forward-looking anticipations—appear in dreams, dreams have been regarded, in all previous ages, less as historical regressions than as anticipations of the future, and rightly so. For everything that will be happens on the basis of what has been, and of what—consciously or unconsciously—still exists as a memory-trace. In so far as no man is born totally new, but continually repeats the stage of development last reached by the species, he contains unconsciously, as an *a priori* datum, the entire psychic structure developed both upwards and downwards by his ancestors in the course of the ages. That is what gives the unconscious its characteristic "historical" aspect, but it is at the same time the *sine qua non* for shaping the future. For this reason it is often very difficult to decide whether an autonomous manifestation of the unconscious should be interpreted as an *effect* (and therefore historical) or as an *aim* (and therefore teleological and anticipatory). The conscious mind thinks as a rule without regard to ancestral preconditions and without taking into account the influence this *a priori* factor has on the

shaping of the individual’s fate. Whereas we think in periods of years, the unconscious thinks and lives in terms of millennia. So when something happens that seems to us an unexampled novelty, it is generally a very old story indeed. We still forget, like children, what happened yesterday. We are still living in a wonderful new world where man thinks himself astonishingly new and “modern.” This is unmistakable proof of the youthfulness of human consciousness, which has not yet grown aware of its historical antecedents.

[500] As a matter of fact, the “normal” person convinces me far more of the autonomy of the unconscious than does the insane person. Psychiatric theory can always take refuge behind real or alleged organic disorders of the brain and thus detract from the importance of the unconscious. But such a view is no longer applicable when it comes to normal humanity. What one sees happening in the world is not just a “shadowy vestige of activities that were once conscious,” but the expression of a living psychic condition that still exists and always will exist. Were that not so, one might well be astonished. But it is precisely those who give least credence to the autonomy of the unconscious who are the most surprised by it. Because of its youthfulness and vulnerability, our consciousness tends to make light of the unconscious. This is understandable enough, for a young man should not let himself be overawed by the authority of his parents if he wants to start something on his own account. Historically as well as individually, our consciousness has developed out of the darkness and somnolence of primordial unconsciousness. There were psychic processes and functions long before any ego-consciousness existed. “Thinking” existed long before man was able to say: “I am conscious of thinking.”

[501] The primitive “perils of the soul” consist mainly of dangers to consciousness. Fascination, bewitchment, “loss of soul,” possession, etc. are obviously phenomena of the dissociation and suppression of consciousness caused by unconscious contents. Even civilized man is not yet entirely free of the darkness of primeval times. The unconscious is the mother of consciousness. Where there is a mother there is also a father, yet he seems to be unknown. Consciousness, in the pride of its youth, may deny its father, but it cannot deny its mother. That would be

too unnatural, for one can see in every child how hesitantly and slowly its ego-consciousness evolves out of a fragmentary consciousness lasting for single moments only, and how these islands gradually emerge from the total darkness of mere instinctuality.

[502] Consciousness grows out of an unconscious psyche which is older than it, and which goes on functioning together with it or even in spite of it. Although there are numerous cases of conscious contents becoming unconscious again (through being repressed, for instance), the unconscious as a whole is far from being a mere remnant of consciousness. Or are the psychic functions of animals remnants of consciousness?

[503] As I have said, there is little hope of our finding in the unconscious an order equivalent to that of the ego. It certainly does not look as if we were likely to discover an unconscious ego-personality, something in the nature of a Pythagorean “counter-earth.” Nevertheless, we cannot overlook the fact that, just as consciousness arises from the unconscious, the ego-centre, too, crystallizes out of a dark depth in which it was somehow contained *in potentia*. Just as a human mother can only produce a human child, whose deepest nature lay hidden during its potential existence within her, so we are practically compelled to believe that the unconscious cannot be an entirely chaotic accumulation of instincts and images. There must be something to hold it together and give expression to the whole. Its centre cannot possibly be the ego, since the ego was born out of it into consciousness and turns its back on the unconscious, seeking to shut it out as much as possible. Or can it be that the unconscious loses its centre with the birth of the ego? In that case we would expect the ego to be far superior to the unconscious in influence and importance. The unconscious would then follow meekly in the footsteps of the conscious, and that would be just what we wish.

[504] Unfortunately, the facts show the exact opposite: consciousness succumbs all too easily to unconscious influences, and these are often truer and wiser than our conscious thinking. Also, it frequently happens that unconscious motives overrule our conscious decisions, especially in matters of vital importance. Indeed, the fate of the individual is largely

dependent on unconscious factors. Careful investigation shows how very much our conscious decisions depend on the undisturbed functioning of memory. But memory often suffers from the disturbing interference of unconscious contents. Moreover, it functions as a rule automatically. Ordinarily it uses the bridges of association, but often in such an extraordinary way that another thorough investigation of the whole process of memory-reproduction is needed in order to find out how certain memories managed to reach consciousness at all. And sometimes these bridges cannot be found. In such cases it is impossible to dismiss the hypothesis of the spontaneous activity of the unconscious. Another example is intuition, which is chiefly dependent on unconscious processes of a very complex nature. Because of this peculiarity, I have defined intuition as "perception via the unconscious."

[505] Normally the unconscious collaborates with the conscious without friction or disturbance, so that one is not even aware of its existence. But when an individual or a social group deviates too far from their instinctual foundations, they then experience the full impact of unconscious forces. The collaboration of the unconscious is intelligent and purposive, and even when it acts in opposition to consciousness its expression is still compensatory in an intelligent way, as if it were trying to restore the lost balance.

[506] There are dreams and visions of such an impressive chararacter that some people refuse to admit that they could have originated in an unconscious psyche. They prefer to assume that such phenomena derive from a sort of "superconsciousness." Such people make a distinction between a quasi-physiological or instinctive unconscious and a psychic sphere or layer "above" consciousness, which they style the "superconscious." As a matter of fact, this psyche, which in Indian philosophy is called the "higher" consciousness, corresponds to what we in the West call the "unconscious." Certain dreams, visions, and mystical experiences do, however, suggest the existence of a consciousness in the unconscious. But, if we assume a consciousness in the unconscious, we are at once faced with the difficulty that no consciousness can exist without a subject, that is, an ego to which the contents are related. Consciousness needs a centre, an ego to which something is conscious.

We know of no other kind of consciousness, nor can we imagine a consciousness without an ego. There can be no consciousness when there is no one to say: “*I* am conscious.”

[507] It is unprofitable to speculate about things we cannot know. I therefore refrain from making assertions that go beyond the bounds of science. It was never possible for me to discover in the unconscious anything like a personality comparable with the ego. But although a “second ego” cannot be discovered (except in the rare cases of dual personality), the manifestations of the unconscious do at least show *traces of personalities*. A simple example is the dream, where a number of real or imaginary people represent the dream-thoughts. In nearly all the important types of dissociation, the manifestations of the unconscious assume a strikingly personal form. Careful examination of the behaviour and mental content of these personifications, however, reveals their fragmentary character. They seem to represent complexes that have split off from a greater whole, and are the very reverse of a personal centre of the unconscious.

[508] I have always been greatly impressed by the character of dissociated fragments as personalities. Hence I have often asked myself whether we are not justified in assuming that, if such fragments have personality, the whole from which they were broken off must have personality to an even higher degree. The inference seemed logical, since it does not depend on whether the fragments are large or small. Why, then, should not the whole have personality too? *Personality need not imply consciousness. It can just as easily be dormant or dreaming.*

[509] The general aspect of unconscious manifestations is in the main chaotic and irrational, despite certain symptoms of intelligence and purposiveness. The unconscious produces dreams, visions, fantasies, emotions, grotesque ideas, and so forth. This is exactly what we would expect a dreaming personality to do. It seems to be a personality that was never awake and was never conscious of the life it had lived and of its own continuity. The only question is whether the hypothesis of a dormant and hidden personality is possible or not. It may be that all of the personality to be found in the unconscious is contained in the

fragmentary personifications mentioned before. Since this is very possible, all my conjectures would be in vain—unless there were evidence of much less fragmentary and more complete personalities, even though they are hidden.

[510] I am convinced that such evidence exists. Unfortunately, the material to prove this belongs to the subtleties of psychological analysis. It is therefore not exactly easy to give the reader a simple and convincing idea of it.

[511] I shall begin with a brief statement: in the unconscious of every man there is hidden a feminine personality, and in that of every woman a masculine personality.

[512] It is a well-known fact that sex is determined by a majority of male or female genes, as the case may be. But the minority of genes belonging to the other sex does not simply disappear. A man therefore has in him a feminine side, an unconscious feminine figure—a fact of which he is generally quite unaware. I may take it as known that I have called this figure the "anima," and its counterpart in a woman the "animus." In order not to repeat myself, I must refer the reader to the literature.[5] This figure frequently appears in dreams, where one can observe all the attributes I have mentioned in earlier publications.

[513] Another, no less important and clearly defined figure is the "shadow." Like the anima, it appears either in projection on suitable persons, or personified as such in dreams. The shadow coincides with the "personal" unconscious (which corresponds to Freud's conception of the unconscious). Again like the anima, this figure has often been portrayed by poets and writers. I would mention the Faust-Mephistopheles relationship and E. T. A. Hoffmann's tale *The Devil's Elixir* as two especially typical descriptions. The shadow personifies everything that the subject refuses to acknowledge about himself and yet is always thrusting itself upon him directly or indirectly—for instance, inferior traits of character and other incompatible tendencies.[6]

[514] The fact that the unconscious spontaneously personifies certain affectively toned contents in dreams is the reason why I have taken over

these personifications in my terminology and formulated them as names.

[515] Besides these figures there are still a few others, less frequent and less striking, which have likewise undergone poetic as well as mythological formulation. I would mention, for instance, the figure of the hero[7] and of the wise old man,[8] to name only two of the best known.

[516] All these figures irrupt autonomously into consciousness as soon as it gets into a pathological state. With regard to the anima, I would particularly like to draw attention to the case described by Nelken.[9] Now the remarkable thing is that these figures show the most striking connections with the poetic, religious, or mythological formulations, though these connections are in no way factual. That is to say, they are spontaneous products of analogy. One such case even led to the charge of plagiarism: the French writer Benoît gave a description of the anima and her classic myth in his book *L'Atlantide*, which is an exact parallel of Rider Haggard's *She*. The lawsuit proved unsuccessful; Benoît had never heard of *She*. (It might, in the last analysis, have been an instance of cryptomnesic deception, which is often extremely difficult to rule out.) The distinctly "historical" aspect of the anima and her condensation with the figures of the sister, wife, mother, and daughter, plus the associated incest motif, can be found in Goethe ("You were in times gone by my wife or sister"),[10] as well as in the anima figure of the *regina* or *femina alba* in alchemy. The English alchemist Eirenaeus Philalethes ("lover of truth"), writing about 1645, remarks that the "Queen" was the King's "sister, mother, or wife."[11] The same idea can be found, ornately elaborated, in Nelken's patient and in a whole series of cases observed by me, where I was able to rule out with certainty any possibility of literary influence. For the rest, the anima complex is one of the oldest features of Latin alchemy.[12]

[517] When one studies the archetypal personalities and their behaviour with the help of the dreams, fantasies, and delusions of patients,[13] one is profoundly impressed by their manifold and unmistakable connections with mythological ideas completely unknown to the layman. They form a species of singular beings whom one would like to endow with ego-consciousness; indeed, they almost seem capable of it. And yet this idea

is not borne out by the facts. There is nothing in their behaviour to suggest that they have an ego-consciousness as we know it. They show, on the contrary, all the marks of fragmentary personalities. They are masklike, wraithlike, without problems, lacking self-reflection, with no conflicts, no doubts, no sufferings; like gods, perhaps, who have no philosophy, such as the Brahma-gods of the *Samyutta-nikãya,* whose erroneous views needed correction by the Buddha. Unlike other contents, they always remain strangers in the world of consciousness, unwelcome intruders saturating the atmosphere with uncanny forebodings or even with the fear of madness.

[518] If we examine their content, i.e., the fantasy material constituting their phenomenology, we find countless archaic and "historical" associations and images of an archetypal nature.[14] This peculiar fact permits us to draw conclusions about the "localization" of anima and animus in the psychic structure. They evidently live and function in the deeper layers of the unconscious, especially in that phylogenetic substratum which I have called the collective unconscious. This localization explains a good deal of their strangeness: they bring into our ephemeral consciousness an unknown psychic life belonging to a remote past. It is the mind of our unknown ancestors, their way of thinking and feeling, their way of experiencing life and the world, gods and men. The existence of these archaic strata is presumably the source of man's belief in reincarnations and in memories of "previous existences." Just as the human body is a museum, so to speak, of its phylogenetic history, so too is the psyche. We have no reason to suppose that the specific structure of the psyche is the only thing in the world that has no history outside its individual manifestations. Even the conscious mind cannot be denied a history reaching back at least five thousand years. It is only our ego-consciousness that has forever a new beginning and an early end. The unconscious psyche is not only immensely old, it is also capable of growing into an equally remote future. It moulds the human species and is just as much a part of it as the human body, which, though ephemeral in the individual, is collectively of immense age.

[519] The anima and animus live in a world quite different from the world outside—in a world where the pulse of time beats infinitely slowly,

where the birth and death of individuals count for little. No wonder their nature is strange, so strange that their irruption into consciousness often amounts to a psychosis. They undoubtedly belong to the material that comes to light in schizophrenia.

[520] What I have said about the collective unconscious may give you a more or less adequate idea of what I mean by this term. If we now turn back to the problem of individuation, we shall see ourselves faced with a rather extraordinary task: the psyche consists of two incongruous halves which together should form a whole. One is inclined to think that ego-consciousness is capable of assimilating the unconscious, at least one hopes that such a solution is possible. But unfortunately the unconscious really is unconscious; in other words, it is unknown. And how can you assimilate something unknown? Even if you can form a fairly complete picture of the anima and animus, this does not mean that you have plumbed the depths of the unconscious. One hopes to control the unconscious, but the past masters in the art of self-control, the yogis, attain perfection in *samadhi*, a state of ecstasy, which so far as we know is equivalent to a state of unconsciousness. It makes no difference whether they call our unconscious a “universal consciousness”; the fact remains that in their case the unconscious has swallowed up ego-consciousness. They do not realize that a “universal consciousness” is a contradiction in terms, since exclusion, selection, and discrimination are the root and essence of everything that lays claim to the name “consciousness.” “Universal consciousness” is logically identical with unconsciousness. It is nevertheless true that a correct application of the methods described in the Pāli Canon or in the *Yoga-sütra* induces a remarkable extension of consciousness. But, with increasing extension, the contents of consciousness lose in clarity of detail. In the end, consciousness becomes all-embracing, but nebulous; an infinite number of things merge into an indefinite whole, a state in which subject and object are almost completely identical. This is all very beautiful, but scarcely to be recommended anywhere north of the Tropic of Cancer.

[521] For this reason we must look for a different solution. We believe in ego-consciousness and in what we call reality. The realities of a northern climate are somehow so convincing that we feel very much better off

when we do not forget them. For us it makes sense to concern ourselves with reality. Our European ego-consciousness is therefore inclined to swallow up the unconscious, and if this should not prove feasible we try to suppress it. But if we understand anything of the unconscious, we know that it cannot be swallowed. We also know that it is dangerous to suppress it, because the unconscious is life and this life turns against us if suppressed, as happens in neurosis.

[522] Conscious and unconscious do not make a whole when one of them is suppressed and injured by the other. If they must contend, let it at least be a fair fight with equal rights on both sides. Both are aspects of life. Consciousness should defend its reason and protect itself, and the chaotic life of the unconscious should be given the chance of having its way too—as much of it as we can stand. This means open conflict and open collaboration at once. That, evidently, is the way human life should be. It is the old game of hammer and anvil: between them the patient iron is forged into an indestructible whole, an "individual."

[523] This, roughly, is what I mean by the individuation process. As the name shows, it is a process or course of development arising out of the conflict between the two fundamental psychic facts. I have described the problems of this conflict, at least in their essentials, in my essay "The Relations between the Ego and the Unconscious." A special chapter, however, is the *symbolism* of the process, which is of the utmost importance for understanding the final stages of the encounter between conscious and unconscious, in practice as well as in theory. My investigations during these last years have been devoted mainly to this theme. It turned out, to my own great astonishment, that the symbol formation has the closest affinities with alchemical ideas, and especially with the conceptions of the "uniting symbol,"[15] which yield highly significant parallels. Naturally these are processes which have no meaning in the initial stages of psychological treatment. On the other hand, more difficult cases, such as cases of unresolved transference, develop these symbols. Knowledge of them is of inestimable importance in treating cases of this kind, especially when dealing with cultured patients.

[524] How the harmonizing of conscious and unconscious data is to be undertaken cannot be indicated in the form of a recipe. It is an irrational life-process which expresses itself in definite symbols. It may be the task of the analyst to stand by this process with all the help he can give. In this case, knowledge of the symbols is indispensable, for it is in them that the union of conscious and unconscious contents is consummated. Out of this union emerge new situations and new conscious attitudes. I have therefore called the union of opposites the “transcendent function.”[16] This rounding out of the personality into a whole may well be the goal of any psychotherapy that claims to be more than a mere cure of symptoms.

A STUDY IN THE PROCESS OF INDIVIDUATION[1]

Tao's working of things is vague and obscure.
Obscure! Oh vague!
In it are images.
Vague! Oh obscure!
In it are things.
Profound! Oh dark indeed!
In it is seed.
Its seed is very truth.
In it is trustworthiness.
From the earliest Beginning until today
Its name is not lacking
By which to fathom the Beginning of all things.
How do I know it is the Beginning of all things?
Through *it!*

LAO-TZU, *Tao Teh Ching*, ch. 21.

Introductory

[525] During the 1920's, I made the acquaintance in America of a lady with an academic education—we will call her Miss X—who had studied psychology for nine years. She had read all the more recent literature in this field. In 1928, at the age of fifty-five, she came to Europe in order to continue her studies under my guidance. As the daughter of an exceptional father she had varied interests, was extremely cultured, and possessed a lively turn of mind. She was unmarried, but lived with the unconscious equivalent of a human partner, namely the animus (the personification of everything masculine in a woman), in that characteristic liaison so often met with in women with an academic education. As frequently happens, this development of hers was based on a positive father complex: she was "fille à papa" and consequently did not have a good relation to her mother. Her animus was not of the kind to

give her cranky ideas. She was protected from this by her natural intelligence and by a remarkable readiness to tolerate the opinions of other people. This good quality, by no means to be expected in the presence of an animus, had, in conjunction with some difficult experiences that could not be avoided, enabled her to realize that she had reached a limit and "got stuck," and this made it urgently necessary for her to look round for ways that might lead her out of the impasse. That was one of the reasons for her trip to Europe. Associated with this there was another—not accidental—motive. On her mother's side she was of Scandinavian descent. Since her relation to her mother left very much to be desired, as she herself clearly realized, the feeling had gradually grown up in her that this side of her nature might have developed differently if only the relation to her mother had given it a chance. In deciding to go to Europe she was conscious that she was turning back to her own origins and was setting out to reactivate a portion of her childhood that was bound up with the mother. Before coming to Zurich she had gone back to Denmark, her mother's country. There the thing that affected her most was the landscape, and unexpectedly there came over her the desire to paint—above all, landscape motifs. Till then she had noticed no such aesthetic inclinations in herself, also she lacked the ability to paint or draw. She tried her hand at water-colours, and her modest landscapes filled her with a strange feeling of contentment. Painting them, she told me, seemed to fill her with new life. Arriving in Zurich, she continued her painting efforts, and on the day before she came to me for the first time she began another landscape—this time from memory. While she was working on it, a fantasy-image suddenly thrust itself between her and the picture: she saw herself with the lower half of her body in the earth, stuck fast in a block of rock. The region round about was a beach strewn with boulders. In the background was the sea. She felt caught and helpless. Then she suddenly saw me in the guise of a medieval sorcerer. She shouted for help, I came along and touched the rock with a magic wand. The stone instantly burst open, and she stepped out uninjured. She then painted this fantasy-image instead of the landscape and brought it to me on the following day.

Picture 1

[526] As usually happens with beginners and people with no skill of hand, the drawing of the picture cost her considerable difficulties. In such cases it is very easy for the unconscious to slip its subliminal images into the painting. Thus it came about that the big boulders would not appear on the paper in their real form but took on unexpected shapes. They looked, some of them, like hardboiled eggs cut in two, with the yolk in the middle. Others were like pointed pyramids. It was in one of these that Miss X was stuck. Her hair, blown out behind her, and the movement of the sea suggested a strong wind.

[527] The picture shows first of all her imprisoned state, but not yet the act of liberation. So it was there that she was attached to the earth, in the land of her mother. Psychologically this state means being caught in the unconscious. Her inadequate relation to her mother had left behind something dark and in need of development. Since she succumbed to the magic of her motherland and tried to express this by painting, it is obvious that she is still stuck with half her body in Mother Earth: that is, she is still partly identical with the mother and, what is more, through that part of the body which contains just that secret of the mother which she had never inquired into.

[528] Since Miss X had discovered all by herself the method of active imagination I have long been accustomed to use, I was able to approach the problem at just the point indicated by the picture: she is caught in the unconscious and expects magical help from me, as from a sorcerer. And since her psychological knowledge had made her completely *au fait* with certain possible interpretations, there was no need of even an understanding wink to bring to light the apparent *sous-entendu* of the liberating magician’s wand. The sexual symbolism, which for many naïve minds is of such capital importance, was no discovery for her. She was far enough advanced to know that explanations of this kind, however true they might be in other respects, had no significance in her case. She did not want to know how liberation might be possible in a *general* way, but how and in what way it could come about for *her*. And about this I knew as little as she. I know that such solutions can only come about in an individual way that cannot be foreseen. One cannot think up ways and means artificially, let alone know them in advance, for such knowledge is

merely collective, based on average experience, and can therefore be completely inadequate, indeed absolutely wrong, in individual cases. And when, on top of that, we consider the patient's age, we would do well to abandon from the start any attempt to apply ready-made solutions and warmed-up generalities of which the patient knows just as much as the doctor. Long experience has taught me not to know anything in advance and not to know better, but to let the unconscious take precedence. Our instincts have ridden so infinitely many times, unharmed, over the problems that arise at this stage of life that we may be sure the transformation processes which make the transition possible have long been prepared in the unconscious and are only waiting to be released.

Picture 24

[529] I had already seen from her previous history how the unconscious made use of the patient's inability to draw in order to insinuate its own suggestions. I had not overlooked the fact that the boulders had surreptitiously transformed themselves into *eggs*. The egg is a germ of life with a lofty symbolical significance. It is not just a cosmogonic symbol—it is also a "philosophical" one. As the former it is the Orphic egg, the world's beginning; as the latter, the philosophical egg of the medieval natural philosophers, the vessel from which, at the end of the *opus alchymicum*, the homunculus emerges, that is, the Anthropos, the spiritual, inner and complete man, who in Chinese alchemy is called the *chen-yen* (literally, "perfect man").[2]

[530] From this hint, therefore, I could already see what solution the unconscious had in mind, namely individuation, for this is the transformation process that loosens the attachment to the unconscious. It is a definitive solution, for which all other ways serve as auxiliaries and temporary makeshifts. This knowledge, which for the time being I kept to myself, bade me act with caution. I therefore advised Miss X not to let it go at a mere fantasy-image of the act of liberation, but to try to make a picture of it. How this would turn out I could not guess, and that was a good thing, because otherwise I might have put Miss X on the wrong track from sheer helpfulness. She found this task terribly difficult owing to her artistic inhibitions. So I counselled her to content herself with what was possible and to use her fantasy for the purpose of circumventing technical difficulties. The object of this advice was to introduce as much fantasy as possible into the picture, for in that way the unconscious has the best chance of revealing its contents. I also advised her not to be afraid of bright colours, for I knew from experience that vivid colours seem to attract the unconscious. Thereupon, a new picture arose.

Picture 2

[531] Again there are boulders, the round and pointed forms; but the round ones are no longer eggs, they are complete circles, and the pointed ones are tipped with golden light. One of the round forms has been blasted out of its place by a golden flash of lightning. The magician and magic wand

are no longer there. The personal relationship to me seems to have ceased: the picture shows an impersonal natural process.

[532] While Miss X was painting this picture she made all sorts of discoveries. Above all, she had no notion of what picture she was going to paint. She tried to reimagine the initial situation; the rocky shore and the sea are proof of this. But the eggs turned into abstract spheres or circles, and the magician’s touch became a flash of lightning cutting through her unconscious state. With this transformation she had rediscovered the historical synonym of the philosophical egg, namely the *rotundum*, the round, original form of the Anthropos (or *στοιχάεῖον στρογγυ’λον*, ‘round element,’ as Zosimos calls it). This is an idea that has been associated with the Anthropos since ancient times.[3] The soul, too, according to tradition, has a round form. As the Monk of Heisterbach says, it is not only “like to the sphere of the moon, but is furnished on all sides with eyes” (*ex omni parte oculata*). We shall come back to this motif of polyophthalmia later on. His remark refers in all probability to certain parapsychological phenomena, the “globes of light” or globular luminosities which, with remarkable consistency, are regarded as “souls” in the remotest parts of the world.[4]

[533] The liberating flash of lightning is a symbol also used by Paracelsus[5] and the alchemists for the same thing. Moses’ rock-splitting staff, which struck forth the living water and afterwards changed into a serpent, may have been an unconscious echo in the background.[6] Lightning signifies a sudden, unexpected, and overpowering change of psychic condition.[7]

[534] “In this Spirit of the Fire-flash consists the Great Almighty Life,” says Jakob Böhme.[8] “For when you strike upon the *sharp* part of the stone, the bitter sting of Nature sharpens itself, and is stirred in the highest degree. For Nature is dissipated or *broken asunder* in the sharpness, so that the *Liberty shines forth as a Flash.*”[9] The flash is the *“Birth of the light.”*[10] It has transformative power: “For if I could in my Flesh comprehend the Flash, which I very well see and know how it is, I could clarify or trans figure my Body therewith, so that it would shine with a bright light and glory. And then it would no more resemble and be conformed to the bestial Body, but to the angels of God.”[11] Elsewhere

Böhme says: “As when the Flash of Life rises up in the centre of the Divine Power, wherein all the spirits of God attain their life, and highly rejoice.”[12] Of the “Source-spirit” *Mercurius*, he says that it “arises in the Fire-flash.” Mercurius is the “animal spirit” which, from *Lucifer’s* body, “struck into the Salniter[13] of God like a *fiery serpent* from its hole, as if there went a fiery Thunder-bolt into God’s Nature, or a fierce Serpent, which tyrannizes, raves, and rages, as if it would tear and rend Nature all to pieces.”[14] Of the “innermost *birth of the soul”* the bestial body “attains only a glimpse, just as if it lightened.”[15] “The triumphing *divine Birth* lasteth in us men only so long as the flash lasteth; therefore our knowledge is but in part, whereas in God the flash stands unchangeably, always eternally thus.”[16] (Cf. Fig. 1.)

[535] In this connection I would like to mention that Böhme associates lightning with something else too. That is the *quaternity*, which plays a great role in the following pictures. When caught and assuaged in the four “Qualities” or four “Spirits,”[17] “the Flash, or the Light, subsists in the *Midst or Centre as a Heart*.[18] Now when that Light, which stands in the Midst or Centre, shines into the four Spirits, then the Power of the four Spirits rises up in the Light, and they become Living, and love the Light; that is, they take it into them, and are *impregnated* with it.”[17] “The Flash, or *Stock*,[20] or Pith, or the Heart, which is generated in the Powers, remains standing in the Midst or Centre, and that is the *Son*. … And this is the true *Holy Ghost*, whom we Christians honour and adore for the third Person in the Deity.”[21] Elsewhere Böhme says: “When the Fire-flash reaches the dark substance,[22] it is a great terror, from which the Cold Fire draws back in affright as if it would perish, and becomes impotent, and sinks into itself, … But now the Flash … makes in its Rising a Cross[23] with the Comprehension of all Properties; for here arises the Spirit in the Essence, and it stands thus: . If thou hast here understanding, thou needest ask no more; it is Eternity and Time, God in Love and Anger, also Heaven and Hell. The lower part, which is thus marked, is the first Principle, and is the Eternal Nature in the Anger, viz. the Kingdom of Darkness dwelling in itself; and the upper Part, with this figure , is the Salniter;[24] the Upper Cross above the Circle is the

Kingdom of Glory, which in the Flagrat of Joy in the Will of the free Lubet[25] proceeds from the Fire in the Lustre of the Light into the power of the Liberty; and this spiritual Water[26] … is the Corporality of the free Lubet … wherein the Lustre from the Fire and Light makes a Tincture, viz. a budding and growing and a Manifestation of Colours from the Fire and Light."[27]

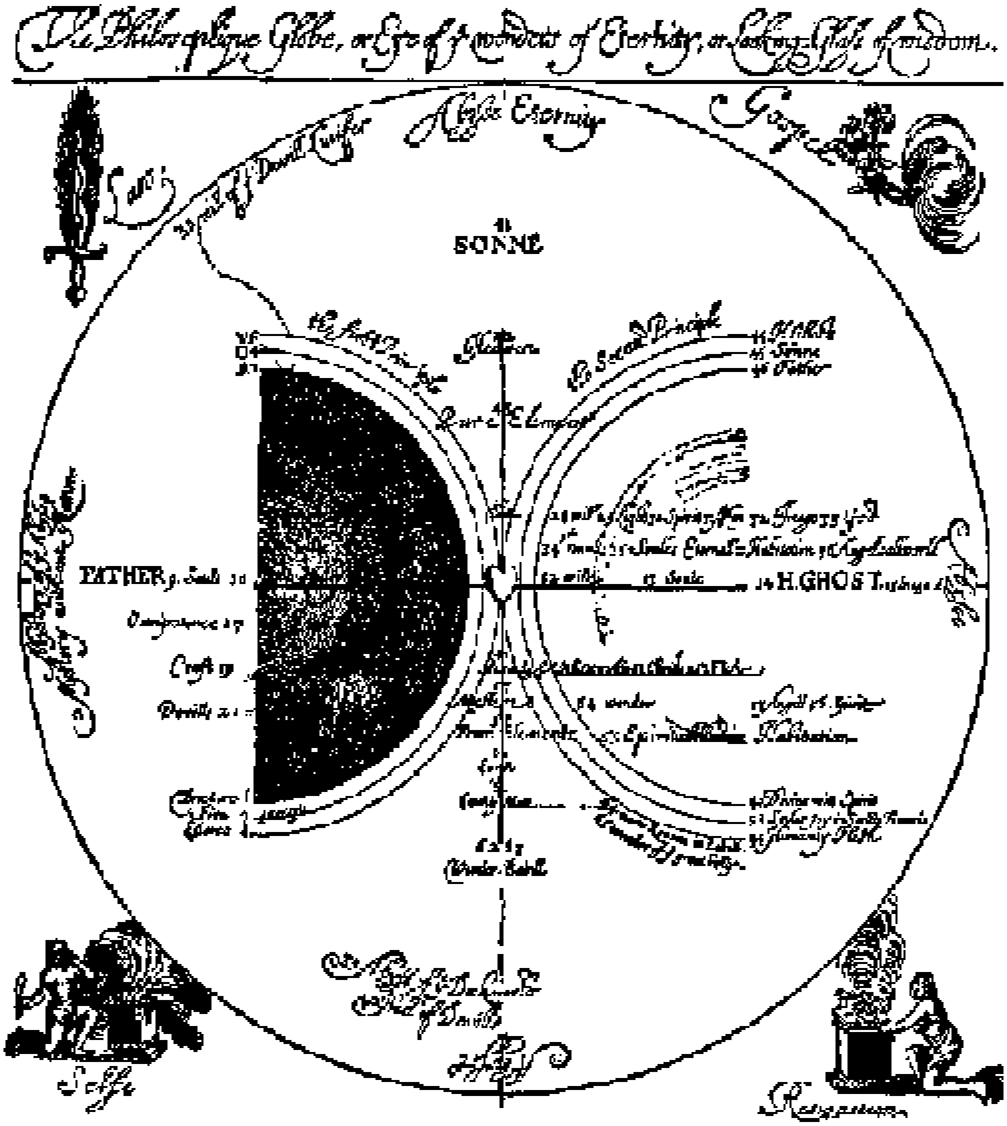

Fig. 1. Mandala from Jakob Böhme’s *XL Questions concerning the Soule* (1620)

The picture is taken from the English edition of 1647. The quaternity consists of *Father, H. Ghost, Sonne,* and *Earth* or *Earthly Man*. It is characteristic that the two semicircles are turned back to back instead of closing.

[536] I have purposely dwelt at some length on Böhme’s disquisition on the lightning, because it throws a good deal of light on the psychology of our pictures. However, it anticipates some things that will only become clear

when we examine the pictures themselves. I must therefore ask the reader to bear Böhme’s views in mind in the following commentary. I have put the most important points in italics. It is clear from the quotations what the lightning meant to Böhme and what sort of a role it plays in the present case. The last quotation in particular deserves special attention, as it anticipates various key motifs in the subsequent pictures done by my patient, namely the cross, the quaternity, the divided mandala, the lower half of which is virtually equivalent to hell and the upper half to the lighter realm of the “Salniter.” For Böhme the lower half signifies the “everlasting darkness” that “extends into the fire,”[28] while the upper, “salnitrous” half corresponds to the third Principle, the “visible, elemental world, which is an emanation of the first and other Principle.”[29] The cross, in turn, corresponds to the second Principle, the “Kingdom of Glory,” which is revealed through “magic fire,” the lightning, which he calls a “Revelation of Divine Motion.”[30] The “lustre of the fire” comes from the “unity of God” and reveals his will. The mandala therefore represents the “Kingdom of Nature,” which “in itself is the great everlasting Darkness.” The “Kingdom of God,” on the other hand, or the “Glory” (i.e., the Cross), is the Light of which John 1 : 5 speaks: “And the light shineth in the darkness, and the darkness comprehendeth it not.” The Life that “breaks itself off from the eternal Light and enters into the Object, as into the selfhood of Properties,” is “only fantastic and foolish, even such as the Devils were, and the souls of the damned are; as can be seen … from the fourth number.”[31] For the “fire of Nature” is called by Böhme the *fourth form*, and he understands it as a “spiritual Life-Fire, that exists from a continual conjunction … of Hardness [i.e., the solidified, dry Salniter] and Motion [the Divine Will].”[32] Quite in keeping with John 1 : 5 the quaternity of the lightning, the Cross, pertains to the Kingdom of Glory, whereas Nature, the visible world and the dark abyss remain untouched by the fourfold light and abide in darkness.

[537] For the sake of completeness I should mention that 🜓 is the sign for *cinnabar*, the most important quicksilver ore (HgS).[33] The coincidence of the two symbols can hardly be accidental in view of the significance

which Böhme attributes to Mercurius. Ruland finds it rather hard to define exactly what was meant by cinnabar.[34] The only certain thing is that there was a *κιννάβαρις* τών ϕιλοσόϕων (cinnabar of the philosophers) in Greek alchemy, and that it stood for the *rubedo* stage of the transforming substance. Thus Zosimos says: “(After the preceding process) you will find the gold coloured fiery red like blood. That is the cinnabar of the philosophers and the copper man (*χαλκάνθρωπος*, turned to gold.”[35] Cinnabar was also supposed to be identical with the uroboros dragon.[36] Even in Pliny, cinnabar is called *sanguis draconis*, ‘dragon’s blood,’ a term that lasted all through the Middle Ages.[37] On account of its redness it was often identified with the philosophical sulphur. A special difficulty is the fact that the wine-red cinnabar crystals were classed with the *άνθρακες*, *carbons*, to which belong all reddish and red-tinted stones like *rubies*, garnets, amethysts, etc. They all shine like glowing coals.[38] The *λιθάνθρακες* (anthracites), on the other hand, were regarded as “quenched” coals. These associations explain the similarity of the alchemical signs for gold, antimony, and garnet. Gold , after mercury the most important “philosophical” substance, shares its sign with what is known as “regulus” or “button” antimony,[39] and during the two decades prior to the writing of *Signatura return* (1622), from which our quotation comes, this had enjoyed particular fame as the new transformative substance[40] and panacea.[41] Basilius Valentinus’ *Triumphal Car of Antimony* was published about the first decade of the seventeenth century (the first edition possibly in 1611) and *soon found the widest acclaim.*[42] The sign for garnet is , and  means salt. A cross with a little circle in it  means copper (from the “Cyprian,” Venus ). Medicinal tartaric acid is denoted by , and hydrogen potassium tartrate (tartar) has the signs .[43] Tartar settles on the bottom of the vessel, which in the language of the alchemists means: in the underworld, Tartarus.[44]

[538] I will not attempt here any interpretation of Böhme’s symbols, but will only point out that in our picture the lightning, striking into the

darkness and “hardness,” has blasted a *rotundum* out of the dark *massa confusa* and kindled a light in it. There can be no doubt that the dark stone means the blackness, i.e., the unconscious, just as the sea and sky and the upper half of the woman’s figure indicate the sphere of consciousness. We may safely assume that Böhme’s symbol refers to a similar situation. The lightning has released the spherical form from the rock and so caused a kind of liberation. But, just as the magician has been replaced by the lightning, so the patient has been replaced by the sphere. The unconscious has thus presented her with ideas which show that she had gone on thinking without the aid of consciousness and that this radically altered the initial situation. It was again her inability to draw that led to this result. Before finding this solution, she had made two attempts to portray the act of liberation with human figures, but with no success. She had overlooked the fact that the initial situation, her imprisonment in the rock, was already irrational and symbolic and therefore could not be solved in a rational way. It had to be done by an equally irrational process. That was why I advised her, should she fail in her attempt to draw human figures, to use some kind of hieroglyph. It then suddenly struck her that the sphere was a suitable symbol for the individual human being. That it was a chance idea (*Einfall*) is proved by the fact that it was not her conscious mind that thought up this typification, but the unconscious, for an *Einfall* “falls in” quite of its own accord. It should be noted that she represents only herself as a sphere, not me. I am represented only by the lightning, purely functionally, so that for her I am simply the “precipitating” cause. As a magician I appeared to her in the apt role of Hermes Kyllenios, of whom the Odyssey says: “Meanwhile Cyllenian Hermes was gathering in the souls of the suitors, armed with the splendid golden wand that he can use at will to cast a spell on our eyes or wake us from the soundest sleep.”[45] Hermes is the *ψνχῶν αἶτιος*, ‘originator of souls.’ He is also the *ήγήτωρ ονείρων*, ‘guide of dreams.”[46] For the following pictures it is of special importance that Hermes has the number 4 attributed to him. Martianus Capella says: “The number four is assigned to the Cyllenian, for he alone is held to be a fourfold god.”[47]

[539] The form the picture had taken was not unreservedly welcome to the patient's conscious mind. Luckily, however, while painting it Miss X had discovered that two factors were involved. These, in her own words, were *reason* and the *eyes*. Reason always wanted to make the picture as *it* thought it ought to be; but the eyes held fast to their vision and finally forced the picture to come out as it actually did and not in accordance with rationalistic expectations. Her reason, she said, had really intended a daylight scene, with the sunshine melting the sphere free, but the eyes favoured a nocturne with "shattering, dangerous lightning." This realization helped her to acknowledge the actual result of her artistic efforts and to admit that it was in fact an objective and impersonal process and not a personal relationship.

[540] For anyone with a personalistic view of psychic events, such as a Freudian, it will not be easy to see in this anything more than an elaborate repression. But if there was any repression here we certainly cannot make, the conscious mind responsible for it, because the conscious mind would undoubtedly have preferred a personal imbroglio as being far more interesting. The repression must have been manoeuvred by the unconscious from the start. One should consider what this means: instinct, the most original force of the unconscious, is suppressed or turned back on itself by an arrangement stemming from this same unconscious! It would be idle indeed to talk of "repression" here, since we know that the unconscious goes straight for its goal and that this does not consist solely in pairing two animals but in allowing an individual to become whole. For this purpose wholeness—represented by the sphere—is emphasized as the essence of personality, while I am reduced to the fraction of a second, the duration of a lightning flash.

[541] The patient's association to lightning was that it might stand for *intuition*, a conjecture that is not far off the mark, since intuitions often come "like a flash." Moreover, there are good grounds for thinking that Miss X was a *sensation* type. She herself thought she was one. The "inferior" function would then be intuition. As such, it would have the significance of a releasing or "redeeming" function. We know from experience that the inferior function always compensates, complements, and balances the "superior" function.[48] My psychic peculiarity would

make me a suitable projection carrier in this respect. The inferior function is the one of which least conscious use is made. This is the reason for its undifferentiated quality, but also for its freshness and vitality. It is not at the disposal of the conscious mind, and even after long use it never loses its autonomy and spontaneity, or only to a very limited degree. Its role is therefore mostly that of a *deus ex machina*. It depends not on the ego but on the *self*. Hence it hits consciousness unexpectedly, like lightning, and occasionally with devastating consequences. It thrusts the ego aside and makes room for a supraordinate factor, the totality of a person, which consists of conscious and unconscious and consequently extends far beyond the ego. This self was always present,[49] but sleeping, like Nietzsche's "image in the stone."[50] It is, in fact, the secret of the stone, of the *lapis philosophorum*, in so far as this is the *prima materia*. In the stone sleeps the spirit *Mercurius*, the "circle of the moon," the "round and square,"[51] the homunculus, Tom Thumb and Anthropos at once,[52] whom the alchemists also symbolized as their famed *lapis philosophorum.*[53]

[542] All these ideas and inferences were naturally unknown to my patient, and they were known to me at the time only in so far as I was able to recognize the circle as a *mardala,*[54] the psychological expression of the totality of the self. Under these circumstances there could be no question of my having unintentionally infected her with alchemical ideas. The pictures are, in all essentials, genuine creations of the unconscious; their inessential aspects (landscape motifs) are derived from conscious contents.

[543] Although the sphere with its glowing red centre and the golden flash of lightning play the chief part, it should not be overlooked that there are several other eggs or spheres as well. If the sphere signifies the self of the patient, we must apply this interpretation to the other spheres, too. They must therefore represent other people who, in all probability, were her intimates. In both the pictures two other spheres are clearly indicated. So I must mention that Miss X had two women friends who shared her intellectual interests and were joined to her in a lifelong friendship. All three of them, as if bound together by fate, are rooted in the same "earth,"

i.e., in the collective unconscious, which is one and the same for all. It is probably for this reason that the second picture has the decidedly *nocturnal* character intended by the unconscious and asserted against the wishes of the conscious mind. It should also be mentioned that the pointed pyramids of the first picture reappear in the second, where their points are actually gilded by the lightning and strongly emphasized. I would interpret them as unconscious contents "pushing up" into the light of consciousness, as seems to be the case with many contents of the collective unconscious.[55]In contrast to the first picture, the second is painted in more vivid colours, red and gold. Gold expresses sunlight, value, divinity even. It is therefore a favourite synonym for the *lapis*, being the *aurum philosophicum* or *aurum potabile* or *aurum vitreum*.[56]

[544] As already pointed out, I was not at that time in a position to reveal anything of these ideas to Miss X, for the simple reason that I myself knew nothing of them. I feel compelled to mention this circumstance yet again, because the third picture, which now follows, brings a motif that points unmistakably to alchemy and actually gave me the definitive incentive to make a thorough study of the works of the old adepts.

Picture 3

[545] The third picture, done as spontaneously as the first two, is distinguished most of all by its light colours. Free-floating in space, among clouds, is a dark blue sphere with a wine-red border. Round the middle runs a wavy silver band, which keeps the sphere balanced by "equal and opposite forces," as the patient explained. To the right, above the sphere, floats a snake with golden rings, its head pointing at the sphere—an obvious development of the golden lightning in Picture 2. But she drew the snake in afterwards, on account of certain "reflections." The whole is "a planet in the making." In the middle of the silver band is the number 12. The band was thought of as being in rapid vibratory motion; hence the wave motif. It is like a vibrating belt that keeps the sphere afloat. Miss X compared it to the ring of Saturn. But unlike this, which is composed of disintegrated satellites, her ring was the origin of future moons such as Jupiter possesses. The black lines in the silver band

she called “lines of force”; they were meant to indicate that it was in motion. As if asking a question, I made the remark: “Then it is the vibrations of the band that keep the sphere floating?” “Naturally,” she said, “they are the wings of Mercury, the messenger of the gods. The silver is *quicksilver!*” She went on at once: “Mercury, that is Hermes, is the Nous, the mind or reason, and that is the animus, who is here outside instead of inside. He is like a veil that hides the true personality.”[57] We shall leave this latter remark alone for the moment and turn first to the wider context, which, unlike that of the two previous pictures, is especially rich.

[546] While Miss X was painting this picture, she felt that two earlier dreams were mingling with her vision. They were the two “big” dreams of her life. She knew of the attribute “big” from my stories of the dream life of African primitives I had visited. It has become a kind of “colloquial term” for characterizing archetypal dreams, which as we know have a peculiar numinosity. It was used in this sense by the dreamer. Several years previously, she had undergone a major operation. Under narcosis she had the following dream-vision: *She saw a grey globe of the world. A silver band rotated about the equator and, according to the frequency of its vibrations, formed alternate zones of condensation and evaporation. In the zones of condensation appeared the numbers 1 to* 3, *but they had the tendency to increase up to 12*. These numbers signified “nodal points” or “great personalities” who played a part in man’s historical development. “The number 12 meant the most important nodal point or great man (still to come), because it denotes the climax or turning point of the process of development.” (These are her own words.)

[547] The other dream that intervened had occurred a year before the first one: *She saw a golden snake in the sky. It demanded the sacrifice, from among a great crowd of people, of a* young *man, who obeyed this demand with an expression of sorrow*. The dream was repeated a little later, but this time *the snake picked on the dreamer herself. The assembled people regarded her compassionately, but she took her fate “proudly” on herself.*

[548] She was, as she told me, born immediately after midnight, so soon afterwards, indeed, that there was some doubt as to whether she came into the world on the 28th or on the 29th. Her father used to tease her by saying that she was obviously born before her time, since she came into the world just at the beginning of a new day, but "only just," so that one could almost believe she was born "at the twelfth hour." The number 12, as she said, meant for her the culminating point of her life, which she had only now reached. That is, she felt the "liberation" as the climax of her life. It is indeed an hour of birth—not of the dreamer but of the self. This distinction must be borne in mind.

[549] The context to Picture 3 here established needs a little commentary. First, it must be emphasized that the patient felt the moment of painting this picture as the "climax" of her life and also described it as such. Second, two "big" dreams have amalgamated in the picture, which heightens its significance still more. The sphere blasted from the rock in Picture 2 has now, in the brighter atmosphere, floated up to heaven. The nocturnal darkness of the earth has vanished. The increase of light indicates conscious realization: the liberation has become a fact that is integrated into consciousness. The patient has understood that the floating sphere symbolizes the "true personality." At present, however, it is not quite clear how she understands the relation of the ego to the "true personality." The term chosen by her coincides in a remarkable way with the Chinese *chen-yen*, the "true" or "complete" man, who has the closest affinity with the *homo quadratus*[58] of alchemy.[59] As we pointed out in the analysis of Picture 2, the *rotundum* of alchemy is identical with Mercurius, the "round and square."[60] In Picture 3 the connection is shown concretely through the mediating idea of the wings of Mercury, who, it is evident, has entered the picture in his own right and not because of any non-existent knowledge of Böhme's writings.[61]

[550] For the alchemists the process of individuation represented by the *opus* was an analogy of the creation of the world, and the *opus* itself an analogy of God's work of creation. Man was seen as a microcosm, a complete equivalent of the world in miniature. In our picture, we see what it is in man that corresponds to the cosmos, and what kind of

evolutionary process is compared with the creation of the world and the heavenly bodies: it is the *birth of the self*, the latter appearing as a microcosm.[62] It is not the empirical man that forms the "correspondentia" to the world, as the medievalists thought, but rather the indescribable totality of the psychic or spiritual man, who cannot be described because he is compounded of consciousness as well as of the indeterminable extent of the unconscious.[63] The term microcosm proves the existence of a common intuition (also present in my patient) that the "total" man is as big as the world, like an Anthropos. The cosmic analogy had already appeared in the much earlier dream under narcosis, which likewise contained the problem of personality: the nodes of the vibrations were great personalities of historical importance. As early as 1916, I had observed a similar individuation process, illustrated by pictures, in another woman patient. In her case too there was a world creation, depicted as follows (see Fig. 2):

[551] To the left, from an unknown source, three drops fall, dissolving into four lines,[64] or two pairs of lines. These lines move and form four separate paths, which then unite periodically in a nodal point and thus build a system of vibrations. The nodes are "great personalities and founders of religions," as my erstwhile patient told me. It is obviously the same conception as in our case, and we can call it archetypal in so far as there exist universal ideas of world periods, critical transitions, gods and half gods who personify the aeons. The unconscious naturally does not produce its images from conscious reflections, but from the worldwide propensity of the human system to form such conceptions as the world periods of the Parsees, the yugas and avatars of Hinduism, and the Platonic months of astrology with their bull and ram deities and the "great" Fish of the Christian aeon.[65]

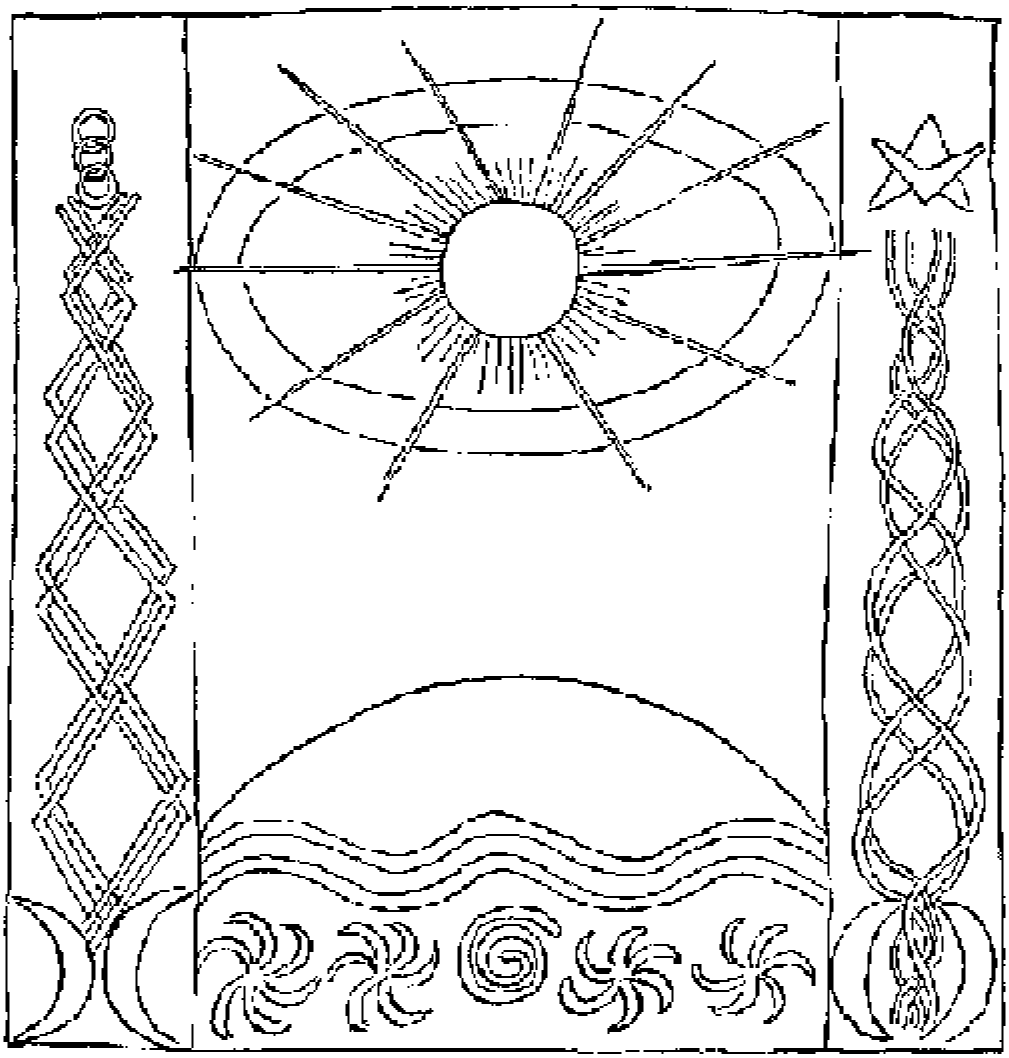

Fig. 2. Sketch of a picture from the year 1916

At the top, the sun, surrounded by a rainbow-coloured halo divided into twelve parts, like the zodiac. To the left, the descending, to the right, the ascending, transformation process.

[552] That the nodes in our patient's picture signify or contain numbers is a bit of unconscious number mysticism that is not always easy to unravel. So far as I can see, there are two stages in this arithmetical phenomenology: the first, earlier stage goes up to 3, the second, later stage up to 12. Two numbers, 3 and 12, are expressly mentioned. Twelve is four times three. I think we have here stumbled again on the axiom of Maria, that peculiar dilemma of three and four,[66] which I have discussed

many times before because it plays such a great role in alchemy.[67] I would hazard that we have to do here with a *tetrameria* (as in Greek alchemy), a transformation process divided into four stages[68] of three parts each, analogous to the twelve transformations of the zodiac and its division into four. As not infrequently happens, the number 12 would then have a not merely individual significance (as the patient's birth number, for instance), but a time-conditioned one too, since the present aeon of the Fishes is drawing to its end and is at the same time the twelfth house of the zodiac. One is reminded of similar Gnostic ideas, such as those in the gnosis of Justin: The "Father" (Elohim) begets with Edem, who was half woman and half snake, twelve "fatherly" angels, and Edem gives birth besides these to twelve "motherly" angels, who—in psychological parlance—represent the shadows of the twelve "fatherly" ones. The "motherly" angels divide themselves into four categories (*μέρη*) of three each, corresponding to the four rivers of Paradise. These angels dance round in a circle (*ὲν χόρῳ κνκλικῷ*).[69]. It is legitimate to bring these seemingly remote associations into hypothetical relationship, because they all spring from a common root, i.e., the collective unconscious.

[553] In our picture Mercurius forms a world-encircling band, usually represented by a snake.[70] Mercurius is a serpent or dragon in alchemy ("serpens mercurialis"). Oddly enough, this serpent is some distance away from the sphere and is aiming down at it, as if to strike. The sphere, we are told, is kept afloat by equal and opposite forces, represented by the quicksilver or somehow connected with it. According to the old view, Mercurius is duplex, i.e., he is himself an antithesis.[71] Mercurius or Hermes is a magician and god of magicians. As Hermes Trismegistus he is the patriarch of alchemy. His magician's wand, the caduceus, is entwined by two snakes. The same attribute distinguishes Asklepios, the god of physicians.[72] The archetype of these ideas was projected on to me by the patient before ever the analysis had begun.

[554] The primordial image underlying the sphere girdled with quicksilver is probably that of the world egg encoiled by a snake.[73] But in our case the snake symbol of Mercurius is replaced by a sort of pseudo-physicistic

notion of a field of vibrating molecules of quicksilver. This looks like an intellectual disguising of the true situation, that the self, or its symbol, is entwined by the mercurial serpent. As the patient remarked more or less correctly, the “true personality” is veiled by it. This, presumably, would then be something like an Eve in the coils of the paradisal serpent. In order to avoid giving this appearance, Mercurius has obligingly split into his two forms, according to the old-established pattern: the *mercurius crudus* or *vulgi* (crude or ordinary quicksilver), and the *Mercurius Philosophorum* (the *spiritus mercurialis* or the spirit Mercurius, Hermes-Nous), who hovers in the sky as the golden lightning-snake or Nous Serpent, at present inactive. In the vibrations of the quicksilver band we may discern a certain tremulous excitement, just as the suspension expresses tense expectation: “Hover and haver suspended in pain!” For the alchemists quicksilver meant the concrete, material manifestation of the spirit Mercurius, as the above-mentioned mandala in the scholia to the *Tractatus aureus* shows: the central point is Mercurius, and the square is Mercurius divided into the four elements. He is the *anima mundi*, the innermost point and at the same time the encompasser of the world, like the atman in the Upanishads. And just as quicksilver is a materialization of Mercurius, so the gold is a materialization of the sun in the earth.[74]

[555] A circumstance that never ceases to astonish one is this: that at all times and in all places alchemy brought its conception of the *lapis* or its *minera* (raw material) together with the idea of the *homo altus* or *maximus*, that is, with the Anthropos.[75] Equally, one must stand amazed at the fact that here too the conception of the dark round stone blasted out of the rock should represent such an abstract idea as the psychic totality of man. The earth and in particular the heavy cold stone is the epitome of materiality, and so is the metallic quicksilver which, the patient thought, meant the animus (mind, *nous*). We would expect pneumatic symbols for the idea of the self and the animus, images of air, breath, wind. The ancient formula *λίθος* οὺ *λίθος* (the stone that is no stone) expresses this dilemma: we are dealing with a *complexio oppositorum*, with something like the nature of light, which under some conditions behaves like particles and under others like waves, and is obviously in its essence both at once. Something of this kind must be conjectured with regard to these

paradoxical and hardly explicable statements of the unconscious. They are not inventions of any conscious mind, but are spontaneous manifestations of a psyche not controlled by consciousness and obviously possessing all the freedom it wants to express views that take no account of our conscious intentions. The duplicity of Mercurius, his simultaneously metallic and pneumatic nature, is a parallel to the symbolization of an extremely spiritual idea like the Anthropos by a corporeal, indeed metallic, substance (gold). One can only conclude that the unconscious tends to regard spirit and matter not merely as equivalent but as actually identical, and this in flagrant contrast to the intellectual one-sidedness of consciousness, which would sometimes like to spiritualize matter and at other times to materialize spirit. That the *lapis*, or in our case the floating sphere, has a double meaning is clear from the circumstance that it is characterized by two symbolical colours: red means blood and affectivity, the physiological reaction that joins spirit to body, and blue means the spiritual process (mind or *nous*). This duality reminds one of the alchemical duality *corpus* and *spiritus*, joined together by a third, the *anima* as the *ligamentum corporis et spiritus*. For Böhme a "high deep blue" mixed with green signifies "Liberty," that is, the inner "Kingdom of Glory" of the reborn soul. Red leads to the region of fire and the "abyss of darkness," which forms the periphery of Böhme's mandala (see Fig. 1).

Picture 4

[556] Picture 4, which now follows, shows a significant change: the sphere has divided into an outer membrane and an inner nucleus. The outer membrane is flesh coloured, and the originally rather nebulous red nucleus in Picture 2 now has a differentiated internal structure of a decidedly ternary character. The "lines of force" that originally belonged to the band of quicksilver now run through the whole nuclear body, indicating that the excitation is no longer external only but has seized the innermost core. "An enormous inner activity now began," the patient told me. The nucleus with its ternary structure is presumably the female organ, stylized to look like a plant, in the act of fecundation: the spermatozoon is penetrating the nuclear membrane. Its role is played by

the mercurial serpent: the snake is black, dark, chthonic, a subterranean and ithyphallic Hermes; but it has the golden wings of Mercury and consequently possesses his pneumatic nature. The alchemists accordingly represented their *Mercurius duplex* as the winged and wingless dragon, calling the former feminine and the latter masculine.

[557] The serpent in our picture represents not so much the spermatozoon but, more accurately, the phallus. Leone Ebreo,[76] in his *Dialoghi d'amore*, calls the planet Mercury the *membrum virile* of heaven, that is, of the macrocosm conceived as the *homo maximus*.[77] The spermatozoon seems, rather, to correspond to the golden substance which the snake is injecting into the invaginated ectoderm of the nucleus.[78] The two silver petals (?) probably represent the receptive vessel, the moon-bowl in which the sun's seed (gold) is destined to rest.[79] Underneath the flower is a small violet circle inside the ovary, indicating by its colour that it is a "united double nature," spirit and body (blue and red).[80] The snake has a pale yellow halo, which is meant to express its numinosity.

[558] Since the snake evolved out of the flash of lightning or is a modulated form of it, I would like to instance a parallel where the lightning has the same illuminating, vivifying, fertilizing, transforming and healing function that in our case falls to the snake (cf. Fig. 3). Two phases are represented: first, a black sphere, signifying a state of profound depression; and second, the lightning that strikes into this sphere. Ordinary speech makes use of the same imagery: something "strikes home" in a "flash of revelation." The only difference is that generally the image comes first, and only afterwards the realization which enables the patient to say: "This has struck home."

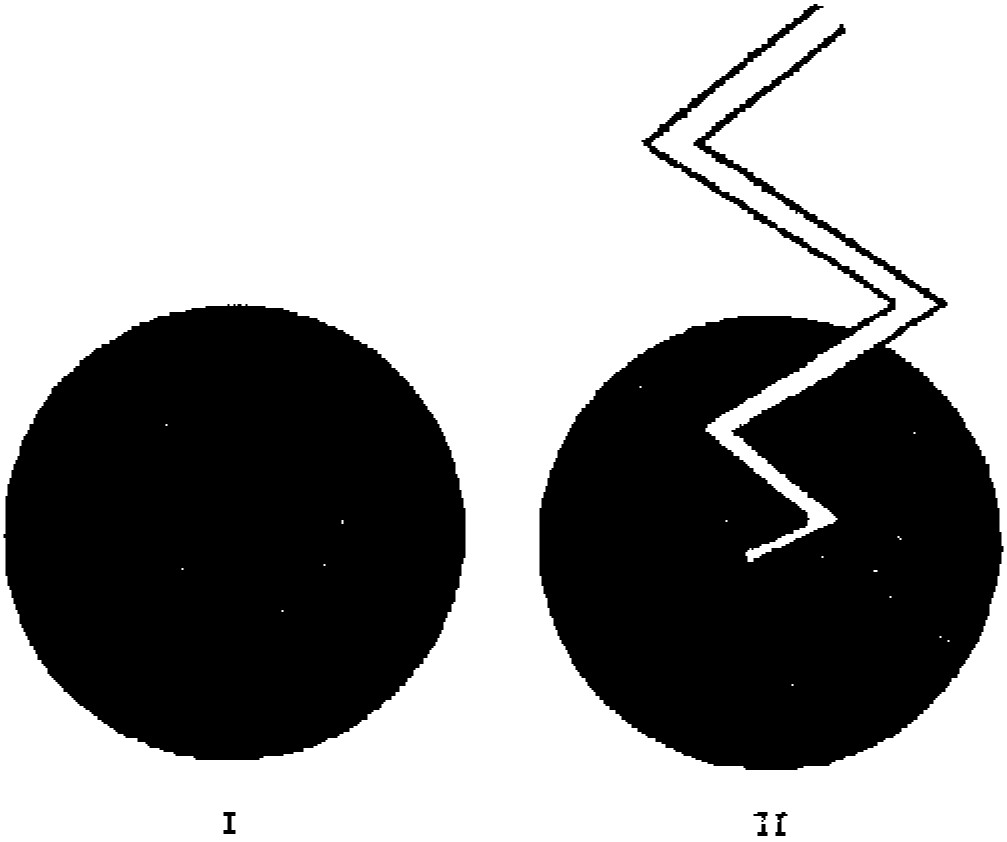

Fig. 3. Sketch of a drawing by a young woman patient with psychogenic depression from the beginning of the treatment

I. State of black hopelessness / II. Beginning of the therapeutic effect

In an earlier picture the sphere lay on the bottom of the sea. As a series of pictures shows, it arose in the first place because a black snake had swallowed the sun. There then followed an eight-rayed, completely black mandala with a wreath of eight silver stars. In the centre was a black homunculus. Next the black sphere developed a red centre, from which red rays, or streams of blood, ran out into tentacle-like extremities. The whole thing looked rather like a crab or an octopus. As the later pictures showed, the patient herself was shut up in the sphere.

[559] As to the context of Picture 4, Miss X emphasized that what disturbed her most was the band of quicksilver in Picture 3. She felt the silvery substance ought to be "inside," the black lines of force remaining outside to form a black snake. This would now encircle the sphere.[81] She felt the snake at first as a "terrible danger," as something threatening the "integrity of the sphere." At the point where the snake penetrates the

nuclear membrane, fire breaks out (emotion). Her conscious mind interpreted this conflagration as a defensive reaction on the part of the sphere, and accordingly she tried to depict the attack as having been repulsed. But this attempt failed to satisfy the “eyes,” though she showed me a pencil sketch of it. She was obviously in a dilemma: she could not accept the snake, because its sexual significance was only too clear to her without any assistance from me. I merely remarked to her: “This is a well-known process[82] which you can safely accept,” and showed her from my collection a similar picture, done by a man, of a floating sphere being penetrated *from below* by a black phallus-like object. Later she said: “I suddenly understood the whole process in a more impersonal way.” It was the realization of a law of life to which sex is subordinated. “The ego was not the centre, but, following a universal law, I circled round a sun.” Thereupon she was able to accept the snake “as a necessary part of the process of growth” and finish the picture quickly and satisfactorily. Only one thing continued to give difficulty: she had to put the snake, she said, “One hundred per cent at the top, in the middle, in order to satisfy the eyes.” Evidently the unconscious would only be satisfied with the most important position at the top and in the middle—in direct contrast to the picture I had previously shown her. This, as I said, was done by a man and showed the menacing black symbol entering the mandala from below. For a woman, the typical danger emanating from the unconscious comes *from above*, from the “spiritual” sphere personified by the animus, whereas for a man it comes from the chthonic realm of the “world and woman,” i.e., the anima projected on to the world.

[560] Once again we must recall similar ideas found in Justin’s gnosis: the third of the fatherly angels is Baruch. He is also the tree of life in paradise. His counterpart on the motherly side is Naas, the serpent, who is the tree of knowledge of good and evil.[83] When Elohim left Edem, because, as the second member, he had retreated to the first member of the divine triad (which consisted of the “Good,” the “Father,” and Edem), Edem pursued the pneuma of the Father, which he had left behind in man, and caused it to be tormented by Naas (*ἵνα πάσαις κολάσεικολάζη τό ὂν πνευμα του ’Ελωεὶμ τὸ ἐν τοῖς ἁνθρωποις*), Naas defiled Eve and

also used Adam as a catamite. Edem, however, is the soul; Elohim is spirit. “The soul is against the spirit, and the spirit against the soul” (*κατὰ τής ψυχής τετάκται*).[84] This idea sheds light on the polarity of red and blue in our mandala, and also on the attack by the snake, who represents knowledge. That is why we fear knowledge of the truth, in this case, of the shadow. Therefore Baruch sent to mankind Jesus, that they might be led back to the “Good.” But the “Good One is Priapus.”[85] Elohim is the swan, Edem is Leda; he the gold, she Danae. Nor should we forget that the god of revelation has from of old the form of a snake—e.g., the *agathodaimon*. Edem too, as a snake-maiden, has a dual nature, “two-minded, two-bodied” (*δίγνωμος, δίσωμος*), and in medieval alchemy her figure became the symbol of the androgynous Mercurius.[86]

[561] Let us remember that in Picture 3 *Mercurius vulgi*, ordinary quicksilver, encircles the sphere. This means that the mysterious sphere is enveloped or veiled by a “vulgar” or crude understanding. The patient herself opined that “the animus veils the true personality.” We shall hardly be wrong in assuming that a banal, everyday view of the world, allegedly biological, has here got hold of the sexual symbol and concretized it after the approved pattern. A pardonable error! Another, more correct view is so much more subtle that one naturally prefers to fall back on something well-known and ready to hand, thus gratifying one’s own “rational” expectations and earning the applause of one’s contemporaries—only to discover that one has got hopelessly stuck and has arrived back at the point from which one set forth on the great adventure. It is clear what is meant by the ithyphallic serpent: from above comes all that is aerial, intellectual, spiritual, and from below all that is passionate, corporeal, and dark. The snake, contrary to expectation, turns out to be a pneumatic symbol,[87] a *Mercurius spiritualis*—a realization which the patient herself formulated by saying that the ego, despite its capricious manipulation of sexuality, is subject to a universal law. Sex in this case is therefore no problem at all, as it has been subjected to a higher transformation process and is contained in it; not repressed, only without an object.

[562] Miss X subsequently told me that she felt Picture 4 was the most difficult, as if it denoted the turning point of the whole process. In my view she may not have been wrong in this, because the clearly felt, ruthless setting aside of the so beloved and so important ego is no light matter. Not for nothing is this “letting go” the *sine qua non* of all forms of higher spiritual development, whether we call it meditation, contemplation, yoga, or spiritual exercises. But, as this case shows, relinquishing the ego is not an act of the will and not a result arbitrarily produced; it is an event, an occurrence, whose inner, compelling logic can be disguised only by wilful self-deception.

[563] In this case and at this moment the ability to “let go” is of decisive importance. But since everything passes, the moment may come when the relinquished ego must be reinstated in its functions. Letting go gives the unconscious the opportunity it has been waiting for. But since it consists of opposites—day and night, bright and dark, positive and negative—and is good and evil and therefore ambivalent, the moment will infallibly come when the individual, like the exemplary Job, must hold fast so as not to be thrown catastrophically off balance—when the wave rebounds. The holding fast can be achieved only by a conscious will, i.e., by the ego. That is the great and irreplaceable significance of the ego, but one which, as we see here, is nonetheless relative. Relative, too, is the gain won by integrating the unconscious. We add to ourselves a bright and a dark, and more light means more night.[88] The urge of consciousness towards wider horizons, however, cannot be stopped; they must needs extend the scope of the personality, if they are not to shatter it.

Picture 5

[564] Picture 5, Miss X said, followed naturally from Picture 4, with no difficulty. The sphere and the snake have drawn apart. The snake is sinking downwards and seems to have lost its threateningness. But the sphere has been fecundated with a vengeance: it has not only got bigger, but blossoms in the most vivid colours.[89] The nucleus has divided into four; something like a segmentation has occurred. This is not due to any

conscious reflection, such as might come naturally to a biologically educated person; the division of the process or of the central symbol into four has always existed, beginning with the four sons of Horus, or the four seraphim of Ezekiel, or the birth of the four Aeons from the Metra (uterus) impregnated by the pneuma in Barbelo-Gnosis, or the cross formed by the lightning (snake) in Böhme's system,[90] and ending with the tetrameria of the *opus alchymicum* and its components (the four elements, qualities, stages, etc.).[91] In each case the quaternity forms a unity; here it is the green circle at the centre of the four. The four are undifferentiated, and each of them forms a vortex, apparently turning to the left. I think I am not mistaken in regarding it as probable that, in general, a leftward movement indicates movement towards the unconscious, while a rightward (clockwise) movement goes towards consciousness.[92] The one is "sinister," the other "right," "rightful," "correct." In Tibet, the leftward-moving swastika is a sign of the Bön religion, of black magic. Stupas and chörtens must therefore be circumambulated clockwise. The leftward-spinning eddies spin into the unconscious; the rightward-spinning ones spin out of the unconscious chaos. The rightward-moving swastika in Tibet is therefore a Buddhist emblem.[93] (Cf. also Fig. 4.)

[565] For our patient the process appeared to mean, first and foremost, a differentiation of consciousness. From the treasures of her psychological knowledge she interpreted the four as the four orienting functions of consciousness: thinking, feeling, sensation, intuition. She noticed, however, that the four were all alike, whereas the four functions are all unlike. This raised no question for her, but it did for me. What are these four if they are *not* the four functional aspects of consciousness? I doubted whether this could be a sufficient interpretation of them. They seemed to be much more than that, and that is probably the reason why they are not different but identical. They do not form four functions, different by definition, but they might well represent the *a priori* possibility for the formation of the four functions. In this picture we have the quaternity, the archetypal 4, which is capable of numerous interpretations, as history shows and as I have demonstrated elsewhere. It illustrates the coming to consciousness of an unconscious content; hence

it frequently occurs in cosmogonic myths. What is the precise significance of the fact that the four eddies are apparently turning to the left, when the division of the mandala into four denotes a process of becoming conscious, is a point about which I would rather not speculate. I lack the necessary material. Blue means air or pneuma, and the leftward movement an intensification of the unconscious influence. Possibly this should be taken as a pneumatic compensation for the strongly emphasized red colour, which signifies affectivity.

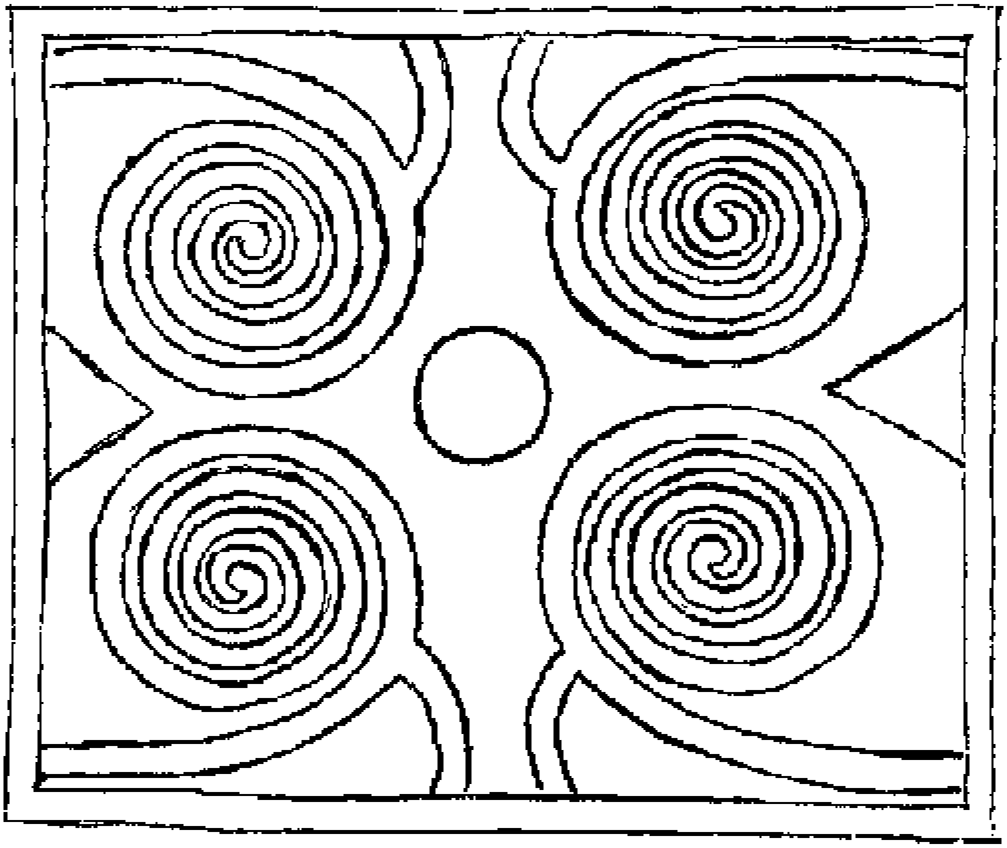

Fig. 4. Neolithic relief from Tarxien, Malta

The spirals represent vine tendrils.

[566] The mandala itself is bright red, but the four eddies have in the main a cool, greenish-blue colour, which the patient associated with "water." This might hang together with the leftward movement, since water is a favourite symbol for the unconscious.[94] The green of the circle in the middle signifies life in the chthonic sense. It is the "benedicta viriditas" of the alchemists.

[567] The problematical thing about this picture is the fact that the black snake is outside the totality of the symbolic circle. In order to make the totality actual, it ought really to be inside. But if we remember the unfavourable significance of the snake, we shall understand why its assimilation into the symbol of psychic wholeness presents certain difficulties. If our conjecture about the leftward movement of the four eddies is correct, this would denote a trend towards the deep and dark

side of the spirit,[95] by means of which the black snake could be assimilated. The snake, like the devil in Christian theology, represents the shadow, and one which goes far beyond anything personal and could therefore best be compared with a principle, such as the principle of evil.[96] It is the colossal shadow thrown by man, of which our age had to have such a devastating experience. It is no easy matter to fit this shadow into our cosmos. The view that we can simply turn our back on evil and in this way eschew it belongs to the long list of antiquated naïveties. This is sheer ostrich policy and does not affect the reality of evil in the slightest. Evil is the necessary opposite of good, without which there would be no good either. It is impossible even to think evil out of existence. Hence the fact that the black snake remains outside expresses the critical position of evil in our traditional view of the world.[97]

[568] The background of the picture is pale, the colour of parchment. I mention this fact in particular, as the pictures that follow show a characteristic change in this respect.

Picture 6

[569] The background of Picture 6 is a cloudy grey. The mandala itself is done in the vividest colours, bright red, green, and blue. Only where the red outer membrane enters the blue-green nucleus does the red deepen to blood colour and the pale blue to a dark ultramarine. The wings of Mercury, missing in the previous picture, reappear here at the neck of the blood-red pistons (as previously on the neck of the black snake in Picture 4). But the most striking thing is the appearance of a swastika, undoubtedly wheeling to the right. (I should add that these pictures were painted in 1928 and had no direct connection with contemporary fantasies, which at that time were still unknown to the world at large.) Because of its green colour, the swastika suggests something plantlike, but at the same time it has the wavelike character of the four eddies in the previous picture.

[570] In this mandala an attempt is made to unite the opposites red and blue, outside and inside. Simultaneously, the rightward movement aims at bringing about an ascent into the light of consciousness, presumably

because the background has become noticeably darker. The black snake has disappeared, but has begun to impart its darkness to the entire background. To compensate this, there is in the mandala an upwards movement towards the light, apparently an attempt to rescue consciousness from the darkening of the environment. The picture was associated with a dream that occurred a few days before. Miss X dreamt that *she returned to the city after a holiday in the country. To her astonishment she found a tree growing in the middle of the room where she worked. She thought: "Well, with its thick bark this tree can withstand the heat of an apartment."* Associations to the tree led to its maternal significance. The tree would explain the plant motif in the mandala, and its sudden growth represents the higher level or freeing of consciousness induced by the movement to the right. For the same reason the "philosophical" tree is a symbol of the alchemical *opus*, which as we know is an individuation process.

[571] We find similar ideas in Justin's gnosis. The angel Baruch stands for the pneuma of Elohim, and the "motherly" angel Naas for the craftiness of Edem. But both angels, as I have said, were also trees: Baruch the tree of life, Naas the tree of knowledge. Their division and polarity are in keeping with the spirit of the times (second-third centuries A.D.). But in those days, too, they knew of an individuation process, as we can see from Hippolytus.[98] Elohim, we are told, set the "prophet" Heracles the task of delivering the "Father" (the pneuma) from the power of the twelve wicked angels. This resulted in his twelve labours. Now the Heracles myth has in fact all the characteristic features of an individuation process: the journeys to the four directions,[99] four sons, submission to the feminine principle (Omphale) that symbolizes the unconscious, and the self-sacrifice and rebirth caused by Deianeira's robe.

[572] The "thick bark" of the tree suggests the motif of protection, which appears in the mandala as the "formation of skins" (see par. 576). This is expressed in the motif of the protective black bird's wings, which shield the contents of the mandala from outside influences. The piston-shaped prolongations of the peripheral red substance are phallic symbols, indicating the entry of affectivity into the pneumatic interior. They are

obviously meant to activate and enrich the spirit dwelling within. This "spirit" has of course nothing to do with intellect, rather with something that we would have to call spiritual substance (pneuma) or—in modern terms—"spiritual life." The underlying symbolical thought is no doubt the same as the view developed in the Clementine Homilies, that *ττνεΰμα* (spirit) and σώμα (body) are one in God.[100] The mandala, though only a symbol of the self as the psychic totality, is at the same time a God-image, for the central point, circle, and quaternity are well-known symbols for the deity. The impossibility of distinguishing empirically between "self" and "God" leads, in Indian theosophy, to the identity of the personal and supra-personal Purusha-Atman. In ecclesiastical as in alchemical literature the saying is often quoted: "God is an infinite circle (or sphere) whose centre is everywhere and the circumference nowhere."[101] This idea can be found in full development as early as Parmenides. I will cite the passage, because it alludes to the same motifs that underlie our mandala: "For the narrower rings[102] were filled with unmixed Fire, and those next to them with Night, but between these rushes the portion of Flame. And in the centre of these is the goddess[103] who guides everything; for throughout she rules over cruel Birth and Mating, sending the female to mate with the male, and conversely again the male with the female."[104]

[573] The learned Jesuit, Nicholas Caussin, apropos the report in Clement of Alexandria that, on certain occasions, wheels were rolled round in the Egyptian temples,[105] comments that Democritus of Abdera called God νοῦν ἐν πυρὶ σφαιροειδεῖ[106] (*mentem in igne orbiculari*, 'mind in the spherical fire'). He goes on: "This was the view also of Parmenides, who defined God as *σπφάνην*, 'crown,' a circle consisting of glowing light.[107] And it has been very clearly established by Iamblichus, in his book on the mysteries, that the Egyptians customarily represent God, the Lord of the world, as sitting in the lotus, a water-plant, the fruits as well as the leaves of which are round,[108] thereby indicating the circular motion of the mind, which everywhere returns into itself." This is also the origin, he says, of the ritual transformations or circuits ("circuitiones") that imitate the motion of the heavens. But the Stoics named the heavens a "round

and revolving God” (*rotundum et volubilem Deum*). Caussin says it is to this that the “mystical” (*mystice* = symbolical) explanation of Psalm 12 : 8 refers: “In circuitu impii ambulant” (the ungodly wander in a circle);[109] they only walk round the periphery without ever reaching the centre, which is God. Here I would mention the wheel motif in mandala symbolism only in passing, as I have dealt with it in detail elsewhere.[110]

Picture 7

[574] In Picture 7 it has indeed turned to night: the entire sheet which the mandala is painted on is black. All the light is concentrated in the sphere. The colours have lost their brightness but have gained in intensity. It is especially striking that the black has penetrated as far as the centre, so that something of what we feared has already occurred: the blackness of the snake and of the sombre surroundings has been assimilated by the nucleus and, at the same time, as the picture shows, is compensated by a golden light radiating out from the centre. The rays form an equal-armed cross, to replace the swastika of the previous picture, which is here represented only by four hooks suggesting a rightwards rotation. With the attainment of absolute blackness, and particularly its presence in the centre, the upward movement and rightward rotation seem to have come to an end. On the other hand, the wings of Mercury have undergone a noticeable differentiation, which presumably means that the sphere has sufficient power to keep itself afloat and not sink down into total darkness. The golden rays forming the cross bind the four together.[111] This produces an inner bond and consolidation as a defence against destructive influences[112] emanating from the black substance that has penetrated to the centre. For us the cross symbol always has the connotation of *suffering*, so we are probably not wrong in assuming that the mood of this picture is one of more or less painful *suspension*—remember the wings!—over the dark abyss of inner loneliness.

[575] Earlier, I mentioned Böhme’s lightning that “makes a cross,” and I brought this cross into connection with the four elements. As a matter of fact, John Dee symbolizes the elements by an equal-armed cross.[113] As we said, the cross with a little circle in it is the alchemical sign for copper

(*cuprum*, from Kypris, Aphrodite), and the sign for Venus is ♀. Remarkably enough,  is the old apothecary's sign for *spiritus Tartari* (tartaric acid), which, literally translated, means 'spirit of the underworld.'  is also the sign for red hematite (bloodstone). Hence there seems to be not only a cross that comes from above, as in Böhme's case and in our mandala, but also one that comes from below. In other words, the lightning—to keep to Böhme's image—can come from below out of the blood, from Venus or from Tartarus. Böhme's neutral "Salniter" is identical with salt in general, and one of the signs for this is . One can hardly imagine a better sign for the arcane substance, which salt was considered to be by the sixteenth- and seventeenth-century alchemists. Salt, in ecclesiastical as well as alchemical usage, is the symbol for Sapientia and also for the distinguished or elect *personality*, as in Matthew 5 : 13: "Ye are the salt of the earth."

[576] The numerous wavy lines or layers in the mandala could be interpreted as representing the formation of *layers of skin*, giving protection against outside influences. They serve the same purpose as the inner consolidation. These cortices probably have something to do with the dream of the tree in the workroom, which had a "thick bark." The formation of skins is also found in other mandalas, and it denotes a hardening or sealing off against the outside, the production of a regular rind or "hide." It is possible that this phenomenon would account for the cortices or *putamina* ('shards') mentioned in the cabala.[114] "For such is the name for that which abides outside holiness," such as the seven fallen kings and the four Achurayim.[115] From them come the "klippoth" or cortices. As in alchemy, these are the scoriae or slag, to which adheres the quality of plurality and of death. In our mandala the cortices are boundary lines marking off the inner unity and protecting it against the outer blackness with its disintegrating influences, personified by the snake.[116] The same motif is expressed by the petals of the lotus and by the skins of the onion: the outer layers are withered and desiccated, but they protect the softer, inner layers. The lotus seat of the Horus-child, of

the Indian divinities, and of the Buddha must be understood in this sense. Hölderlin makes use of the same image:

> Fateless, like the sleeping
> Infant, breathe the heavenly ones,
> Chastely guarded
> In modest bud; their spirits
> Blossom eternally …[117]

[577] In Christian metaphor, Mary is the flower in which God lies hidden; or again, the rose window in which the *rex gloriae* and judge of the world is enthroned.

[578] The idea of circular layers is to be found, by implication, in Böhme, for the outermost ring of his three-dimensional mandala[118] is labelled “will of ye Devill Lucifer,” “Abysse (of) Eternity,” “Abyss of ye Darkness,” “Hell of Devills,” etc. (See Fig. 1.) Böhme says of this in his *Aurora* (ch. XVII, sec. 6): “Behold, when Lucifer with his hosts aroused the Wrath-fire in God’s nature, so that God waxed wroth in Nature in the place of Lucifer, the outermost Birth in Nature acquired another Quality, wholly wrathful, dry, cold, vehement, bitter, and sour. The raging Spirit, that before had a subtle, gentle Quality in Nature, became in his outermost Birth wholly presumptuous and terrible, and now in his outermost Birth is called the Wind, or the element Air.” In this way the four elements arose—the earth, in particular, by a process of contraction and desiccation.

[579] Cabalistic influences may be conjectured here, though Böhme knew not much more about the Cabala than did Paracelsus. He regarded it as a species of magic. The four elements correspond to the four Achurayim.[119] They constitute a sort of second quaternity, proceeding from the inner, pneumatic quaternity but of a physical nature. The alchemists, too, allude to the Achurayim. Mennens,[120] for instance, says: “And although the holy name of God reveals the Tetragrammaton or the Four Letters, yet if you should look at it aright, only three Letters are found in it. The letter *he* [n] is found twice, since they are the same, namely Air and Water, which signifies the Son; Earth the Father, and Fire the Holy Ghost. Thus the Four Letters of God’s name manifestly signify

the Most Holy Trinity and Matter, which likewise is threefold (*triplex*)[121] … and which is also called the shadow of the same [i.e., of God], and is named by Moyses[122] the back of God *[Dei posteriora]*, which seems to be created out of it [matter]."[123] This statement bears out Böhme's view.

[580] To return to our mandala. The original four eddies have coalesced into the wavy squares in the middle of the picture. Their place is taken by golden points at the outer rim (developed from the previous picture), emitting rainbow colours. These are the colours of the *peacock's eye*, which play a great role as the *cauda pavonis* in alchemy.[124] The appearance of these colours in the *opus* represents an intermediate stage preceding the definitive end result. Böhme speaks of a "love-desire or a Beauty of Colours; and here all Colours arise."[125] In our mandala, too, the rainbow colours spring from the red layer that means affectivity. Of the "life of Nature and Spirit" that is united in the "spherical wheel"[126] Böhme says: "Thus is made known to us an eternal Essence of Nature, like to Water and Fire, which stand as it were mixed into one another. For there comes a *bright-blue* colour, like the *Lightning* of the Fire; and then it has a form like a *Ruby*[127] mingled with Crystals into one Essence, or like *yellow, white, red*, and *blue* mingled in *dark Water:* for it is like blue in green, since each still has its brightness and shines, and the Water only resists their Fire, so that there is no wasting anywhere, but one eternal Essence in two Mysteries mingled together, notwithstanding the difference of two Principles, viz. two kinds of life." The phenomenon of the colours owes its existence to the "Imagination of the great Mystery, where a wondrous essential Life is born."[128]

[581] It is abundantly clear from this that Böhme was preoccupied with the same psychic phenomenon that fascinated Miss X—and many other patients too. Although Böhme took the idea of the *cauda pavonis* and the tetrameria from alchemy,[129] he, like the alchemists, was working on an empirical basis which has since been rediscovered by modern psychology. There are products of active imagination, and also dreams, which reproduce the same patterns and arrangements with a spontaneity that cannot be influenced. A good example is the following dream: A patient dreamt that *she was in a drawing-room. There was a table with*

three chairs *beside it. An unknown man standing beside her invited her to sit down. For this purpose she fetched a* fourth *chair that stood further off. She then sat at the table and began turning over the pages of a book, containing pictures of* blue *and* red *cubes, as for a building game. Suddenly it occurred to her that she had something else to attend to. She left the room and went to a* yellow *house. It was raining in torrents, and she sought shelter under a* green *laurel tree*.

[582] The table, the three chairs, the invitation to sit down, the other chair that had to be fetched to make four chairs, the cubes, and the building game all suggest a process of *composition*. This takes place in stages: a combination first of blue and red, then of yellow and green. These four colours symbolize four qualities, as we have seen, which can be interpreted in various ways. Psychologically this quaternity points to the orienting functions of consciousness, of which at least one is unconscious and therefore not available for conscious use. Here it would be the green, the sensation function,[130] because the patient's relation to the real world was uncommonly complicated and clumsy. The "inferior" function, however, just because of its unconsciousness, has the great advantage of being contaminated with the collective unconscious and can be used as a bridge to span the gulf between conscious and unconscious and thus restore the vital connection with the latter. This is the deeper reason why the dream represents the inferior function as a laurel. The laurel in this dream has the same connection with the processes of inner growth as the tree that Miss X dreamt grew in her room. It is essentially the same tree as the *arbor philosophica* of the alchemists, about which I have written in *Psychology and Alchemy*.[131] We should also remember that, according to tradition, the laurel is not injured either by lightning or by cold—"intacta triumphat." Hence it symbolized the Virgin Mary,[132] the model for all women, just as Christ is the model for men. In view of its historical interpretation the laurel, like the alchemical tree, should be taken in this context as a symbol of the self.[133] The ingenuousness of patients who produce such dreams is always very impressive.

[583] To turn back again to our mandala. The golden lines that end in pistons recapitulate the spermatozoon motif and therefore have a

spermatic significance, suggesting that the quaternity will be reproduced in a new and more distinct form. In so far as the quaternity has to do with conscious realization, we can infer from these symptoms an intensification of the latter, as is also suggested by the golden light radiating from the centre. Probably a kind of inner illumination is meant.

[584] Two days before painting this picture, Miss X dreamt that *she was in her father's room in their country house. "But my mother had moved my bed away from the wall into the middle of the room and had slept in it. I was furious, and moved the bed back to its former place. In the dream the bed-cover was red—exactly the red reproduced in the picture."*

[585] The mother significance of the tree in her previous dream has here been taken up by the unconscious: this time the mother has slept in the middle of the room. This seems to be for Miss X an annoying intrusion into her sphere, symbolized by the room of her father, who has an animus significance for her. Her sphere is therefore a spiritual one, and she has usurped it just as she usurped her father's room. She has thus identified with the "spirit." Into this sphere her mother has intruded and installed herself in the centre, at first under the symbol of the tree. She therefore stands for physis opposed to spirit, i.e., for the natural feminine being which the dreamer also is, but which she would not accept because it appeared to her as a black snake. Although she remedied the intrusion at once, the dark chthonic principle, the black substance, has nevertheless penetrated to the centre of her mandala, as Picture 7 shows. But just because of this the golden light can appear: "e tenebris lux!" We have to relate the mother to Böhme's idea of the matrix. For him the matrix is the *sine qua non* of all differentiation or realization, without which the spirit remains suspended and never comes down to earth. The collision between the paternal and the maternal principle (spirit and nature) works like a shock.

[586] After this picture, she felt the renewed penetration of the red colour, which she associated with feeling, as something disturbing, and she now discovered that her "rapport" with me, her analyst (= father), was unnatural and unsatisfactory. She was giving herself airs, she said, and was posing as an intelligent, understanding pupil (usurpation of

spirituality!). But she had to admit that she felt very silly and was very silly, regardless of what I thought about it. This admission brought her a feeling of great relief and helped her to see at last that sex was “not, on the one hand, merely a mechanism for producing children and not, on the other, only an expression of supreme passion, but was also banally physiological and autoerotic.” This belated realization led her straight into a fantasy state where she became conscious of a series of obscene images. At the end she saw the image of a large bird, which she called the “earth bird,” and which alighted on the earth. Birds, as aerial beings, are well-known spirit symbols. It represented the transformation of the “spiritual” image of herself into a more earthy version that is more characteristic of women. This “tailpiece” confirms our suspicion that the intensive upward and rightward movement has come to a halt: the bird is coming down to earth. This symbolization denotes a further and necessary differentiation of what Böhme describes in general as “Love-desire.” Through this differentiation consciousness is not only widened but also brought face to face with the reality of things, so that the inner experience is tied, so to speak, to a definite spot.

[587] On the days following, the patient was overcome by feelings of self-pity. It became clear to her how much she regretted never having had any children. She felt like a neglected animal or a lost child. This mood grew into a regular *Weltschmerz*, and she felt like the “all-compassionate Tathagata” (Buddha), Only when she had completely given way to these feelings could she bring herself to paint another picture. Real liberation comes not from glossing over or repressing painful states of feeling, but only from experiencing them to the full.

Picture 8

[588] The thing that strikes us at once in Picture 8 is that almost the whole interior is filled with the black substance. The blue-green of the water has condensed to a dark blue quaternity, and the golden light in the centre turns in the reverse direction, anti-clockwise: the bird is coming down to earth. That is, the mandala is moving towards the dark, chthonic depths. It is still floating—the wings of Mercury show this—but it has come

much closer to the blackness. The inner, undifferentiated quaternity is balanced by an outer, differentiated one, which Miss X equated with the four functions of consciousness. To these she assigned the following colours: yellow = intuition, light blue = thinking, flesh pink = feeling, brown = sensation.[134] Each of these quarters is divided into three, thus producing the number 12 again. The separation and characterization of the two quaternities is worth noting. The outer quaternity of wings appears as a differentiated realization[135] of the undifferentiated inner one, which really represents the archetype. In the cabala this relationship corresponds to the quaternity of Merkabah[136] on the one hand and of the Achurayim on the other, and in Böhme they are the four Spirits of God[137] and the four elements.

[589] The plantlike form of the cross in the middle of the mandala, also noted by the patient, refers back to the tree ("tree of the cross") and the mother.[138] She thus makes it clear that this previously taboo element has been accepted and now holds the central place. She was fully conscious of this—which of course was a great advance on her previous attitude.

[590] In contrast to the previous picture there are no inner cortices. This is a logical development, because the thing they were meant to exclude is now in the centre, and defence has become superfluous. Instead, the cortices spread out into the darkness as golden rings, expanding concentrically like waves. This would mean a far-reaching influence on the environment emanating from the sealed-off self.

[591] Four days before she painted this mandala she had the following dream: *"I drew a young man to the window and, with a brush dipped in white oil, removed a black fleck from the cornea of his eye. A little golden lamp then became visible in the centre of the pupil. The young man felt greatly relieved, and I told him he should come again for treatment. I woke up saying the words: 'If therefore thine eye be single, thy whole body shall be full of light.'"S* (Matthew 6 : 22.)

[592] This dream describes the change: the patient is no longer identical with her animus. The animus has, so to speak, become *her* patient, since he has eye trouble. As a matter of fact the animus usually sees things

"cock-eyed" and often very unclearly. Here a black fleck on the cornea obscures the golden light shining from inside the eye. He has "seen things too blackly." The eye is the prototype of the mandala, as is evident from Böhme, who calls his mandala "The Philosophique Globe, or Eye of ye Wonders of Eternity, or Looking-Glass of Wisdom." He says: "The substance and Image of the Soul may be resembled to the Earth, having a fair Flower growing out of it, and also to the Fire and Light; as we see that Earth is a Centre, but no life; yet it is essential, and a fair flower grows out of it, which is not like Earth … and yet the Earth is the Mother of the Flower." The soul is a "fiery Eye, and similitude of the First Principle," a "Centre of Nature."[139]

[593] Our mandala is indeed an "eye," the structure of which symbolizes the centre of order in the unconscious. The eye is a hollow sphere, black inside, and filled with a semi-liquid substance, the vitreous humour. Looking at it from outside, one sees a round, coloured surface, the iris, with a dark centre, from which a golden light shines. Böhme calls it a "fiery eye," in accordance with the old idea that seeing emanates from the eye. The eye may well stand for consciousness (which is in fact an organ of perception), looking into its own background. It sees its own light there, and when this is clear and pure the whole body is filled with light. Under certain conditions consciousness has a purifying effect. This is probably what is meant by Matthew 6 : 22ff., an idea expressed even more clearly in Luke 11: 331Ï.

[594] The eye is also a well-known symbol for God. Hence Böhme calls his "Philosophique Globe" the "Eye of Eternity," the "Essence of all Essences," the "Eye of God."[140]

[595] By accepting the darkness, the patient has not, to be sure, changed it into light, but she has kindled a light that illuminates the darkness within. By day no light is needed, and if you don't know it is night you won't light one, nor will any light be lit for you unless you have suffered the horror of darkness. This is not an edifying text but a mere statement of the psychological facts. The transition from Picture 7 to Picture 8 gives one a working idea of what I mean by "accepting the dark principle." It has sometimes been objected that nobody can form a clear conception of

what this means, which is regrettable, because it is an ethical problem of the first order. Here, then, is a practical example of this "acceptance," and I must leave it to the philosophers to puzzle out the ethical aspects of the process.[141]

Picture 9

[596] In Picture 9 we see for the first time the blue "soul-flower," on a red background, also described as such by Miss X (naturally without knowledge of Böhme).[142] In the centre is the golden light in the form of a lamp, as she herself stated. The cortices are very pronounced, but they consist of light (at least in the upper half of the mandala) and radiate outwards.[143] The light is composed of the rainbow hues of the rising sun; it is a real *cauda pavonis*. There are six sets of sunbeams. This recalls the Buddha's Discourse on the Robe, from the Collection of the Pali Canon:

> His heart overflowing with lovingkindness … with compassion … with joyfulness … with equanimity, he abides, raying forth lovingkindness, compassion, joyfulness, equanimity, towards one quarter of space, then towards the second, then towards the third, then towards the fourth, and above and below, thus, all around. Everywhere, into all places the wide world over, his heart overflowing with compassion streams forth, wide, deep, illimitable, free from enmity, free from all ill-will….[144]

[597] But a parallel with the Buddhist East cannot be carried through here, because the mandala is divided into an upper and a lower half.[145] Above, the rings shine many-hued as a rainbow; below, they consist of brown earth. Above, there hover three white birds (*pneumata* signifying the Trinity); below, a goat is rising up, accompanied by two ravens (Wotan's birds)[146] and twining snakes. This is not the sort of picture a Buddhist holy man would make, but that of a Western person with a Christian background, whose light throws a dark shadow. What is more, the three birds float in a jet black sky, and the goat, rising out of dark clay, is shown against a field of bright orange. This, oddly enough, is the colour of the Buddhist monk's robe, which was certainly not a conscious intention of the patient. The underlying thought is clear: no white without

black, and no holiness without the devil. Opposites are brothers, and the Oriental seeks to liberate himself from them by his *nirdvandva* ("free from the two") and his *neti neti* ("not this, not that"), or else he puts up with them in some mysterious fashion, as in Taoism. The connection with the East is deliberately stressed by the patient, through her painting into the mandala four hexagrams from the *I Ching*.[147]

[598] The sign in the left top half is "Yü, ENTHUSIASM" (NO. 16). It means "Thunder comes resounding out of the earth," i.e., a movement coming from the unconscious, and expressed by music and dancing. Confucius comments as follows:

> Firm as a rock, what need of a whole day?
> The judgment can be known.
> The superior man knows what is hidden and what is evident.
> He knows weakness, he knows strength as well.
> Hence the myriads look up to him.
> Enthusiasm can be the source of beauty, but it can also delude.

[599] The second hexagram at the top is "Sun, DECREASE" (NO. 41). The upper trigram means Mountain, the lower trigram means Lake. The mountain towers above the lake and "restrains" it. That is the "image" whose interpretation points to self-restraint and reserve, i.e., a seeming decrease of oneself. This is significant in the light of "ENTHUSIASM." In the top line of the hexagram, "But [one] no longer has a separate home," the homelessness of the Buddhist monk is meant. On the psychological level this does not, of course, refer to so drastic a demonstration of renunciation and independence, but to the patient's irreversible insight into the conditioned quality of all relationships, into the relativity of all values, and the transience of all things.

[600] The sign in the bottom half to the right is "Sheng, PUSHING UPWARD" (No. 46). "Within the earth, wood grows: The image of Pushing Upward." It also says: "One pushes upward into an empty city," and "The king offers him Mount Ch'i." So this hexagram means growth and development of the personality, like a plant pushing out of the earth—a theme already anticipated by the plant motif in an earlier mandala. This is

an allusion to the important lesson which Miss X has learnt from her experience: that there is no development unless the shadow is accepted.

[601] The hexagram to the left is "Ting, THE CAULDRON" (No. 50). This is a bronze sacrificial vessel equipped with handles and legs, which held the cooked viands used for festive occasions. The lower trigram means Wind and Wood, the upper one Fire. The "Cauldron" is thus made up of "fire over wood," just as the alchemical vessel consists of fire or water.[148] There is "delicious food" in it (the "fat of the pheasant"), but it is not eaten because "the handle of the *ting* is altered" and its "legs are broken," making it unusable. But, as a result of "constant self-abnegation," the personality becomes differentiated ("the *ting* has golden carrying rings" and even "rings of jade") and purified, until it acquires the "hardness and soft lustre" of precious jade.[149]

[602] Though the four hexagrams were put into the mandala on purpose, they are authentic results of preoccupation with the *I Ching*. The phases and aspects of my patient's inner process of development can therefore express themselves easily in the language of the *I Ching*, because it too is based on the psychology of the individuation process that forms one of the main interests of Taoism and of Zen Buddhism.[150] Miss X's interest in Eastern philosophy was due to the deep impression which a better knowledge of her life and of herself had made upon her—an impression of the tremendous contradictions in human nature. The insoluble conflict she was faced with makes her preoccupation with Eastern therapeutic systems, which seem to get along without conflict, doubly interesting. It may be partly due to this acquaintance with the East that the opposites, irreconcilable in Christianity, were not blurred or glossed over, but were seen in all their sharpness, and in spite (or perhaps just because) of this, were brought together into the unity of the mandala. Böhme was never able to achieve this union; on the contrary, in his mandala the bright and dark semi-circles are turned back to back. The bright half is labelled "H. Ghost," the dark half "Father," i.e., *auctor rerum*[151] or "First Principle," whereas the Holy Ghost is the "Second Principle." This polarity is crossed by the paired opposites "Sonne" and "Earthly Man." The

"Devills" are all on the side of the dark "Father" and constitute his "Wrath-fire," just as on the periphery of the mandala.

[603] Böhme's starting-point was philosophical alchemy, and to my knowledge he was the first to try to organize the Christian cosmos, as a total reality, into a mandala.[152] The attempt failed, inasmuch as he was unable to unite the two halves in a circle. Miss X's mandala, on the other hand, comprises and contains the opposites, as a result, we may suppose, of the support afforded by the Chinese doctrine of Yang and Yin, the two metaphysical principles whose co-operation makes the world go round. The hexagrams, with their firm (yang) and yielding (yin) lines, illustrate certain phases of this process. It is therefore right that they should occupy a mediating position between above and below. Lao-tzu says: "High stands on low." This indisputable truth is secretly suggested in the mandala: the three white birds hover in a black field, but the grey-black goat has a bright orange-coloured background. Thus the Oriental truth insinuates itself and makes possible—at least by symbolic anticipation—a union of opposites within the irrational life process formulated by the *I Ching*. That we are really concerned here with opposite phases of one and the same process is shown by the picture that now follows.

Picture 10

[604] In Picture 10, begun in Zurich but only completed when Miss X again visited her motherland, we find the same division as before into above and below. The "soul-flower"[153] in the centre is the same, but it is surrounded on all sides by a dark blue night sky, in which we see the four phases of the moon, the new moon coinciding with the world of darkness below. The three birds have become two. Their plumage has darkened, but on the other hand the goat has turned into two semi-human creatures with horns and light faces, and only two of the four snakes remain. A notable innovation is the appearance of two *crabs* in the lower, chthonic hemisphere that also represents the body. The crab has essentially the same meaning as the astrological sign Cancer.[154] Unfortunately Miss X gave no context here. In such cases it is usually worth investigating what use has been made in the past of the object in question. In earlier,

prescientific ages hardly any distinction was drawn between longtailed crabs (*Macrura*, crayfish) and short-tailed crabs (*Brachyura*). As a zodiacal sign Cancer signifies *resurrection*, because the crab sheds its shell.[155] The ancients had in mind chiefly *Pagurus bernhardus*, the hermit crab. It hides in its shell and cannot be attacked. Therefore it signifies *caution* and *foresight, knowledge of coming events*[156]. It “depends on the moon, and waxes with it.”[157] It is worth noting that the crab appears just in the mandala in which we see the phases of the moon for the first time. Astrologically, Cancer is the house of the moon. Because of its backwards and sideways movement, it plays the role of an unlucky animal in superstition and colloquial speech (“crabbed,” “catch a crab,” etc.). Since ancient times cancer (*καρκίνοή* has been the name for a malignant tumour of the glands. Cancer is the zodiacal sign in which the sun begins to retreat, when the days grow shorter. Pseudo-Kallisthenes relates that crabs dragged Alexander’s ships down into the sea.[158] “Karkinos” was the name of the crab that bit Heracles in the foot in his fight with the Lernaean monster. In gratitude, Hera set her accomplice among the stars.[159]

[605] In astrology, Cancer is a feminine and watery sign,[160] and the summer solstice takes place in it. In the *melothesiae*[161] it is correlated with the *breast*. It rules over the *Western sea*. In Propertius it makes a sinister appearance: “Octipedis Cancri terga sinistra time” (Fear thou the ill-omened back of the eight-footed crab).[162] De Gubernatis says: “The crab … causes now the death of the solar hero and now that of the monster.”[163] The *Panchatantra* (V, 2) relates how a crab, which the mother gave to her son as apotropaic magic, saved his life by killing a black snake.[164] As De Gubernatis thinks, the crab stands now for the sun and now for the moon,[165] according to whether it goes forwards or backwards.

[606] Miss X was born in the first degrees of Cancer (actually about 3°). She knew her horoscope and was well aware of the significance of the moment of birth; that is, she realized that the degree of the rising sign (the ascendent) conditions the individuality of the horoscope. Since she obviously guessed the horoscope’s affinity with the mandala, she

introduced her individual sign into the painting that was meant to express her psychic self.[166]

[607] The essential conclusion to be drawn from Picture 10 is that the dualities which run through it are always inwardly balanced, so that they lose their sharpness and incompatibility. As Multatuli says: “Nothing is quite true, and even that is not quite true.” But this loss of strength is counterbalanced by the unity of the centre, where the lamp shines, sending out coloured rays to the eight points of the compass.[167]

[608] Although the attainment of inner balance through symmetrical pairs of opposites was probably the main intention of this mandala, we should not overlook the fact that the *duplication motif* also occurs when unconscious contents are about to become conscious and differentiated. They then split, as often happens in dreams, into two identical or slightly different halves corresponding to the conscious and still unconscious aspects of the nascent content. I have the impression, from this picture, that it really does represent a kind of solstice or climax, where decision and division take place. The dualities are, at bottom, Yes and No, the irreconcilable opposites, but they *have* to be held together if the balance of life is to be maintained. This can only be done by holding unswervingly to the centre, where action and suffering balance each other. It is a path “sharp as the edge of a razor.” A climax like this, where universal opposites clash, is at the same time a moment when a wide perspective often opens out into the past and future. This is the psychological moment when, as the *consensus gentium* has established since ancient times, synchronistic phenomena occur—that is, when the far appears near: sixteen years later, Miss X became fatally ill with cancer of the breast.[168]

Picture 11

[609] Here I will only mention that the coloured rays emanating from the centre have become so rarified that, in the next few pictures, they disappear altogether. Sun and moon are now outside, no longer included in the microcosm of the mandala. The sun is not golden, but has a dull, ochrous hue and in addition is clearly turning to the left: it is moving

towards its own obscuration, as had to happen after the cancer picture (solstice). The moon is in the first quarter. The roundish masses near the sun are probably meant to be cumulus clouds, but with their grey-red hues they look suspiciously like bulbous swellings. The interior of the mandala now contains a quincunx of stars, the central star being silver and gold. The division of the mandala into an aerial and an earthy hemisphere has transferred itself to the outside world and can no longer be seen in the interior. The silvery rim of the aerial hemisphere in the preceding picture now runs round the entire mandala and recalls the band of quicksilver that, as *Mercurius vulgaris*, “veils the true personality.” At all events, it is probable that the influence and importance of the outside world are becoming so strong in this picture as to bring about an impairment and devaluation of the mandala. It does not break down or burst (as can easily happen under similar circumstances), but is removed from the telluric influence through the symbolical constellation of stars and heavenly bodies.

Picture 12–24

[610] In Picture 12 the sun is in fact sinking below the horizon and the moon is coming out of the first quarter. The radiation of the mandala has ceased altogether, but the equivalents of sun and moon, and also of the earth, have been assimilated into it. A remarkable feature is its sudden inner animation by two human figures and various animals. The constellation character of the centre has vanished and given way to a kind of flower motif. What this animation means cannot be established, unfortunately, as we have no commentary.

[611] In Picture 13 the source of radiation is no longer in the mandala but outside, in the shape of the full moon, from which rings of rainbow-coloured light radiate in concentric circles. The mandala is laced together by four black and golden snakes, the heads of three of them pointing to the centre, while the fourth rears upwards. In between the snakes and the centre there are indications of the spermatozoon motif. This may mean an intensive penetration on the part of the outside world, but it could also

mean magical protection. The breaking down of the quaternity into 3 plus 1 is in accord with the archetype.[169]

[612] In Picture 14 the mandala is suspended over the lit-up ravine of Fifth Avenue, New York, whither Miss X in the meantime returned. On the blue flower in the centre the *coniunctio* of the "royal" pair is represented by the sacrificial fire burning between them. The King and Queen are assisted by two kneeling figures of a man and a woman. It is a typical marriage quaternio, and for an understanding of its psychology I must refer the reader to my account in the "Psychology of the Transference."[170] This inner bond should be thought of as a compensatory "consolidation" against disintegrating influences from without.

[613] In Picture 15 the mandala floats between Manhattan and the sea. It is daylight again, and the sun is just rising. Out of the blue centre blue snakes penetrate into the red flesh of the mandala: the enantiodromia is setting in, after the introversion of feeling caused by the shock of New York had passed its climax. The blue colour of the snakes indicates that they have acquired a pneumatic nature.

[614] From Picture 16 onwards, the drawing and painting technique shows a decided improvement. The mandalas gain in aesthetic value. In Picture 17 a kind of *eye motif* appears, which I have also observed in the mandalas of other persons. It seems to me to link up with the motif of *polyophthalmia* and to point to the peculiar nature of the unconscious, which can be regarded as a "multiple consciousness." I have discussed this question in detail elsewhere.[171] (See also Fig. 5.)

Fig. 5. Mandala by a woman patient

Aged 58, artistic and technically accomplished. In the centre is the egg encircled by the snake; outside, apotropaic wings and eyes. The mandala is exceptional in that it has a pentadic structure. (The patient also produced triadic mandalas. She was fond of playing with forms irrespective of their meaning—a consequence of her artistic gift.)

[615] The enantiodromia only reached its climax the following year, in Picture 19.[172] In that picture the red substance is arranged round the golden, four-rayed star in the centre, and the blue substance is pushing everywhere to the periphery. Here the rainbow-coloured radiation of the mandala begins again for the first time, and from then on was maintained for over ten years (in mandalas not reproduced here).

[616] I will not comment on the subsequent pictures, nor reproduce them all—as I say, they extend over more than ten years—because I feel I do not understand them properly. In addition, they came into my hands only recently, after the death of the patient, and unfortunately without text or commentary. Under these circumstances the work of interpretation becomes very uncertain, and is better left unattempted. Also, this case was meant only as an example of how such pictures come to be produced, what they mean, and what reflections and observations their interpretation requires. It is not intended to demonstrate how an entire lifetime expresses itself in symbolic form. The individuation process has many stages and is subject to many vicissitudes, as the fictive course of the *opus alchymicum* amply shows.

Conclusion

[617] Our series of pictures illustrates the initial stages of the way of individuation. It would be desirable to know what happens afterwards. But, just as neither the philosophical gold nor the philosophers' stone was ever made in reality, so nobody has ever been able to tell the story of the whole way, at least not to mortal ears, for it is not the story-teller but death who speaks the final "consummatum est." Certainly there are many things worth knowing in the later stages of the process, but, from the point of view of teaching as well as of therapy, it is important not to skip too quickly over the initial stages. As these pictures are intuitive anticipations of future developments, it is worth while lingering over them for a long time, in order, with their help, to integrate so many contents of the unconscious into consciousness that the latter really does reach the stage it sees ahead. These psychic evolutions do not as a rule keep pace with the tempo of intellectual developments. Indeed, their very first goal is to bring a consciousness that has hurried too far ahead into contact again with the unconscious background with which it should be connected. This was the problem in our case too. Miss X had to turn back to her "motherland" in order to find her earth again—*vestigia retro!* It is a task that today faces not only individuals but whole civilizations. What else is the meaning of the frightful regressions of our time? The tempo of the development of consciousness through science and technology was

too rapid and left the unconscious, which could no longer keep up with it, far behind, thereby forcing it into a defensive position which expresses itself in a universal will to destruction. The political and social isms of our day preach every conceivable ideal, but, under this mask, they pursue the goal of lowering the level of our culture by restricting or altogether inhibiting the possibilities of individual development. They do this partly by creating a chaos controlled by terrorism, a primitive state of affairs that affords only the barest necessities of life and surpasses in horror the worst times of the so-called "Dark" Ages. It remains to be seen whether this experience of degradation and slavery will once more raise a cry for greater spiritual freedom.

[618] This problem cannot be solved collectively, because the masses are not changed unless the individual changes. At the same time, even the best-looking solution cannot be forced upon him, since it is a good solution only when it is combined with a natural process of development. It is therefore a hopeless undertaking to stake everything on collective recipes and procedures. The bettering of a general ill begins with the individual, and then only when he makes himself and not others responsible. This is naturally only possible in freedom, but not under a rule of force, whether this be exercised by a self-elected tyrant or by one thrown up by the mob.

[619] The initial pictures in our series illustrate the characteristic psychic processes which set in the moment one gives a mind to that part of the personality which has remained behind, forgotten. Scarcely has the connection been established when symbols of the self appear, trying to convey a picture of the total personality. As a result of this development, the unsuspecting modern gets into paths trodden from time immemorial—the *via sancta*, whose milestones and signposts are the religions.[173] He will think and feel things that seem strange to him, not to say unpleasant. Apuleius relates that in the Isis mysteries he "approached the very gates of death and set one foot on Proserpina's threshold, yet was permitted to return, rapt through all the elements. At midnight I saw the sun shining as if it were noon; I entered the presence of the gods of the underworld and the gods of the upper world, stood near and worshipped them."[174] Such experiences are also expressed in our mandalas; that is why we find in

religious literature the best parallels to the symbols and moods of the situations they formulate. These situations are intense inner experiences which can lead to lasting psychic growth and a ripening and deepening of the personality, if the individual affected by them has the moral capacity for *πίστπ*, loyal trust and confidence. They are the age-old psychic experiences that underlie “faith” and ought to be its unshakable foundation—and not of faith alone, but also of knowledge.

[620] Our case shows with singular clarity the spontaneity of the psychic process and the transformation of a personal situation into the problem of individuation, that is, of becoming whole, which is the answer to the great question of our day: How can consciousness, our most recent acquisition, which has bounded ahead, be linked up again with the oldest, the unconscious, which has lagged behind? The oldest of all is the instinctual foundation. Anyone who overlooks the instincts will be ambuscaded by them, and anyone who does not humble himself will be humbled, losing at the same time his freedom, his most precious possession.

[621] Always when science tries to describe a “simple” life-process, the matter becomes complicated and difficult. So it is no wonder that the details of a transformation process rendered visible through active imagination make no small demands on our understanding. In this respect they may be compared with all other biological processes. These, too, require specialized knowledge to become comprehensible. Our example also shows, however, that this process can begin and run its course without any special knowledge having to stand sponsor to it. But if one wants to understand anything of it and assimilate it into consciousness, then a certain amount of knowledge is needed. If the process is not understood at all, it has to build up an unusual intensity so as not to sink back again into the unconscious without result. But if its affects rise to an unusual pitch, they will enforce some kind of understanding. It depends on the correctness of this understanding whether the consequences turn out more pathologically or less. Psychic experiences, according to whether they are rightly or wrongly understood, have very different effects on a person’s development. It is one of the duties of the psychotherapist to acquire such knowledge of these things as will enable

him to help his patient to an adequate understanding. Experiences of this kind are not without their dangers, for they are also, among other things, the matrix of the psychoses. Stiffnecked and violent interpretations should under all circumstances be avoided, likewise a patient should never be forced into a development that does not come naturally and spontaneously. But once it has set in, he should not be talked out of it again, unless the possibility of a psychosis has been definitely established. Thorough psychiatric experience is needed to decide this question, and it must constantly be borne in mind that the constellation of archetypal images and fantasies is not in itself pathological. The pathological element only reveals itself in the way the individual reacts to them and how he interprets them. The characteristic feature of a pathological reaction is, above all, *identification with the archetype*. This produces a sort of inflation and possession by the emergent contents, so that they pour out in a torrent which no therapy can stop. Identification can, in favourable cases, sometimes pass off as a more or less harmless inflation. But in all cases identification with the unconscious brings a weakening of consciousness, and herein lies the danger. You do not "make" an identification, you do not "identify yourself," but you experience your identity with the archetype in an unconscious way and so are possessed by it. Hence in more difficult cases it is far more necessary to strengthen and consolidate the ego than to understand and assimilate the products of the unconscious. The decision must be left to the diagnostic and therapeutic tact of the analyst.

*

[622] This paper is a groping attempt to make the inner processes of the mandala more intelligible. They are, as it were, self-delineations of dimly sensed changes going on in the background, which are perceived by the "reversed eye" and rendered visible with pencil and brush, just as they are, uncomprehended and unknown. The pictures represent a kind of ideogram of unconscious contents. I have naturally used this method on myself too and can affirm that one can paint very complicated pictures without having the least idea of their real meaning. While painting them, the picture seems to develop out of itself and often in opposition to one's

conscious intentions. It is interesting to observe how the execution of the picture frequently thwarts one's expectations in the most surprising way. The same thing can be observed, sometimes even more clearly, when writing down the products of active imagination.[175]

[623] The present work may also serve to fill a gap I myself have felt in my exposition of therapeutic methods. I have written very little on active imagination, but have talked about it a great deal. I have used this method since 1916, and I sketched it out for the first time in "The Relations between the Ego and the Unconscious." I first mentioned the mandala in 1929, in *The Secret of the Golden Flower*.[176] For at least thirteen years I kept quiet about the results of these methods in order to avoid any suggestion. I wanted to assure myself that these things—mandalas especially—really are produced spontaneously and were not suggested to the patient by my own fantasy. I was then able to convince myself, through my own studies, that mandalas were drawn, painted, carved in stone, and built, at all times and in all parts of the world, long before my patients discovered them. I have also seen to my satisfaction that mandalas are dreamt and drawn by patients who were being treated by psychotherapists whom I had not trained. In view of the importance and significance of the mandala symbol, special precautions seemed to be necessary, seeing that this motif is one of the best examples of the universal operation of an archetype. In a seminar on children's dreams, which I held in 1939–40,[177] I mentioned the dream of a ten-year-old girl who had absolutely no possibility of ever hearing about the quaternity of God. The dream was written down by the child herself and was sent to me by an acquaintance: *"Once in a dream I saw an animal that had lots of horns. It spiked up other little animals with them. It wriggled like a snake and that was how it lived. Then a blue fog came out of all the four corners, and it stopped eating. Then God came, but there were really four Gods in the four corners. Then the animal died, and all the animals it had eaten came out alive again."*

[624] This dream describes an unconscious individuation process: all the animals are eaten by the one animal. Then comes the enantiodromia: the dragon changes into pneuma, which stands for a divine quaternity.

Thereupon follows the apocatastasis, a resurrection of the dead. This exceedingly “unchildish” fantasy can hardly be termed anything but archetypal. Miss X, in Picture 12, also put a whole collection of animals into her mandala—two snakes, two tortoises, two fishes, two lions, two pigs, a goat and a ram.[178] Integration gathers many into one. To the child who had this dream, and to Miss X likewise, it was certainly not known that Origen had already said (speaking of the sacrificial animals): “Seek these sacrifices within thyself, and thou wilt find them within thine own soul. Understand that thou hast within thyself flocks of cattle … flocks of sheep and flocks of goats. … Understand that the birds of the sky are also within thee. Marvel not if we say that these are within thee, but understand that thou thyself art even another little world, and hast within thee the sun and the moon, and also the stars.”[179]

[625] The same idea occurs again in another passage, but this time it takes the form of a psychological statement: “For look upon the countenance of a man who is at one moment angry, at the next sad, a short while afterward joyful, then troubled again, and then contented. … See how he who thinks himself one is not one, but seems to have as many personalities as he has moods, as also the Scripture says: A fool is changed as the moon. …[180] God, therefore, is unchangeable, and is called one for the reason that he changes not. Thus also the true imitator of God, who is made after God’s image, is called one and the selfsame *[unus et ipse]* when he comes to perfection, for he also, when he is fixed on the summit of virtue, is not changed, but remains alway one. For every man, whiles he is in wickedness *[malitia]*, is divided among many things and torn in many directions; and while he is in many kinds of evil he cannot be called one.”[181]

[626] Here the many animals are affective states to which man is prone. The individuation process, clearly alluded to in this passage, subordinates the many to the One. But the One is God, and that which corresponds to him in us is the *imago Dei*, the God-image. But the God-image, as we saw from Jakob Böhme, expresses itself in the mandala.

CONCERNING MANDALA SYMBOLISM[1]

[627] In what follows I shall try to describe a special category of symbols, the *mandala,* with the help of a wide selection of pictures. I have dealt with this theme on several occasions before, and in *Psychology and Alchemy* I gave a detailed account, with running commentary, of the mandala symbols that came up in the course of an individual analysis. I repeated the attempt in the preceding paper of the present volume, but there the mandalas did not derive from dreams but from active imagination. In this paper I shall present mandalas of the most varied provenance, on the one hand to give the reader an impression of the astonishing wealth of forms produced by individual fantasy, and on the other hand to enable him to form some idea of the regular occurrence of the basic elements.

[628] As regards the interpretation, I must refer the reader to the literature. In this paper I shall content myself with hints, because a more detailed explanation would lead much too far, as the mandalas described in "Psychology and Religion" and in the preceding paper of this volume show.

[629] The Sanskrit word *mandala* means 'circle.' It is the Indian term for the circles drawn in religious rituals. In the great temple of Madura, in southern India, I saw how a picture of this kind was made. It was drawn by a woman on the floor of the *mandapam* (porch), in coloured chalks, and measured about ten feet across. A pandit who accompanied me said in reply to my questions that he could give me no information about it. Only the women who drew such pictures knew what they meant. The woman herself was non-committal; she evidently did not want to be disturbed in her work. Elaborate mandalas, executed in red chalk, can also be found on the whitewashed walls of many huts. The best and most significant mandalas are found in the sphere of Tibetan Buddhism.[2] I

shall use as an example a Tibetan mandala, to which my attention was drawn by Richard Wilhelm.

Figure 1

[630] A mandala of this sort is known in ritual usage as a *yantra*, an instrument of contemplation. It is meant to aid concentration by narrowing down the psychic field of vision and restricting it to the centre. Usually the mandala contains three circles, painted in black or dark blue. They are meant to shut out the outside and hold the inside together. Almost regularly the outer rim consists of fire, the fire of *concupiscentia*, ‘desire,’ from which proceed the torments of hell. The horrors of the burial ground are generally depicted on the outer rim. Inside this is a garland of lotus leaves, characterizing the whole mandala as a *padma*, ‘lotus-flower.’ Then comes a kind of monastery courtyard with four gates. It signifies sacred seclusion and concentration. Inside this courtyard there are as a rule the four basic colours, red, green, white, and yellow, which represent the four directions and also the psychic functions, as the Tibetan Book of the Dead[3] shows. Then, usually marked off by another magic circle, comes the centre as the essential object or goal of contemplation.

[631] This centre is treated in very different ways, depending on the requirements of the ritual, the grade of initiation of the contemplator, and the sect he belongs to. As a rule it shows Shiva in his world-creating emanations. Shiva, according to Tantric doctrine, is the One Existent, the Timeless in its perfect state. Creation begins when this unextended point —known as *Shiva-bindu*—appears in the eternal embrace of its feminine side, the Shakti. It then emerges from the state of being-in-itself and attains the state of being-for-itself, if I may use the Hegelian terminology.

[632] In *kundalini* yoga symbolism, Shakti is represented as a snake wound three and a half times round the *lingam*, which is Shiva in the form of a phallus. This image shows the *possibility* of manifestation in space. From Shakti comes Maya, the building material of all individual things; she is, in consequence, the creatrix of the real world. This is thought of as illusion, as being and not-being. It *is*, and yet remains dissolved in Shiva. Creation therefore begins with an act of division of the opposites that are united in the deity. From their splitting arises, in a gigantic explosion of energy, the multiplicity of the world.

[633] The goal of contemplating the processes depicted in the mandala is that the yogi shall become inwardly aware of the deity. Through contemplation, he recognizes himself as God again, and thus returns from the illusion of individual existence into the universal totality of the divine state.

[634] As I have said, mandala means ‘circle.’ There are innumerable variants of the motif shown here, but they are all based on the squaring of a circle. Their basic motif is the premonition of a centre of personality, a kind of central point within the psyche, to which everything is related, by which everything is arranged, and which is itself a source of energy. The energy of the central point is manifested in the almost irresistible compulsion and urge to *become what one is*, just as every organism is driven to assume the form that is characteristic of its nature, no matter what the circumstances. This centre is not felt or thought of as the ego but, if one may so express it, as the *self*. Although the centre is represented by an innermost point, it is surrounded by a periphery containing everything that belongs to the self—the paired opposites that make up the total personality. This totality comprises consciousness first of all, then the personal unconscious, and finally an indefinitely large segment of the collective unconscious whose archetypes are common to all mankind. A certain number of these, however, are permanently or temporarily included within the scope of the personality and, through this contact, acquire an individual stamp as the shadow, anima, and animus, to mention only the best-known figures. The self, though on the one hand

simple, is on the other hand an extremely composite thing, a "conglomerate soul," to use the Indian expression.

[635] Lamaic literature gives very detailed instructions as to how such a circle must be painted and how it should be used. Form and colour are laid down by tradition, so the variants move within fairly narrow limits. The ritual use of the mandala is actually non-Buddhist; at any rate it is alien to the original Hínayāna Buddhism and appears first in Mahāyāna Buddhism.

[636] The mandala shown here depicts the state of one who has emerged from contemplation into the absolute state. That is why representation of hell and the horrors of the burial ground are missing. The diamond thunderbolt, the *dorje* in the centre, symbolizes the perfect state where masculine and feminine are united. The world of illusions has finally vanished. All energy has gathered together in the initial state.

[637] The four *dorjes* in the gates of the inner courtyard are meant to indicate that life's energy is streaming inwards; it has detached itself from objects and now returns to the centre. When the perfect union of all energies in the four aspects of wholeness is attained, there arises a static state subject to no more change. In Chinese alchemy this state is called the "Diamond Body," corresponding to the *corpus incorruptibile* of medieval alchemy, which is identical with the *corpus glorificationis* of Christian tradition, the incorruptible body of resurrection. This mandala shows, then, the union of all opposites, and is embedded between *yang* and *yin*, heaven and earth; the state of everlasting balance and immutable duration.

[638] For our more modest psychological purposes we must abandon the colourful metaphysical language of the East. What yoga aims at in this exercise is undoubtedly a psychic change in the adept. The ego is the expression of individual existence. The yogin exchanges his ego for Shiva or the Buddha; in this way he induces a shifting of the psychological centre of personality from the personal ego to the impersonal non-ego, which is now experienced as the real "Ground" of the personality.

[639] In this connection I would like to mention a similar Chinese conception, namely the system on which the *I Ching* is based.

Figure 2

[640] In the centre is *ch'ien,* 'heaven,' from which the four emanations go forth, like the heavenly forces extending through space. Thus we have:

ch'ien: self-generated creative energy, corresponding to Shiva.
heng: all-pervading power.
yuen: generative power.
li: beneficent power.
ching: unchangeable, determinative power.

[641] Round this masculine power-centre lies the earth with its formed elements. It is the same conception as the Shiva-Shakti union in *kundalini* yoga, but here represented as the earth receiving into itself the creative power of heaven. The union of heaven with *kun*, the feminine and receptive, produces the *tetraktys*, which, as in Pythagoras, underlies all existence.

[642] The "River Map" is one of the legendary foundations of the *I Ching*, which in its present form derives partly from the twelfth century B.C. According to the legend, a dragon dredged the magical signs of the "River Map" from a river. On it the sages discovered the drawing, and in the drawing the laws of the world-order. This drawing, in accordance with its extreme age, shows the knotted cords that signify numbers. These numbers have the usual primitive character of qualities, chiefly masculine and feminine. All uneven numbers are masculine, even numbers feminine.

[643] Unfortunately I do not know whether this primitive conception influenced the formation of the much younger Tantric mandala. But the parallels are so striking that the European investigator has to ask himself: Which view influenced the other? Did the Chinese develop from the Indian, or the Indian from the Chinese? An Indian whom I asked answered: "Naturally the Chinese developed from the Indian." But he did not know how old the Chinese conceptions are. The bases of the *I Ching* go back to the third millennium B.C. My late friend Richard Wilhelm, the

eminent expert on classical Chinese philosophy, was of the opinion that no direct connections could be assumed. Nor, despite the fundamental similarity of the symbolic ideas, does there need to be any direct influence, since the ideas, as experience shows and as I think I have demonstrated, arise autochthonously again and again, independently of one another, out of a psychic matrix that seems to be ubiquitous.

Figure 3

[644] As a counterpart to the Lamaic mandala, I now reproduce the Tibetan "World Wheel," which should be sharply distinguished from the former, since it represents the world. In the centre are the three principles: cock, snake, and pig, symbolizing lust, envy, and unconsciousness. The wheel has, near the centre, six spokes, and twelve spokes round the edge. It is based on a triadic system. The wheel is held by the god of death, Yama. (Later we shall meet other "shield-holders": Figs. 34 and 47.) It is understandable that the sorrowful world of old age, sickness, and death should be held in the claws of the death-demon. The incomplete state of existence is, remarkably enough, expressed by a triadic system, and the complete (spiritual) state by a tetradic system. The relation between the incomplete and the complete state therefore corresponds to the "sesquitertian proportion" of 3 : 4. This relation is known in Western alchemical tradition as the axiom of Maria. It also plays a not inconsiderable role in dream symbolism.[4]

*

[645] We shall now pass on to individual mandalas spontaneously produced by patients in the course of an analysis of the unconscious. Unlike the mandalas so far discussed, these are not based on any tradition or model, seeming to be free creations of fantasy, but determined by certain archetypal ideas unknown to their creators. For this reason the fundamental motifs are repeated so often that marked similarities occur in drawings done by the most diverse patients. The pictures come as a rule from educated persons who were unacquainted with the ethnic parallels. The pictures differ widely, according to the stage of the

therapeutic process; but certain important stages correspond to definite motifs. Without going into therapeutic details, I would only like to say that a rearranging of the personality is involved, a kind of new centring. That is why mandalas mostly appear in connection with chaotic psychic states of disorientation or panic. They then have the purpose of reducing the confusion to order, though this is never the conscious intention of the patient. At all events they express order, balance, and wholeness. Patients themselves often emphasize the beneficial or soothing effect of such pictures. Usually the mandalas express religious, i.e., numinous, thoughts and ideas, or, in their stead, philosophical ones. Most mandalas have an intuitive, irrational character and, through their symbolical content, exert a retroactive influence on the unconscious. They therefore possess a "magical" significance, like icons, whose possible efficacy was never consciously felt by the patient. In fact, it is from the effect of their own pictures that patients discover what icons can mean. Their pictures work not because they spring from the patients' own fantasy but because they are impressed by the fact that their subjective imagination produces motifs and symbols of the most unexpected kind that conform to law and express an idea or situation which their conscious mind can grasp only with difficulty. Confronted with these pictures, many patients suddenly realize for the first time the reality of the collective unconscious as an autonomous entity. I will not labour the point here; the strength of the impression and its effect on the patient are obvious enough from some of the pictures.

[646] I must preface the pictures that now follow with a few remarks on the formal elements of mandala symbolism. These are primarily:

1. *Circular, spherical*, or *egg-shaped* formation.
2. The circle is elaborated into a *flower* (rose, lotus) or a *wheel*.
3. A centre expressed by a *sun, star*, or *cross*, usually with four, eight, or twelve rays.
4. The circles, spheres, and cruciform figures are often represented in *rotation* (swastika).
5. The circle is represented by a *snake* coiled about a centre, either ring-shaped (uroboros) or spiral (Orphic egg).
6. *Squaring of the circle*, taking the form of a circle in a square or vice versa.
7. *Castle, city*, and *courtyard (temenos)* motifs, quadratic or circular.
8. *Eye* (pupil and iris).

9. Besides the tetradic figures (and multiples of four), there are also triadic and pentadic ones, though these are much rarer.

They should be regarded as “disturbed” totality pictures, as we shall see below.

Figure 4

[647] This mandala was done by a woman patient in her middle years, who first saw it in a dream. Here we see at once the difference from the Eastern mandala. It is poor in form, poor in ideas, but nevertheless expresses the individual attitude of the patient far more clearly than the Eastern pictures, which have been subjected to a collective and traditional configuration. Her dream ran: *“I was trying to decipher an embroidery pattern. My sister knew how. I asked her if she had made an elaborate hemstitched handkerchief. She said, “No, but I know how it was done.” Then I saw it with the threads drawn, but the work not yet done. One must go around and around the square until near the centre, then go in circles.”*

[648] The spiral is painted in the typical colours red, green, yellow, and blue. According to the patient, the square in the centre represents a *stone*, its four facets showing the four basic colours. The inner spiral represents the snake that, like Kundalini, winds three and a half times[5] round the centre.

[649] The dreamer herself had no notion of what was going on in her, namely the beginning of a new orientation, nor would she have understood it consciously. Also, the parallels from Eastern symbolism were completely unknown to her, so that any influence is out of the question. The symbolic picture came to her spontaneously, when she had reached a certain point in her development.

[650] It is, unfortunately, not possible for me to say exactly under what circumstances each of these pictures arose. That would lead us too far. The sole aim of this paper is to give a survey of the formal parallels to the individual and collective mandala. I regret also that for the same reason no single picture can be interpreted circumstantially and in detail,

as that would inevitably require a comprehensive account of the analytical situation of the patient. Wherever it is possible to shed light on the origins of the picture by a passing hint, as in the present case, I shall do so.

[651] As to the interpretation of the picture, it must be emphasized that the snake, arranged in angles and then in circles round the square, signifies the circumambulation of, and way to, the centre. The snake, as a chthonic and at the same time spiritual being, symbolizes the unconscious. The stone in the centre, presumably a cube, is the quaternary form of the *lapis philosophorum*. The four colours also point in this direction.[6] It is evident that the stone in this case signifies the new centre of personality, the self, which is also symbolized by a vessel.

Figure 5

[652] The painter was a middle-aged woman of schizoid disposition. She had several times drawn mandalas spontaneously, because they always had an ordering effect on her chaotic psychic states. The picture shows a rose, the Western equivalent of the lotus. In India the lotus-flower (*padma*) is interpreted by the Tantrists as the womb. We know this symbol from the numerous pictures of the Buddha (and other Indian deities) in the lotus-flower.[7] It corresponds to the "Golden Flower" of Chinese alchemy, the rose of the Rosicrucians, and the mystic rose in Dante's *Paradiso*. Rose and lotus are usually arranged in groups of four petals, indicating the squaring of the circle or the united opposites. The significance of the rose as the maternal womb was nothing strange to our Western mystics, for we read in a prayer inspired by the Litany of Loreto:

O Rose-wreath, thy blossoming makes men weep for joy.
O rosy sun, thy burning makes men to love.
O son of the sun,
Rose-child,
Sun-beam.
Flower of the Cross, pure Womb that blossoms
Over all blooming and burning,
Sacred Rose,

Mary.

[653] At the same time, the vessel motif is an expression of the content, just as Shakti represents the actualization of Shiva. As alchemy shows, the self is androgynous and consists of a masculine and a feminine principle. Conrad of Würzburg speaks of Mary, the flower of the sea in which Christ lies hidden. And in an old hymn we read:

> O’er all the heavens a rose appears
> And a bright dress of blossom wears.
> Its light glows in the Three-in-One
> For God himself has put it on.

Figure 6

[654] The rose in the centre is depicted as a ruby, its outer ring being conceived as a wheel or a wall with gates (so that nothing can come out from inside or go in from outside). The mandala was a spontaneous product from the analysis of a male patient. It was based on a dream: *The dreamer found himself with three younger travelling companions in Liverpool.*[8] *It was night, and raining. The air was full of smoke and soot. They climbed up from the harbour to the “upper city.”* The dreamer said: *“It was terribly dark and disagreeable, and we could not understand how anyone could stick it here. We talked about this, and one of my companions said that, remarkably enough, a friend of his had settled here, which astonished everybody. During this conversation we reached a sort of public garden in the middle of the city. The park was square, and in the centre was a lake or large pool. A few street lamps just lit up the pitch darkness, and I could see a little island in the pool. On it there was a single tree, a red-flowering magnolia, which miraculously stood in everlasting sunshine. I noticed that my companions had not seen this miracle, whereas I was beginning to understand why the man had settled here.”*

[655] The dreamer went on: “I tried to paint this dream. But as so often happens, it came out rather different. The magnolia turned into a sort of rose made of ruby-coloured glass. It shone like a four-rayed star. The square represents the wall of the park and at the same time a street

leading round the park in a square. From it there radiate eight main streets, and from each of these eight side-streets, which meet in a shining red central point, rather like the Étoile in Paris. The acquaintance mentioned in the dream lived in a house at the corner of one of these stars.” The mandala thus combines the classic motifs of flower, star, circle, precinct (*temenos*), and plan of city divided into quarters with citadel. “The whole thing seemed like a window opening on to eternity,” wrote the dreamer.

Figure 7

[656] Flower motif with cross in the centre. The square, too, is arranged like a flower. The four faces at the corners correspond to the four cardinal points, which are often depicted as four deities. Here they have a demonic character. This may be connected with the fact that the patient was born in the Dutch East Indies, where she sucked up the peculiar local demonology with the mother’s milk of her native ayah. Her numerous drawings all had a distinctly Eastern character, and thereby helped her to assimilate influences that at first could not be reconciled with her Western mentality.[9]

[657] In the picture that followed, the demon faces were ornamentally elaborated in eight directions. For the superficial observer the flowerlike character of the whole may disguise the demonic element the mandala is meant to ward off. The patient felt that the “demonic” effect came from the European influence with its moralism and rationalism. Brought up in the East Indies until her sixth year, she came later into a conventional European milieu, and this had a devastating effect on the flowerlike quality of her Eastern spirit and caused a prolonged psychic trauma. Under treatment her native world, long submerged, came up again in these drawings, bringing with it psychic recovery.

Figure 8

[658] The flowerlike development has got stronger and is beginning to overgrow the “demonishness” of the faces.

Figure 9

[659] A later stage is shown here. Minute care in the draughtsmanship vies with richness of colour and form. From this we can discern not only the extraordinary concentration of the patient but the triumph of Eastern "flowerlikeness" over the demon of Western intellectualism, rationalism, and moralism. At the same time the new centring of the personality becomes visible.

Figure 10

[660] In this painting, done by another young woman patient, we see at the cardinal points four creatures: a bird, a sheep, a snake, and a lion with a human face. Together with the four colours in which the four regions are painted, they embody four principles. The interior of the mandala is empty. Or rather, it contains a "Nothing" that is expressed by a quaternity. This is in accord with the overwhelming majority of individual mandalas: as a rule the centre contains the motif of the *rotundum*, known to us from alchemy, or the four-fold emanation or the squaring of the circle, or—more rarely—the figure of the patient in a universal human sense, representing the Anthropos.[10] We find this motif, too, in alchemy. The four animals remind us of the cherubim in Ezekiel's vision, and also of the four symbols of the evangelists and the four sons of Horus, which are sometimes depicted in the same way, three with animal heads and one with a human head. Animals generally signify the instinctive forces of the unconscious, which are brought into unity within the mandala. This integration of the instincts is a prerequisite for individuation.

Figure 11

[661] Painting by an older patient. Here the flower is seen not in the basic pattern of the mandala, but in elevation. The circular form has been preserved inside the square, so that despite its different execution this picture can still be regarded as a mandala. The plant stands for growth and development, like the green shoot in the diaphragm *chakra* of the

kundalini yoga system. The shoot symbolizes Shiva and represents the centre and the male, whereas the calyx represents the female, the place of germination and birth.[11] Thus the Buddha sitting in the lotus is shown as the germinating god. It is the god in his rising, the same symbol as Ra the falcon, or the phoenix rising from the nest, or Mithras in the tree-top, or the Horus-child in the lotus. They are all symbolizations of the *status nascendi* in the seeding-place of the matrix. In medieval hymns Mary too is praised as the cup of the flower in which Christ, coming down as a bird, makes his nest. Psychologically Christ means unity, which clothes itself in the *corpus mysticum* of the Church or in the body of the Mother of God ("mystic rose"), surrounded as with flower-petals, and thus reveals itself in reality. Christ as an image is a symbol of the self.[12] Just as the plant stands for growth, so the flower depicts the unfolding from a centre.

Figure 12

[662] Here the four rays emanating from the centre spread across the whole picture. This gives the centre a dynamic character. The structure of the flower is a multiple of four. The picture is typical of the marked personality of the patient, who had some artistic talent. (She also painted Fig. 5.) Besides that she had a strong feeling for Christian mysticism, which played a great role in her life. It was important for her to experience the archetypal background of Christian symbolism.

Figure 13

[663] Photograph of a rug woven by a middle-aged woman, Penelope-like, at a time of great inner and outer distress. She was a doctor and she wove this magic circle round herself, working at it every day for months, as a counterbalance to the difficulties of her life. She was not my patient and could not have been influenced by me. The rug contains an eight-petalled flower. A special feature of the rug is that it has a real "above and below." Above is light; below, relative darkness. In it, there is a creature like a beetle, representing an unconscious content, and comparable with the sun in the form of Khepera. Occasionally the "above and below" are

outside the protective circle, instead of inside. In that case the mandala affords protection against extreme opposites; that is, the sharpness of the conflict is not yet realized or else is felt as intolerable. The protective circle then guards against possible disruption due to the tension of opposites.

Figure 14

[664] An Indian picture of *Shiva-bindu*, the unextended point. It shows the divine power before the creation: the opposites are still united. The god rests in the point. Hence the snake signifies extension, the mother of Becoming, the creation of the world of forms. In India this point is also called Hiranyagarbha, ‘golden germ’ or ‘golden egg.’ We read in the Sanatsugatiya: “That pure great light which is radiant, that great glory which the gods worship, which makes the sun shine forth, that divine, eternal Being is perceived by the faithful.”[13]

Figure 15

[665] This picture, also by a middle-aged woman patient, shows the squaring of the circle. The plants again denote germination and growth. In the centre is a sun. As the snake-and-tree motif shows, we have here a conception of Paradise. A parallel is the Gnostic conception of Edem with the four rivers of Paradise in the Naassene gnosis. For the functional significance of the snake in relation to the mandala, see the preceding paper (comments on pictures 3, 4, and 5).

Figure 16

[666] This picture was painted by a neurotic young woman. The snake is somewhat unusual in that it lies in the centre itself, its head coinciding with this. Usually it is outside the inner circle, or at least coiled round the central point. One suspects (rightly, as it turned out) that the inner darkness does not conceal the longed-for unity, the self, but rather the chthonic, feminine nature of the patient. In a later picture the mandala bursts and the snake comes out.

Figure 17

[667] The picture was done by a young woman. This mandala is “legitimate” in so far as the snake is coiled round the four-rayed middle point. It is trying to get out: it is the awakening of Kundalini, meaning that the patient’s chthonic nature is becoming active. This is also indicated by the arrows pointing outwards. In practice it means becoming conscious of one’s instinctual nature. The snake in ancient times personified the spinal ganglia and the spinal cord. Arrows pointing outwards may in other cases mean the opposite: protection of the inside from danger.

Figure 18

[668] Drawn by an older patient. Unlike the previous picture, this one is “introverted.” The snake is coiled round the four-rayed centre and has laid its head on the white, central point (*Shiva-bindu*), so that it looks as if it were wearing a halo. There seems to be a kind of incubation of the middle point—the motif of the snake guarding the treasure. The centre is often characterized as the “treasure hard to attain.”[14]

Figure 19

[669] Done by a middle-aged woman. The concentric circles express concentration. This is further emphasized by the fishes circumnavigating the centre. The number 4 has the meaning of total concentration. The movement to the left presumably indicates movement towards the unconscious, i.e., immersion in it.

Figure 20

[670] This is a parallel to Figure 19: sketch of a fish-motif which I saw on the ceiling of the Maharajah’s pavilion in Benares.

Figure 21

[671] A fish instead of a snake. Fish and snake are simultaneously attributes of both Christ and the devil. The fish is making a whirlpool in the sea of the unconscious, and in its midst the precious pearl is being formed. A Rig-Veda hymn says:

> Darkness there was, concealed in darkness,
> A Lightless ocean lost in night.
> Then the One, that was hidden in the shell,
> Was born through the power of fiery torment.
> From it arose in the beginning love,
> Which is the germ and the seed of knowledge.[15]

[672] As a rule the snake personifies the unconscious, whereas the fish usually represents one of its contents. These subtle distinctions must be borne in mind when interpreting a mandala, because the two symbols very probably correspond to two different stages of development, the snake representing a more primitive and more instinctual state than the fish, which in history as well was endowed with higher authority than the snake (cf. the Ichthys-symbol).

Figure 22

[673] In this picture by a young woman the fish has produced a differentiated centre by circumnavigation, and in it a mother and child stand before a stylized Tree of Life or of Knowledge. Here the fish has a dragonlike nature; it is a monster, a sort of Leviathan, which, as the texts from Ras Shamra show, was originally a snake.[16] Once more the movement is to the left.

Figure 23

[674] The golden ball corresponds to the golden germ (Hiranyagarbha). It is rotating, and the Kundalini winding round it has doubled. This indicates conscious realization, since a content rising out of the unconscious splits at a certain moment into two halves, a conscious and an unconscious one. The doubling is not made by the conscious mind, but appears spontaneously in the products of the unconscious. The rightwards rotation, expressed by the wings (swastika-motif), likewise

indicates conscious realization. The stars show that the centre has a cosmic structure. It has four rays, and thus behaves like a heavenly body. The Shatapatha-Brahmana says:

> Then he looks up to the sun, for that is the final goal, that the safe resort. To that final goal, to that resort he goes; for this reason he looks up to the sun.

He looks up, saying, “Self-existent art thou, the best ray of light!” The sun is indeed the best ray of light, and therefore he says, “Self-existent art thou, the best ray of light!” “Light-bestowing art thou: give me light (*varkas*)!” “So say I,” said Yajñavalkya, “and for this indeed the Brahmin should strive, if he would be *brahmavarkasin*, illumined by brahma.”

> He then turns from left to right, saying, “I move along the course of the sun.” Having reached that final goal, that safe resort, he now moves along the course of yonder sun.[17]

[675] This sun has seven rays. A commentator remarks that four of them point to the four quarters; one points upwards, another downwards, but the seventh and “best” points inwards. It is at the same time the sun’s disc, named Hiranyagarbha. This, according to Ramanuja’s commentary on the Vedanta Sutras,[18] is the highest self, the “collective aggregate of all individual souls.” It is the body of the highest Brahma and represents the collective psyche. For the idea of the self as compounded of many, compare Origen’s “Each of us is not one, but many” and “All are righteous, but one receiveth the crown.”[19]

[676] The patient was a woman of sixty, artistically gifted. The individuation process, long blocked but released by the treatment, stimulated her creative activity (Fig. 21 derives from the same source) and gave rise to a series of happily coloured pictures which eloquently express the intensity of her experience.

Figure 24

[677] Done by the same patient. She herself is shown practising contemplation or concentration on the centre: she has taken the place of the fish and the snakes. An ideal image of herself is laid round the

precious egg. The legs are flexible, like a nixie's. The psychology of such a picture reappears in ecclesiastical tradition. The Shiva-Shakti of the East is known in the West as the "man encompassed by a woman," Christ and his bride the Church. Compare the Maitrayana-Brahmana Upanishad:

> He [the Self] is also he who warms, the Sun, hidden by the thousand-eyed golden egg, as one fire by another. He is to be thought after, he is to be sought after. Having said farewell to all living things, having gone to the forest, and having renounced all sensuous objects, let a man perceive the Self from his own body.[20]

[678] Here too the radiation from the centre spreads out beyond the protective circle into the distance. This expresses the idea of the far-reaching effect of the introverted state of consciousness. It could also be described as an *unconscious* connection with the world.

Figure 25

[679] This picture was done by another middle-aged patient. It shows various phases of the individuation process. Down below she is caught in a chthonic tangle of roots (the *mūlādhāra* of *kundalini* yoga). In the middle she studies a book, cultivating her mind and augmenting her knowledge and consciousness. At the top, reborn, she receives illumination in the form of a heavenly sphere that widens and frees the personality, its round shape again representing the mandala in its "Kingdom of God" aspect, whereas the lower, wheel-shaped mandala is chthonic. There is a confrontation of the natural and spiritual totalities. The mandala is unusual on account of its six rays, six mountain peaks, six birds, three human figures. In addition, it is located between a distinct Above and Below, also repeated in the mandala itself. The upper, bright sphere is in the act of descending into the hexad or triad and has already passed the rim of the wheel. According to old tradition the number 6 means creation and evolution, since it is a *coniunctio* of 2 and 3 (even and odd = female and male). Philo Judaeus therefore calls the *senarius* (6) the "number most suited to generation."[21] The number 3, he says, denotes the surface or flatness, whereas 4 means height or depth. The *quaternarius* "shows the nature of solids," whereas the three first

numbers characterize or produce incorporeal intelligences. The number 4 appears as a three-sided pyramid.[22] The hexad shows that the mandala consists of two triads, and the upper one is making itself into a quaternity, the state of “equability and justice,” as Philo says. Down below lurk unintegrated dark clouds. This picture demonstrates the not uncommon fact that the personality needs to be extended both upwards and downwards.

Figure 26 and 27

[680] These mandalas are in part atypical. Both were done by the same young woman. In the centre, as in the previous mandala, is a female figure, as if enclosed in a glass sphere or transparent bubble. It looks almost as if an homunculus were in the making. In addition to the usual four or eight rays, both mandalas show a pentadic element. There is thus a dilemma between four and five. Five is the number assigned to the “natural” man, in so far as he consists of a trunk with five appendages. Four, on the other hand, signifies a *conscious* totality. It describes the ideal, “spiritual” man and formulates him as a totality in contrast to the pentad, which describes the corporeal man. It is significant that the swastika symbolizes the “ideal” man,[23] whereas the five-pointed star symbolizes the material and bodily man.[24] The dilemma of four and five corresponds to the conflict between “culture” and “nature.” That was the problem of the patient. In Figure 26 the dilemma is indicated by the four groups of stars: two of them contain four stars and two of them five stars. On the rims of both mandalas we see the “fire of desire.” In Figure 27 the rim is made of something that looks like lighted tissue. In characteristic contrast to the “shining” mandala, both these (especially the second one) are “burning.” It is flaming desire, comparable to the longing of the homunculus in the retort (*Faust*, Part II), which was finally shattered against the throne of Galatea. The fire represents an erotic demand but at the same time an *amor fati* that burns in the innermost self, trying to shape the patient’s fate and thus help the self into reality. Like the homunculus in *Faust*, the figure shut up in the vessel wants to “become.”

[681] The patient was herself aware of the conflict, for she told me she had no peace after painting the second picture. She had reached the afternoon of her life, and was in her thirty-fifth year. She was in doubt as to whether she ought to have another child. She decided for a child, but fate did not let her, because the development of her personality was evidently pursuing a different goal, not a biological but a cultural one. The conflict was resolved in the interests of the latter.

Figure 28

[682] Picture by a middle-aged man. In the centre is a star. The blue sky contains golden clouds. At the four cardinal points we see human figures: at the top, an old man in the attitude of contemplation; at the bottom, Loki or Hephaestus with red, flaming hair, holding in his hands a temple. To the right and left are a light and a dark female figure. Together they indicate four aspects of the personality, or four archetypal figures belonging, as it were, to the periphery of the self. The two female figures can be recognized without difficulty as the two aspects of the anima. The old man corresponds to the archetype of meaning, or of the spirit, and the dark chthonic figure to the opposite of the Wise Old Man, namely the magical (and sometimes destructive) Luciferian element. In alchemy it is Hermes Trismegistus versus Mercurius, the evasive "trickster."[25] The circle enclosing the sky contains structures or organisms that look like protozoa. The sixteen globes painted in four colours just outside this circle derived originally from an eye motif and therefore stand for the observing and discriminating consciousness. Similarly, the ornaments in the next circle, all opening inwards, are rather like vessels pouring out their content towards the centre.[26] On the other hand the ornaments along the rim open outwards, as if to receive something from outside. That is, in the individuation process what were originally projections stream back "inside" and are integrated into the personality again. Here, in contrast to Figure 25, "Above" and "Below," male and female, are integrated, as in the alchemical hermaphrodite.

Figure 29

[683] Once again the centre is symbolized by a star. This very common image is consistent with the previous pictures, where the sun represents the centre. The sun, too, is a star, a radiant cell in the ocean of the sky. The picture shows the self appearing as a star out of chaos. The four-rayed structure is emphasized by the use of four colours. This picture is significant in that it sets the structure of the self as a principle of order against chaos.[27] It was painted by the same man who did Figure 28.

Figure 30

[684] This mandala, by an older woman patient, is again split into Above and Below: heaven above, the sea below, as indicated by the golden waves on a green ground. Four wings revolve leftwards about the centre, which is marked only by an orange-red spot. Here too the opposites are integrated and are presumably the cause of the centre’s rotation.

Figure 31

[685] An atypical mandala, based on a dyad. A golden moon and a silver moon form the upper and lower edges. The inside is blue sky above and something like a black crenellated wall below. On it there sits a peacock, fanning out its tail, and to the left there is an egg, presumably the peacock’s. In view of the important role which the peacock and the peacock’s egg together play in alchemy and also in Gnosticism, we may expect the miracle of the *cauda pavonis*, the appearance of “all Colours” (Böhme), the unfolding and realization of wholeness, once the dark dividing wall has broken down. (See Fig. 32.) The patient thought the egg might split and produce something new, maybe a snake. In alchemy the peacock is synonymous with the Phoenix. A variant of the Phoenix legend relates that the Semenda Bird consumes itself, a worm forms from the ashes, and from the worm the bird rises anew.

Figure 32

[686] This picture is reproduced from the Codex Alchemicus Rhenoviensis, Central Library, Zurich. Here the peacock represents the Phoenix rising

newborn from the fire. There is a similar picture in a manuscript in the British Museum, only there the peacock is enclosed in a flask, the *vas hermeticum*, like the homunculus.[28] The peacock is an old emblem of rebirth and resurrection, quite frequently found on Christian sarcophagi. In the vessel standing beside the peacock the colours of the *cauda pavonis* appear, as a sign that the transformation process is nearing its goal. In the alchemical process the *serpens mercurialis*, the dragon, is changed into the eagle, the peacock, the goose of Hermes, or the Phoenix.[29]

Figure 33

[687] This picture was done by a seven-year-old boy, offspring of a problem marriage. He had done a whole series of these drawings of circles and hung them up round his bed. He called them his “loves” and would not go to sleep without them. This shows that the “magical” pictures still functioned for him in their original sense, as a protective magic circle.

Figure 34

[688] An eleven-year-old girl, whose parents were divorced, had, at a time of great difficulties and upsets, drawn a number of pictures which clearly reveal a mandala structure. Here too they were magic circles intended to stop the difficulties and adversities of the outside world from entering into the inner psychic space. They represent a kind of self-protection.

[689] As on the *kilkhor*, the Tibetan World Wheel (Fig. 3), you can see at either side of this picture something that looks like horns, which as we know belong to the devil or to one of his theriomorphic symbols. The slanting eye-slits underneath them, and the two strokes for nose and mouth, are also the devil’s. This amounts to saying: Behind the mandala lurks the devil. Either the “demons” are covered up by the magically powerful picture, and thereby eliminated—which would be the purpose of the mandala—or, as in the case of the Tibetan World Wheel, the world is caught in the claws of the demon of death. In this picture the devils merely peek out over the edge. I have seen what this means from another

case: An artistically gifted patient produced a typical tetradic mandala and stuck it on a sheet of thick paper. On the back there was a circle to match, filled with drawings of sexual perversions. This shadow aspect of the mandala represented the disorderly, disruptive tendencies, the "chaos" that hides behind the self and bursts out in a dangerous way as soon as the individuation process comes to a standstill, or when the self is not realized and so remains unconscious. This piece of psychology was expressed by the alchemists in their Mercurius duplex, who on the one hand is Hermes the mystagogue and psychopomp, and on the other hand is the poisonous dragon, the evil spirit and "trickster."

Figure 35

[690] Drawing by the same girl. Round the sun is a circle with eyes, and round this an uroboros. The motif of polyophthalmia frequently occurs in individual mandalas. (See Picture 17 and Fig. 5 in the preceding paper.) In the Maitrayana-Brahmana Upanishad VI, 8 the egg (Hiranyagarbha) is described as "thousand-eyed." The eyes in the mandala no doubt signify the observing consciousness, but it must also be borne in mind that the texts as well as the pictures both attribute the eyes to a mythic figure, e.g., an Anthropos, who does the seeing. This seems to me to point to the fascination which, through a kind of magical stare, attracts the attention of the conscious mind. (Cf. Figs. 38 and 39.)

Figure 36

[691] Painting of a medieval city with walls and moats, streets and churches, arranged quadratically. The inner city is again surrounded by walls and moats, like the Imperial City in Peking. The buildings all open inwards, towards the centre, represented by a castle with a golden roof. It too is surrounded by a moat. The ground round the castle is laid with black and white tiles, representing the united opposites. This mandala was done by a middle-aged man (cf. Figs. 6, 28, 29). A picture like this is not unknown in Christian symbolism. The Heavenly Jerusalem of Revelation is known to everybody. Coming to the Indian world of ideas, we find the city of Brahma on the world mountain, Meru. We read in the

Golden Flower: “The *Book of the Yellow Castle* says: ‘In the square inch field of the square foot house, life can be regulated.’ The square foot house is the face. The square inch field in the face: what could that be other than the heavenly heart? In the middle of the square inch dwells the splendour. In the purple hall of the city of jade dwells the God of Utmost Emptiness and Life.”[30]

Figure 37

[692] Painted by the same patient who did Figures 11 and 30. Here the “seeding-place” is depicted as a child enclosed in a revolving sphere. The four “wings” are painted in the four basic colours. The child corresponds to Hiranyagarbha and to the homunculus of the alchemists. The mythologem of the “Divine Child” is based on ideas of this sort.[31]

Figure 38

[693] Mandala in rotation, by the same patient, who did Figures 21 and 23. A notable feature is the quaternary structure of the golden wings in combination with the triad of three dogs running round the centre. They have their backs to it, indicating that for them the centre is in the unconscious. The mandala contains—another unusual feature—a triadic motif turning to the left, while the wings turn to the right. This is not accidental. The dogs represent consciousness “scenting” or “intuiting” the unconscious; the wings show the movement of the unconscious towards consciousness, as corresponded to the patient’s situation at the time. It is as if the dogs were fascinated by the centre although they cannot see it. They seem to represent the fascination felt by the conscious mind. The picture embodies the above-mentioned sesquitertian proportion (3 : 4).

Figure 39

[694] The same motif as before, but represented by hares. From a Gothic window in the cathedral at Paderborn. There is no recognizable centre though the rotation presupposes one.

Figure 40

[695] Picture by a young woman patient. It too exhibits the sesquitertian proportion and hence the dilemma with which Plato's *Timaeus* begins, and which as I said plays a considerable role in alchemy, as the axiom of Maria.[32]

Figure 41

[696] This picture was done by a young woman patient with a schizoid disposition. The pathological element is revealed in the "breaking lines" that split up the centre. The sharp, pointed forms of these breaking lines indicate evil, hurtful, and destructive impulses which might hinder the desired synthesis of personality. But it seems as if the regular structure of the surrounding mandala might be able to restrain the dangerous tendencies to dissociation. And this proved to be the case in the further course of the treatment and subsequent development of the patient.

Figure 42

[697] A neurotically disturbed mandala. It was drawn by a young, unmarried woman patient at a time that was full of conflict: she was in a dilemma between two men. The outer rim shows four different colours. The centre is doubled in a curious way: fire breaks out from behind the blue star in the black field, while to the right a sun appears, with blood vessels running through it. The five-pointed star suggests a pentagram symbolizing man, the arms, legs, and head all having the same value. As I have said, it signifies the purely instinctual, chthonic, unconscious man. (Cf. Figs. 26 and 27.) The colour of the star is blue—of a cool nature, therefore. But the nascent sun is yellow and red—a warm colour. The sun itself (looking rather like the yolk of an incubated egg) usually denotes consciousness, illumination, understanding. Hence we could say of this mandala: a light is gradually dawning on the patient, she is waking out of her formerly unconscious state, which corresponded to a purely biological and rational existence. (Rationalism is no guarantee of higher consciousness, but merely of a one-sided one!) The new state is

characterized by red (feeling) and yellow or gold (intuition). There is thus a shifting of the centre of personality into the warmer region of heart and feeling, while the inclusion of intuition suggests a groping, irrational apprehension of wholeness.

Figure 43

[698] This picture was done by a middle-aged woman who, without being neurotic, was struggling for spiritual development and used for this purpose the method of active imagination. These efforts induced her to make a drawing of the birth of a new insight or conscious awareness (eye) from the depths of the unconscious (sea). Here the eye signifies the self.

Figure 44

[699] Drawing of motif from a Roman mosaic on the floor of a house in Moknine, Tunis, which I photographed. It represents an apotropaism against the evil eye.

Figure 45

[700] Mandala from the Navaho Indians, who with great toil prepare such mandalas from coloured sand for curative purposes. It is part of the Mountain Chant Rite performed for the sick. Around the centre there runs, in a wide arc, the body of the Rainbow Goddess. A square head denotes a female deity, a round one a male deity. The arrangement of the four pairs of deities on the arms of the cross suggests a swastika wheeling to the right. The four male deities who surround the swastika are making the same movement.

Figure 46

[701] Another sand-painting by the Navahos, from the Male Shooting Chant. The four horned heads are painted in the four colours that correspond to the four directions.[33]

Figure 47

[702] Here, for comparison, is a painting of the Egyptian Sky Mother, bending, like the Rainbow Goddess, over the "Land" with its round horizon. Behind the mandala stands—presumably—the Air God, like the demon in Figures 3 and 34. Underneath, the arms of the *ka*, raised in adoration and decked with the eye motif, hold the mandala, which probably signifies the wholeness of the "Two Lands."[34]

Figure 48

[703] This picture, from a manuscript of Hildegard of Bingen, shows the earth surrounded by the ocean, realm of air, and starry heaven. The actual globe of the earth in the centre is divided into four.[35]

[704] Böhme has a mandala in his book *XL Questions concerning the Soule* (see Fig. 1 of preceding paper). The periphery contains a bright and a dark hemisphere turning their backs to one another. They represent ununited opposites, which presumably should be bound together by the heart standing between them. This drawing is most unusual, but aptly expresses the insoluble moral conflict underlying the Christian view of the world. "The Soul," Böhme says, "is an Eye in the Eternal Abyss, a similitude of Eternity, a perfect Figure and Image of the first Principle, and resembles God the Father in his Person, as to the eternal Nature. The Essence and Substance of it, merely as to what it is purely in itself, is first the wheel of Nature, with the first four Forms." In the same treatise Böhme says: "The substance and Image of the soul may be resembled to the Earth, having a fair flower growing out of it…" "The Soul is a fiery Eye … from the eternal Centre of Nature … a similitude of the First Principle."[36] As an eye, the soul "receives the Light, as the Moon does the glance of the Sun … for the life of the soul has its original in the Fire."[37]

Figure 49 and 50

[705] Figure 49 is especially interesting because it shows us very clearly in what relationship the picture stands to the painter. The patient (the same

as did Fig. 42) has a shadow problem. The female figure in the picture represents her dark, chthonic side. She is standing in front of a wheel with four spokes, the two together forming an eight-rayed mandala. From her head spring four snakes,[38] expressing the tetradic nature of consciousness, but—in accordance with the demonic character of the picture—they do this in an evil and nefarious way, since they represent evil and destructive thoughts. The entire figure is wrapped in flames, emitting a dazzling light. She is like a fiery demon, a salamander, the medieval conception of a fire sprite. Fire expresses an intense transformation process. Hence the *prima materia* in alchemy was symbolized by the salamander in the fire, as the next picture shows.[39] The spear- or arrow-head expresses "direction": it is pointing upwards from the middle of the head. Everything that the fire consumes rises up to the seat of the gods. The dragon glowing in the fire becomes volatilized; illumination comes through the fiery torment. Figure 49 tells us something about the background of the transformation process. It depicts a state of suffering, reminiscent on the one hand of crucifixion and on the other of Ixion bound to the wheel. From this it is evident that individuation, or becoming whole, is neither a *summum bonum* nor a *summum desideratum*, but the painful experience of the union of opposites. That is the real meaning of the cross in the circle, and that is why the cross has an apotropaic effect, because, pointed at evil, it shows evil that it is already included and has therefore lost its destructive power.

Figure 51

[706] This picture was done by a sixty-year-old woman patient with a similar problem: A fiery demon mounts through the night towards a star. There he passes over from a chaotic into an ordered and fixed state. The star stands for the transcendent totality, the demon for the animus, who, like the anima, is the connecting link between conscious and unconscious. The picture recalls the antique symbolism found, for instance, in Plutarch:[40] The soul is only partly in the body, the other part is outside it and soars above man like a star symbolizing his "genius." The same conception can be found among the alchemists.

Figure 52

[707] Picture by the same patient as before, showing flames with a soul rising up from them, as if swimming. The motif is repeated in Figure 53. Exactly the same thing—and with the same meaning—can be found in the Codex Rhenoviensis (fifteenth century), Zurich (Fig. 54). The souls of the calcined *prima materia* escape as vapours, in the form of human figures looking like children (homunculi). In the fire is the dragon, the chthonic form of the *anima mundi*, which is being transmuted.

Figure 53 and 54

[708] Here I must remark that not only did the patient have no knowledge of alchemy but that I myself knew nothing at that time of the alchemical picture material. The resemblance between these two pictures, striking as it is, is nothing extraordinary, since the great problem and concern of philosophical alchemy was the same as underlies the psychology of the unconscious, namely individuation, the integration of the self. Similar causes (other things being equal) have similar effects, and similar psychological situations make use of the same symbols, which on their side rest on archetypal foundations, as I have shown in the case of alchemy.

Conclusion

[709] I hope I have succeeded in giving the reader some idea of mandala symbolism with the help of these pictures. Naturally my exposition aims at nothing more than a superficial survey of the empirical material on which comparative research is based. I have indicated a few parallels that may point the way to further historical and ethnic comparisons, but have refrained from a more complete and more thorough exposition because it would have taken me too far.

[710] I need say only a few words about the functional significance of the mandala, as I have discussed this theme several times before. Moreover, if we have a little feeling in our fingertips we can guess from these pictures, painted with the greatest devotion but with unskilful hands,

what is the deeper meaning that the patients tried to put into them and express through them. They are *yantras* in the Indian sense, instruments of meditation, concentration, and self-immersion, for the purpose of realizing inner experience, as I have explained in the commentary to the *Golden Flower*. At the same time they serve to produce an inner order—which is why, when they appear in a series, they often follow chaotic, disordered states marked by conflict and anxiety. They express the idea of a safe refuge, of inner reconciliation and wholeness.

[711] I could produce many more pictures from all parts of the world, and one would be astonished to see how these symbols are governed by the same fundamental laws that can be observed in individual mandalas. In view of the fact that all the mandalas shown here were new and uninfluenced products, we are driven to the conclusion that there must be a transconscious disposition in every individual which is able to produce the same or very similar symbols at all times and in all places. Since this disposition is usually not a conscious possession of the individual I have called it the *collective unconscious*, and, as the bases of its symbolical products, I postulate the existence of primordial images, the *archetypes*. I need hardly add that the identity of unconscious individual contents with their ethnic parallels is expressed not merely in their form but in their meaning.

[712] Knowledge of the common origin of these unconsciously preformed symbols has been totally lost to us. In order to recover it, we have to read old texts and investigate old cultures, so as to gain an understanding of the things our patients bring us today in explanation of their psychic development. And when we penetrate a little more deeply below the surface of the psyche, we come upon historical layers which are not just dead dust, but alive and continuously active in everyone—maybe to a degree that we cannot imagine in the present state of our knowledge.

APPENDIX

MANDALAS[1]

[713] The Sanskrit word *mandala* means “circle” in the ordinary sense of the word. In the sphere of religious practices and in psychology it denotes circular images, which are drawn, painted, modelled, or danced. Plastic structures of this kind are to be found, for instance, in Tibetan Buddhism, and as dance figures these circular patterns occur also in Dervish monasteries. As psychological phenomena they appear spontaneously in dreams, in certain states of conflict, and in cases of schizophrenia. Very frequently they contain a quaternity or a multiple of four, in the form of a cross, a star, a square, an octagon, etc. In alchemy we encounter this motif in the form of *quadratura circuli*.

[714] In Tibetan Buddhism the figure has the significance of a ritual instrument (*yantra*), whose purpose is to assist meditation and concentration. Its meaning in alchemy is somewhat similar, inasmuch as it represents the synthesis of the four elements which are forever tending to fall apart. Its spontaneous occurrence in modern individuals enables psychological research to make a closer investigation into its functional meaning. As a rule a mandala occurs in conditions of psychic dissociation or disorientation, for instance in the case of children between the ages of eight and eleven whose parents are about to be divorced, or in adults who, as the result of a neurosis and its treatment, are confronted with the problem of opposites in human nature and are consequently disoriented; or again in schizophrenics whose view of the world has become confused, owing to the invasion of incomprehensible contents from the unconscious. In such cases it is easy to see how the severe pattern imposed by a circular image of this kind compensates the disorder and confusion of the psychic state—namely, through the construction of a central point to which everything is related, or by a concentric arrangement of the disordered multiplicity and of contradictory and irreconcilable elements. This is evidently an *attempt at self-healing* on the part of Nature, which does not spring from conscious reflection but

from an instinctive impulse. Here, as comparative research has shown, a fundamental schema is made use of, an archetype which, so to speak, occurs everywhere and by no means owes its individual existence to tradition, any more than the instincts would need to be transmitted in that way. Instincts are given in the case of every newborn individual and belong to the inalienable stock of those qualities which characterize a species. What psychology designates as archetype is really a particular, frequently occurring, formal aspect of instinct, and is just as much an *a priori* factor as the latter. Therefore, despite external differences, we find a fundamental conformity in mandalas regardless of their origin in time and space.

[715] The "squaring of the circle" is one of the many archetypal motifs which form the basic patterns of our dreams and fantasies. But it is distinguished by the fact that it is one of the most important of them from the functional point of view. Indeed, it could even be called the *archetype of wholeness*. Because of this significance, the "quaternity of the One" is the schema for all images of God, as depicted in the visions of Ezekiel, Daniel, and Enoch, and as the representation of Horus with his four sons also shows. The latter suggests an interesting differentiation, inasmuch as there are occasionally representations in which three of the sons have animals' heads and only one a human head, in keeping with the Old Testament visions as well as with the emblems of the seraphim which were transferred to the evangelists, and—last but not least—with the nature of the Gospels themselves: three of which are synoptic and one "Gnostic." Here I must add that, ever since the opening of Plato's *Timaeus* ("One, two, three … but where, my dear Socrates, is the fourth?") and right up to the Cabiri scene in *Faust*, the motif of four as three and one was the ever-recurring preoccupation of alchemy.

[716] The profound significance of the quaternity with its singular process of differentiation extending over the centuries, and now manifest in the latest development of the Christian symbol,[2] may explain why *Du* chose just the archetype of wholeness as an example of symbol formation. For, just as this symbol claims a central position in the historical documents, individually too it has an outstanding significance. As is to be expected, individual mandalas display an enormous variety. The overwhelming

majority are characterized by the circle and the quaternity. In a few, however, the three or the five predominates, for which there are usually special reasons.

[717] Whereas ritual mandalas always display a definite style and a limited number of typical motifs as their content, individual mandalas make use of a well-nigh unlimited wealth of motifs and symbolic allusions, from which it can easily be seen that they are endeavouring to express either the totality of the individual in his inner or outer experience of the world, or its essential point of reference. Their object is the *self* in contradistinction to the *ego*, which is only the point of reference for consciousness, whereas the self comprises the totality of the psyche altogether, i.e., conscious *and* unconscious. It is therefore not unusual for individual mandalas to display a division into a light and a dark half, together with their typical symbols. An historical example of this kind is Jakob Böhme's mandala, in his treatise *XL Questions concerning the Soule*. It is at the same time an image of God and is designated as such. This is not a matter of chance, for Indian philosophy, which developed the idea of the self, Atman or Purusha, to the highest degree, makes no distinction in principle between the human essence and the divine. Correspondingly, in the Western mandala, the *scintilla* or soul-spark, the innermost divine essence of man, is characterized by symbols which can just as well express a God-image, namely the image of Deity unfolding in the world, in nature, and in man.

[718] The fact that images of this kind have under certain circumstances a considerable therapeutic effect on their authors is empirically proved and also readily understandable, in that they often represent very bold attempts to see and put together apparently irreconcilable opposites and bridge over apparently hopeless splits. Even the mere attempt in this direction usually has a healing effect, but only when it is done spontaneously. Nothing can be expected from an artificial repetition or a deliberate imitation of such images.

BIBLIOGRAPHY

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A*. Ancient volumes containing collections of alchemical tracts by various authors; *B*. General bibliography, including cross-references to the material in section *A*. Short titles of the ancient volumes are printed in capital letters.

A. ANCIENT VOLUMES CONTAINING COLLECTIONS OF ALCHEMICAL TRACTS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum.… Argentorati [Strasbourg], 1566.

Contents quoted in this volume:

Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to as “Tractatus aureus”]

ARTIS AURIFERAE quam chemiam vocant.… Basileae [Basel], [1593]. 2 vols.

Contents quoted in this volume:

VOLUME I

i. Allegoriae super librum Turbae [pp. 139–45]
ii. Aurora consurgens, quae dicitur Aurea hora [pp. 185–246]
iii. [Zosimus:] Rosinus ad Sarratantam episcopum [pp. 277–319]
iv. [Kallid:] Calidis Liber secretorum [pp. 325–51]
v. Tractatulus Aristotelis de practica lapidis philosophici [pp. 361–73]
vi. Rachaidibus: De materia philosophici lapidis [pp. 397–404]
vii. Liber de arte chymica [pp. 575–631]

VOLUME II

viii Rosarium philosophorum [pp. 204–384]; contains a version of the “Visio Arislei,” pp. 246ff. Another edition of the *Artis auriferae*, occasionally quoted in this volume, appeared in 1572 at Basel; contains the “Tractatus aureus,” pp. 641ff.

MANGETUS, JOANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum ad alchemiam pertinentium thesaurus instructissimus* … Coloniae Allobrogum [Geneva], 1702, 2 vols.

Contents quoted in this volume:

VOLUME I

i Hermes Trismegistus: Tractatus aureus de lapidis physici secreto [pp. 400–45]

ii Morienus: Liber de compositione alchemiae [pp. 509–19]

VOLUME II

iii Sendivogius: Epistola XIII [p. 496]

THEATRUM CHEMICUM, praecipuos selectorum auctorum tractatus … continens. Ursellis [Ursel] and Argentorati [Strasbourg], 1602–61. 6 vols. (Vols. I–III, Ursel, 1602; Vols. IV–VI, Strasbourg, 1613, 1622, 1661 respectively.)

Contents quoted in this volume:

VOLUME I

i Dorn: Speculativae philosophiae, gradus septem vel decem continens [pp. 255–310]

ii Dorn: De tenebris contra Naturam et vita brevi [pp. 518–35]

iii Dorn: De transmutatione metallorum [pp. 563–646]

VOLUME II

iv Dee: Monas hieroglyphica [pp. 218–43]

VOLUME IV

v Hermetis Trismegisti Tractatus vere aureus de lapide philosophici secreto [pp. 672–797; usually referred to as “Tractatus aureus”]

vi David Lagneus: Harmonia seu Consensus philosophorum chemicorum (frequently called Harmonia chemica) [pp. 813–903]

VOLUME V

vii Mennens: De aureo vellere … libri tres [pp. 267–470]

VOLUME VI

viii. Vigenerus (Blaise de Vigenère): Tractatus de igne et sale [pp.1–139]

INDEX

INDEX

THE COLLECTED WORKS OF *C. G. JUNG*

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation;* works originally written in English, such as *Psychology and Religion;* works not previously translated, such as *Aion;* and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)
On Manic Mood Disorder (1903)
A Case of Hysterical Stupor in a Prisoner in Detention (1902)
On Simulated Insanity (1903)
A Medical Opinion on a Case of Simulated Insanity (1904)
A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)
On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)
The Associations of Normal Subjects (by Jung and F. Riklin)
An Analysis of the Associations of an Epileptic
The Reaction-Time Ratio in the Association Experiment
Experimental Observations on the Faculty of Memory
Psychoanalysis and Association Experiments
The Psychological Diagnosis of Evidence
Association, Dream, and Hysterical Symptom
The Psychopathological Significance of the Association Experiment
Disturbances in Reproduction in the Association Experiment
The Association Method
The Family Constellation
PSYCHOPHYSICAL RESEARCHES (1907–8)
On the Psychophysical Relations of the Association Experiment
Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)
Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)
Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of

Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

*3 THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

+4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)
Introduction to Kranefeldt’s “Secret Ways of the Mind” (1930)
Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)
PART I
Introduction
Two Kinds of Thinking
The Miller Fantasies: Anamnesis
The Hymn of Creation
The Song of the Moth
PART II
Introduction
The Concept of Libido
The Transformation of Libido
The Origin of the Hero
Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice
Epilogue
Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)
Introduction
The Problem of Types in the History of Classical and Medieval Thought
Schiller’s Ideas on the Type Problem
The Apollinian and the Dionysian
The Type Problem in Human Character
The Type Problem in Poetry

The Type Problem in Psychopathology
The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931. 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY
On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE
On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)
Psychological Factors Determining Human Behavior (1937)
Instinct and the Unconscious (1919)
The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)

The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

* 9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS
Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept (1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

* 9. PART II. AION (1951)
RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF
The Ego
The Shadow
The Syzygy: Anima and Animus
The Self
Christ, a Symbol of the Self
The Sign of the Fishes
The Prophecies of Nostradamus
The Historical Significance of the Fish
The Ambivalence of the Fish Symbol

The Fish in Alchemy
The Alchemical Interpretation of the Fish
Background to the Psychology of Christian Alchemical Symbolism
Gnostic Symbols of the Self
The Structure and Dynamics of the Self
Conclusion

10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)
Mind and Earth (1927/1931)
Archaic Man (1931)
The Spiritual Problem of Modern Man (1928/1931)
The Love Problem of a Student (1928)
Woman in Europe (1927)
The Meaning of Psychology for Modern Man (1933/1934)
The State of Psychotherapy Today (1934)
Preface and Epilogue to “Essays on Contemporary Events” (1946)
Wotan (1936)
After the Catastrophe (1945)
The Fight with the Shadow (1946)
The Undiscovered Self (Present and Future) (1957)
Flying Saucers: A Modern Myth (1958)
A Psychological View of Conscience (1958)
Good and Evil in Analytical Psychology (1959)
Introduction to Wolff’s “Studies in Jungian Psychology” (1959)
The Swiss Line in the European Spectrum (1928)
Reviews of Keyserling’s “America Set Free” (1930) and “La Révolution Mondiale” (1934)
The Complications of American Psychology (1930)
The Dreamlike World of India (1939)
What India Can Teach Us (1939)

Appendix: Documents (1933–1938)

11 PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White’s “God and the Unconscious” and Werblowsky’s “Lucifer and Prometheus” (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on “The Tibetan Book of the Great Liberation” (1939/1954) and “The Tibetan Book of the Dead” (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki’s “Introduction to Zen Buddhism” (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer’s “Der Weg zum Selbst” (1944)

Foreword to the “I Ching” (1950)

12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

13. ALCHEMICAL STUDIES

Commentary on “The Secret of the Golden Flower” (1929)

The Visions of Zosimos (1938/1954)
Paracelsus as a Spiritual Phenomenon (1942)
The Spirit Mercurius (1943/1948)
The Philosophical Tree (1945/1954)

14. MYSTERIUM CONIUNCTIONIS (1955–56)
AN INQUIRY INTO THE SEPARATION AND SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY
The Components of the Coniunctio
The Paradoxa
The Personification of the Opposites
Rex and Regina
Adam and Eve
The Conjunction

15. THE SPIRIT IN MAN, ART, AND LITERATURE
Paracelsus (1929)
Paracelsus the Physician (1941)
Sigmund Freud in His Historical Setting (1932)
In Memory of Sigmund Freud (1939)
Richard Wilhelm: In Memoriam (1930)
On the Relation of Analytical Psychology to Poetry (1922)
Psychology and Literature (1930/1950)
“Ulysses”: A Monologue (1932)
Picasso (1932)

16. THE PRACTICE OF PSYCHOTHERAPY
GENERAL PROBLEMS OF PSYCHOTHERAPY
Principles of Practical Psychotherapy (1935)
What Is Psychotherapy? (1935)
Some Aspects of Modern Psychotherapy (1930)
The Aims of Psychotherapy (1931)

Problems of Modern Psychotherapy (1929)
Psychotherapy and a Philosophy of Life (1943)
Medicine and Psychotherapy (1945)
Psychotherapy Today (1945)
Fundamental Questions of Psychotherapy (1951)
SPECIFIC PROBLEMS OF PSYCHOTHERAPY
The Therapeutic Value of Abreaction (1921/1928)
The Practical Use of Dream-Analysis (1934)
The Psychology of the Transference (1946)
Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

17. THE DEVELOPMENT OF PERSONALITY
Psychic Conflicts in a Child (1910/1946)
Introduction to Wickes's "Analyses der Kinderseele" (1927/1931)
Child Development and Education (1928)
Analytical Psychology and Education: Three Lectures (1926/1946)
The Gifted Child (1943)
The Significance of the Unconscious in Individual Education (1928)
The Development of Personality (1934)
Marriage as a Psychological Relationship (1925)

18. THE SYMBOLIC LIFE
Miscellaneous Writings

19 GENERAL BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

20. GENERAL INDEX TO THE COLLECTED WORKS

C. G. JUNG: Word and Image
Edited by Aniela Jaffé

[*] In *Psychiatric Studies*, vol. 1 of the *Coll. Works*.

[1] [First published in the *Eranos-Jahrbuch 1934*, and later revised and published in *Von den Wurzeln des Bewusstseins* (Zurich, 1954), from which version the present translation is made. The translation of the original version, by Stanley Dell, in *The Integration of the Personality* (New York, 1939; London, 1940), has been freely consulted.—EDITORS.]

[2] In his later works Freud differentiated the basic view mentioned here. He called the instinctual psyche the "id," and his "super-ego" denotes the collective consciousness, of which the individual is partly conscious and partly unconscious (because it is repressed).

[3] De *opificio mundi*, I, 69. Cf. Colson/Whitaker trans., I, p. 55.

[4] *Adversus haereses* II, 7, 5: "Mundi fabricator non a semetipso fecit haec, sed de alienis archetypis transtulit." (Cf. Roberts/Rambaut trans., I, p. 139.)

[5] Scott, *Hermetica*, I, p. 140.

[6] In Migne, *P.G.*, vol. 3, col. 144.

[7] Ibid., col. 595. Cf. *The Divine Names* (trans. by Rolt), pp. 62, 72.

[8] Migne, *P.L.*, vol. 40, col. 30. "Archetype" is used in the same way by the alchemists, as in the "Tractatus aureus" of Hermes Trismegistus (*Theatrum chemicum*, IV, 1613, p. 718): "As God [contains] all the treasure of his godhead … hidden in himself as in an archetype *[in se tanquam archetypo absconditum]* … in like manner Saturn carries the similitudes of metallic bodies hiddenly in himself." In the "Tractatus de igne et sale" of Vigenerus (*Theatr. chem*., VI, 1661, p. 3), the world is "ad archetypi sui similitudinem factus" (made after the likeness of its archetype) and is therefore called the "magnus homo" (the "homo maximus" of Swedenborg).

[9] One must, for the sake of accuracy, distinguish between "archetype" and "archetypal ideas." The archetype as such is a hypothetical and irrepresentable model, something like the "pattern of behaviour" in biology. Cf. "On the Nature of the Psyche," sec. 7.

[10] An allegory is a paraphrase of a conscious content, whereas a symbol is the best possible expression for an unconscious content whose nature can only be guessed, because it is still unknown.

[11] Cf. my papers on the divine child and the Kore in the present volume, and Kerényi's complementary essays in *Essays on* [or *Introduction to*] *a Science of Mythology*.

[12] [Schiller, *Piccolomini*, II, 6.—EDITORS.]

[13] Cf. my "Brother Klaus."

[12] This standpoint derives from Kant’s theory of knowledge and has nothing to do with materialism.

[13] Winthuis, *Das Zweigeschlechterwesen bei den Zentralaustraliern und anderen Völkern*.

[14] Especially in the system of the Valentinians. Cf. Irenaeus, *Adversus haereses*.

[15] Cf. *The I Ching or Book of Changes*. [Also Needham, *Science and Civilization in China*, II, pp. 273f.—EDITORS.]

[16] Hermetic alchemical philosophy from the 14th to the 17th cents. provides a wealth of instructive examples. For our purposes, a glimpse into Michael Maier’s *Symbola aureae mensae* (1617) would suffice.

[17] There are of course cases where, in spite of the patient’s seemingly sufficient insight, the reactive effect of the projection does not cease, and the expected liberation does not take place. I have often observed that in such cases meaningful but unconscious contents are still bound up with the projection carrier. It is these contents that keep up the effect of the projection, although it has apparently been seen through.

[18] Fl. *c*. 300 B.C. Cf. Block, *Euhémère: son livre et sa doctrine*.

[19] This is not to overlook the fact that there is probably a far greater number of visions which agree with the dogma. Nevertheless, they are not spontaneous and autonomous projections in the strict sense but are *visualizations of conscious contents*, evoked through prayer, autosuggestion, and heterosuggestion. Most spiritual exercises have this effect, and so do the prescribed meditation practices of the East. In any thorough investigation of such visions it would have to be ascertained, among other things, what the actual vision was and how far dogmatic elaboration contributed to its form.

[20] Cf. Stoeckli, *Die Visionen des seligen Bruder Klaus*, and Blanke, *Bruder Klaus von Flüe*.

[21] The peculiar love-story of this youngest Aeon can be found in Irenaeus, *Adv. haer*., I, 2, 2ff. (Roberts/Rambaut trans., I, pp. 7ff.)

[22] Cf. my "Brother Klaus."

[23] Guillaume wrote three *Pèlerinages* in the manner of the Divine Comedy, but independently of Dante, between 1330 and 1350. He was Prior of the Cistercian monastery at Châlis, in Normandy. Cf. Delacotte, *Guillaume de Digulleville: Trois Romans-poèmes du XIV siècle*. [Also cf. *Psychology and Alchemy*, pars. 315ff.—EDITORS.]

[24] *Anna Kingsford: Her Life, Letters, Diary, and Work*, I, pp. 130. Maitland's vision is similar in form and meaning to the one in the Poimandres (Scott, *Hermetica*, I, Libellus I, pp. 114ff.), where the spiritual light is described as "male-female." I do not know whether Maitland was acquainted with the Poimandres; probably not.

[25] Hubert and Mauss (*Mélanges d'histoire des religions*, preface, p. xxix) call these *a priori* thought-forms "categories," presumably with reference to Kant: "They exist ordinarily as habits which govern consciousness, but are themselves unconscious." The authors conjecture that the primordial images are conditioned by language. This conjecture may be correct in certain cases, but in general it is contradicted by the fact that a great many archetypal images and associations are brought to light by dream psychology and psychopathology which would be absolutely incommunicable through language.

[26] Conforming to the bisexual Original Man in Plato, *Symposium*, XIV, and to the hermaphroditic Primal Beings in general.

[27] The "dual birth" refers to the motif, well known from hero mythology, which makes the hero descend from divine as well as from human parents. In most mysteries and religions it plays an important role as a baptism or rebirth motif. It was this motif that misled Freud in his study of Leonardo da Vinci. Without taking account of the fact that Leonardo was by no means the only artist to paint the motif of St. Anne, Mary, and the Christ-child, Freud tried to reduce Anne and Mary, the grandmother and mother, to the mother and stepmother of Leonardo; in other words, to assimilate the painting to his theory. But did the other painters all have stepmothers? What prompted Freud to this violent interpretation was obviously the fantasy of dual descent suggested by Leonardo's biography. This fantasy covered up the inconvenient reality that St. Anne was the grandmother, and prevented Freud from inquiring into the biographies of other artists who also painted St. Anne. The "religious inhibition of thought" mentioned on p. 79 (1957 edn.) proved true of the author himself. Similarly, the incest theory on which he lays so much stress is based on another archetype, the well-known incest motif frequently met with in hero myths. It is logically derived from the original hermaphrodite type, which seems to go far back into prehistory. Whenever a psychological theory is forcibly applied, we have reason to suspect that an archetypal fantasy-image is trying to distort reality, thus bearing out Freud's own idea of the "religious inhibition of thought." But to explain the genesis of archetypes by means of the incest theory is about as useful as ladling water from one kettle into another kettle standing beside it, which is connected with the first by a pipe. You cannot explain one archetype by another; that is, it is impossible to say where the archetype comes from, because there is no Archimedean point outside the *a priori* conditions it represents.

[28] Cf. Avalon, *The Serpent Power; Shrī-Chakra-Sambhara Tantra;* Woodroffe, *Shakti and Shakta*.

[29] Schultz, *Dokumente der Gnosis*, especially the lists in Irenaeus, *Adversus haereses*.

[30] Cf. *Psychology and Alchemy*.

[31] Cf. the first paper in this volume.

[32] The most important problems for therapy are discussed in my essay “The Relations between the Ego and the Unconscious” and also in the “Psychology of the Transference.” For the mythological aspects of the anima, the reader is referred to another paper in this volume, “The Psychological Aspects of the Kore.”

[1] Cf. my “Instinct and the Unconscious,” par. 277.

[2] [Cf. the previous paper, “Concerning the Archetypes,” par. 137, n. 25.—EDITORS.]

[1] This is the etymological meaning of the three *gunas*. See Weckerling, *Ananda-raya-makhi: Das Glück des Lebens*, pp. 21ff., and Garbe, *Die Samkhya Philosophie*, pp. 272ff. [Cf. also Zimmer, *Philosophies of India*, index, s.v.—EDITORS.]

[2] American psychology can supply us with any amount of examples. A blistering but instructive lampoon on this subject is Philip Wylie's *Generation of Vipers*.

[1] But the father-complex also plays a considerable part here.

[2] [Cf. *Two Essays on Analytical Psychology*, pars. 16ff.—EDITORS.]

[3] In the present section I propose to present a series of different “types” of mother-complex; in formulating them, I am drawing on my own therapeutic experiences. “Types” are not individual cases, neither are they freely invented schemata into which all individual cases have to be fitted. “Types” are ideal instances, or pictures of the average run of experience, with which no single individual can be identified. People whose experience is confined to books or psychological laboratories can form no proper idea of the cumulative experience of a practising psychologist.

[4] This statement is based on the repeated experience that, where love is lacking, power fills the vacuum.

[5] In my English seminars [privately distributed] I have called this the “natural mind.”

[6] Here the initiative comes from the daughter. In other cases the father’s psychology is responsible; his projection of the anima arouses an incestuous fixation in the daughter.

[7] Herein lies the difference between this type of complex and the feminine father-complex related to it, where the “father” is mothered and coddled.

[8] This does not mean that they are unconscious of the *facts*. It is only their *meaning* that escapes them.

[9] This type of woman has an oddly disarming effect on her husband, but only until he discovers that the person he has married and who shares his nuptial bed is his mother-in-law.

[1] *Faust*, Part II, Act 5.

[24] Cf. *Psychology and Alchemy*, Part II.

[25] Cf. Ruland, *Lexicon* (1893 edn.), p. 226.

[26] Izquierdo, *Pratica di alcuni Esercitij spirituali di S. Ignatio* (Rome, 1686, p. 7): "A colloquy … is nothing else than to talk and communicate familiarly with Christ."

[26a] ["Daily Conversations with Dr. Piffoel," in her *Intimate Journal*.—EDITORS.]

[27] A Pseudo-Aristotle quotation in *Rosarium philosophorum* (1550), fol. Q.

[28] "Largiri vis mihi meum" is the usual reading, as in the first edition (1556) of *Ars chemica*, under the title "Septem tractatus seu capitula Hermetis Trismegisti aurei," and also in *Theatrum chemicum*, IV (1613), and Manget, *Bibliotheca chemica*, I (1702), pp. 400ff. In the *Rosarium philosophorum* (1550), fol. E, there is a different reading: "Largire mihi ius meum ut te adiuvem" (Give me my due that I may help thee). This is one of the interpretative readings for which the anonymous author of the *Rosarium* is responsible. Despite their arbitrariness they have an important bearing on the interpretation of alchemy. [Cf. *Psychology and Alchemy*, par. 139, n.17.]

[29] *Biblio. chem*., I, p. 430b.

[30] Detailed documentation in *Psychology and Alchemy*, par. 84, and "The Spirit Mercurius," pars. 278ff., 287ff.

[31] "Tanquam praeceptor intermedius inter lapidem et discipulum." (*Biblio. chem*., I. p 430b.) Cf. the beautiful prayer of Astrampsychos, beginning "Come to me, Lord Hermes," and ending "I am thou and thou art I." (Reitzenstein, *Poimandres*, p. 21.)

[32] The stone and its transformation are represented:

(1) as the resurrection of the *homo philosophicus*, the Second Adam ("Aurea hora," *Art is auriferae*, 1593, I, p. 195);

(2) as the human soul ("Book of Krates," Berthelot, *La Chimie au moyen âge*, III, p. 50);

(3) as a being below and above man: "This stone is under thee, as to obedience; above thee, as to dominion; therefore from thee, as to knowledge; about thee, as to equals" ("Rosinus ad Sarratantam," *Art. aurif*., I, p. 310);

(4) as life: "blood is soul and soul is life and life is our Stone" ("Tractatulus Aristotelis," ibid., p. 364),

(5) as the resurrection of the dead ("Calidis liber secretorum," ibid., p. 347; also "Rachaidibi fragmentum," ibid., p. 398);

(6) as the Virgin Mary ("De arte chymica," ibid., p. 582); and

(7) as man himself: "thou art its ore … and it is extracted from thee … and it remains inseparably with thee" ("Rosinus ad Sarratantam," ibid., p. 311).

[1] [The Dawood trans. of the Koran is quoted, sometimes with modifications. The 18th Sura is at pp. 89–98.—EDITORS.]

[2] Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra*, II.

[3] Cf. especially the crowning vision in the dream of Zosimos: “And another [came] behind him, bringing one adorned round with signs, clad in white and comely to see, who was named the Meridian of the Sun.” Cf. “The Visions of Zosimos,” par. 87 (III, v bis).

[4] Matthews, *The Mountain Chant*, and Stevenson, *Ceremonial of Hasjelti Dailjis*.

[5] An account of the secret doctrine hinted at in this treatise may be found in my “Paracelsus as a Spiritual Phenomenon,” pars. 169ff.

[6] The different versions of the legend speak sometimes of seven and sometimes of eight disciples. According to the account given in the Koran, the eighth is a dog. The 18th Sura mentions still other versions: “Some will say: ‘The sleepers were three: their dog was the fourth.’ Others, guessing at the unknown, will say: ‘They were five; their dog was the sixth.’ And yet others: ‘Seven; their dog was the eighth.’” It is evident, therefore, that the dog is to be taken into account. This would seem to be an instance of that characteristic wavering between seven and eight (or three and four, as the case may be), which I have pointed out in *Psychology and Alchemy*, pars. 200ff. There the wavering between seven and eight is connected with the appearance of Mephistopheles, who, as we know, materialized out of the black poodle. In the case of three and four, the fourth is the devil or the female principle, and on a higher level the Mater Dei. (Cf. “Psychology and Religion,” pars. 124ff.) We may be dealing with the same kind of ambiguity as in the numbering of the Egyptian nonad (*paut* = ‘company of gods’; cf. Budge, *The Gods of the Egyptians*, I, p. 88). The Khidr legend relates to the persecution of the Christians under Decius (*c*. A.D. 250). The scene is Ephesus, where St. John lay “sleeping,” but not dead. The seven sleepers woke up again during the reign of Theodosius II (408–450); thus they had slept not quite 200 years.

[7] The seven are the planetary gods of the ancients. Cf. Bousset, *Hauptprobleme der Gnosis*, pp. 23ff.

[8] Obedience under the law on the one hand, and the freedom of the “children of God,” the reborn, on the other, is discussed at length in the Epistles of St. Paul. He distinguishes not only between two different classes of men, who are separated by a greater or lesser development of consciousness, but also between the higher and lower man in one and the same individual. The *sarkikos* (carnal man) remains eternally under the law; the *pneumatikos* (spiritual man) alone is capable of being reborn into freedom. This is quite in keeping with what seems such an insoluble paradox: the Church demanding absolute obedience and at the same time proclaiming freedom from the law. So, too, in the Koran text, the legend appeals to the *pneumatikos* and promises rebirth to him that has ears to hear. But he who, like the *sarkikos,* has no inner ear will find satisfaction and safe guidance in blind submission to Allah’s will.

[9] Vollers, “Chidher,” *Archiv für Religionswissenschaft*, XII, p. 241. All quotations from the commentaries are extracted from this article.

[10] Ibid., p. 253.

[11] Cf. *Aion*, pars. 195ff.

[12] Vollers, p. 244.

[13] Ibid., p. 260.

[14] Ibid., p. 258.

[15] Cf. the myth in the "Visio Arislei," especially the version in the *Rosarium philosophorum (Art. aurif.*, II, p. 246), likewise the drowning of the sun in the Mercurial Fountain and the green lion who devours the sun (*Art. aurif.*, II, pp. 315, 366). Cf. "The Psychology of the Transference," pars. 467ff.

[16] The white stone appears on the edge of the vessel, "like Oriental gems, like fish's eyes." Cf. Joannes Isaacus Hollandus, *Opera mineralia* (1600), p. 370. Also Lagneus, "Harmonica chemica." *Theatrum chemicum*, IV (1613), p. 870. The eyes appear at the end of the *nigredo* and with the beginning of the *albedo*. Another simile of the same sort is the *scintillae* that appear in the dark substance. This idea is traced back to Zacharias 4 : 10 (DV): "And they shall rejoice and see the tin plummet in the hand of Zorobabel. These are the seven eyes of the Lord that run to and fro through the whole earth." (Cf. Eirenaeus Orandus, in the introduction to Nicholas Flamel's *Exposition of the Hieroglyphicall Figures*, 1624, fol. A 5.) They are the seven eyes of God on the corner-stone of the new temple (Zach. 3 : 9). The number seven suggests the seven stars, the planetary gods, who were depicted by the alchemists in a cave under the earth (Mylius, *Philosophia reformata*, 1622, p. 167). They are the "sleepers enchained in Hades" (Berthelot, *Collection des anciens alchimistes grecs*, IV, xx, 8). This is an allusion to the legend of the seven sleepers.

[17] Vollers, p. 254. This may possibly be due to Christian influence: one thinks of the fish meals of the early Christians and of fish symbolism in general. Vollers himself stresses the analogy between Christ and Khidr. Concerning the fish symbolism, see *Aion*.

[18] Further examples in *Symbols of Transformation*, Part II. I could give many more from alchemy, but shall content myself with the old verse:

> "This is the stone, poor and of little price.
> Spurned by the fool, but honoured by the wise."

(*Ros. phil.*, in *Art. aurif.*, II, p. 210.) The "lapis exilis" may be a connecting-link with the "lapsit exillis," the grail of Wolfram von Eschenbach.

[19] [The Ojibway legend of Mondamin was recorded by H. R. Schoolcraft and became a source for Longfellow's *Song of Hiawatha*. Cf. M. L. Williams, *School-craft's Indian Legends*, pp. 58ff.—EDITORS.]

[20] Rhine, *New Frontiers of the Mind*. [Cf. also "Synchronicity: An Acausal Connecting Principle."—EDITORS.]

[21] He spoke in Kiswahili, the lingua franca of East Africa. It contains many words borrowed from Arabic, as shown by the above example: *kitab* = book.

[22] There are similar indications in the Jewish tales about Alexander. Cf. Bin Gorion, *Der Born Judas*, III, p. 133, for the legend of the "water of life," which is related to the 18th Sura.

[23] [For a fuller discussion of these relationships, see *Symbols of Transformation*, pars. 282ff.—EDITORS.]

[24] Just as the Dioscuri come to the aid of those who are in danger at sea.

[1] Kerényi, "The Primordial Child in Primordial Times."

[2] *Der Mensch in der Geschichte* (1860).

[3] *Psyche* (1846).

[4] A working example in "The Concept of the Collective Unconscious," pars. 105ff., above.

[5] Freud, in his *Interpretation of Dreams* (p. 261), paralleled certain aspects of infantile psychology with the Oedipus legend and observed that its "universal validity" was to be explained in terms of the same infantile premise. The real working out of mythological material was then taken up by my pupils (A. Maeder, "Essai d'interprétation de quelques râves," 1907, and "Die Symbolik in den Legenden, Märchen, Gebräuchen, und Träumen," 1908; F. Riklin, "Über Gefängnispsychosen," 1907, and *Wishfulfilment and Symbolism in Fairy Tales*, orig. 1908); and by K. Abraham, *Dreams and Myths*, orig. 1909. They were succeeded by Otto Rank of the Viennese school (*The Myth of the Birth of the Hero*, orig. 1922). In the *Psychology of the Unconscious* (orig. 1911; revised and expanded as *Symbols of Transformation*), I presented a somewhat more comprehensive examination of psychic and mythological parallels. Cf. also my essay in this volume, "Concerning the Archetypes, with Special Reference to the Anima Concept."

[6] This fact is well known, and the relevant ethnological literature is too extensive to be mentioned here.

[7] Cf. "The Structure of the Psyche," pars. 330ff.

[8] Except for certain cases of spontaneous vision, *automatismes téléologiques* (Flournoy), and the processes in the method of "active imagination" which I have described [e.g., in "The Transcendent Function" and *Mysterium Coniunctionis*, pars. 706, 753f.—EDITORS].

[9] The relevant material can be found in the unpublished reports of the seminars I gave at the Federal Polytechnic Institute (ETH) in Zurich in 1936–39, and in Michael Fordham's book *The Life of Childhood*.

[20] *Symbols of Transformation*, index, s.v.

[21] It may not be superfluous to point out that lay prejudice is always inclined to identify the child motif with the concrete experience "child," as though the real child were the cause and pre-condition of the existence of the child motif. In psychological reality, however, the empirical idea "child" is only the means (and not the only one) by which to express a psychic fact that cannot be formulated more exactly. Hence by the same token the mythological idea of the child is emphatically not a copy of the empirical child but a *symbol* clearly recognizable as such: it is a wonder-child, a divine child, begotten, born, and brought up in quite extraordinary circumstances, and not—this is the point—a human child. Its deeds are as miraculous or monstrous as its nature and physical constitution. Only on account of these highly unempirical properties is it necessary to speak of a "child motif" at all. Moreover, the mythological "child" has various forms: now a god, giant, Tom Thumb, animal, etc., and this points to a causality that is anything but rational or concretely human. The same is true of the "father" and "mother" archetypes which, mythologically speaking, are equally irrational symbols.

[39] *The Flowing Light of the Godhead*.

[40] Salomon, *Opicinus de Canistris*.

[41] Cf. the diatribe by Bishop Asterius (Foucart, *Mystères of d'Eleusis*, pp. 477ff.). According to Hippolytus' account the hierophant actually made himself impotent by a draught of hemlock. The self-castration of priests in the worship of the Mother Goddess is of similar import.

[42] A more detailed account of these developments is to be found in "The Relations between the Ego and the Unconscious."

[1] To the best of my knowledge, no other suggestions have been made so far. Critics have contented themselves with asserting that no such archetypes exist. Certainly they do not exist, any more than a botanical system exists in nature! But will anyone deny the existence of natural plant-families on that account? Or will anyone deny the occurrence and continual repetition of certain morphological and functional similarities? It is much the same thing in principle with the typical figures of the unconscious. They are forms existing *a priori*, or biological norms of psychic activity.

[2] The "personalistic" approach interprets such dreams as "wish-fulfilments." To many, this kind of interpretation seems the only possible one. These dreams, however, occur in the most varied circumstances, even in circumstances when the wish-fulfilment theory becomes entirely forced or arbitrary. The investigation of motifs in the field of dreams therefore seems to me the more cautious and the more appropriate procedure.

[3] The double vision of a salamander, of which Benvenuto Cellini tells in his autobiography, would be an anima-projection caused by the music his father was playing.

[4] One of my patients, whose principal difficulty was a negative mother-complex, developed a series of fantasies on a primitive mother-figure, an Indian woman, who instructed her on the nature of woman in general. In these pronouncements a special paragraph is devoted to blood, running as follows: "A woman's life is close to the *blood*. Every month she is reminded of this, and birth is indeed a bloody business, destructive and creative. A woman is only *permitted* to give birth, but the new life is not *her* creation. In her heart of hearts she knows this and rejoices in the grace that has fallen to her. She is a little mother, not the *Great Mother*. But her little pattern is like the great pattern. If she understands this she is blessed by nature, because she has submitted in the right way and can thus partake of the nourishment of the Great Mother…."

[5] Often the moon is simply "there," as for instance in a fantasy of the chthonic mother in the shape of the "Woman of the Bees" (Josephine D. Bacon, *In the Border Country*, pp. 14ff.): "The path led to a tiny hut of the same colour as the *four great trees* that stood about it. Its door hung wide open, and in the middle of it, on a low stool, there sat an old woman wrapped in a long cloak, looking kindly at her…." The hut was filled with the steady *humming of bees*. In the corner of the hut there was a deep cold *spring*, in which "a white moon and little stars" were reflected. The old woman exhorted the heroine to remember the duties of a woman's life. In Tantric yoga an "indistinct hum of swarms of love-mad bees" proceeds from the slumbering Shakti (*Shat-Chakra Nirupana*, in Avalon, *The Serpent Power*, p. 29). Cf. infra, the dancer who dissolves into a *swarm of bees*. Bees are also, as an allegory, connected with Mary, as the text for the consecration of the Easter candle shows. See Duchesne, *Christian Worship: Its Origin* and Evolution, p. 253.

[6] [See Neumann, *The Great Mother*, Pls. 1a, 3. This entire work elucidates the present study.—EDITORS.]

[7] *Psychology and Alchemy*, Part II.

[8] I would refer to the thesis of my pupil Jan Nelken, "Analytische Beobachtungen über Phantasien eines Schizophrenen," as also to my own analysis of a series of fantasies in *Symbols of Transformation*.

[9] Cf. *Symbols of Transformation*. H. G. Baynes' book, *The Mythology of the Soul*, runs to 939 pages and endeavours to do justice to the material provided by only two cases.

[10] [Cf. infra, "On the Psychology of the Trickster-Figure."—EDITORS.]

[11] *Theatrum chemicum*, I (1602), pp. 286ff.

[12] "Humanum genus, cui Deo resistere iam innatum est, non desistit media quaerere, quibus proprio conatu laqueos evadat, quos sibimet posuit, ab eo non petens auxilium, a quo solo dependet omnis

misericordiae munus. Hinc factum est, ut in sinistram viae partem officinam sibi maximam exstruxerint … huic domui praeest industria, etc. Quod postquam adepti fuerint, ab industria recedentes *in secundam mundi regionem* tendunt: *per infirmitatis pontem* facientes transitum…. At quia bonus Deus retrahere vellet, infirmitates in ipsis dominari permittit, turn rursus ut prius remedium [industrial] a se quaerentes, *ad xenodochium etiam a sinistris constructum* et permaximum confluunt, cui medicina praeest. Ibi pharmacopolarum, chirurgorum et physicorum ingens est copia." (p. 288.)

[13] "… pervenietis ad Sophiae castra, quibus excepti, longe vehementiori quam antea cibo reficiemini…. viventis aquae fluvius tam admirando fluens artificio de montis apice. (De Sophiae fonte scaturiunt aquael)" [Slightly modified by Professor Jung. Cf. Dorn, pp. 279–80.—EDITORS.]

[14] Only extracts from the dreams are given, so far as they bear on the anima.

[15] The following statements are not meant as "interpretations" of the dreams. They are intended only to sum up the various forms in which the anima appears.

[16] Cf. the third paper in this volume.

[1] [First published as a lecture, "Zur Psychologie des Geistes," in the *Eranos-Jahr-buch 1945*. Revised and published as "Zur Phänomenologie des Geistes im Märchen," in *Symbolik des Geistes* (Zurich, 1948), from which the present translation was made. This translation was published in a slightly different form in *Spirit and Nature* (Papers from the Eranos Yearbooks, 1; New York, 1953; London, 1954).—EDITORS.]

[2] [An Hegelian term, roughly equivalent to our "spirit of man."—TRANS.]

[3] See my "Spirit and Life."

[4] Ludwig Klages, *Der Geist als Widersacher der Seele*.

[5] *Soul*, from Old German *saiwaló*, may be cognate with *αιόλος*, 'quick-moving, changeful of hue, shifting.' It also has the meaning of 'wily' or 'shifty"; hence an air of probability attaches to the alchemical definition of *anima* as Mercurius.

[6] Even if one accepts the view that a self-revelation of spirit—an apparition for instance—is nothing but an hallucination, the fact remains that this is a spontaneous psychic event not subject to our control. At any rate it is an autonomous complex, and that is quite sufficient for our purpose.

[7] Cf. *Psychology and Alchemy*, par. 115.

[8] Cf. the vision of the "naked boy" in Meister Eckhart (trans. by Evans, I, p. 438).

[9] I would remind the reader of the "boys" in Bruno Goetz's novel *Das Reich ohne Raum*.

[10] Cf. the paper on the "Child Archetype" in this volume, pars. 268f.

[11] Hence the many miraculous stories about rishis and mahatmas. A cultured Indian with whom I once conversed on the subject of gurus told me. when I asked him who his guru had been, that it was Shankaracharya (who lived in the 8th and 9th cents.) "But that's the celebrated commentator," I remarked in amazement. Whereupon he replied, "Yes, so he was; but naturally it was his spirit," not in the least perturbed by my Western bewilderment.

[12] I am indebted to Mrs. H. von Roques and Dr. Marie-Louise von Franz for the fairytale material used here.

[13] *Finnische und estnische Volksmärchen*, No. 68, p. 208 ["How an Orphan Boy Unexpectedly Found His Luck"]. [All German collections of tales here cited are listed under "Folktales" in the bibliography, q.v. English titles of tales are given in brackets, though no attempt has been made to locate published translations.—EDITORS.]

[14] The mountain stands for the goal of the pilgrimage and ascent, hence it often has the psychological meaning of the self. The *I Ching* describes the goal thus: "The king introduces him / To the Western Mountain" (Wilhelm/Baynes trans., 1967, p. 74 —Hexagram 17, *Sui*, "Following"). Cf. Honorius of Autun (*Expositio in Cantica canticorum*, col. 389): "The mountains are prophets." Richard of St. Victor says: "Vis videre Christum transfiguratum? Ascende in montem istum, disce cognoscere te ipsum" (Do you wish to see the transfigured Christ? Ascend that mountain and learn to know yourself). (*Benjamin minor*, cols. 53–56.)

[15] In this respect we would call attention to the phenomenology of yoga.

[16] There are numerous examples of this: *Spanische und Portugiesische Volksmärchen*, pp. 158, 199 ["The White Parrot" and "Queen Rose, or Little Tom"]; *Russische Volksmärchen*, p. 149 ["The Girl with No Hands"]: *Balkanmärchen*, p. 64 ["The Shepherd and the Three Samovilas (Nymphs)"]; *Märchen aus Iran*, pp. 150ff. ["The Secret of the Bath of Windburg"]; *Nordische Volksmärchen*, I, p. 231 ["The Werewolf"].

[17] To the girl looking for her brothers he gives a ball of thread that rolls towards them (*Finnische und Estnische Volksmärchen*, p. 260 [“The Contending Brothers”]). The prince who is searching for the kingdom of heaven is given a boat that goes by itself (*Deutsche Märchen seit Grimm*, pp. 381 f. [“The Iron Boots”]). Other gifts are a flute that sets everybody dancing (*Balkanmärchen*, p. 173 [“The Twelve Crumbs”]), or the path-finding ball, the staff of invisibility (*Nordische Volksmärchen*, I, p. 97 [“The Princess with Twelve Pairs of Golden Shoes”]), miraculous dogs (ibid., p. 287 [“The Three Dogs”]), or a book of secret wisdom (*Chinesische Volksmärchen*, p. 258 [“Jang Liang”]).

[18] *Finnische und estnische Volksmärchen*, loc. cit.

[19] *Deutsche Märchen seit Grimm*, p. 382 [op. cit.]. In one Balkan tale (*Balkan-Märchen*, p. 65 [“The Shepherd and the Three Samovilas”]) the old man is called the “Czar of all the birds.” Here the magpie knows all the answers. Cf. the mysterious “master of the dovecot” in Gustav Meyrink’s novel *Der weisse Dominikaner*.

[20] *Märchen aus Iran*, p. 152 [op. cit.].

[21] *Spanische und Portugiesische Märchen*, p. 158 [“The White Parrot”].

[25] *Balkanmärchen*, p. 217 [“The Lubi (She-Devil) and the Fair of the Earth”].

[26] This occurs in the tale of the griffin, No. 84 in the volume of children’s fairytales collected by the brothers Grimm (1912), II, pp. 84ft. The text swarms with phonetic mistakes. [The English text (trans. by Margaret Hunt, rev. by James Stern, no. 165) has “hoary.”—TRANS.]

[27] Goethe, “Die neue Melusine.”

[28] Cf. “The Visions of Zosimos,” Par. 87 (III, i, 2–3).

[29] In one Siberian fairytale (*Märchen aus Sibirien*, no. 13 [“The Man Turned to Stone”]) the old man is a white shape towering up to heaven.

[30] *Indianermärchen aus Sudamerika*, p. 285 [“The End of the World and the Theft of Fire”—Bolivian].

[31] *Indianermärchen aus Nordamerika*, p. 74 [Tales of Manabos: “The Theft of Fire”].

[32] *Deutsche Märchen seit Grimm*, pp. 189ff.

[33] In his “Cantilena” (15 cent.). [Cf. *Mysterium Coniunctionis*, par. 374.].

[34] Prudentius, *Contra Symmachum*, I, 94 (trans. by Thomson, I, p. 356). See Hugo Rahner, “Die seelenheilende Blume.”

[35] *Balkanmärchen*, pp. 34ff. [“The Deeds of the Czar’s Son and His Two Companions”].

[36] Ibid., pp. 177ff. [“The Son-in-Law from Abroad”].

[37] *Deutsche Märchen seit Grimm*, pp. 1ff. [“The Princess in the Tree”].

[38] With reference to the quaternity I would call attention to my earlier writings, and in particular to *Psychology and Alchemy* and “Psychology and Religion.”

[39] The oldest representation I know of this problem is that of the four sons of Horus, three of whom are occasionally depicted with the heads of animals, and the other with the head of a man. Chronologically this links up with Ezekiel's vision of the four creatures, which then reappear in the attributes of the four evangelists. Three have animal heads and one a human head (the angel). [Cf. frontispiece to *Psychology and Religion: West and East.*—EDITORS.]

[40] According to the dictum in the "Tabula smaragdina," "Quod est inferius, est sicut quod est superius" (That which is below is like that which is above).

[41] Cf. *Psychology and Alchemy*, fig. 54 and par. 539; and, for a more detailed account, "The Spirit Mercurius," par. 271.

[42] This unexplained passage has been put down to Plato's "drollery."

[43] In *Deutsche Märchen seit Grimm* (I, p. 256 ["The Mary-Child"]) it is said that the "Three-in-One" is in the forbidden room, which seems to me worth noting.

[44] Aelian (*De natura animalium*, I, 47) relates that Apollo condemned the ravens to perpetual thirst because a raven sent to fetch water dallied too long. In German folklore it is said that the raven has to suffer from thirst in June or August, the reason given being that he alone did not mourn at the death of Christ, and that he failed to return when Noah sent him forth from the ark. (Köhler, *Kleinere Schriften zur Märchenforschung*, p. 3.) For the raven as an allegory of evil, see the exhaustive account by Hugo Rahner, "Earth Spirit and Divine Spirit in Patristic Theology." On the other hand the raven is closely connected with Apollo as his sacred animal, and in the Bible too he has a positive significance. See Psalm 147 : 9: "He giveth to the beast his food, and to the young ravens which cry"; Job 38: 41: "Who provideth for the raven his food? when his young ones cry unto God, they wander for lack of meat." Cf. also Luke 12 : 24. Ravens appear as true "ministering spirits" in I Kings 17 : 6, where they bring Elijah the Tishbite his daily fare.

[45] Pictured as three princesses, buried neck deep, in *Nordische Volksmärchen*, II, pp. 126ff. ["The Three Princesses in the White Land"].

[46] For the function theory, see *Psychological Types*.

[47] I would like to add, for the layman's benefit, that the theory of the psyche's structure was not derived from fairytales and myths, but is grounded on empirical observations made in the field of medico-psychological research and was corroborated only secondarily through the study of comparative symbology, in spheres very far removed from ordinary medical practice.

[48] A typical enantiodromia is played out here: as one cannot go any higher along this road, one must now realize the other side of one's being, and climb down again.

[49] The young man asks himself, on catching sight of the tree, "How would it be if you were to look at the world from the top of that great tree?"

[50] The "omniscience" of the unconscious components is naturally an exaggeration. Nevertheless they do have at their disposal—or are influenced by—subliminal perceptions and memories of the unconscious, as well as by its instinctive archetypal contents. It is these that give unconscious activities their unexpectedly accurate information.

[51] The hunter has reckoned without his host, as generally happens. Seldom or never do we think of the price exacted by the spirit's activity.

[52] Cf. the Heracles cycle.

[53] The alchemists stress the long duration of the work and speak of the "longissima via," "diuturnitas immensae meditationis," etc. The number 12 may be connected with the ecclesiastical year, in which the redemptive work of Christ is fulfilled. The lamb-sacrifice probably comes from this source too.

[54] "Daughter of the sea."—Afanas'ev, *Russian Fairy Tales*, pp. 553ff.

[55] The old man puts the dismembered body into a barrel which he throws into the sea. This is reminiscent of the fate of Osiris (head and phallus).

[56] From *kost*, 'bone,' and *pakost, kapost*, 'disgusting, dirty.'

[57] Ka-mutef means "bull of his mother." See Jacobsohn, "Die dogmatische Stellung des Königs in der Theologie der alten Aegypter," pp. 17, 35, 41ff.

[58] Cf. *Symbols of Transformation*, pars. 370ff., 421.

[59] The fact that she is no ordinary girl, but is of royal descent and moreover the *electa* of the evil spirit, proves her nonhuman, mythological nature. I must assume that the reader is acquainted with the idea of the anima.

[60] "I ween that I hung / on the windy tree.
Hung there for nights full nine;
With the spear I was wounded, / and offered I was
To Othin, myself to myself,
On the tree that none / may ever know
What root beneath it runs."

—*Hovamol*, 139 (trans. by H. A. Bellows, p. 60).

[61] Cf. the experience of God as described by Nietzsche in "Ariadne's Lament":

"I am but thy quarry,
Cruellest of hunters!
Thy proudest captive,
Thou brigand back of the clouds!"

—*Gedichte und Sprüche*, pp. 155ff.

[62] Cf. Emma Jung, "On the Nature of the Animus."

[63] As regards the triadic nature of Wotan cf. Ninck, *Wodan una germanischer Schicksalsglaube*, p. 142. His horse is also described as, among other things, three-legged.

[64] The assumption that they are a brother-sister pair is supported by the fact that the stallion addresses the mare as "sister." This may be just a figure of speech; on the other hand sister means sister, whether we take it figuratively or non-figuratively. Moreover, incest plays a significant part in mythology as well as in alchemy.

[65] Human in so far as the anima is replaced by a human person.

[66] The great tree corresponds to the *arbor philosophica* of the alchemists. The meeting between an earthly human being and the anima, swimming down in the shape of a mermaid, is to be found in the so-called "Ripley Scrowle." Cf. *Psychology and Alchemy*, fig. 257.

[67] Cf. my “Wotan.”

[1] [Originally published as part 5 of *Der göttliche Schelm*, by Paul Radin, with commentaries by C. G. Jung and Karl Kerényi (Zurich, 1954). The present translation then appeared in the English version of the volume: *The Trickster: A Study in American Indian Mythology* (London and New York, 1956); it is republished here with only minor revisions.—EDITORS.]

[2] Du Cange, *Glossarium*, s.v. Kalendae, p. 1666. Here there is a note to the effect that the French title "sou-diacres" means literally 'saturi diaconi' or 'diacres saouls' (drunken deacons).

[3] These customs seem to be directly modelled on the pagan feast known as "Cervula" or "Cervulus." It took place on the kalends of January and was a kind of New Year's festival, at which people exchanged *strenae* (étrennes, 'gifts'), dressed up as animals or old women, and danced through the streets singing, to the applause of the populace. According to Du Cange (s.v. cervulus), sacrilegious songs were sung. This happened even in the immediate vicinity of St. Peter's in Rome.

[4] Part of the *festum fatuorum* in many places was the still unexplained ball-game played by the priests and captained by the bishop or archbishop, "ut etiam sese ad lusum pilae demittent" (that they also may indulge in the game of pelota). *Pila* or *pelota* is the ball which the players throw to one another. See Du Cange, s.v. Kalendae and pelota.

[5] "Puella, quae cum asino a parte Evangelii prope altare collocabatur" (the girl who stationed herself with the ass at the side of the altar where the gospel is read). Du Cange, s.v. festum asinorum.

[6] *Caetera* instead of *vetera?* [Trans. by A. S. B. Glover:

From the furthest Eastern clime
Came the Ass in olden time,
Comely, sturdy for the road,
Fit to bear a heavy load.

Sing then loudly, master Ass,
Let the tempting titbit pass:
You shall have no lack of hay
And of oats find good supply.

Say Amen, Amen, good ass, (here a *genuflection is made*)
Now you've had your fill of grass;
Ancient paths are left behind:
Sing Amen with gladsome mind.]

[7] Cf. also Tertullian, *Apologeticus adversus gentes*, XVI.

[8] [Reproduced in *Symbols of Transformation*, pl. XLIII.—EDITORS.]

[9] *Thus Spake Zarathustra*, Part. IV, ch. LXXVIII.

[10] I am thinking here of the series called "Balli di Sfessania." The name is probably a reference to the Etrurian town of Fescennia, which was famous for its lewd songs. Hence "Fescennina licentia" in Horace, Fescenninus being the equivalent of øαλλικός.

[11] Cf. the article "Daily Paper Pantheon," by A. McGlashan, in *The Lancet* (1953), p. 238, pointing out that the figures in comic-strips have remarkable archetypal analogies.

[12] Earlier stages of consciousness seem to leave perceptible traces behind them. For instance, the chakras of the Tantric system correspond by and large to the regions where consciousness was earlier localized, *anahata* corresponding to the breast region, *manipura* to the abdominal region,

svadhistana to the bladder region, and *visuddha* to the larynx and the speech-consciousness of modern man. Cf. Avalon, *The Serpent Power*.

[13] The same idea can be found in the Church Father Irenaeus, who calls it the "umbra." *Adversus haereses*, I, ii, 1.

[14] For instance, the ducking of the "Ueli" (from Udalricus = Ulrich, yokel, oaf, fool) in Basel during the second half of January was, if I remember correctly, forbidden by the police in the 1860's, after one of the victims died of pneumonia.

[15] Not to forget something means keeping it in consciousness. If the enemy disappears from my field of vision, then he may possibly be behind me—and even more dangerous.

[16] Radin, *The World of Primitive Man*, p. 3.

[17] Ibid., p. 5.

[18] By the metaphor "standing behind the shadow" I am attempting to illustrate the fact that, to the degree in which the shadow is recognized and integrated, the problem of the anima, i.e., of relationship, is constellated. It is understandable that the encounter with the shadow should have an enduring effect on the relations of the ego to the inside and outside world, since the integration of the shadow brings about an alteration of personality. Cf. *Aion*, Part II of this vol., pars. 13ff.

[19] A crocodile stole a child from its mother. On being asked to give it back to her, the crocodile replied that he would grant her wish if she could give a true answer to his question: "Shall I give the child back?" If she answers "Yes," it is not true, and she won't get the child back. If she answers "No," it is again not true, so in either case the mother loses the child.

[20] Neumann, *The Origins and History of Consciousness*, passim.

[1] [Originally written in English as “The Meaning of Individuation,” the introductory chapter of *The Integration of the Personality* (New York, 1939; London. 1940), a collection of papers otherwise translated by Stanley Dell. Professor Jung afterward rewrote the paper, with considerable revision, in German and published it as “Bewusstsein, Unbewusstes und Individuation,” *Zentralblatt für Psychotherapie und ihre Grenzgebiete* (Leipzig), XI (1939) : 5, 257–70. The original English version was slightly longer, owing to material which Mr. Dell edited into it from other writings of Jung’s, for the special requirements of the *Integration* volume. It is the basis of the present version, together with the 1939 German version.—EDITORS.]

[2] Modern physicists (Louis de Broglie, for instance) use instead of this the concept of something “discontinuous.”

[3] [See also Jung’s *Psychiatric Studies*, index, s. vv.—EDITORS.]

[4] By this I mean only certain cases of schizophrenia, such as the famous Schreber case (*Memoirs of My Nervous Illness*) or the case published by Nelken (“Analytische Beobachtungen über Phantasien eines Schizophrenen,” 1912).

[5] *Psychological Types*, Def. 48; “The Relations between the Ego and the Unconscious,” pars. 296ff.; *Psychology and Alchemy*, Part II. Cf. also the third paper in this volume.

[7] *Symbols of Transformation*, Part II.

[8] Cf. supra, “The Phenomenology of the Spirit in Fairytales.”

[9] See n. 4, above.

[10] [Untitled poem (“Warum gabst du uns die tiefen Blicke”) in *Werke*, II, p. 43.—EDITORS.]

[11] *Ripley Reviv’d; or, An Exposition upon Sir George Ripley’s Hermetico-Poetical Works* (1678), trans. into German in 1741 and possibly known to Goethe.

[12] Cf. the celebrated “Visio Arislei” (*Artis auriferae*, 1593, II, pp. 246ff.), also available in German: Ruska, *Die Vision des Arisleus*, p. 22.

[13] For an example of the method, see *Psychology and Alchemy*, Part II.

[14] In my *Symbols of Transformation*, I have described the case of a young woman with a “hero-story,” i.e., an animus fantasy that yielded a rich harvest of mythological material. Rider Haggard, Benoît, and Goethe (in *Faust*) have all stressed the historical character of the anima.

[15] [*Psychological Types*, Def. 51 and ch. V, 3c. In the *Collected Works*, the term “uniting symbol” supersedes the earlier translation “reconciling symbol.”—EDITORS.]

[16] [Cf. “The Transcendent Function.”—EDITORS.]

[1] [Translated from “Zur Empirie des Individuationsprozesses,” *Gestaltungen des Unbewussten* (Zurich, 1950), where it carries the author’s note that it is a “thoroughly revised and enlarged version of the lecture of the same title first published in the *Eranos-Jahrbuch 1933*,” i.e., in 1934. The original version was translated by Stanley Dell and published in *The Integration of the Personality* (New York, 1939; London, 1940). The motto by Lao-tzu is from a translation by Carol Baumann in her article “Time and Tao,” *Spring*, 1951, p. 30.—EDITORS.]

[2] Cf. *Psychology and Alchemy*, pars. 138f., 306, and Wei Po-yang, “An Ancient Chinese Treatise on Alchemy.”

[3] *Psychology and Alchemy*, par. 109, n. 38.

[4] Caesarius of Heisterbach, *The Dialogue on Miracles*, trans. by Scott and Bland, Dist. IV, c. xxxiv (p. 231) and Dist. I, c. xxxii (p. 42): “His soul was like a glassy spherical vessel, that had eyes before and behind.” A collection of similar reports in Bozzano, *Popoli primitivi e Manifestation supernormali*.

[5] Cf. my “Paracelsus as a Spiritual Phenomenon,” par. 190. It is Hermes Kyllenios, who calls up the souls. The caduceus corresponds to the phallus. Cf. Hippolytus, *Elenchos*, V, 7, 30.

[6] The same association in *Elenchos*, V, 16, 8: serpent = δύναμις of Moses.

[7] Ruland (*Lexicon*, 1612) speaks of “the gliding of the mind or spirit into another world.” In the *Chymical Wedding* of Rosencreutz the lightning causes the royal pair to come alive. The Messiah appears as lightning in the Syrian Apocalypse of Baruch (Charles, *Apocrypha*, II, p. 510). Hippolytus (*Elenchos*, VIII, 10, 3) says that, in the view of the Docetists, the Monogenes drew together “like the greatest lightning-flash into the smallest body” (because the Aeons could not stand the effulgence of the Pleroma), or like “light under the eyelids.” In this form he came into the world through Mary (VIII, 10, 5). Lactantius (*Works*, trans. by Fletcher, I, p. 470) says: “… the light of the descending God may be manifest in all the world as lightning.” This refers to Luke 17 : 24: “… as the lightning that lighteneth … so shall the Son of man be in his day.” Similarly Zach. 9: 14: “And the Lord God … his dart shall go forth as lightning” (DV).

[8] *Forty Questions concerning the Soul (Works*, ed. Ward and Langcake, II, p. 17).

[9] *The High and Deep Searching of the Threefold Life of Man (Works*, II), p. 11.

[10] *Aurora (Works*, I), X.17, p. 84.

[11] Ibid., X. 38, p. 86.

[12] Ibid., X. 53, p. 87.

[13] Salniter = *sal nitri* = Saltpetre; like salt, *the prima materia. Three Principles of the Divine Essence (Works*, I), I. 9, p. 10.

[14] *Aurora*, XV. 84, p. 154. Here the lightning is not a revelation of God’s will but a Satanic change of state. Lightning is also a manifestation of the devil (Luke 10: 18).

[15] Ibid., XIX. 19, p. 185.

[16] Ibid., XI. 10, p. 93.

[17] For Böhme the four “qualities” coincide partly with the four elements but also with dry, wet, warm, cold, the four qualities of taste (e.g., sharp, bitter, sweet, sour), and the four colours.

[18] A heart forms the centre of the mandala in the *Forty Questions*. See Fig. 1.

[19] *Aurora*, XI, 27–28, p. 94.

[20] “Stock” in this context can mean tree or cross (*σταυός*, ‘stake, pole, post’), but it could also refer to a staff or stick. It would then be the magical wand that, in the subsequent development of these pictures, begins to sprout like a tree. Cf. infra, par. 570.

[21] *Aurora*, XI. 37, p. 95.

[22] The lower darkness corresponds to the elemental world, which has a quaternary character. Cf. the four Achurayim mentioned in the commentary to Picture 7.

[23] The reason for this is that the lightning is caught by the quaternity of elements and qualities and so divided into four.

[24] Saltpetre is the arcane substance, synonymous with *Sal Saturni* and *Sal Tartan mundi maioris* (Khunrath, *Von hylealischen Chaos*, 1597, p. 263). Tartarus has a double meaning in alchemy: on the one hand it means tartar (hydrogen potassium tartrate); on the other, the lower half of the cooking vessel and also the arcane substance (Eleazar, *Uraltes Chymisches Werk*, 1760, II, p. 91, no. 32). The metals grow in the “cavitates terrae” (Tartarus). Salt, according to Khunrath, is the “centrum terrae physicum.” Eleazar says that the “Heaven and Tartarus of the wise” change all metals back into mercury. Saturn is a dark “malefic” star. There is the same symbolism in the Offertory from the Mass for the Dead: “Deliver the souls of all the faithful departed from the pains of hell and from the deep pit; deliver them from the mouth of the lion [attribute of Ialdabaoth, Saturn], lest Tartarus lay hold on them, and they fall into darkness.” Saturn “maketh darkness” (Böhme, *Threefold Life*, IX. 85, p. 96) and is one aspect of the Salniter (*Signatura rerum*, XIV. 46–48, p. 118). Salniter is the “dried” or “fixed” form and embodiment of the seven “Source Spirits” of God, who are all contained in the seventh, Mercury, the “Word of God” (*Aurora*, XI. 86f., p. 99 and XV. 49, p. 151; *Sig. rer.*, IV. 35, p. 28). Salniter, like mercury, is the mother and cause of all metals and salts (*Sig. rer.*, XIV. 46 and III. 16, pp. 118 and 19). It is a subtle body, the paradisal earth and the spotless state of the body before the Fall, and hence the epitome of the *prima materia*.

[25] [“Flagrat” and “lubet” are used by Böhme to signify respectively “flash, flame, burning” And “Desire, Affect.”—EDITORS.]

[26] Reference to the “waters which were above the firmament” (Gen. 1 : 7).

[27] *Sig. rer.*, XIV. 32–33, p. 116.

[28] *Tabula principiorum*, 3 (Amsterdam edn., 1682, p. 271).

[29] Ibid., 5, p. 271.

[30] Ibid., 42, p. 279.

[31] *Four Tables of Divine Revelation*, p. 14.

[32] Ibid., p. 13.

[33] Its official name is *hydrargyrum sulfuratum rubrum*. Another version of its sign is : cf. Lüdy, *Alchemistische und Chemische Zeichen*, and Gessmann, *Die Geheimsymbole der Alchymie, Arzneikunde und Astrologie des Mittelalters*.

[34] “There is very great doubt among doctors as to what is actually signified by Cinnabar, for the term is applied by different authorities to very diverse substances.” Ruland, *Lexicon*, p. 102.

[35] Berthelot, *Alch. grecs*, III, xxix, 24.

[36] Ibid., I, V, 1. It may be remarked that the dragon has three ears and four legs (The axiom of Maria! Cf. Psychology and *Alchemy*, pars. 209f.)

[37] *Hist, nat*., Lib. XXXΠI, cap. vii.

[38] The medical term *anthrax* means ‘carbuncle, abscess.’

[39] Antimony is also denoted by ♁. Regulus = “The impure mass of metal formed beneath the slag in melting and reducing ores” (Merriam-Webster).

[40] Michael Maier (*Symbola aureae mensae*, 1617, p. 380) says: “The true antimony of the Philosophers lies hidden in the deep sea, like the son of the King.”

[41] Praised as Hercules Morbicida, “slayer of diseases” (ibid., p. 378).

[42] The book was (first?) mentioned by Maier, ibid., pp. 379ff.

[43] Also ⚃, a pure quaternity.

[44] Τάρταρος, like *βόρβορος*, *βάρβαρος*, etc. is probably onomatopoeic, expressing terror. *Τάργανου* means ‘vinegar, spoilt wine.’ Derived from *ταράσσω*, ‘to stir up, disturb, frighten’ (*τάραγμα*, ‘trouble, confusion’) and *τάρβος*, ‘terror, awe.’

[45] Rieu trans., p. 351.

[46] Hippolytus, *Elenchos*, V, 7, 30; Kerényi, “Hermes der Seelenführer,” p. 29.

[47] Ibid., p. 30.

[48] The Pairs of functions are thinking/feeling, sensation/intuition. see *Psychological Types*, definitions.

[49] Cf. *Psychology and Alchemy*, par. 329, for the *a priori* presence of the mandala symbol.

[50] Details in ibid., par. 406.

[51] Preisendanz, *Papyri Graecae Magicae*, II, p. 139.

[52] “The Spirit Mercurius,” pars. 267ff.

[53] *Psychology and Alchemy*, Part III, ch. 5.

[54] Cf. Wilhelm and Jung, *The Secret of the Golden Flower*.

[55] Though we talk a great deal and with some justice about the resistance which the unconscious puts up against becoming conscious, it must also be emphasized that it has a kind of gradient towards consciousness, and this acts as an urge to become conscious.

[56] The last-named refers to Rev. 21 : 21.

[57] Miss X was referring to my remarks in “The Relations between the Ego and the Unconscious,” which she knew in its earlier version in *Collected Papers on Analytical Psychology* (2nd. edn., 1920).

[58] The expressions “square,” “four-square,” are used in English in this sense.

[59] The “squared figure” in the centre of the alchemical mandala, symbolizing the *lapis*, and whose midpoint is Mercurius, is called the “mediator making peace between the enemies or elements.” [Cf. *Aion* (Part II of this vol.), pars. 377f.—EDITORS.]

[60] So called in an invocation to Hermes. Cf. Preisendanz, II, p. 139. Further particulars in *Psychology and Alchemy*, par. 172; fig. 214 is a repetition of the *quadrangulum secretum sapientum* from the *Tractatus aureus* (1610), p. 43. Cf. also my "The Spirit Mercurius," par. 272.

[61] Despite my efforts I could find no other source for the "mercury." Naturally cryptomnesia cannot be ruled out. considering the definiteness of the idea and the astonishing coincidence of its appearance (as in Böhme), I incline to the hypothesis of spontaneous emergence, which does not eliminate the archetype but, on the contrary, presupposes it.

[62] Cf. the "innermost Birth of the soul" in Böhme.

[63] This *homo interior* or *altus* was Mercurius, or was at least derived from him. Cf. "The Spirit Mercurius," pars. 284ff.

[64] The lines are painted in the classical four colours.

[65] The "giant" fish of the Abercius inscription (c. A.D. 200). [Cf. *Aion*, par. 127, n. 4.—EDITORS.]

[66] cf. Frobenius, *Schicksalskunde*, pp. 119f. The author's interpretations seem to me questionable in some respects.

[67] *Psychology and Alchemy*, par. 204; "The Phenomenology of the Spirit in Fairytales," pars. 425 and 430; and *Psychology and Religion*, par. 184.

[68] *Psychology and Alchemy*, index, s.v. "quartering."

[69] Hippolytus, *Elenchos*, V, 26, 1ff.

[70] Cf. the "account … of a many-coloured and many-shaped sphere" from the Cod. Vat. 190 (cited by Cumont in *Textes et monuments figurés relatifs aux mystères de Mithra*), which says: "The all-wise God fashioned an immensely great dragon of gigantic length, breadth and thickness, having its dark-coloured head … towards sunrise, and its tail … towards sunset." Of the dragon the text says: "Then the all-wise Demiurge, by his highest command, set in motion the great dragon with the spangled crown, I mean the twelve signs of the zodiac which it carried on its back." Eisler (*Weltenmantel und Himmelszelt*, p. 389) connects this zodiacal serpent with Leviathan. For the dragon as symbol of the year, see the Mythographus Vaticanus III, in *Classicorum Auctorum e Vaticanis Codicibus Editorum*, VI(1831), p. 162. There is a similar association in Horapollo, *Hieroglyphica*, trans. by Boas, p. 57.

[71] "The Spirit Mercurius," ch. 6.

[72] Meier, *Antike Inkubation und moderne Psychotherapie*.

[73] Vishnu is described as *dãmodara*, 'bound about the body with a rope." I am not sure whether this symbol should be considered here; I mention it only for the sake of completeness.

[74] Michael Maier, *De circulo physico quadrato* (1616), ch. I.

[75] Christ in medieval alchemy. Cf. *Psychology and Alchemy*, Part III, ch. 5.

[76] The writings of the physician and philosopher Leone Ebreo (c. 1460–1520) enjoyed widespread popularity in the sixteenth century and exercised a far-reaching influence on his contemporaries and their successors. His work is a continuation of the Neoplatonist thought developed by the physician and alchemist Marsilio Ficino(1433–99) in his commentary on Plato's *Symposium*. Ebreo's real name was Don Judah Abrabanel, of Lisbon. (Sometimes the texts have Abrabanel, sometimes Abarbanel.)

[77] Cf. the English version, *The Philosophy of Love*, trans. by Friedeberg-Seeley and Barnes, pp. 92 and 94. The source of this view can be found in the cabalistic interpretation of Yesod (Knorr von Rosenroth, *Kabbala Denudata*, 1677–84).

[78] This pseudo-biological terminology fits in with the patient’s scientific education.

[79] Another alchemical idea: the *synodos Lunae cum Sole*, or hierogamy of sun and moon. Cf. “The Psychology of the Transference,” par. 421, n. 17.

[80] More on this in “On the Nature of the Psyche,” par. 498.

[81] Here one must think of the world-encircling Ocean and the world-snake hidden in it: Leviathan, the “dragon in the sea,” which, in accordance with the Egyptian tradition of Typhon (Set) and the sea he rules over, is the devil. “The devil … surrounds the seas and the ocean on all sides” (St. Jerome, *Epistolae*, Part I, p. 12). Further particulars in Rahner, “Antenna Crucis II: Das Meer der Welt,” pp. 89ff.

[82] We find the same motif in the two mandalas published by Esther Harding in *Psychic Energy: Its Source and Its Transformation* [Pls. XVI, XVII].

[83] Naas is the same as the snakelike nous and mercurial serpent of alchemy.

[84] Hippolytus, *Elenchos*, V, 26, 21ff. This tale of Adam and Eve and the serpent was preserved until well into the Middle Ages.

[85] Apparently a play on the words Πρίαπος and ἐπριοποίησε τὰ πάντα (‘created all’). *Elenchos*, V, 26, 33.

[86] See the illustration from Reusner’s *Pandora* (1588) in my “Paracelsus as a Spiritual Phenomenon,” Fig.B4.

[87] In accordance with the classical view that the snake is *πνευματίκώτατον ξωον*, ‘the most spiritual animal.” For this reason it was a symbol for the Nous and the Redeemer.

[88] Cf. what St. John of the Cross says about the “dark night of the soul.” His interpretation is as helpful as it is psychological.

[89] Hence the alchemical mandala was likened to a *rosarium* (rose-garden).

[90] In Buddhism the “four great kings” (*lokapata*), the world-guardians, form the quaternity. Cf. the *Samyutta-Nikaya*, in *Dialogues of the Buddha*, Part II, p. 242.

[91] “God separated and divided this primordial water by a kind of mystical distillation into four parts and regions” (Sendivogius, *Epist. XIII, in* Manget, *Bibliotheca chemica*, 1702, II, p. 496). In Christianos (Berthelot, *Alch. grecs*, VI, ix, 1 and x, 1) the egg, and matter itself, consist of four components. (Cited from Xenocrates, ibid., VI, xv, 8.)

[92] In Taoist philosophy, movement to the right means a “falling” life-process, as the spirit is then under the influence of the feminine *p’o-soul*, which embodies the *yin* principle and is by nature passionate. Its designation as the anima (cf. my “Commentary on *The Secret of the Golden Flower,”* pars. 57*ff*.) is psychologically correct, although this touches only one aspect of it. The *p’o-soul* entangles *hun*, the spirit, in the world-process and in reproduction. A leftward or backward movement, on the other hand, means the “rising” movement of life. A “deliverance from outward things” occurs and the spirit obtains control over the anima. This idea agrees with my findings, but it does not take account of the fact that a person can easily have the spirit outside and the anima inside.

[93] This was told to me by the Rimpoche of Bhutia Busty, Sikkim.

[94] Water also symbolizes the “materiality” of the spirit when it has become a “fixed” doctrine. One is reminded, too, of the blue-green colour in böhme, signifying “liberty.”

[95] For the double nature of the spirit (*Mercurius duplex* of the alchemists) see “The Phenomenology of the spirit in Fairytales,” supra.

[96] Cf. the fiery serpent of Lucifer in Böhme.

[97] Cf. “A Psychological Approach to the Dogma of the Trinity,” pars. 243ff.

[98] *Elenchos*, V, 26, 27ff.

[99] *Psychology and Alchemy*, par. 457.

[100] Hauck, *Realencyclopädie für protestantische Theologie*, IV, p. 173, li. 59.

[101] Baumgartner (*Die Philosophie des Alarms de Insults*, II, Part 4, p. 118) traces this saying to a *liber Hermetis* or *liber Trismegisti*, Cod. Par. 6319 and Cod. Vat. 3060.

[102] Στεφάναι — coronae.

[103] *Δαίμων ή πάντα κυβέρναι*, a feminine *daemonium*.

[104] Freeman, *Ancilla to the Pre-Socratic Philosophers*, p. 45.

[105] *Writings of Clement of Alexandria*, trans. by Wilson, II, p. 248: “Also Dionysius Thrax, the grammarian, in his book *Respecting the Exposition of the Symbolical Signification of Circles*, says expressly, ‘Some signified actions not by words only, but also by symbols: … as the wheel that is turned in the temples of the gods [by] the Egyptians, and the branches that are given to the worshippers. For the Thracian Orpheus says:

> For the works of mortals on earth are like branches,
> Nothing has but one fate in the mind, but all things
> Revolve in a circle, nor is it lawful to abide in one place,
> But each keeps its own course wherewith it began.’”

[Verses translated from the Overbeck version in German quoted by the author.—TRANS.]

[106] Diels, *Fragmente der Vorsokratiker*, II, p. 102. Aetius, *De plac. phil*, 1, 7, 16.

[107] A Reference to Cicero, *De natura deorum* (trans. by Rackham, p. 31): “Parmenides … invents a purely fanciful something resembling a crown—*stephane* is his name for it—an unbroken ring of glowing lights encircling the sky, which he entitles god; but no one can imagine this to possess divine form, or sensation.” This ironic remark of Cicero’s shows that he was the child of another age, already very far from the primordial images.

[108] There are innumerable representations of the sun-child sitting in the lotus. Cf. Erman, *Die Religion der Aegypter*, p. 62 and *Handbook of Egyptian Religion*, p. 26. It is also found on Gnostic gems *[Psychology and Alchemy*, fig. 52]. The lotus is the customary seat of the gods in India.

[109] [Or, as in the DV, “The wicked walk round about.”—EDITORS.]

[110] *Psychology and Alchemy*, pars. 214f

[111] This interpretation was confirmed for me by my Tibetan mentor, Lingdam Gomchen, abbot of Bhutia Busty: the swastika, he said, is that which "cannot be broken, divided, or spoilt." Accordingly, it would amount to an inner consolidation of the mandala.

[112] Cf. the similar motif in the mandala of the *Amitāyur-dhyāna Sūtra*, in "The Psychology of Eastern Meditation," pars. 917, 930.

[113] "Monas hieroglyphica," *Theatr. chem*. (1602), II, p. 220. Dee also associates the cross with fire.

[114] [Cf. "Answer to Job," *Psychology and Religion*, par. 595, n. 8.—EDITORS.]

[115] The seven kings refer to previous aeons, "perished" worlds, and the four Achurayim are the so-called "back of God": "All belong to Malkhuth; which is so called because it is last in the system of Aziluth … they exist in the depths of the Shckinah" (*Kabbala Denudata*, I, p. 72). They form a masculine-feminine quaternio "of the Father and Mother of the highest, and of the Senex Israel and Tebhunah" (I, p. 675). The Senex is Ain-Soph or Kether (I, p. 635), Tebhunah is Binah, intelligence (I, p. 726). The shards also mean unclean spirits.

[116] *Kabbala Denudata*, 1, pp. 675L The shards also stand for evil. (*Zohar*, I, 137aff., II, 34b.). According to a Christian interpretation from the 17th century, Adam Belial is the body of the Messiah, the "entire body or the host of shards." (Cf. II Cor. 6 : 15.) In consequence of the Fall, the host of shards irrupted into Adam's body, its outer layers being more infected than the inner ones. The "Anima Christi" fought and finally destroyed the shards, which signify matter. In connection with Adam Belial the text refers to Proverbs 6 : 12: "A naughty person, a wicked man, walketh with a froward mouth" (AV). (*Kabbala Denudata*, II, Appendix, cap. IX, sec.2, p. 56.)

[117] "Hyperion's Song Of Fate," in *Gedichte*, p. 315. (Trans. as in Jung, *Symbols of Transformation*, p. 399.)

[118] Concerning the total vision of the "Life of Spirit and Nature," Böhme says: "We may then liken it to a round spherical Wheel, which goes on all sides, as the Wheel in Ezekiel shows" (*Mysterium pansophicum*, Sãmmtliche Werke, ed. Schiebler, VI, p. 416).

[119] *Quaestiones Theosophicae* (Amsterdam edn., 1682), p. 23. *Aurora*, XVII.9, p. 168, mentions the "seven Spirits, which kindled themselves in their outermost Birth or Geniture." They are the Spirits of God, "Source-Spirits" of eternal and timeless Nature, corresponding to the seven planets and forming the "Wheel of the Centre" (*Sig. rer*., IX, 8ff., p. 60). These seven Spirits are the seven above-mentioned "Qualities" which all come from one mother. She is the "twofold Source, evil and good in all things" (*Aurora*, p. 27). Cf. the "goddess" in Parmenides and the two-bodied Edem in Justin's gnosis.

[120] Gulielmus Mennens(1525–1608), a learned Flemish alchemist, wrote a book entitled *Aurei velleris, sive sacrae philosophiae, naturae et artis admirabilium libri tres* (Antwerp, 1604). Printed in *Theatr. chem*., V(1622), pp. 267ft.

[121] "As therefore God is three and one, so also the matter from which he created all things is triplex and one." This is the alchemical equivalent of the conscious and uncon-cious triads of functions in psychology. Cf. supra, "The Phenomenology of the Spirit in Fairytales," pars. 425 and 436ff.

[122] Mennens seems to refer not to the Cabala direct, but to a text ascribed to Moses, which I have not been able to trace. It is certainly not a reference to the Greek text called by Berthelot "Chimie de

Moise" (*Alch. grecs*, IV, xxii). Moses is mentioned now and then in the old literature, and Lenglet du Frcsnoy (*Histoire de la philosophie hermétique*, 1742, III, p. 22) cites under No. 26 a MS from the Vienna Bibliothek entitled: "Moysis Prophetae et Legislatoris Hebraeorum secretum Chimicum" (Ouvrage supposé).

[123] "Aurei velleris," I, Cap. X, in *Theatr. chem.*, V, pp. 334t.

[124] The *cauda pavonis* is identified by Khunrath with Iris, the "nuncia Dei." Dorn ("De transmutatione metallorum," *Theatr. chem.*, I, p. 599) explains it as follows: "This is the bird which flies by night without wings, which the early dew of heaven, continually acting by upward and downward ascent and descent, turns into the head of a crow (*caput corvi*), then into the tail of a peacock, and afterwards it acquires the bright wings of a swan, and lastly an extreme redness, an index of its fiery nature." In Basilides (Hippolytus, *Elenchos*, X, 14, 1) the peacock's egg is synonymous with the *sperma mundi*, the κόκκος σινάπεως. It contains the "fullness of colours," 365 of them. The golden colour should be produced from the peacock's eggs, we are told in the Cyranides (Delatte, *Textes latins et vieux français relatifs aux Cyranides*, p. 171). The light of Mohammed has the form of a peacock, and the angels were made out of the peacock's sweat (Aptowitzer, "Arabisch-Judische Schopfungstheorien," pp. 209, 233).

[125] *Sig. rer.*, XIV, 10ff., pp. 112f.

[126] See *n.* 118.

[127] The carbuncle is a synonym for the *lapis*. "The king bright as a carbuncle" (Lilius, an old source in the "Rosarium philosophorum," *Art. aurif.*, 1593, II, p. 329). "A ray … in the earth, shining in the darkness after the manner of a carbuncle gathered into itself" (from Michael Maier's exposition of the theory of Thomas Aquinas, in *Symbola aureae tnensae*, p. 377). "I found a certain stone, red, shining, transparent, and brilliant, and in it I saw all the forms of the elements and also their contraries" (quotation from Thomas in Mylius, *Philosophia reformata*, p. 42). For heaven, gold, and carbuncle as synonyms for the *rubedo*, see ibid., p. 104. The *lapis* is "shimmering carbuncle light" (Khunrath, *Von hyleal. Chaos*, p. 237). Ruby or carbuncle is the name for the *corpus glorificatum* (Glauber, *Tractatus de natura salium*, Part I, p. 42). In Rosencreutz's *Chemical Wedding* (1616) the bed-chamber of Venus is lit by carbuncles (p. 97). Cf. what was said above about *anthrax* (ruby and cinnabar).

[128] *Mysterium pansophicum*, pp. 416f

[129] The chemical causes of the *cauda pavonis* are probably the iridiscent skin on molten metals and the vivid colours of certain compounds of mercury and lead. These two metals were often used as the primary material.

[130] Statistically, at least, green is correlated with the sensation function.

[131] [See the index, s.v.; also Jung, "The Philosophical Tree."—EDITORS.]

[132] "Lovely laurel, evergreen in all its parts, standing midmost among many trees smitten by lightning, bears the inscription: 'untouched it triumphs.' this similitude refers to mary the virgin, alone among all creatures undefiled by any lightning-flash of sin." picinelli, *Mondo simbolico* (1669), Lib. IX, cap. XVI.

[133] cf. "The Spirit Mercurius," par. 241.

[134] The colour correlated with sensation in the mandalas of other persons is usually green.

[135] Cf. the Achurayim quaternity.

[136] Chochmah (= face of the man), Binah (= eagle), Gedulah (= lion), Gebhurah (= bull), the four symbolical angels in Ezekiel's vision.

[137] He gives them the names of planets and describes them as the "four Bailiffs, who hold government in the Mother, the Birth-giver," They are Jupiter, Saturn, Mars, and Sun. "In these four Forms the Spirit's Birth consists, viz. the true Spirit both in the inward and outward Being" (*Sig. rer.*, IX, 9ff., p. 61).

[138] The connection between tree and mother, especially in Christian tradition, is discussed at length in *Symbols of Transformation*, Part II.

[139] A *Summary Appendix of the Soul*, p. 117.

[140] *Forty Questions*, pp. 24ff.

[141] I do not feel qualified to go into the ethics of what "venerable Mother Nature" has to do in order to unfold her precious flower. Some people can, and those whose temperament makes them feel an ethical compulsion must do this in order to satisfy a need that is also felt by others. Erich Neumann has discussed these problems in a very interesting way in his *Tiefenpsychologie und Neue Ethik*. It will be objected that my respect for Nature is a very unethical attitude, and I shall be accused of shirking "decisions." People who think like this evidently know all about good and evil, and why and for what one has to decide. Unfortunately I do not know all this so precisely, but I hope for my patients and for myself that everything, light and darkness, decision and agonizing doubt, may turn to "good"—and by "good" I mean a development such as is here described, an unfolding which does no damage to either of them but conserves the possibilities of life.

[142] *The Secret of the Golden Flower* had not been published then. Picture 9 was reproduced in it.

[143] Cf. *Kabbala Denudata*, Appendix, ch. IV, sec.2, p. 26: "The beings created by the infinite Deity through the First Adam were all spiritual beings, viz. they were simple, shining acts, being one in themselves, partaking of a being that may be thought of as the midpoint of a sphere, and partaking of a life that may be imagined as a sphere emitting rays."

[144] "Parable of the Cloth," in *The First Fifty Discourses from the Collection of the Middle-Length Discourses (Majjhima Nikaya) of Gotama the Buddha*, I, pp. 39f., modified. This reference to the Buddha is not accidental, since the figure of the Tathagata in the lotus seat occurs many times in the patient's mandalas.

[145] Tibetan mandalas are not so divided, but very often they are embedded between heaven and hell, i.e., between the benevolent and the wrathful deities.

[146] This is the lower triad that corresponds to the Trinity, just as the devil is occasionally depicted with three heads. Cf. supra, "Phenomenology of the spirit in fairytales," pars. 425 and 436ff.

[147] Trans. by Wilhelm and Baynes (1967), pp. 67ff.

[148] *Psychology ana Alchemy*, par. 338.

[149] The same idea as the transformation into the *lapis*. Cf. ibid., par. 378.

[150] Good examples are *The secret of the Golden Flower* and Suzuki, *Introduction to Zen Buddhism*.

[151] Cf. the above quotation from the “Aureum vellus” of Mennens, where earth signifies the Father and his “shadow” signifies matter. Böhme’s view is thoroughly consistent with the character of Yahweh, who, despite his role as the guardian of justice and morality, is amoral and unjust. cf. stade, *biblische théologie des alten testaments*, I, pp. 88f.

[152] I am purposely disregarding the numerous arrangements in a circle such as the *rex gloriae* with the four evangelists, Paradise with its four rivers, the heavenly hierarchies of Dionysius the Areopagite, etc. These all ignore the reality of evil, because they regard it as a mere *privatio boni* and thereby dismiss it with a euphemism.

[153] Cf. Rahner, “Die seelenheilende Blume.”

[154] Cf. Bouché-Leclercq, *L’Astrologie grecque*, p. 136: Cancer = “crabe ou écrevisse.” The constellation was usually represented as a tailless crab.

[155] “The crab is wont to change with the changing seasons; casting off its old shell, it puts on a new and fresh one.” This, says Picinelli, is an “emblema” of the resurrection of the dead, and cites Ephesians 4: 23: “… be renewed in the spirit of your minds” (RSV). (*Mondo simbólico*, Lib. VI, No. 45.)

[156] Foreseeing the flooding of the Nile, the crabs (like the tortoises and crocodiles) bring their eggs in safety to a higher place. “They foresee the future in their mind long before it comes,” Caussin, *Polyhistor symbolicus* (1618), p. 442.

[157] Masenius, *Speculum imaginum veritatis occultae* (1714), cap. LXVII, 30, p. 768.

[158] De Gubernatis, *Zoological Mythology*, II, p. 355.

[159] Roscher, *Lexikon*, II, col.959, s.v. “Karkinos.” The same motif occurs in a dream described in *Two Essays on Analytical Psychology*, pars. 80ff.

[160] In egypt, the heliacal rising of Cancer indicates the beginning of the annual flooding of the Nile and hence the beginning of the year. Bouché-Leclercq, p. 137.

[161] [Cf. “Psychology and Religion,” p. 67, n. 5.—EDITORS.]

[162] Propertius, trans. by Butler, p. 875.

[163] De Gubernatis, II, p. 356.

[164] *The Panchatantra Reconstructed*, ed. by Edgerton, II, pp. 403f Cf. also Hoffmann-Krayer et al., *Handwõrterbuch des Deutschen Aberglaubens*, V, col. 448, s.v. “Krebs.”

[165] De Gubernatis, II, p. 356.

[166] Her horoscope shows four earth signs but no air sign. The danger coming from the animus is reflected in ☽ □ ☿.

[167] Cf. the Buddhist conception of the “eight points of the compass” in the *Amitāyur-dhyāna Sūtra;* cf. “The Psychology of Eastern Meditation,” pp. 560ff.

[168] I do not hesitate to take the synchronistic phenomena that underlie astrology seriously. Just as there is an eminently psychological reason for the existence of alchemy, so too in the case o« astrology. Nowadays it is no longer interesting to know how far these two fields are abeirations; we should rather investigate the psychological foundations on which they rest. [Cf. Jung, “Synchronicity: An Acausal Connecting Principle,” *passim.*—EDITORS.]

[169] An instance of the axiom of Maria. Other well-known examples are Horus and his 4 (or 3 + 1) sons, the 4 symbolical figures in Ezekiel, the 4 evangelists and—last but not least—the 3 synoptic gospels and the 1 gospel of St. John.

[170] [Ch. 2, pp. 211ff.—EDITORS.]

[171] “On the Nature of the Psyche,” sec. 6.

[172] [Pictures 18–24, which were not reproduced with the earlier versions of this essay, were chosen by Professor Jung from among those painted by the patient after the termination of analytical work. 1 he dates of the entire series of pictures were as follows:1–6, Oct. 1928; 7 9, Nov. 1928; 10, Jan.; 11, Feb.; 12, June.; 13, Aug.; 14, Sept.; 15, Oct.; 16. 17, Nov, all 1920; 18, Feb. 1930; 19, Aug. 1930; 20, March 1931; 21, July 1933; 22. Aug 1933 23, 1935; 24, “Night-blooming cereus, done May 1938, on last trip to Jung” (patient’s notation).—EDITORS.]

[1] [First published, as “Über Mandalasymbolik,” in *Gestaltungen des Unbewussten* (Psychologische Abhandlungen, VII; Zurich, 1950). The illustrations had originally been collected for a seminar which Professor Jung gave at Berlin in 1930. Nine of them (Figs. 1, 6, 9, 25, 26, 28, 36, 37, 38) were published with brief comments as “Examples of European Mandalas” in *Das Geheimnis der goldenen Blüte*, by Jung and Richard Wilhelm (Munich, 1929; 2nd edn., Zurich, 1938), translated by C. F. Baynes as *The Secret of the Golden Flower* (London and New York, 1931; rev. edn., 1962); subsequently published in *Coll. Works*, vol. 13. In his *Memories, Dreams, Reflections* Jung acknowledged having painted the mandalas in Figs. 6 and 36 (thus also those in Figs. 28 and 29) and the frontispiece; see U.S. edn., pp. 197, 195; Brit, edn., pp. 188ff., 187.—EDITORS.]

[2] Cf. *Psychology and Alchemy*, pars. 122ff.

[3] [Cf. Jung, Psychological Commentary on the *Tibetan Book of the Dead*, par. 850.—EDITORS.]

[4] Cf. the preceding paper, par. 552.

[5] The motif of 3½ (the Apocalyptic number of days of affliction; cf. Rev. 11 : 9 and 11) refers to the alchemical dilemma “3 or 4?” or to the sesquitertian proportion (3 : 4). The *sesquitertius* is 3 + ⅓.

[6] There is a very interesting American Indian parallel to this mandala: a white snake coiled round a centre shaped like a cross in four colours. Cf. Newcomb and Reichard, *Sandpaintings of the Navajo Shooting Chant*, Pl. XIII, pp. 13 and 78. The book contains a large number of interesting mandalas in colour.

[7] The Egyptian Horus-child is likewise shown sitting in the lotus.

[8] Note the allusion in the name “Liver-pool.” The liver is that which causes to live, the seat of life. [Cf. *Memories, Dreams, Reflections*, pp. *197f./195f.]*

[9] [Cf. *The Practice of Psychotherapy*, 2nd edn., appendix, esp. par. 557.—EDITORS.]

[10] [Cf. “Psychology and Religion,” pars. 136f., 156f.]

[11] [Cf. “The Philosophical Tree,” par. 336 and fig. 27.—EDITORS.]

[12] Cf. *Aion* (Part II of this volume), ch.5.

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

C. G. JUNG

SECOND EDITION

TRANSLATED BY R. F. C. HULL

BOLLINGEN SERIES XX

PRINCETON UNIVERSITY PRESS

PUBLISHED BY PRINCETON UNIVERSITY PRESS, PRINCETON, N.J.

Second hardcover edition, with corrections and minor revisions, 1968
Fifth hardcover printing, with additional corrections, 1978
First Princeton / Bollingen Paperback printing, 1979

This book is a paperback reprint of Volume 9, part ii, of the Collected Works of C. G. Jung. All the volumes comprising the Collected Works constitute number XX in Bollingen Series, under the editorship of Herbert Read (d. 1968), Michael Fordham, and Gerhard Adler; executive editor, William McGuire.

Translated from the first part of *Aion: Untersuchungen zur Symbolgeschichte* (Psychologische Abhandlungen, VIII), published by Rascher Verlag, Zurich, 1951.

ISBN 0-691-01826-X (paperback edition)
ISBN 0-691-09775-5 (hardcover edition)
LIBRARY OF CONGRESS CATALOG CARD NUMBER 75-156

EDITORIAL NOTE

Volume 9 of the Collected Works is devoted to studies of the specific archetypes of the collective unconscious. Part I, entitled *The Archetypes and the Collective Unconscious*, is composed of shorter essays; Part II, *Aion*, is a long monograph on the archetype of the self. The author has agreed to a modification of the sub-title of *Aion*, which in the Swiss edition appeared in two forms, “Researches into the History of Symbols” and “Contributions to the Symbolism of the Self.” The first five chapters were previously published, with small differences, in *Psyche and Symbol: A Selection from the Writings of C. G. Jung*, edited by Violet S. de Laszlo (Anchor Books, Garden City, New York, 1958).

EDITORIAL NOTE TO THE SECOND EDITION

For this edition corrections have been made in the text and footnotes and the bibliographical references have been brought up to date in relation to the *Collected Works*. The translation has been corrected in light of further experience of translating Jung’s works.

TRANSLATOR'S NOTE

Grateful acknowledgment is made to the following persons, whose translations have been consulted during the preparation of the present work: Mr. William H. Kennedy, for extensive use of his translation of portions of chapters 2 and 3, issued as "Shadow, Animus, and Anima" by the Analytical Psychology Club of New York, 1950; Dr. Hildegarde Nagel, for reference to her translation of the original *Eranos-Jahrbuch* version (1949) of "Concerning the Self," in *Spring*, 1951, which original version the author later expanded into *Aion*, chapters 4 and 5; and Miss Barbara Hannah and Dr. Marie-Louise von Franz, for helpful advice with the remaining chapters. Especial thanks are due to Mr. A. S. B. Glover, who (unless otherwise noted) translated the Latin and Greek texts throughout. References to published sources are given for the sake of completeness.

FOREWORD

The theme of this work[1] is the idea of the Aeon (Greek, *Aion*). My investigation seeks, with the help of Christian, Gnostic, and alchemical symbols of the self, to throw light on the change of psychic situation within the "Christian aeon." Christian tradition from the outset is not only saturated with Persian and Jewish ideas about the beginning and end of time, but is filled with intimations of a kind of enantiodromian reversal of dominants. I mean by this the dilemma of Christ and Antichrist. Probably most of the historical speculations about time and the division of time were influenced, as the Apocalypse shows, by astrological ideas. It is therefore only natural that my reflections should gravitate mainly round the symbol of the *Fishes,* for the Pisces aeon is the synchronistic concomitant of two thousand years of Christian development. In this time-period not only was the figure of the Anthropos (the "Son of Man") progressively amplified symbolically, and thus assimilated psychologically, but it brought with it changes in man's attitude that had already been anticipated by the expectation of the Antichrist in the ancient texts. Because these texts relegate the appearance of Antichrist to the end of time, we are justified in speaking of a "Christian aeon," which, it was presupposed, would find its end with the Second Coming. It seems as if this expectation coincides with the astrological conception of the "Platonic month" of the Fishes.

The immediate occasion for my proposing to discuss these historical questions is the fact that the archetypal image of wholeness, which appears so frequently in the products of the unconscious, has its forerunners in history. These were identified very early with the figure of Christ, as I have shown in my book *Psychology and Alchemy.*[2] I have been requested so often by my readers to discuss the relations between the traditional Christ-figure and the natural symbols of wholeness, or the self, that I finally decided to take this task in hand. Considering the unusual difficulties of such an undertaking, my decision did not come easily to me, for, in order to surmount all the obstacles and possibilities of error, a knowledge and caution would be needed which, unfortunately, are vouchsafed me only in limited degree. I am moderately certain of my observations on the empirical material, but I am fully aware of the risk I am taking in drawing the testimonies of history into the scope of my reflections. I think I also know the responsibility I am taking upon myself when, as though continuing the historical process of assimilation, I add to the many symbolical amplifications of the Christ-figure yet another, the psychological one, or even, so it might seem, reduce the Christ-symbol to a psychological image of wholeness. My reader should never forget, however, that I am not making a confession of faith or writing a tendentious tract, but am simply considering how certain things could be understood from the standpoint of our modern consciousness—things which I deem it valuable to understand, and which are obviously in danger of being swallowed up in the abyss of incomprehension and oblivion; things, finally, whose understanding would do much to remedy our philosophic disorientation by shedding light on the psychic background and the secret chambers of the soul. The essence of this book was built up gradually, in the course of many years, in countless conversations with people of all ages and all walks of life; with people who in the confusion and uprootedness of our society were likely to lose all contact with the meaning of European culture and to fall into that state of suggestibility which is the occasion and cause of the Utopian mass-psychoses of our time.

I write as a physician, with a physician's sense of responsibility, and not as a proselyte. Nor do I write as a scholar, otherwise I would wisely barricade myself behind the safe walls of my specialism and not, on account of my inadequate knowledge of history, expose myself to critical attack and damage my scientific reputation. So far as my capacities allow, restricted as they are by old age and illness, I have made every effort to document my material as reliably as possible and to assist the verification of my conclusions by citing the sources.

I

THE EGO

[1] Investigation of the psychology of the unconscious confronted me with facts which required the formulation of new concepts. One of these concepts is the *self*. The entity so denoted is not meant to take the place of the one that has always been known as the *ego*, but includes it in a supraordinate concept. We understand the ego as the complex factor to which all conscious contents are related. It forms, as it were, the centre of the field of consciousness; and, in so far as this comprises the empirical personality, the ego is the subject of all personal acts of consciousness. The relation of a psychic content to the ego forms the criterion of its consciousness, for no content can be conscious unless it is represented to a subject.

[2] With this definition we have described and delimited the *scope* of the subject. Theoretically, no limits can be set to the field of consciousness, since it is capable of indefinite extension. Empirically, however, it always finds its limit when it comes up against the *unknown*. This consists of everything we do not know, which, therefore, is not related to the ego as the centre of the field of consciousness. The unknown falls into two groups of objects: those which are outside and can be experienced by the senses, and those which are inside and are experienced immediately. The first group comprises the unknown in the outer world; the second the unknown in the inner world. We call this latter territory the *unconscious*.

[3] The ego, as a specific content of consciousness, is not a simple or elementary factor but a complex one which, as such, cannot be described exhaustively. Experience shows that it rests on two seemingly different bases: the *somatic* and the *psychic*. The somatic basis is inferred from the totality of endosomatic perceptions, which for their part are already of a psychic nature and are associated with the ego, and are therefore conscious. They are produced by endosomatic stimuli, only some of

which cross the threshold of consciousness. A considerable proportion of these stimuli occur unconsciously, that is, subliminally. The fact that they are subliminal does not necessarily mean that their status is merely physiological, any more than this would be true of a psychic content. Sometimes they are capable of crossing the threshold, that is, of becoming perceptions. But there is no doubt that a large proportion of these endosomatic stimuli are simply incapable of consciousness and are so elementary that there is no reason to assign them a psychic nature—unless of course one favours the philosophical view that all life-processes are psychic anyway. The chief objection to this hardly demonstrable hypothesis is that it enlarges the concept of the psyche beyond all bounds and interprets the life-process in a way not absolutely warranted by the facts. Concepts that are too broad usually prove to be unsuitable instruments because they are too vague and nebulous. I have therefore suggested that the term "psychic" be used only where there is evidence of a will capable of modifying reflex or instinctual processes. Here I must refer the reader to my paper "On the Nature of the Psyche,"[1] where I have discussed this definition of the "psychic" at somewhat greater length.

[4] The somatic basis of the ego consists, then, of conscious and unconscious factors. The same is true of the psychic basis: on the one hand the ego rests on the *total field of consciousness*, and on the other, on the *sum total of unconscious contents*. These fall into three groups: first, temporarily subliminal contents that can be reproduced voluntarily (memory); second, unconscious contents that cannot be reproduced voluntarily; third, contents that are not capable of becoming conscious at all. Group two can be inferred from the spontaneous irruption of subliminal contents into consciousness. Group three is hypothetical; it is a logical inference from the facts underlying group two. It contains contents which have *not yet* irrupted into consciousness, or which never will.

[5] When I said that the ego "rests" on the total field of consciousness I do not mean that it *consists* of this. Were that so, it would be indistinguishable from the field of consciousness as a whole. The ego is

only the latter's point of reference, grounded on and limited by the somatic factor described above.

[6] Although its bases are in themselves relatively unknown and unconscious, the ego is a conscious factor par excellence. It is even acquired, empirically speaking, during the individual's lifetime. It seems to arise in the first place from the collision between the somatic factor and the environment, and, once established as a subject, it goes on developing from further collisions with the outer world and the inner.

[7] Despite the unlimited extent of its bases, the ego is never more and never less than consciousness as a whole. As a conscious factor the ego could, theoretically at least, be described completely. But this would never amount to more than a picture of the *conscious personality*; all those features which are unknown or unconscious to the subject would be missing. A total picture would have to include these. But a total description of the personality is, even in theory, absolutely impossible, because the unconscious portion of it cannot be grasped cognitively. This unconscious portion, as experience has abundantly shown, is by no means unimportant. On the contrary, the most decisive qualities in a person are often unconscious and can be perceived only by others, or have to be laboriously discovered with outside help.

[8] Clearly, then, the *personality as a total phenomenon* does not coincide with the ego, that is, with the conscious personality, but forms an entity that has to be distinguished from the ego. Naturally the need to do this is incumbent only on a psychology that reckons with the fact of the unconscious, but for such a psychology the distinction is of paramount importance. Even for jurisprudence it should be of some importance whether certain psychic facts are conscious or not—for instance, in adjudging the question of responsibility.

[9] I have suggested calling the total personality which, though present, cannot be fully known, the *self*. The ego is, by definition, subordinate to the self and is related to it like a part to the whole. Inside the field of consciousness it has, as we say, free will. By this I do not mean anything philosophical, only the well-known psychological fact of "free choice," or rather the subjective feeling of freedom. But, just as our free will

clashes with necessity in the outside world, so also it finds its limits outside the field of consciousness in the subjective inner world, where it comes into conflict with the facts of the self. And just as circumstances or outside events “happen” to us and limit our freedom, so the self acts upon the ego like an *objective occurrence* which free will can do very little to alter. It is, indeed, well known that the ego not only can do nothing against the self, but is sometimes actually assimilated by unconscious components of the personality that are in the process of development and is greatly altered by them.

[10] It is, in the nature of the case, impossible to give any general description of the ego except a formal one. Any other mode of observation would have to take account of the *individuality* which attaches to the ego as one of its main characteristics. Although the numerous elements composing this complex factor are, in themselves, everywhere the same, they are infinitely varied as regards clarity, emotional colouring, and scope. The result of their combination—the ego—is therefore, so far as one can judge, individual and unique, and retains its identity up to a certain point. Its stability is relative, because far-reaching changes of personality can sometimes occur. Alterations of this kind need not always be pathological; they can also be developmental and hence fall within the scope of the normal.

[11] Since it is the point of reference for the field of consciousness, the ego is the subject of all successful attempts at adaptation so far as these are achieved by the will. The ego therefore has a significant part to play in the psychic economy. Its position there is so important that there are good grounds for the prejudice that the ego is the centre of the personality, and that the field of consciousness is the psyche *per se*. If we discount certain suggestive ideas in Leibniz, Kant, Schelling, and Schopenhauer, and the philosophical excursions of Carus and von Hartmann, it is only since the end of the nineteenth century that modern psychology, with its inductive methods, has discovered the foundations of consciousness and proved empirically the existence of a psyche outside consciousness. With this discovery the position of the ego, till then absolute, became relativized; that is to say, though it retains its quality as the centre of the field of consciousness, it is questionable

whether it is the centre, of the personality. It is part of the personality but not the whole of it. As I have said, it is simply impossible to estimate how large or how small its share is; how free or how dependent it is on the qualities of this “extra-conscious” psyche. We can only say that its freedom is limited and its dependence proved in ways that are often decisive. In my experience one would do well not to underestimate its dependence on the unconscious. Naturally there is no need to say this to persons who already overestimate the latter’s importance. Some criterion for the right measure is afforded by the psychic consequences of a wrong estimate, a point to which we shall return later on.

[12] We have seen that, from the standpoint of the psychology of consciousness, the unconscious can be divided into three groups of contents. But from the standpoint of the psychology of the personality a twofold division ensues: an “extra-conscious” psyche whose contents are *personal*, and an “extra-conscious” psyche whose contents are *impersonal* and *collective*. The first group comprises contents which are integral components of the individual personality and could therefore just as well be conscious; the second group forms, as it were, an omnipresent, unchanging, and everywhere identical *quality or substrate of the psyche per se*. This is, of course, no more than a hypothesis. But we are driven to it by the peculiar nature of the empirical material, not to mention the high probability that the general similarity of psychic processes in all individuals must be based on an equally general and impersonal principle that conforms to law, just as the instinct manifesting itself in the individual is only the partial manifestation of an instinctual substrate common to all men.

II

THE SHADOW

[13] Whereas the contents of the personal unconscious are acquired during the individual’s lifetime, the contents of the collective unconscious are invariably archetypes that were present from the beginning. Their relation to the instincts has been discussed elsewhere.[1] The archetypes most clearly characterized from the empirical point of view are those which have the most frequent and the most disturbing influence on the ego. These are the *shadow*, the *anima*, and the *animus.*[2] The most accessible of these, and the easiest to experience, is the shadow, for its nature can in large measure be inferred from the contents of the personal unconscious. The only exceptions to this rule are those rather rare cases where the positive qualities of the personality are repressed, and the ego in consequence plays an essentially negative or unfavourable role.

[14] The shadow is a moral problem that challenges the whole ego-personality, for no one can become conscious of the shadow without considerable moral effort. To become conscious of it involves recognizing the dark aspects of the personality as present and real. This act is the essential condition for any kind of self-knowledge, and it therefore, as a rule, meets with considerable resistance. Indeed, self-knowledge as a psychotherapeutic measure frequently requires much painstaking work extending over a long period.

[15] Closer examination of the dark characteristics—that is, the inferiorities constituting the shadow—reveals that they have an *emotional* nature, a kind of autonomy, and accordingly an obsessive or, better, possessive quality. Emotion, incidentally, is not an activity of the individual but something that happens to him. Affects occur usually where adaptation is weakest, and at the same time they reveal the reason for its weakness, namely a certain degree of inferiority and the existence of a lower level of personality. On this lower level with its uncontrolled

or scarcely controlled emotions one behaves more or less like a primitive, who is not only the passive victim of his affects but also singularly incapable of moral judgment.

[16] Although, with insight and good will, the shadow can to some extent be assimilated into the conscious personality, experience shows that there are certain features which offer the most obstinate resistance to moral control and prove almost impossible to influence. These resistances are usually bound up with *projections*, which are not recognized as such, and their recognition is a moral achievement beyond the ordinary. While some traits peculiar to the shadow can be recognized without too much difficulty as one's own personal qualities, in this case both insight and good will are unavailing because the cause of the emotion appears to lie, beyond all possibility of doubt, in the *other person*. No matter how obvious it may be to the neutral observer that it is a matter of projections, there is little hope that the subject will perceive this himself. He must be convinced that he throws a very long shadow before he is willing to withdraw his emotionally-toned projections from their object.

[17] Let us suppose that a certain individual shows no inclination whatever to recognize his projections. The projection-making factor then has a free hand and can realize its object—if it has one—or bring about some other situation characteristic of its power. As we know, it is not the conscious subject but the unconscious which does the projecting. Hence one meets with projections, one does not make them. The effect of projection is to isolate the subject from his environment, since instead of a real relation to it there is now only an illusory one. Projections change the world into the replica of one's own unknown face. In the last analysis, therefore, they lead to an autoerotic or autistic condition in which one dreams a world whose reality remains forever unattainable. The resultant *sentiment d'incomplétude* and the still worse feeling of sterility are in their turn explained by projection as the malevolence of the environment, and by means of this vicious circle the isolation is intensified. The more projections are thrust in between the subject and the environment, the harder it is for the ego to see through its illusions. A forty-five-year-old patient who had suffered from a compulsion neurosis since he was twenty and had become completely cut off from the world once said to

me: “But I can never admit to myself that I’ve wasted the best twenty-five years of my life!”

[18] It is often tragic to see how blatantly a man bungles his own life and the lives of others yet remains totally incapable of seeing how much the whole tragedy originates in himself, and how he continually feeds it and keeps it going. Not *consciously*, of course—for consciously he is engaged in bewailing and cursing a faithless world that recedes further and further into the distance. Rather, it is an unconscious factor which spins the illusions that veil his world. And what is being spun is a cocoon, which in the end will completely envelop him.

[19] One might assume that projections like these, which are so very difficult if not impossible to dissolve, would belong to the realm of the shadow—that is, to the negative side of the personality. This assumption becomes untenable after a certain point, because the symbols that then appear no longer refer to the same but to the opposite sex, in a man’s case to a woman and vice versa. The source of projections is no longer the shadow—which is always of the same sex as the subject—but a contrasexual figure. Here we meet the animus of a woman and the anima of a man, two corresponding archetypes whose autonomy and unconsciousness explain the stubbornness of their projections. Though the shadow is a motif as well known to mythology as anima and animus, it represents first and foremost the personal unconscious, and its content can therefore be made conscious without too much difficulty. In this it differs from anima and animus, for whereas the shadow can be seen through and recognized fairly easily, the anima and animus are much further away from consciousness and in normal circumstances are seldom if ever realized. With a little self-criticism one can see through the shadow—so far as its nature is personal. But when it appears as an archetype, one encounters the same difficulties as with anima and animus. In other words, it is quite within the bounds of possibility for a man to recognize the relative evil of his nature, but it is a rare and shattering experience for him to gaze into the face of absolute evil.

III

THE SYZYGY: ANIMA AND ANIMUS

[20] What, then, is this projection-making factor? The East calls it the "Spinning Woman"[1]—Maya, who creates illusion by her dancing. Had we not long since known it from the symbolism of dreams, this hint from the Orient would put us on the right track: the enveloping, embracing, and devouring element points unmistakably to the mother,[2] that is, to the son's relation to the real mother, to her imago, and to the woman who is to become a mother for him. His Eros is passive like a child's; he hopes to be caught, sucked in, enveloped, and devoured. He seeks, as it were, the protecting, nourishing, charmed circle of the mother, the condition of the infant released from every care, in which the outside world bends over him and even forces happiness upon him. No wonder the real world vanishes from sight!

[21] If this situation is dramatized, as the unconscious usually dramatizes it, then there appears before you on the psychological stage a man living regressively, seeking his childhood and his mother, fleeing from a cold cruel world which denies him understanding. Often a mother appears beside him who apparently shows not the slightest concern that her little son should become a man, but who, with tireless and self-immolating effort, neglects nothing that might hinder him from growing up and marrying. You behold the secret conspiracy between mother and son, and how each helps the other to betray life.

[22] Where does the guilt lie? With the mother, or with the son? Probably with both. The unsatisfied longing of the son for life and the world ought to be taken seriously. There is in him a desire to touch reality, to embrace the earth and fructify the field of the world. But he makes no more than a series of fitful starts, for his initiative as well as his staying power are crippled by the secret memory that the world and happiness may be had as a gift—from the mother. The fragment of world which he, like every

man, must encounter again and again is never quite the right one, since it does not'fall into his lap, does not meet him half way, but remains resistant, has to be conquered, and submits only to force. It makes demands on the masculinity of a man, on his ardour, above all on his courage and resolution when it comes to throwing his whole being into the scales. For this he would need a faithless Eros, one capable of forgetting his mother and undergoing the pain of relinquishing the first love of his life. The mother, foreseeing this danger, has carefully inculcated into him the virtues of faithfulness, devotion, loyalty, so as to protect him from the moral disruption which is the risk of every life adventure. He has learnt these lessons only too well, and remains true to his mother. This naturally causes her the deepest anxiety (when, to her greater glory, he turns out to be a homosexual, for example) and at the same time affords her an unconscious satisfaction that is positively mythological. For, in the relationship now reigning between them, there is consummated the immemorial and most sacred archetype of the marriage of mother and son. What, after all, has commonplace reality to offer, with its registry offices, pay envelopes, and monthly rent, that could outweigh the mystic awe of the *hieros gamos?* Or the star-crowned woman whom the dragon pursues, or the pious obscurities veiling the marriage of the Lamb?

[23] This myth, better than any other, illustrates the nature of the collective unconscious. At this level the mother is both old and young, Demeter and Persephone, and the son is spouse and sleeping suckling rolled into one. The imperfections of real life, with its laborious adaptations and manifold disappointments, naturally cannot compete with such a state of indescribable fulfilment.

[24] In the case of the son, the projection-making factor is identical with the mother-imago, and this is consequently taken to be the real mother. The projection can only be dissolved when the son sees that in the realm of his psyche there is an imago not only of the mother but of the daughter, the sister, the beloved, the heavenly goddess, and the chthonic Baubo. Every mother and every beloved is forced to become the carrier and embodiment of this omnipresent and ageless image, which corresponds to the deepest reality in a man. It belongs to him, this

perilous image of Woman; she stands for the loyalty which in the interests of life he must sometimes forgo; she is the much needed compensation for the risks, struggles, sacrifices that all end in disappointment; she is the solace for all the bitterness of life. And, at the same time, she is the great illusionist, the seductress, who draws him into life with her Maya—and not only into life's reasonable and useful aspects, but into its frightful paradoxes and ambivalences where good and evil, success and ruin, hope and despair, counterbalance one another. Because she is his greatest danger she demands from a man his greatest, and if he has it in him she will receive it.

[25] This image is "My Lady Soul," as Spitteler called her. I have suggested instead the term "anima," as indicating something specific, for which the expression "soul" is too general and too vague. The empirical reality summed up under the concept of the anima forms an extremely dramatic content of the unconscious. It is possible to describe this content in rational, scientific language, but in this way one entirely fails to express its living character. Therefore, in describing the living processes of the psyche, I deliberately and consciously give preference to a dramatic, mythological way of thinking and speaking, because this is not only more expressive but also more exact than an abstract scientific terminology, which is wont to toy with the notion that its theoretic formulations may one fine day be resolved into algebraic equations.

[26] The projection-making factor is the anima, or rather the unconscious as represented by the anima. Whenever she appears, in dreams, visions, and fantasies, she takes on personified form, thus demonstrating that the factor she embodies possesses all the outstanding characteristics of a feminine being.[3] She is not an invention of the conscious, but a spontaneous product of the unconscious. Nor is she a substitute figure for the mother. On the contrary, there is every likelihood that the numinous qualities which make the mother-imago so dangerously powerful derive from the collective archetype of the anima, which is incarnated anew in every male child.

[27] Since the anima is an archetype that is found in men, it is reasonable to suppose that an equivalent archetype must be present in women; for

just as the man is compensated by a feminine element, so woman is compensated by a masculine one. I do not, however, wish this argument to give the impression that these compensatory relationships were arrived at by deduction. On the contrary, long and varied experience was needed in order to grasp the nature of anima and animus empirically. Whatever we have to say about these archetypes, therefore, is either directly verifiable or at least rendered probable by the facts. At the same time, I am fully aware that we are discussing pioneer work which by its very nature can only be provisional.

[28] Just as the mother seems to be the first carrier of the projection-making factor for the son, so is the father for the daughter. Practical experience of these relationships is made up of many individual cases presenting all kinds of variations on the same basic theme. A concise description of them can, therefore, be no more than schematic.

[29] Woman is compensated by a masculine element and therefore her unconscious has, so to speak, a masculine imprint. This results in a considerable psychological difference between men and women, and accordingly I have called the projection-making factor in women the animus, which means mind or spirit. The animus corresponds to the paternal Logos just as the anima corresponds to the maternal Eros. But I do not wish or intend to give these two intuitive concepts too specific a definition. I use Eros and Logos merely as conceptual aids to describe the fact that woman's consciousness is characterized more by the connective quality of Eros than by the discrimination and cognition associated with Logos. In men, Eros, the function of relationship, is usually less developed than Logos. In women, on the other hand, Eros is an expression of their true nature, while their Logos is often only a regrettable accident. It gives rise to misunderstandings and annoying interpretations in the family circle and among friends. This is because it consists of *opinions* instead of reflections, and by opinions I mean *a priori* assumptions that lay claim to absolute truth. Such assumptions, as everyone knows, can be extremely irritating. As the animus is partial to argument, he can best be seen at work in disputes where both parties know they are right. Men can argue in a very womanish way, too, when they are anima-possessed and have thus been transformed into the

animus of their own anima. With them the question becomes one of personal vanity and touchiness (as if they were females); with women it is a question of *power*, whether of truth or justice or some other “ism”—for the dressmaker and hairdresser have already taken care of their vanity. The “Father” (i.e., the sum of conventional opinions) always plays a great role in female argumentation. No matter how friendly and obliging a woman’s Eros may be, no logic on earth can shake her if she is ridden by the animus. Often the man has the feeling—and he is not altogether wrong—that only seduction or a beating or rape would have the necessary power of persuasion. He is unaware that this highly dramatic situation would instantly come to a banal and unexciting end if he were to quit the field and let a second woman carry on the battle (his wife, for instance, if she herself is not the fiery war horse). This sound idea seldom or never occurs to him, because no man can converse with an animus for five minutes without becoming the victim of his own anima. Anyone who still had enough sense of humour to listen objectively to the ensuing dialogue would be staggered by the vast number of commonplaces, misapplied truisms, clichés from newspapers and novels, shop-soiled platitudes of every description interspersed with vulgar abuse and brain-splitting lack of logic. It is a dialogue which, irrespective of its participants, is repeated millions and millions of times in all the languages of the world and always remains essentially the same.

[30] This singular fact is due to the following circumstance: when animus and anima meet, the animus draws his sword of power and the anima ejects her poison of illusion and seduction. The outcome need not always be negative, since the two are equally likely to fall in love (a special instance of love at first sight). The language of love is of astonishing uniformity, using the well-worn formulas with the utmost devotion and fidelity, so that once again the two partners find themselves in a banal collective situation. Yet they live in the illusion that they are related to one another in a most individual way.

[31] In both its positive and its negative aspects the anima/animus relationship is always full of “animosity,” i.e., it is emotional, and hence collective. Affects lower the level of the relationship and bring it closer to the common instinctual basis, which no longer has anything individual

about it. Very often the relationship runs its course heedless of its human performers, who afterwards do not know what happened to them.

[32] Whereas the cloud of "animosity" surrounding the man is composed chiefly of sentimentality and resentment, in woman it expresses itself in the form of opinionated views, interpretations, insinuations, and misconstructions, which all have the purpose (sometimes attained) of severing the relation between two human beings. The woman, like the man, becomes wrapped in a veil of illusions by her demon-familiar, and, as the daughter who alone understands her father (that is, is eternally right in everything), she is translated to the land of sheep, where she is put to graze by the shepherd of her soul, the animus.

[33] Like the anima, the animus too has a positive aspect. Through the figure of the father he expresses not only conventional opinion but—equally—what we call "spirit," philosophical or religious ideas in particular, or rather the attitude resulting from them. Thus the animus is a psychopomp, a mediator between the conscious and the unconscious and a personification of the latter. Just as the anima becomes, through integration, the Eros of consciousness, so the animus becomes a Logos; and in the same way that the anima gives relationship and relatedness to a man's consciousness, the animus gives to woman's consciousness a capacity for reflection, deliberation, and self-knowledge.

[34] The effect of anima and animus on the ego is in principle the same. This effect is extremely difficult to eliminate because, in the first place, it is uncommonly strong and immediately fills the ego-personality with an unshakable feeling of rightness and righteousness. In the second place, the cause of the effect is projected and appears to lie in objects and objective situations. Both these characteristics can, I believe, be traced back to the peculiarities of the archetype. For the archetype, of course, exists *a priori*. This may possibly explain the often totally irrational yet undisputed and indisputable existence of certain moods and opinions. Perhaps these are so notoriously difficult to influence because of the powerfully suggestive effect emanating from the archetype. Consciousness is fascinated by it, held captive, as if hypnotized. Very often the ego experiences a vague feeling of moral defeat and then

behaves all the more defensively, defiantly, and self-righteously, thus setting up a vicious circle which only increases its feeling of inferiority. The bottom is then knocked out of the human relationship, for, like megalomania, a feeling of inferiority makes mutual recognition impossible, and without this there is no relationship.

[35] As I said, it is easier to gain insight into the shadow than into the anima or animus. With the shadow, we have the advantage of being prepared in some sort by our education, which has always endeavoured to convince people that they are not one-hundred-per-cent pure gold. So everyone immediately understands what is meant by “shadow,” “inferior personality,” etc. And if he has forgotten, his memory can easily be refreshed by a Sunday sermon, his wife, or the tax collector. With the anima and animus, however, things are by no means so simple. Firstly, there is no moral education in this respect, and secondly, most people are content to be self-righteous and prefer mutual vilification (if nothing worse!) to the recognition of their projections. Indeed, it seems a very natural state of affairs for men to have irrational moods and women irrational opinions. Presumably this situation is grounded on instinct and must remain as it is to ensure that the Empedoclean game of the hate and love of the elements shall continue for all eternity. Nature is conservative and does not easily allow her courses to be altered; she defends in the most stubborn way the inviolability of the preserves where anima and animus roam, Hence it is much more difficult to become conscious of one’s anima/animus projections than to acknowledge one’s shadow side. One has, of course, to overcome certain moral obstacles, such as vanity, ambition, conceit, resentment, etc., but in the case of projections all sorts of purely intellectual difficulties are added, quite apart from the contents of the projection which one simply doesn’t know how to cope with. And on top of all this there arises a profound doubt as to whether one is not meddling too much with nature’s business by prodding into consciousness things which it would have been better to leave asleep.

[36] Although there are, in my experience, a fair number of people who can understand without special intellectual or moral difficulties what is meant by anima and animus, one finds very many more who have the greatest trouble in visualizing these empirical concepts as anything

concrete. This shows that they fall a little outside the usual range of experience. They are unpopular precisely because they seem unfamiliar. The consequence is that they mobilize prejudice and become taboo like everything else that is unexpected.

[37] So if we set it up as a kind of requirement that projections should be dissolved, because it is wholesomer that way and in every respect more advantageous, we are entering upon new ground. Up till now everybody has been convinced that the idea "my father," "my mother," etc., is nothing but a faithful reflection of the real parent, corresponding in every detail to the original, so that when someone says "my father" he means no more and no less than what his father is in reality. This is actually what he supposes he does mean, but a supposition of identity by no means brings that identity about. This is where the fallacy of the *enkekalymmenos* ('the veiled one') comes in.[4] If one includes in the psychological equation X's picture of his father, which he takes for the real father, the equation will not work out, because the unknown quantity he has introduced does not tally with reality. X has overlooked the fact that his idea of a person consists, in the first place, of the possibly very incomplete picture he has received of the real person and, in the second place, of the subjective modifications he has imposed upon this picture. X's idea of his father is a complex quantity for which the real father is only in part responsible, an indefinitely larger share falling to the son. So true is this that every time he criticizes or praises his father he is unconsciously hitting back at himself, thereby bringing about those psychic consequences that overtake people who habitually disparage or overpraise themselves. If, however, X carefully compares his reactions with reality, he stands a chance of noticing that he has miscalculated somewhere by not realizing long ago from his father's behaviour that the picture he has of him is a false one. But as a rule X is convinced that he is right, and if anybody is wrong it must be the other fellow. Should X have a poorly developed Eros, he will be either indifferent to the inadequate relationship he has with his father or else annoyed by the inconsistency and general incomprehensibility of a father whose behaviour never really corresponds to the picture X has of him. Therefore X thinks he has every right to feel hurt, misunderstood, and even betrayed.

[38] One can imagine how desirable it would be in such cases to dissolve the projection. And there are always optimists who believe that the golden age can be ushered in simply by telling people the right way to go. But just let them try to explain to these people that they are acting like a dog chasing its own tail. To make a person see the shortcomings of his attitude considerably more than mere “telling” is needed, for more is involved than ordinary common sense can allow. What one is up against here is the kind of fateful misunderstanding which, under ordinary conditions, remains forever inaccessible to insight. It is rather like expecting the average respectable citizen to recognize himself as a criminal.

[39] I mention all this just to illustrate the order of magnitude to which the anima/animus projections belong, and the moral and intellectual exertions that are needed to dissolve them. Not all the contents of the anima and animus are projected, however. Many of them appear spontaneously in dreams and so on, and many more can be made conscious through active imagination. In this way we find that thoughts, feelings, and affects are alive in us which we would never have believed possible. Naturally, possibilities of this sort seem utterly fantastic to anyone who has not experienced them himself, for a normal person “knows what he thinks.” Such a childish attitude on the part of the “normal person” is simply the rule, so that no one without experience in this field can be expected to understand the real nature of anima and animus. With these reflections one gets into an entirely new world of psychological experience, provided of course that one succeeds in realizing it in practice. Those who do succeed can hardly fail to be impressed by all that the ego does not know and never has known. This increase in self-knowledge is still very rare nowadays and is usually paid for in advance with a neurosis, if not with something worse.

[40] The autonomy of the collective unconscious expresses itself in the figures of anima and animus. They personify those of its contents which, when withdrawn from projection, can be integrated into consciousness. To this extent, both figures represent *functions* which filter the contents of the collective unconscious through to the conscious mind. They appear or behave as such, however, only so long as the tendencies of the

conscious and unconscious do not diverge too greatly. Should any tension arise, these functions, harmless till then, confront the conscious mind in personified form and behave rather like systems split off from the personality, or like part souls. This comparison is inadequate in so far as nothing previously belonging to the ego-personality has split off from it; on the contrary, the two figures represent a disturbing accretion. The reason for their behaving in this way is that though the *contents* of anima and animus can be integrated they themselves cannot, since they are archetypes. As such they are the foundation stones of the psychic structure, which in its totality exceeds the limits of consciousness and therefore can never become the object of direct cognition. Though the effects of anima and animus can be made conscious, they themselves are factors transcending consciousness and beyond the reach of perception and volition. Hence they remain autonomous despite the integration of their contents, and for this reason they should be borne constantly in mind. This is extremely important from the therapeutic standpoint, because constant observation pays the unconscious a tribute that more or less guarantees its co-operation. The unconscious as we know can never be "done with" once and for all. It is, in fact, one of the most important tasks of psychic hygiene to pay continual attention to the symptomatology of unconscious contents and processes, for the good reason that the conscious mind is always in danger of becoming one-sided, of keeping to well-worn paths and getting stuck in blind alleys. The complementary and compensating function of the unconscious ensures that these dangers, which are especially great in neurosis, can in some measure be avoided. It is only under ideal conditions, when life is still simple and unconscious enough to follow the serpentine path of instinct without hesitation or misgiving, that the compensation works with entire success. The more civilized, the more conscious and complicated a man is, the less he is able to follow his instincts. His complicated living conditions and the influence of his environment are so strong that they drown the quiet voice of nature. Opinions, beliefs, theories, and collective tendencies appear in its stead and back up all the aberrations of the conscious mind. Deliberate attention should then be given to the unconscious so that the compensation can set to work. Hence it is especially important to picture the archetypes of the unconscious not as a rushing phantasmagoria of fugitive images but as constant, autonomous factors, which indeed they are.

[41] Both these archetypes, as practical experience shows, possess a fatality that can on occasion produce tragic results. They are quite literally the father and mother of all the disastrous entanglements of fate and have long been recognized as such by the whole world. Together they form a divine pair,[5] one of whom, in accordance with his Logos nature, is characterized by *pneuma* and *nous*, rather like Hermes with his ever-shifting hues, while the other, in accordance with her Eros nature, wears the features of Aphrodite, Helen (Selene), Persephone, and Hecate. Both of them are unconscious powers, "gods" in fact, as the ancient world quite rightly conceived them to be. To call them by this name is to give them that central position in the scale of psychological values which has always been theirs whether consciously acknowledged or not; for their power grows in proportion to the degree that they remain unconscious. Those who do not see them are in their hands, just as a typhus epidemic flourishes best when its source is undiscovered. Even in Christianity the divine syzygy has not become obsolete, but occupies the highest place as Christ and his bride the Church.[6] Parallels like these prove extremely helpful in our attempts to find the right criterion for gauging the significance of these two archetypes. What we can discover about them from the conscious side is so slight as to be almost imperceptible. It is only when we throw light into the dark depths of the psyche and explore the strange and tortuous paths of human fate that it gradually becomes clear to us how immense is the influence wielded by these two factors that complement our conscious life.

[42] Recapitulating, I should like to emphasize that the integration of the shadow, or the realization of the personal unconscious, marks the first stage in the analytic process, and that without it a recognition of anima and animus is impossible. The shadow can be realized only through a relation to a partner, and anima and animus only through a relation to a partner of the opposite sex, because only in such a relation do their projections become operative. The recognition of the anima gives rise, in a man, to a triad, one third of which is transcendent: the masculine subject, the opposing feminine subject, and the transcendent anima. With

a woman the situation is reversed. The missing fourth element that would make the triad a quaternity is, in a man, the archetype of the Wise Old Man, which I have not discussed here, and in a woman the Chthonic Mother. These four constitute a half immanent and half transcendent quaternity, an archetype which I have called the *marriage quaternio.*[7] The marriage quaternio provides a schema not only for the self but also for the structure of primitive society with its cross-cousin marriage, marriage classes, and division of settlements into quarters. The self, on the other hand, is a God-image, or at least cannot be distinguished from one. Of this the early Christian spirit was not ignorant, otherwise Clement of Alexandria could never have said that he who knows himself knows God.[8]

IV

THE SELF[1]

[43] We shall now turn to the question of whether the increase in self-knowledge resulting from the withdrawal of impersonal projections—in other words, the integration of the contents of the collective unconscious—exerts a specific influence on the ego-personality. To the extent that the integrated contents are *parts of the self*, we can expect this influence to be considerable. Their assimilation augments not only the area of the field of consciousness but also the importance of the ego, especially when, as usually happens, the ego lacks any critical approach to the unconscious. In that case it is easily overpowered and becomes identical with the contents that have been assimilated. In this way, for instance, a masculine consciousness comes under the influence of the anima and can even be possessed by her.

[44] I have discussed the wider effects of the integration of unconscious contents elsewhere[2] and can therefore omit going into details here. I should only like to mention that the more numerous and the more significant the unconscious contents which are assimilated to the ego, the closer the approximation of the ego to the self, even though this approximation must be a never-ending process. This inevitably produces an inflation of the ego,[3] unless a critical line of demarcation is drawn between it and the unconscious figures. But this act of discrimination yields practical results only if it succeeds in fixing reasonable boundaries to the ego and in granting the figures of the unconscious—the self, anima, animus, and shadow—relative autonomy and reality (of a psychic nature). To psychologize this reality out of existence either is ineffectual, or else merely increases the inflation of the ego. One cannot dispose of facts by declaring them unreal. The projection-making factor, for instance, has undeniable reality. Anyone who insists on denying it becomes identical with it, which is not only dubious in itself but a

positive danger to the well-being of the individual. Everyone who has dealings with such cases knows how perilous an inflation can be. No more than a flight of steps or a smooth floor is needed to precipitate a fatal fall. Besides the “pride goeth before a fall” motif there are other factors of a no less disagreeable psychosomatic and psychic nature which serve to reduce “puffed-up-ness.” This condition should not be interpreted as one of conscious self-aggrandizement. Such is far from being the rule. In general we are not directly conscious of this condition at all, but can at best infer its existence indirectly from the symptoms. These include the reactions of our immediate environment. Inflation magnifies the blind spot in the eye, and the more we are assimilated by the projection-making factor, the greater becomes the tendency to identify with it. A clear symptom of this is our growing disinclination to take note of the reactions of the environment and pay heed to them.

[45] It must be reckoned a psychic catastrophe when the *ego is assimilated by the self*. The image of wholeness then remains in the unconscious, so that on the one hand it shares the archaic nature of the unconscious and on the other finds itself in the psychically relative space-time continuum that is characteristic of the unconscious as such.[4] Both these qualities are numinous and hence have an unlimited determining effect on ego-consciousness, which is differentiated, i.e., separated, from the unconscious and moreover exists in an absolute space and an absolute time. It is a vital necessity that this should be so. If, therefore, the ego falls for any length of time under the control of an unconscious factor, its adaptation is disturbed and the way opened for all sorts of possible accidents.

[46] Hence it is of the greatest importance that the ego should be anchored in the world of consciousness and that consciousness should be reinforced by a very precise adaptation. For this, certain virtues like attention, conscientiousness, patience, etc., are of great value on the moral side, just as accurate observation of the symptomatology of the unconscious and objective selfcriticism are valuable on the intellectual side.

[47] However, accentuation of the ego personality and the world of consciousness may easily assume such proportions that the figures of the unconscious are psychologized and the *self consequently becomes assimilated to the ego*. Although this is the exact opposite of the process we have just described it is followed by the same result: inflation. The world of consciousness must now be levelled down in favour of the reality of the unconscious. In the first case, reality had to be protected against an archaic, “eternal” and “ubiquitous” dream-state: in the second, room must be made for the dream at the expense of the world of consciousness. In the first case, mobilization of all the virtues is indicated; in the second, the presumption of the ego can only be damped down by moral defeat. This is necessary, because otherwise one will never attain that median degree of modesty which is essential for the maintenance of a balanced state. It is not a question, as one might think, of relaxing morality itself but of making a moral effort in a different direction. For instance, a man who is not conscientious enough has to make a moral effort in order to come up to the mark; while for one who is sufficiently rooted in the world through his own efforts it is no small moral achievement to inflict defeat on his virtues by loosening his ties with the world and reducing his adaptive performance. (One thinks in this connection of Brother Klaus, now canonized, who for the salvation of his soul left his wife to her own devices, along with numerous progeny.)

[48] Since real moral problems all begin where the penal code leaves off, their solution can seldom or never depend on precedent, much less on precepts and commandments. The real moral problems spring from *conflicts of duty*. Anyone who is sufficiently humble, or easy-going, can always reach a decision with the help of some outside authority. But one who trusts others as little as himself can never reach a decision at all, unless it is brought about in the manner which Common Law calls an “Act of God.” The Oxford Dictionary defines this concept as the “action of uncontrollable natural forces.” In all such cases there is an unconscious authority which puts an end to doubt by creating a *fait accompli*. (In the last analysis this is true also of those who get their decision from a higher authority, only in more veiled form.) One can

describe this authority either as the "will of God" or as an "action of uncontrollable natural forces," though psychologically it makes a good deal of difference how one thinks of it. The rationalistic interpretation of this inner authority as "natural forces" or the instincts satisfies the modern intellect but has the great disadvantage that the apparent victory of instinct offends our moral self-esteem; hence we like to persuade ourselves that the matter has been decided solely by the rational motions of the will. Civilized man has such a fear of the "crimen laesae maiestatis humanae" that whenever possible he indulges in a retrospective coloration of the facts in order to cover up the feeling of having suffered a moral defeat. He prides himself on what he believes to be his self-control and the omnipotence of his will, and despises the man who lets himself be outwitted by mere nature.

[49] If, on the other hand, the inner authority is conceived as the "will of God" (which implies that "natural forces" are divine forces), our self-esteem is benefited because the decision then appears to be an act of obedience and the result a divine intention. This way of looking at it can, with some show of justice, be accused not only of being very convenient but of cloaking moral laxity in the mantle of virtue. The accusation, however, is justified only when one is in fact knowingly hiding one's own egoistic opinion behind a hypocritical façade of words. But this is by no means the rule, for in most cases instinctive tendencies assert themselves for or against one's subjective interests no matter whether an outside authority approves or not. The inner authority does not need to be consulted first, as it is present at the outset in the intensity of the tendencies struggling for decision. In this struggle the individual is never a spectator only; he takes part in it more or less "voluntarily" and tries to throw the weight of his feeling of moral freedom into the scales of decision. Nevertheless, it remains a matter of doubt how much his seemingly free decision has a causal, and possibly unconscious, motivation. This may be quite as much an "act of God" as any natural cataclysm. The problem seems to me unanswerable, because we do not know where the roots of the feeling of moral freedom lie; and yet they exist no less surely than the instincts, which are felt as compelling forces.

[50] All in all, it is not only more beneficial but more "correct" psychologically to explain as the "will of God" the natural forces that appear in us as instincts. In this way we find ourselves living in harmony with the *habitus* of our ancestral psychic life; that is, we function as man has functioned at all times and in all places. The existence of this habitus is proof of its viability, for, if it were not viable, all those who obeyed it would long since have perished of maladaptation. On the other hand, by conforming to it one has a reasonable life expectancy. When an habitual way of thinking guarantees as much as this there is not only no ground for declaring it incorrect but, on the contrary, every reason to take it as "true" or "correct" in the psychological sense. Psychological truths are not metaphysical insights; they are habitual modes of thinking, feeling, and behaving which experience has proved appropriate and useful.

[51] So when I say that the impulses which we find in ourselves should be understood as the "will of God," I wish to emphasize that they ought not to be regarded as an arbitrary wishing and willing, but as absolutes which one must learn how to handle correctly. The will can control them only in part. It may be able to suppress them, but it cannot alter their nature, and what is suppressed comes up again in another place in altered form, but this time loaded with a resentment that makes the otherwise harmless natural impulse our enemy. I should also like the term "God" in the phrase "the will of God" to be understood not so much in the Christian sense as in the sense intended by Diotima, when she said: "Eros, dear Socrates, is a mighty daemon." The Greek words *daimon* and *daimonion* express a determining power which comes upon man from outside, like providence or fate, though the ethical decision is left to man. He must know, however, what he is deciding about and what he is doing. Then, if he obeys he is following not just his own opinion, and if he rejects he is destroying not just his own invention.

[52] The purely biological or scientific standpoint falls short in psychology because it is, in the main, intellectual only. That this should be so is not a disadvantage, since the methods of natural science have proved of great heuristic value in psychological research. But the psychic phenomenon cannot be grasped in its totality by the intellect, for it consists not only of *meaning* but also of *value*, and this depends on the

intensity of the accompanying feeling-tones. Hence at least the two "rational" functions[5] are needed in order to map out anything like a complete diagram of a given psychic content.

[53] If, therefore, in dealing with psychic contents one makes allowance not only for intellectual judgments but for value judgments as well, not only is the result a more complete picture of the content in question, but one also gets a better idea of the particular position it holds in the hierarchy of psychic contents in general. The feeling-value is a very important criterion which psychology cannot do without, because it determines in large measure the role which the content will play in the psychic economy. That is to say, the affective value gives the measure of the intensity of an idea, and the intensity in its turn expresses that idea's energic tension, its effective potential. The shadow, for instance, usually has a decidedly negative feeling-value, while the anima, like the animus, has more of a positive one. Whereas the shadow is accompanied by more or less definite and describable feeling-tones, the anima and animus exhibit feeling qualities that are harder to define. Mostly they are felt to be fascinating or numinous. Often they are surrounded by an atmosphere of sensitivity, touchy reserve, secretiveness, painful intimacy, and even absoluteness. The relative autonomy of the anima- and animus-figures expresses itself in these qualities. In order of affective rank they stand to the shadow very much as the shadow stands in relation to ego-consciousness. The main affective emphasis seems to lie on the latter; at any rate it is able, by means of a considerable expenditure of energy, to repress the shadow, at least temporarily. But if for any reason the unconscious gains the upper hand, then the valency of the shadow and of the other figures increases proportionately, so that the scale of values is reversed. What lay furthest away from waking consciousness and seemed unconscious assumes, as it were, a threatening shape, and the affective value increases the higher up the scale you go: ego-consciousness, shadow, anima, self. This reversal of the conscious waking state occurs regularly during the transition from waking to sleeping, and what then emerge most vividly are the very things that were unconscious by day. Every *abaissement du niveau mental* brings about a relative reversal of values.

[54] I am speaking here of the *subjective* feeling-value, which is subject to the more or less periodic changes described above. But there are also *objective* values which are founded on a *consensus omnium*—moral, aesthetic, and religious values, for instance, and these are universally recognized ideals or feelingtoned collective ideas (Lévy-Bruhl's "representations collectives").[6] The subjective feeling-tones or "value quanta" are easily recognized by the kind and number of constellations, or symptoms of disturbance,[7] they produce. Collective ideals often have no subjective feeling-tone, but nevertheless retain their feeling-value. This value, therefore, cannot be demonstrated by subjective symptoms, though it may be by the attributes attaching to these collective ideas and by their characteristic symbolism, quite apart from their suggestive effect.

[55] The problem has a practical aspect, since it may easily happen that a collective idea, though significant in itself, is—because of its lack of subjective feeling-tone—represented in a dream only by a subsidiary attribute, as when a god is represented by his theriomorphic attribute, etc. Conversely, the idea may appear in consciousness lacking the affective emphasis that properly belongs to it, and must then be transposed back into its archetypal context—a task that is usually discharged by poets and prophets. Thus Hölderlin, in his "Hymn to Liberty," lets this concept, worn stale by frequent use and misuse, rise up again in its pristine splendour:

> Since her arm out of the dust has raised me,
> Beats my heart so boldly and serene;
> And my cheek still tingles with her kisses,
> Flushed and glowing where her lips have been.
> Every word she utters, by her magic
> Rises new-created, without flaw;
> Hearken to the tidings of my goddess,
> Hearken to the Sovereign, and adore![8]

[56] It is not difficult to see here that the idea of liberty has been changed back to its original dramatic state—into the shining figure of the anima, freed from the weight of the earth and the tyranny of the senses, the psychopomp who leads the way to the Elysian fields.

[57] The first case we mentioned, where the collective idea is represented in a dream by a lowly aspect of itself, is certainly the more frequent: the “goddess” appears as a black cat, and the Deity as the *lapis exilis* (stone of no worth). Interpretation then demands a knowledge of certain things which have less to do with zoology and mineralogy than with the existence of an historical *consensus omnium* in regard to the object in question. These “mythological” aspects are always present, even though in a given case they may be unconscious. If for instance one doesn’t happen to recall, when considering whether to paint the garden gate green or white, that green is the colour of life and hope, the symbolic aspect of “green” is nevertheless present as an unconscious *sous-entendu*. So we find something which has the highest significance for the life of the unconscious standing lowest on the scale of conscious values, and vice versa. The figure of the shadow already belongs to the realm of bodiless phantoms—not to speak of anima and animus, which do not seem to appear at all except as projections upon our fellow human beings. As for the self, it is completely outside the personal sphere, and appears, if at all, only as a religious mythologem, and its symbols range from the highest to the lowest. Anyone who identifies with the daylight half of his psychic life will therefore declare the dreams of the night to be null and void, notwithstanding that the night is as long as the day and that all consciousness is manifestly founded on unconsciousness, is rooted in it and every night is extinguished in it. What is more, psychopathology knows with tolerable certainty what the unconscious can do to the conscious, and for this reason devotes to the unconscious an attention that often seems incomprehensible to the layman. We know, for instance, that what is small by day is big at night, and the other way round; thus we also know that besides the small by day there always looms the big by night, even when it is invisible.

[58] This knowledge is an essential prerequisite for any integration—that is to say a content can only be integrated when its double aspect has become conscious and when it is grasped not merely intellectually but understood according to its feeling-value. Intellect and feeling, however, are difficult to put into one harness—they conflict with one another by definition. Whoever identifies with an intellectual standpoint will

occasionally find his feeling confronting him like an enemy in the guise of the anima; conversely, an intellectual animus will make violent attacks on the feeling standpoint. Therefore, anyone who wants to achieve the difficult feat of realizing something not only intellectually, but also according to its feeling-value, must for better or worse come to grips with the anima/animus problem in order to open the way for a higher union, a *coniunctio oppositorum*. This is an indispensable prerequisite for wholeness.

[59] Although "wholeness" seems at first sight to be nothing but an abstract idea (like anima and animus), it is nevertheless empirical in so far as it is anticipated by the psyche in the form of spontaneous or autonomous symbols. These are the quaternity or mandala symbols, which occur not only in the dreams of modern people who have never heard of them, but are widely disseminated in the historical records of many peoples and many epochs. Their significance as *symbols of unity and totality* is amply confirmed by history as well as by empirical psychology. What at first looks like an abstract idea stands in reality for something that exists and can be experienced, that demonstrates its *a priori* presence spontaneously. Wholeness is thus an objective factor that confronts the subject independently of him, like anima or animus; and just as the latter have a higher position in the hierarchy than the shadow, so wholeness lays claim to a position and a value superior to those of the syzygy. The syzygy seems to represent at least a substantial portion of it, if not actually two halves of the totality formed by the royal brother-sister pair, and hence the tension of opposites from which the divine child[9] is born as the symbol of unity.

[60] Unity and totality stand at the highest point on the scale of objective values because their symbols can no longer be distinguished from the *imago Dei*. Hence all statements about the God-image apply also to the empirical symbols of totality. Experience shows that individual mandalas are symbols of *order*, and that they occur in patients principally during times of psychic disorientation or re-orientation. As magic circles they bind and subdue the lawless powers belonging to the world of darkness, and depict or create an order that transforms the chaos into a cosmos.[10] The mandala at first comes into the conscious mind as an unimpressive

point or dot,[11] and a great deal of hard and painstaking work as well as the integration of many projections are generally required before the full range of the symbol can be anything like completely understood. If this insight were purely intellectual it could be achieved without much difficulty, for the world-wide pronouncements about the God within us and above us, about Christ and the *corpus mysticum,* the personal and suprapersonal atman, etc., are all formulations that can easily be mastered by the philosophic intellect. This is the common source of the illusion that one is then in possession of the thing itself. But actually one has acquired nothing more than its name, despite the age-old prejudice that the name magically represents the thing, and that it is sufficient to pronounce the name in order to posit the thing's existence. In the course of the millennia the reasoning mind has been given every opportunity to see through the futility of this conceit, though that has done nothing to prevent the intellectual mastery of a thing from being accepted at its face value. It is precisely our experiences in psychology which demonstrate as plainly as could be wished that the intellectual "grasp" of a psychological fact produces no more than a concept of it, and that a concept is no more than a name, a *flatus vocis*. These intellectual counters can be bandied about easily enough. They pass lightly from hand to hand, for they have no weight or substance. They sound full but are hollow; and though purporting to designate a heavy task and obligation, they commit us to nothing. The intellect is undeniably useful in its own field, but is a great cheat and illusionist outside of it whenever it tries to manipulate values.

[61] It would seem that one can pursue any science with the intellect alone except psychology, whose subject—the psyche—has more than the two aspects mediated by sense-perception and thinking. The function of value—feeling—is an integral part of our conscious orientation and ought not to be missing in a psychological judgment of any scope, otherwise the model we are trying to build of the real process will be incomplete. Every psychic process has a value quality attached to it, namely its feeling-tone. This indicates the degree to which the subject is *affected* by the process or how much it means to him (in so far as the process reaches consciousness at all). It is through the "affect" that the subject becomes involved and so comes to feel the whole weight of reality. The difference

amounts roughly to that between a severe illness which one reads about in a textbook and the real illness which one has. In psychology one possesses nothing unless one has experienced it in reality. Hence a purely intellectual insight is not enough, because one knows only the words and not the substance of the thing from inside.

[62] There are far more people who are afraid of the unconscious than one would expect. They are even afraid of their own shadow. And when it comes to the anima and animus, this fear turns to panic. For the syzygy does indeed represent the psychic contents that irrupt into consciousness in a psychosis (most clearly of all in the paranoid forms of schizophrenia).[12] The overcoming of this fear is often a moral achievement of unusual magnitude, and yet it is not the only condition that must be fulfilled on the way to a real experience of the self.

[63] The shadow, the syzygy, and the self are psychic factors of which an adequate picture can be formed only on the basis of a fairly thorough experience of them. Just as these concepts arose out of an experience of reality, so they can be elucidated only by further experience. Philosophical criticism will find everything to object to in them unless it begins by recognizing that they are concerned with *facts*, and that the "concept" is simply an abbreviated description or definition of these facts. Such criticism has as little effect on the object as zoological criticism on a duck-billed platypus. It is not the concept that matters; the concept is only a word, a counter, and it has meaning and use only because it stands for a certain sum of experience. Unfortunately I cannot pass on this experience to my public. I have tried in a number of publications, with the help of case material, to present the nature of these experiences and also the method of obtaining them. Wherever my methods were really applied the facts I give have been confirmed. One could see the moons of Jupiter even in Galileo's day if one took the trouble to use his telescope.

[64] Outside the narrower field of professional psychology these figures meet with understanding from all who have any knowledge of comparative mythology. They have no difficulty in recognizing the shadow as the adverse representative of the dark chthonic world, a figure

whose characteristics are universal. The syzygy is immediately comprehensible as the psychic prototype of all divine couples. Finally the self, on account of its empirical peculiarities, proves to be the *eidos* behind the supreme ideas of unity and totality that are inherent in all monotheistic and monistic systems.

[65] I regard these parallels as important because it is possible, through them, to relate so-called *metaphysical* concepts, which have lost their root connection with natural experience, to living, universal psychic processes, so that they can recover their true and original meaning. In this way the connection is reestablished between the ego and projected contents now formulated as "metaphysical" ideas. Unfortunately, as already said, the fact that metaphysical ideas exist and are believed in does nothing to prove the actual existence of their content or of the object they refer to, although the coincidence of idea and reality in the form of a special psychic state, a state of grace, should not be deemed impossible, even if the subject cannot bring it about by an act of will. Once metaphysical ideas have lost their capacity to recall and evoke the original experience they have not only become useless but prove to be actual impediments on the road to wider development. One clings to possessions that have once meant wealth; and the more ineffective, incomprehensible, and lifeless they become the more obstinately people cling to them. (Naturally it is only sterile ideas that they cling to; living ideas have content and riches enough, so there is no need to cling to them.) Thus in the course of time the meaningful turns into the meaningless. This is unfortunately the fate of metaphysical ideas.

[66] Today it is a real problem what on earth such ideas can mean. The world—so far as it has not completely turned its back on tradition—has long ago stopped wanting to hear a "message"; it would rather be told what the message means. The words that resound from the pulpit are incomprehensible and cry for an explanation. How has the death of Christ brought us redemption when no one feels redeemed? In what way is Jesus a God-man and what is such a being? What is the Trinity about, and the parthenogenesis, the eating of the body and the drinking of the blood, and all the rest of it? What connection can there be between the world of such concepts and the everyday world, whose material reality is

the concern of natural science on the widest possible scale? At least sixteen hours out of twenty-four we live exclusively in this everyday world, and the remaining eight we spend preferably in an unconscious condition. Where and when does anything take place to remind us even remotely of phenomena like angels, miraculous feedings, beatitudes, the resurrection of the dead, etc.? It was therefore something of a discovery to find that during the unconscious state of sleep intervals occur, called "dreams," which occasionally contain scenes having a not inconsiderable resemblance to the motifs of mythology. For myths are miracle tales and treat of all those things which, very often, are also objects of belief.

[67] In the everyday world of consciousness such things hardly exist; that is to say, until 1933 only lunatics would have been found in possession of living fragments of mythology. After this date the world of heroes and monsters spread like a devastating fire over whole nations, proving that the strange world of myth had suffered no loss of vitality during the centuries of reason and enlightenment. If metaphysical ideas no longer have such a fascinating effect as before, this is certainly not due to any lack of primitivity in the European psyche, but simply and solely to the fact that the erstwhile symbols no longer express what is now welling up from the unconscious as the end-result of the development of Christian consciousness through the centuries. This end-result is a true *antimimon pneuma*, a false spirit of arrogance, hysteria, woolly-mindedness, criminal amorality, and doctrinaire fanaticism, a purveyor of shoddy spiritual goods, spurious art, philosophical stutterings, and Utopian humbug, fit only to be fed wholesale to the mass man of today. That is what the post-Christian spirit looks like.

V

CHRIST, A SYMBOL OF THE SELF

[68] The dechristianization of our world, the Luciferian development of science and technology, and the frightful material and moral destruction left behind by the second World War have been compared more than once with the *eschatological* events foretold in the New Testament. These, as we know, are concerned with the coming of the Antichrist: “This is Antichrist, who denieth the Father and the Son.”[1] “Every spirit that dissolveth Jesus … is Antichrist … of whom you have heard that he cometh.”[2] The Apocalypse is full of expectations of terrible things that will take place at the end of time, before the marriage of the Lamb. This shows plainly that the *anima christiana* has a sure knowledge not only of the existence of an adversary but also of his future usurpation of power.

[69] Why—my reader will ask—do I discourse here upon Christ and his adversary, the Antichrist? Our discourse necessarily brings us to Christ, because he is the still living myth of our culture. He is our culture hero, who, regardless of his historical existence, embodies the myth of the divine Primordial Man, the mystic Adam. It is he who occupies the centre of the Christian mandala, who is the Lord of the Tetramorph, i.e., the four symbols of the evangelists, which are like the four columns of his throne. He is in us and we in him. His kingdom is the pearl of great price, the treasure buried in the field, the grain of mustard seed which will become a great tree, and the heavenly city.[3] As Christ is in us, so also is his heavenly kingdom.[4]

[70] These few, familiar references should be sufficient to make the psychological position of the Christ symbol quite clear. *Christ exemplifies the archetype of the self.*[5] He represents a totality of a divine or heavenly kind, a glorified man, a son of God *sine macula peccati*, unspotted by sin. As *Adam secundus* he corresponds to the first Adam before the Fall, when the latter was still a pure image of God, of which Tertullian (d. 222) says: “And this therefore is to be considered as the image of God in man, that the human spirit has the same motions and senses as God has, though not in the same way as God has them.”[6] Origen (185–254) is very much more explicit: The *imago Dei* imprinted

on the soul, not on the body,[7] is an image of an image, "for my soul is not directly the image of God, but is made after the likeness of the former image."[8] Christ, on the other hand, is the true image of God,[9] after whose likeness our inner man is made, invisible, incorporeal, incorrupt, and immortal.[10] The God-image in us reveals itself through "prudentia, iustitia, moderatio, virtus, sapientia et disciplina."[11]

[71] St. Augustine (354–430) distinguishes between the God-image which is Christ and the image which is implanted in man as a means or possibility of becoming like God.[12] The God-image is not in the corporeal man, but in the *anima rationalis*, the possession of which distinguishes man from animals. "The God-image is within, not in the body. … Where the understanding is, where the mind is, where the power of investigating truth is, there God has his image."[13] Therefore we should remind ourselves, says Augustine, that we are fashioned after the image of God nowhere save in the understanding: "… but where man knows himself to be made after the image of God, there he knows there is something more in him than is given to the beasts."[14] From this it is clear that the God-image is, so to speak, identical with the *anima rationalis*. The latter is the higher spiritual man, the *homo coelestis* of St Paul.[15] Like Adam before the Fall, Christ is an embodiment of the God-image,[16] whose totality is specially emphasized by St. Augustine. "The Word," he says, "took on complete manhood, as it were in its fulness: the soul and body of a man. And if you would have me put it more exactly—since even a beast of the field has a 'soul' and a body—when I say a human soul and human flesh, I mean he took upon him a complete human soul."[17]

[72] The God-image in man was not destroyed by the Fall but was only damaged and corrupted ("deformed"), and can be restored through God's grace. The scope of the integration is suggested by the *descensus ad inferos*, the descent of Christ's soul to hell, its work of redemption embracing even the dead. The psychological equivalent of this is the integration of the collective unconscious which forms an essential part of the individuation process. St. Augustine says: "Therefore our end must be our perfection, but our perfection is Christ,"[18] since he is the perfect God-image. For this reason he is also called "King." His bride (*sponsa*) is the human soul, which "in an inwardly hidden spiritual mystery is joined to the Word, that two may be in one flesh," to correspond with the mystic marriage of Christ and the Church.[19] Concurrently with the continuance of this *hieros gamos* in the dogma and rites of the Church, the symbolism developed in the course of the Middle Ages into the alchemical conjunction of opposites, or

"chymical wedding," thus giving rise on the one hand to the concept of the *lapis philosophorum*, signifying totality, and on the other hand to the concept of chemical combination.

[73] The God-image in man that was damaged by the first sin can be "reformed"[20] with the help of God, in accordance with Romans 12:2: "And be not conformed to this world, but be transformed by the renewal of your mind, that you may prove what is … the will of God" (RSV). The totality images which the unconscious produces in the course of an individuation process are similar "reformations" of an *a priori* archetype (the mandala).[21] As I have already emphasized, the spontaneous symbols of the self, or of wholeness, cannot in practice be distinguished from a God-image. Despite the word μεταμορφοῦσθε ('be transformed') in the Greek text of the above quotation, the "renewal" (ἀνακαίνωσις, *reformatio*) of the mind is not meant as an actual alteration of consciousness, but rather as the restoration of an original condition, an apocatastasis. This is in exact agreement with the empirical findings of psychology, that there is an ever-present archetype of wholeness[22] which may easily disappear from the purview of consciousness or may never be perceived at all until a consciousness illuminated by conversion recognizes it in the figure of Christ. As a result of this "anamnesis" the original state of oneness with the God-image is restored. It brings about an integration, a bridging of the split in the personality caused by the instincts striving apart in different and mutually contradictory directions. The only time the split does not occur is when a person is still as legitimately unconscious of his instinctual life as an animal. But it proves harmful and impossible to endure when an artificial unconsciousness—a repression—no longer reflects the life of the instincts.

[74] There can be no doubt that the original Christian conception of the *imago Dei* embodied in Christ meant an all-embracing totality that even includes the animal side of man. Nevertheless the Christ-symbol lacks wholeness in the modern psychological sense, since it does not include the dark side of things but specifically excludes it in the form of a Luciferian opponent. Although the exclusion of the power of evil was something the Christian consciousness was well aware of, all it lost in effect was an insubstantial shadow, for, through the doctrine of the *privatio boni* first propounded by Origen, evil was characterized as a mere diminution of good and thus deprived of substance. According to the teachings of the Church, evil is simply "the accidental lack of perfection." This assumption resulted in the proposition "omne bonum a Deo, omne malum ab

homine." Another logical consequence was the subsequent elimination of the devil in certain Protestant sects.

[75] Thanks to the doctrine of the *privatio boni*, wholeness seemed guaranteed in the figure of Christ. One must, however, take evil rather more substantially when one meets it on the plane of empirical psychology. There it is simply the opposite of good. In the ancient world the Gnostics, whose arguments were very much influenced by psychic experience, tackled the problem of evil on a broader basis than the Church Fathers. For instance, one of the things they taught was that Christ "cast off his shadow from himself."[23] If we give this view the weight it deserves, we can easily recognize the cut-off counterpart in the figure of Antichrist. The Antichrist develops in legend as a perverse imitator of Christ's life. He is a true ἀντιμιμὸν πνεῦμα, an imitating spirit of evil who follows in Christ's footsteps like a shadow following the body. This complementing of the bright but one-sided figure of the Redeemer—we even find traces of it in the New Testament—must be of especial significance. And indeed, considerable attention was paid to it quite early.

[76] If we see the traditional figure of Christ as a parallel to the psychic manifestation of the self, then the Antichrist would correspond to the shadow of the self, namely the dark half of the human totality, which ought not to be judged too optimistically. So far as we can judge from experience, light and shadow are so evenly distributed in man's nature that his psychic totality appears, to say the least of it, in a somewhat murky light. The psychological concept of the self, in part derived from our knowledge of the whole man, but for the rest depicting itself spontaneously in the products of the unconscious as an archetypal quaternity bound together by inner antinomies, cannot omit the shadow that belongs to the light figure, for without it this figure lacks body and humanity. In the empirical self, light and shadow form a paradoxical unity. In the Christian concept, on the other hand, the archetype is hopelessly split into two irreconcilable halves, leading ultimately to a metaphysical dualism—the final separation of the kingdom of heaven from the fiery world of the damned.

[77] For anyone who has a positive attitude towards Christianity the problem of the Antichrist is a hard nut to crack. It is nothing less than the counterstroke of the devil, provoked by God's Incarnation; for the devil attains his true stature as the adversary of Christ, and hence of God, only after the rise of Christianity, while as late as the Book of Job he was still one of God's sons and on familiar terms with Yahweh.[24] Psychologically the case is clear, since the dogmatic figure of Christ is so sublime and spotless that everything else turns dark beside

it. It is, in fact, so one-sidedly perfect that it demands a psychic complement to restore the balance. This inevitable opposition led very early to the doctrine of the two sons of God, of whom the elder was called Satanaël.[25] The coming of the Antichrist is not just a prophetic prediction—it is an inexorable psychological law whose existence, though unknown to the author of the Johannine Epistles, brought him a sure knowledge of the impending enantiodromia. Consequently he wrote as if he were conscious of the inner necessity for this transformation, though we may be sure that the idea seemed to him like a divine revelation. In reality every intensified differentiation of the Christ-image brings about a corresponding accentuation of its unconscious complement, thereby increasing the tension between above and below.

[78] In making these statements we are keeping entirely within the sphere of Christian psychology and symbolism. A factor that no one has reckoned with, however, is the fatality inherent in the Christian disposition itself, which leads inevitably to a reversal of its spirit—not through the obscure workings of chance but in accordance with psychological law. The ideal of spirituality striving for the heights was doomed to clash with the materialistic earth-bound passion to conquer matter and master the world. This change became visible at the time of the "Renaissance." The word means "rebirth," and it referred to the renewal of the antique spirit. We know today that this spirit was chiefly a mask; it was not the spirit of antiquity that was reborn, but the spirit of medieval Christianity that underwent strange pagan transformations, exchanging the heavenly goal for an earthly one, and the vertical of the Gothic style for a horizontal perspective (voyages of discovery, exploration of the world and of nature). The subsequent developments that led to the Enlightenment and the French Revolution have produced a worldwide situation today which can only be called "antichristian" in a sense that confirms the early Christian anticipation of the "end of time." It is as if, with the coming of Christ, opposites that were latent till then had become manifest, or as if a pendulum had swung violently to one side and were now carrying out the complementary movement in the opposite direction. No tree, it is said, can grow to heaven unless its roots reach down to hell. The double meaning of this movement lies in the nature of the pendulum. Christ is without spot, but right at the beginning of his career there occurs the encounter with Satan, the Adversary, who represents the counterpole of that tremendous tension in the world psyche which Christ's advent signified. He is the "mysterium iniquitatis" that accompanies the "sol iustitiae" as inseparably as the shadow belongs to the light, in exactly the same way, so the Ebionites[26] and Euchites[27] thought, that one brother cleaves to the other. Both

strive for a kingdom: one for the kingdom of heaven, the other for the "principatus huius mundi." We hear of a reign of a "thousand years" and of a "coming of the Antichrist," just as if a partition of worlds and epochs had taken place between two royal brothers. The meeting with Satan was therefore more than mere chance; it was a link in the chain.

[79] Just as we have to remember the gods of antiquity in order to appreciate the psychological value of the anima/animus archetype, so Christ is our nearest analogy of the self and its meaning. It is naturally not a question of a collective value artificially manufactured or arbitrarily awarded, but of one that is effective and present *per se*, and that makes its effectiveness felt whether the subject is conscious of it or not. Yet, although the attributes of Christ (consubstantiality with the Father, coeternity, filiation, parthenogenesis, crucifixion, Lamb sacrificed between opposites, One divided into Many, etc.) undoubtedly mark him out as an embodiment of the self, looked at from the psychological angle he corresponds to only one half of the archetype. The other half appears in the Antichrist. The latter is just as much a manifestation of the self, except that he consists of its dark aspect. Both are Christian symbols, and they have the same meaning as the image of the Saviour crucified between two thieves. This great symbol tells us that the progressive development and differentiation of consciousness leads to an ever more menacing awareness of the conflict and involves nothing less than a crucifixion of the ego, its agonizing suspension between irreconcilable opposites.[28] Naturally there can be no question of a total extinction of the ego, for then the focus of consciousness would be destroyed, and the result would be complete unconsciousness. The relative abolition of the ego affects only those supreme and ultimate decisions which confront us in situations where there are insoluble conflicts of duty. This means, in other words, that in such cases the ego is a suffering bystander who decides nothing but must submit to a decision and surrender unconditionally. The "genius" of man, the higher and more spacious part of him whose extent no one knows, has the final word. It is therefore well to examine carefully the psychological aspects of the individuation process in the light of Christian tradition, which can describe it for us with an exactness and impressiveness far surpassing our feeble attempts, even though the Christian image of the self—Christ—lacks the shadow that properly belongs to it.

[80] The reason for this, as already indicated, is the doctrine of the Summum Bonum. Irenaeus says very rightly, in refuting the Gnostics, that exception must be taken to the "light of their Father," because it "could not illuminate and fill even those things which were within it,"[29] namely the shadow and the void. It

seemed to him scandalous and reprehensible to suppose that within the pleroma of light there could be a "dark and formless void." For the Christian neither God nor Christ could be a paradox; they had to have a single meaning, and this holds true to the present day. No one knew, and apparently (with a few commendable exceptions) no one knows even now, that the hybris of the speculative intellect had already emboldened the ancients to propound a philosophical definition of God that more or less obliged him to be the Summum Bonum. A Protestant theologian has even had the temerity to assert that "God *can* only be good." Yahweh could certainly have taught him a thing or two in this respect, if he himself is unable to see his intellectual trespass against God's freedom and omnipotence. This forcible usurpation of the Summum Bonum naturally has its reasons, the origins of which lie far back in the past (though I cannot enter into this here). Nevertheless, it is the effective source of the concept of the *privatio boni*, which nullifies the reality of evil and can be found as early as Basil the Great (330–79) and Dionysius the Areopagite (2nd half of the 4th century), and is fully developed in Augustine.

[81] The earliest authority of all for the later axiom "Omne bonum a Deo, omne malum ab homine" is Tatian (2nd century), who says: "Nothing evil was created by God; we ourselves have produced all wickedness."[30] This view is also adopted by Theophilus of Antioch (2nd century) in his treatise *Ad Autolycum.*[31]

[82] Basil says:

> You must not look upon God as the author of the existence of evil, nor consider that evil has any subsistence in itself [ἰδίαν ὑπόστασιν τοῦ κοκοῦ εἶναι]. For evil does not subsist as a living being does, nor can we set before our eyes any substantial essence [οὐσίαν ἐνυπόστατον] thereof. For evil is the privation [στέρησις] of good. … And thus evil does not inhere in its own substance [ἐν ἰδίᾳ ὑπάρξει], but arises from the mutilation [πηρώμασιν] of the soul.[32] Neither is it uncreated, as the wicked say who set up evil for the equal of good … nor is it created. For if all things are of God, how can evil arise from good?[33]

[83] Another passage sheds light on the logic of this statement. In the second homily of the *Hexaemeron*, Basil says:

> It is equally impious to say that evil has its origin from God, because the contrary cannot proceed from the contrary. Life does not engender death, darkness is not the origin of light, sickness is not the maker of health. … Now if evil is neither uncreated nor created by God, whence comes its nature? That evil

> exists no one living in the world will deny. What shall we say, then? That evil is not a living and animated entity, but a condition [διἄθεσις] of the soul opposed to virtue, proceeding from light-minded [ῥαθύμοις] persons on account of their falling away from good. … Each of us should acknowledge that he is the first author of the wickedness in him.[34]

[84] The perfectly natural fact that when you say "high" you immediately postulate "low" is here twisted into a causal relationship and reduced to absurdity, since it is sufficiently obvious that darkness produces no light and light produces no darkness. The idea of good and evil, however, is the premise for any moral judgment. They are a logically equivalent pair of opposites and, as such, the *sine qua non* of all acts of cognition. From the empirical standpoint we cannot say more than this. And from this standpoint we would have to assert that good and evil, being coexistent halves of a moral judgment, do not derive from one another but are always there together. Evil, like good, belongs to the category of human values, and we are the authors of moral value judgments, but only to a limited degree are we authors of the facts submitted to our moral judgment. These facts are called by one person good and by another evil. Only in capital cases is there anything like a *consensus generalis*. If we hold with Basil that man is the author of evil, we are saying in the same breath that he is also the author of good. But man is first and foremost the author merely of judgments; in relation to the facts judged, his responsibility is not so easy to determine. In order to do this, we would have to give a clear definition of the extent of his free will. The psychiatrist knows what a desperately difficult task this is.

[85] For these reasons the psychologist shrinks from metaphysical assertions but must criticize the admittedly human foundations of the *privatio boni*. When therefore Basil asserts on the one hand that evil has no substance of its own but arises from a "mutilation of the soul," and if on the other hand he is convinced that evil really exists, then the relative reality of evil is grounded on a real "mutilation" of the soul which must have an equally real cause. If the soul was originally created good, then it has really been corrupted and by something that is real, even if this is nothing more than carelessness, indifference, and frivolity, which are the meaning of the word ῥαθυμία. When something—I must stress this with all possible emphasis—is traced back to a psychic condition or fact, it is very definitely not reduced to nothing and thereby nullified, but is shifted on to the plane of *psychic reality*, which is very much easier to establish empirically than, say, the reality of the devil in dogma, who according to the authentic sources was not invented by man at all but existed long before he did.

If the devil fell away from God of his own free will, this proves firstly that evil was in the world before man, and therefore that man cannot be the sole author of it, and secondly that the devil already had a “mutilated” soul for which we must hold a real cause responsible. The basic flaw in Basil’s argument is the *petitio principii* that lands him in insoluble contradictions: it is laid down from the start that the independent existence of evil must be denied even in face of the eternity of the devil as asserted by dogma. The historical reason for this was the threat presented by Manichaean dualism. This is especially clear in the treatise of Titus of Bostra (d. *c*. 370), entitled *Adversus Manichaeos*[35] where he states in refutation of the Manichaeans that, so far as substance is concerned, there is no such thing as evil.

[86] John Chrysostom (*c*. 344–407) uses, instead of στέρησις (*privatio*), the expression ἐκτροπὴ τοῦ καλοῦ (deviation, or turning away, from good). He says: “Evil is nothing other than a turning away from good, and therefore evil is secondary in relation to good.”[36]

[87] Dionysius the Areopagite gives a detailed explanation of evil in the fourth chapter of *De divinis nominibus*. Evil, he says, cannot come from good, because if it came from good it would not be evil. But since everything that exists comes from good, everything is in some way good, but “evil does not exist at all” (τὸ δε κοκὸν οὔτε ὄν ἐστιν).

[88] Evil in its nature is neither a thing nor does it bring anything forth.

Evil does not exist at all and is neither good nor productive of good [οὐκ ἔστι καθόλου τὸ κακὸν οὔτε ἀγαθὸν οὔτε ἀγαθοποιόν].

All things which are, by the very fact that they are, are good and come from good; but in so far as they are deprived of good, they are neither good nor do they exist.

That which has no existence is not altogether evil, for the absolutely non-existent will be nothing, unless it be thought of as subsisting in the good superessentially [κατὰ τὸ ὑπερούσιον]. Good, then, as absolutely existing and as absolutely non-existing, will stand in the foremost and highest place [πολλῷ πρότερον ὑπεριδρύμενον], while evil is neither in that which exists nor in that which does not exist [τὸ δὲ κακὸν οὔτε ἐν τοῖς οὖσιν, οὔτε ἐν τοῖς μὴ οὖσιν].[37]

[89] These quotations show with what emphasis the reality of evil was denied by the Church Fathers. As already mentioned, this hangs together with the Church’s attitude to Manichaean dualism, as can plainly be seen in St.

Augustine. In his polemic against the Manichaeans and Marcionites he makes the following declaration:

> For this reason all things are good, since some things are better than others and the goodness of the less good adds to the glory of the better. … Those things we call evil, then, are defects in good things, and quite incapable of existing in their own right outside good things. … But those very defects testify to the natural goodness of things. For what is evil by reason of a defect must obviously be good of its own nature. For a defect is something contrary to nature, something which damages the nature of a thing—and it can do so only by diminishing that thing's goodness. *Evil therefore is nothing but the privation of good*. And thus it can have no existence anywhere except in some good thing. … So there can be things which are good without any evil in them, such as God himself, and the higher celestial beings; but there can be no evil things without good. For if evils cause no damage to anything, they are not evils; if they do damage something, they diminish its goodness; and if they damage it still more, it is because it still has some goodness which they diminish; and if they swallow it up altogether, nothing of its nature is left to be damaged. And so there will be no evil by which it can be damaged, since there is then no nature left whose goodness any damage can diminish.[38]

[90] The *Liber Sententiarum ex Augustino* says (CLXXVI): "Evil is not a substance,[39] for as it has not God for its author, it does not exist; and so the defect of corruption is nothing else than the desire or act of a misdirected will."[40] Augustine agrees with this when he says: "The steel is not evil; but the man who uses the steel for a criminal purpose, he is evil."[41]

[91] These quotations clearly exemplify the standpoint of Dionysius and Augustine: evil has no substance or existence in itself, since it is merely a diminution of good, which alone has substance. Evil is a *vitium*, a bad use of things as a result of erroneous decisions of the will (blindness due to evil desire, etc.). Thomas Aquinas, the great theoretician of the Church, says with reference to the above quotation from Dionysius:

> One opposite is known through the other, as darkness is known through light. Hence also what evil is must be known from the nature of good. Now we have said above that good is everything appetible; and thus, since every nature desires its own being and its own perfection, it must necessarily be said that the being and perfection of every created thing is essentially good. Hence it cannot

be that evil signifies a being, or any form or nature. Therefore it must be that by the name of evil is signified the absence of good.[42]

Evil is not a being, whereas good is a being.[43]

That every agent works for an end clearly follows from the fact that every agent tends to something definite. Now that to which an agent tends definitely must needs be befuting to that agent, since the latter would not tend to it save on account of some fittingness thereto. But that which is befitting to a thing is good for it. Therefore every agent works for a good.[44]

[92] St. Thomas himself recalls the saying of Aristotle that "the thing is the whiter, the less it is mixed with black,"[45] without mentioning, however, that the reverse proposition: "the thing is the blacker, the less it is mixed with white," not only has the same validity as the first but is also its logical equivalent. He might also have mentioned that not only darkness is known through light, but that, conversely, light is known through darkness.

[93] As only that which works is real, so, according to St. Thomas, only good is real in the sense of "existing." His argument, however, introduces a good that is tantamount to "convenient, sufficient, appropriate, suitable." One ought therefore to translate "omne agens agit propter bonum" as: "Every agent works for the sake of what suits it." That's what the devil does too, as we all know. He too has an "appetite" and strives after perfection–not in good but in evil. Even so, one could hardly conclude from this that his striving is "essentially good."

[94] Obviously evil can be represented as a diminution of good, but with this kind of logic one could just as well say: The temperature of the Arctic winter, which freezes our noses and ears, is relatively speaking only a little below the heat prevailing at the equator. For the Arctic temperature seldom falls much lower than 230° C. above absolute zero. All things on earth are "warm" in the sense that nowhere is absolute zero even approximately reached. Similarly, all things are more or less "good," and just as cold is nothing but a diminution of warmth, so evil is nothing but a diminution of good. The *privatio boni* argument remains a euphemistic *petitio principii* no matter whether evil is regarded as a lesser good or as an effect of the finiteness and limitedness of created things. The false conclusion necessarily follows from the premise "Deus = Summum Bonum," since it is unthinkable that the perfect good could ever have created evil. It merely created the good and the less good (which last is simply called "worse" by laymen).[46] Just as we freeze miserably despite a temperature of 230° above absolute zero, so there are people and things that, although created by God, are good only to the minimal and bad to the maximal degree.

[95] It is probably from this tendency to deny any reality to evil that we get the axiom “Omne bonum a Deo, omne malum ab homine.” This is a contradiction of the truth that he who created the heat is also responsible for the cold (“the goodness of the less good”). We can certainly hand it to Augustine that all natures are good, yet just not good enough to prevent their badness from being equally obvious.

*

[96] One could hardly call the things that have happened, and still happen, in the concentration camps of the dictator states an “accidental lack of perfection”—it would sound like mockery.

[97] Psychology does not know what good and evil are in themselves; it knows them only as judgments about relationships. “Good” is what seems suitable, acceptable, or valuable from a certain point of view; evil is its opposite. If the things we call good are “really” good, then there must be evil things that are “real” too. It is evident that psychology is concerned with a more or less subjective judgment, i.e., with a psychic antithesis that cannot be avoided in naming value relationships: “good” denotes something that is not bad, and “bad” something that is not good. There are things which from a certain point of view are extremely evil, that is to say dangerous. There are also things in human nature which are very dangerous and which therefore seem proportionately evil to anyone standing in their line of fire. It is pointless to gloss over these evil things, because that only lulls one into a sense of false security. Human nature is capable of an infinite amount of evil, and the evil deeds are as real as the good ones so far as human experience goes and so far as the psyche judges and differentiates between them. Only unconsciousness makes no difference between good and evil. Inside the psychological realm one honestly does not know which of them predominates in the world. We hope, merely, that good does—i.e., what seems suitable to us. No one could possibly say what the general good might be. No amount of insight into the relativity and fallibility of our moral judgment can deliver us from these defects, and those who deem themselves beyond good and evil are usually the worst tormentors of mankind, because they are twisted with the pain and fear of their own sickness.

[98] Today as never before it is important that human beings should not overlook the danger of the evil lurking within them. It is unfortunately only too real, which is why psychology must insist on the reality of evil and must reject any definition that regards it as insignificant or actually non-existent. Psychology is

an empirical science and deals with realities. As a psychologist, therefore, I have neither the inclination nor the competence to mix myself up with metaphysics. Only, I have to get polemical when metaphysics encroaches on experience and interprets it in a way that is not justified empirically. My criticism of the *privatio boni* holds only so far as psychological experience goes. From the scientific point of view the *privatio boni*, as must be apparent to everyone, is founded on a *petitio principii*, where what invariably comes out at the end is what you put in at the beginning. Arguments of this kind have no power of conviction. But the fact that such arguments are not only used but are undoubtedly believed is something that cannot be disposed of so easily. It proves that there is a tendency, existing right from the start, to give priority to "good," and to do so with all the means in our power, whether suitable or unsuitable. So if Christian metaphysics clings to the *privatio boni*, it is giving expression to the tendency always to increase the good and diminish the bad. The *privatio boni* may therefore be a metaphysical truth. I presume to no judgment on this matter. I must only insist that in our field of experience white and black, light and dark, good and bad, are equivalent opposites which always predicate one another.

[99] This elementary fact was correctly appreciated in the so-called Clementine Homilies,[47] a collection of Gnostic-Christian writings dating from about A.D. 150. The unknown author understands good and evil as the right and left hand of God, and views the whole of creation in terms of syzygies, or pairs of opposites. In much the same way the follower of Bardesanes, Marinus, sees good as "light" and pertaining to the right hand (δεξιόν), and evil as "dark" and pertaining to the left hand (ἀριστερόν).[48] The left also corresponds to the feminine. Thus in Irenaeus (*Adv. haer.*, I, 30, 3), Sophia Prounikos is called Sinistra. Clement finds this altogether compatible with the idea of God's unity. Provided that one has an anthropomorphic God-image—and every God-image is anthropomorphic in a more or less subtle way—the logic and naturalness of Clement's view can hardly be contested. At all events this view, which may be some two hundred years older than the quotations given above, proves that the reality of evil does not necessarily lead to Manichaean dualism and so does not endanger the unity of the God-image. As a matter of fact, it guarantees that unity on a plane beyond the crucial difference between the Yahwistic and the Christian points of view. Yahweh is notoriously unjust, and injustice is not good. The God of Christianity, on the other hand, is *only* good. There is no denying that Clement's theology helps us to get over this contradiction in a way that fits the psychological facts.

[100] It is therefore worth following up Clement’s line of thought a little more closely. “God,” he says, “appointed two kingdoms [ßασιλείας] and two ages [αἰῶνας], determining that the present world should be given over to evil [πονηρῷ], because it is small and passes quickly away. But he promised to preserve the future world for good, because it is great and eternal.” Clement goes on to say that this division into two corresponds to the structure of man: the body comes from the female, who is characterized by emotionality; the spirit comes from the male, who stands for rationality. He calls body and spirit the “two triads.”[49]

> Man is a compound of two mixtures [ϕνραμἀτων, lit. ‘pastes’], the female and the male. Wherefore also two ways have been laid before him—those of obedience and of disobedience to law; and two kingdoms have been established—the one called the kingdom of heaven, and the other the kingdom of those who are now rulers upon earth. … Of these two, the one does violence to the other. Moreover these two rulers are the swift hands of God.

That is a reference to Deuteronomy 32 : 39: “I will kill and I will make to live” (DV). He kills with the left hand and saves with the right.

> These two principles have not their substance outside of God, for there is no other primal source [ἀρχὴ]. Nor have they been sent forth from God as animals, for they were of the same mind [ὁμόδοξοι] with him. … But from God were sent forth the four first elements—hot and cold, moist and dry. In consequence of this, he is the Father of every substance [οὐσίας], but not of the knowledge which arises from the mixing of the elements.[50] For when these were combined from without, choice [προαίρεσις] was begotten in them as a child.[51]

That is to say, through the mixing of the four elements inequalities arose which caused uncertainty and so necessitated decisions or acts of choice. The four elements form the fourfold substance of the body (τετραγενὴς τοῦ σώματος οὐσία) and also of evil (τοῦ πονηροῦ). This substance was “carefully discriminated and sent forth from God, but when it was combined from without, according to the will of him who sent it forth, there arose, as a result of the combination, the preference which rejoices in evils [ἡ κακοῖς χαίρουσα προαίρεσις].”[52]

[101] The last sentence is to be understood as follows: The fourfold substance is eternal (οὖσα ἀεί) and God’s child. But the tendency to evil was added from

outside to the mixture willed by God (κατὰ τὴν τοῦ θεοῦ βούλησιν ἔξω τῆ κράσει συμβέβηκεν). Thus evil is not created by God or by any one else, nor was it projected out of him, nor did it arise of itself. Peter, who is engaged in these reflections, is evidently not quite sure how the matter stands.

[102] It seems as if, without God’s intending it (and possibly without his knowing it) the mixture of the four elements took a wrong turning, though this is rather hard to square with Clement’s idea of the opposite hands of God “doing violence to one another.” Obviously Peter, the leader of the dialogue, finds it rather difficult to attribute the cause of evil to the Creator in so many words.

[103] The author of the Homilies espouses a Petrine Christianity distinctly “High Church” or ritualistic in flavour. This, taken together with his doctrine of the dual aspect of God, brings him into close relationship with the early Jewish-Christian Church, where, according to the testimony of Epiphanius, we find the Ebionite notion that God had two sons, an elder one, Satan, and a younger one, Christ.[53] Michaias, one of the speakers in the dialogue, suggests as much when he remarks that if good and evil were begotten in the same way they must be brothers.[54]

[104] In the (Jewish-Christian?) apocalypse, the “Ascension of Isaiah,” we find, in the middle section, Isaiah’s vision of the seven heavens through which he was rapt.[55] First he saw Sammaël and his hosts, against whom a “great battle” was raging in the firmament. The angel then wafted him beyond this into the first heaven and led him before a throne. On the right of the throne stood angels who were more beautiful than the angels on the left. Those on the right “all sang praises with *one* voice,” but the ones on the left sang *after* them, and their singing was not like the singing of the first. In the second heaven all the angels were more beautiful than in the first heaven, and there was no difference between them, either here or in any of the higher heavens. Evidently Sammaël still has a noticeable influence on the first heaven, since the angels on the left are not so beautiful there. Also, the lower heavens are not so splendid as the upper ones, though each surpasses the other in splendour. The devil, like the Gnostic archons, dwells in the firmament, and he and his angels presumably correspond to astrological gods and influences. The gradation of splendour, going all the way up to the topmost heaven, shows that his sphere interpenetrates with the divine sphere of the Trinity, whose light in turn filters down as far as the lowest heaven. This paints a picture of complementary opposites balancing one another like right and left hands. Significantly enough,

this vision, like the Clementine Homilies, belongs to the pre-Manichaean period (second century), when there was as yet no need for Christianity to fight against its Manichaean competitors. It might easily be a description of a genuine yang-yin relationship, a picture that comes closer to the actual truth than the *privatio boni*. Moreover, it does not damage monotheism in any way, since it unites the opposites just as yang and yin are united in Tao (which the Jesuits quite logically translated as "God"). It is as if Manichaean dualism first made the Fathers conscious of the fact that until then, without clearly realizing it, they had always believed firmly in the substantiality of evil. This sudden realization might well have led them to the dangerously anthropomorphic assumption that what man cannot unite, God cannot unite either. The early Christians, thanks to their greater unconsciousness, were able to avoid this mistake.

[105] Perhaps we may risk the conjecture that the problem of the Yahwistic God-image, which had been constellated in men's minds ever since the Book of Job, continued to be discussed in Gnostic circles and in syncretistic Judaism generally, all the more eagerly as the Christian answer to this question—namely the unanimous decision in favour of God's goodness[56]—did not satisfy the conservative Jews. In this respect, therefore, it is significant that the doctrine of the two antithetical sons of God originated with the Jewish Christians living in Palestine. Inside Christianity itself the doctrine spread to the Bogomils and Cathars; in Judaism it influenced religious speculation and found lasting expression in the two sides of the cabalistic Tree of the Sephiroth, which were named *hesed* (love) and *din* (justice). A rabbinical scholar, Zwi Werblowsky, has been kind enough to put together for me a number of passages from Hebrew literature which have bearing on this problem.

[106] R. Joseph taught: "What is the meaning of the verse, 'And none of you shall go out at the door of his house until the morning?' (Exodus 12 : 22.)[57] Once permission has been granted to the destroyer, he does not distinguish between the righteous and the wicked. Indeed, he even begins with the righteous."[58] Commenting on Exodus 33 : 5 ("If for a single moment I should go up among you, I would consume you"), the midrash says: "Yahweh means he could wax wroth with you for a moment—for that is the length of his wrath, as is said in Isaiah 26 : 20, 'Hide yourselves for a little moment until the wrath is past'—and destroy you." Yahweh gives warning here of his unbridled irascibility. If in this moment of divine wrath a curse is uttered, it will indubitably be effective. That is why Balaam, "who knows the thoughts of the

Most High,”[59] when called upon by Balak to curse Israel, was so dangerous an enemy, because he knew the moment of Yahweh’s wrath.[60]

[107] God’s love and mercy are named his right hand, but his justice and his administration of it are named his left hand. Thus we read in I Kings 22 : 19: “I saw the Lord sitting on his throne, and all the host of heaven standing beside him on his right hand and on his left.” The midrash comments: “Is there right and left on high? This means that the intercessors stand on the right and the accusers on the left.”[61] The comment on Exodus 15 : 6 (“Thy right hand, O Lord, glorious in power, thy right hand, O Lord, shatters the enemy”) runs: “When the children of Israel perform God’s will, they make the left hand his right hand. When they do not do his will, they make even the right hand his left hand.”[62] “God’s left hand dashes to pieces; his right hand is glorious to save.”[63]

[108] The dangerous aspect of Yahweh’s justice comes out in the following passage: “Even so said the Holy One, blessed be He: If I create the world on the basis of mercy alone, its sins will be great; but on the basis of justice alone the world cannot exist. Hence I will create it on the basis of justice and mercy, and may it then stand!”[64] The midrash on Genesis 18 : 23 (Abraham’s plea for Sodom) says (Abraham speaking): “If thou desirest the world to endure, there can be no absolute justice, while if thou desirest absolute justice, the world cannot endure. Yet thou wouldst hold the cord by both ends, desiring both the world and absolute justice. Unless thou forgoest a little, the world cannot endure.”[65]

[109] Yahweh prefers the repentant sinners even to the righteous, and protects them from his justice by covering them with his hand or by hiding them under his throne.[66]

[110] With reference to Habakkuk 2 : 3 (“For still the vision awaits its time. … If it seem slow, wait for it”), R. Jonathan says: “Should you say, *We* wait [for his coming] but *He* does not, it stands written (Isaiah 30 : 18), ‘Therefore will the Lord wait, that he may be gracious unto you.’ … But since we wait and he waits too. what delays his coming? Divine justice delays it.”[67] It is in this sense that we have to understand the prayer of R. Jochanan: “May it be thy will, O Lord our God, to look upon our shame and behold our evil plight. Clothe thyself in thy mercies, cover thyself in thy strength, wrap thyself in thy loving-kindness, and gird thyself with thy graciousness, and may thy goodness and gentleness come before thee.”[68] God is properly exhorted to remember his good qualities. There is even a tradition that God prays to himself: “May it be My will that My

mercy may suppress My anger, and that My compassion may prevail over My other attributes."[69] This tradition is borne out by the following story:

> R. Ishmael the son of Elisha said: I once entered the innermost sanctuary to offer incense, and there I saw Akathriel[70] Jah Jahweh Zebaoth[71] seated upon a high and exalted throne. He said to me, Ishmael, my son, bless me! And I answered him: May it be Thy will that Thy mercy may suppress Thy anger, and that Thy compassion may prevail over Thy other attributes, so that Thou mayest deal with Thy children according to the attribute of mercy and stop short of the limit of strict justice! And He nodded to me with His head.[72]

[111] It is not difficult to see from these quotations what was the effect of Job's contradictory God-image. It became a subject for religious speculation inside Judaism and, through the medium of the Cabala, it evidently had an influence on Jakob Böhme. In his writings we find a similar ambivalence, namely the love and the "wrath-fire" of God, in which Lucifer burns for ever.[73]

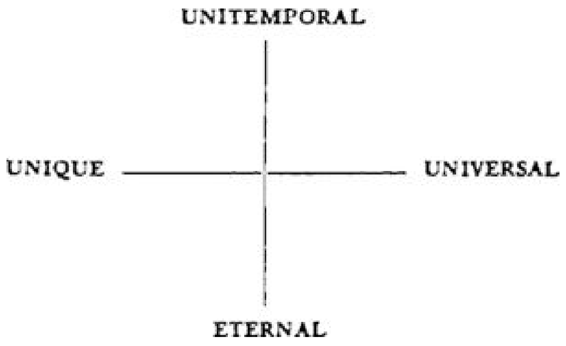
[112] Since psychology is not metaphysics, no metaphysical dualism can be derived from, or imputed to, its statements concerning the equivalence of opposites.[74] It knows that equivalent opposites are necessary conditions inherent in the act of cognition, and that without them no discrimination would be possible. It is not exactly probable that anything so intrinsically bound up with the act of cognition should be at the same time a property of the object. It is far easier to suppose that it is primarily our consciousness which names and evaluates the differences between things, and perhaps even creates distinctions where no differences are discernible.

[113] I have gone into the doctrine of the *privatio boni* at such length because it is in a sense responsible for a too optimistic conception of the evil in human nature and for a too pessimistic view of the human soul. To offset this, early Christianity, with unerring logic, balanced Christ against an Antichrist. For how can you speak of "high" if there is no "low," or "right" if there is no "left," of "good" if there is no "bad," and the one is as real as the other? Only with Christ did a devil enter the world as the real counterpart of God, and in early Jewish-Christian circles Satan, as already mentioned, was regarded as Christ's elder brother.

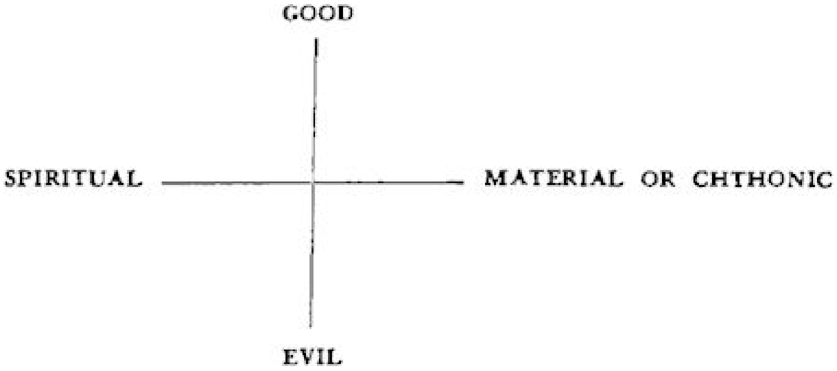
[114] But there is still another reason why I must lay such critical stress on the *privatio boni*. As early as Basil we meet with the tendency to attribute evil to the disposition (διάθεσις) of the soul, and at the same time to give it a "non-existent" character. Since, according to this author, evil originates in human

frivolity and therefore owes its existence to mere negligence, it exists, so to speak, only as a by-product of psychological oversight, and this is such a *quantité négligeable* that evil vanishes altogether in smoke. Frivolity as a cause of evil is certainly a factor to be taken seriously, but it is a factor that can be got rid of by a change of attitude. We *can* act differently, if we want to. Psychological causation is something so elusive and seemingly unreal that everything which is reduced to it inevitably takes on the character of futility or of a purely accidental mistake and is thereby minimized to the utmost. It is an open question how much of our modern undervaluation of the psyche stems from this prejudice. This prejudice is all the more serious in that it causes the psyche to be suspected of being the birthplace of all evil. The Church Fathers can hardly have considered what a fatal power they were ascribing to the soul. One must be positively blind not to see the colossal role that evil plays in the world. Indeed, it took the intervention of God himself to deliver humanity from the curse of evil, for without his intervention man would have been lost. If this paramount power of evil is imputed to the soul, the result can only be a negative inflation—i.e., a daemonic claim to power on the part of the unconscious which makes it all the more formidable. This unavoidable consequence is anticipated in the figure of the Antichrist and is reflected in the course of contemporary events, whose nature is in accord with the Christian aeon of the Fishes, now running to its end.

[115] In the world of Christian ideas Christ undoubtedly represents the self.[75] As the apotheosis of individuality, the self has the attributes of uniqueness and of occurring once only in time. But since the psychological self is a transcendent concept, expressing the totality of conscious and unconscious contents, it can only be described in antinomial terms;[76] that is, the above attributes must be supplemented by their opposites if the transcendental situation is to be characterized correctly. We can do this most simply in the form of a quaternion of opposites:



[116] This formula expresses not only the psychological self but also the dogmatic figure of Christ. As an historical personage Christ is unitemporal and unique; as God, universal and eternal. Likewise the self: as the essence of individuality it is unitemporal and unique; as an archetypal symbol it is a God-image and therefore universal and eternal.[77] Now if theology describes Christ as simply "good" and "spiritual," something "evil" and "material"—or "chthonic"—is bound to arise on the other side, to represent the Antichrist. The resultant quaternion of opposites is united on the psychological plane by the fact that the self is not deemed exclusively "good" and "spiritual"; consequently its shadow turns out to be much less black. A further result is that the opposites of "good" and "spiritual" need no longer be separated from the whole:



[117] This *quaternio* characterizes the psychological self. Being a totality, it must by definition include the light and dark aspects, in the same way that the self embraces both masculine and feminine and is therefore symbolized by the marriage *quaternio*.[78] This last is by no means a new discovery, since according to Hippolytus it was known to the Naassenes.[79] Hence individuation is a "mysterium coniunctionis," the self being experienced as a nuptial union of opposite halves[80] and depicted as a composite whole in mandalas that are drawn spontaneously by patients.

[118] It was known, and stated, very early that the man Jesus, the son of Mary, was the *principium individuationis*. Thus Basilides[81] is reported by Hippolytus as saying: "Now Jesus became the first sacrifice in the discrimination of the natures [φυλοκρίνησις], and the Passion came to pass for no other reason than the discrimination of composite things. For in this manner, he says, the sonship that had been left behind in a formless state [ἀμορφία] … needed separating into its components [φυλοκρινηθῆναι], in the same way that Jesus was separated."[82] According to the rather complicated teachings of Basilides, the "non-existent" God begot a threefold sonship (υἱότης). The first "son," whose nature was the finest and most subtle, remained up above with the Father. The

second son, having a grosser (παχυμερέστερα) nature, descended a bit lower, but received “some such wing as that with which Plato … equips the soul in his *Phaedrus*.”[83] The third son, as his nature needed purifying (ἀποκαθάρσις), fell deepest into “formlessness.” This third “sonship” is obviously the grossest and heaviest because of its impurity. In these three emanations or manifestations of the non-existent God it is not hard to see the trichotomy of spirit, soul, and body (πνενματικόν, Ψυχικόν, σαρκικόν). Spirit is the finest and highest; soul, as the *ligamentum spiritus et corporis*, is grosser than spirit, but has “the wings of an eagle,”[84] so that it may lift its heaviness up to the higher regions. Both are of a “subtle” nature and dwell, like the ether and the eagle, in or near the region of light, whereas the body, being heavy, dark, and impure, is deprived of the light but nevertheless contains the divine seed of the third sonship, though still *unconscious and formless*. This seed is as it were awakened by Jesus, purified and made capable of ascension (ἀναδρομή),[85] by virtue of the fact that the opposites were separated in Jesus through the Passion (i.e., through his division into four).[86] Jesus is thus the prototype for the awakening of the third sonship slumbering in the darkness of humanity. He is the “spiritual inner man.”[87] He is also a complete trichotomy in himself, for Jesus the son of Mary represents the incarnate man, but his immediate predecessor is the second Christ, the son of the highest archon of the hebdomad, and his first prefiguration is Christ the son of the highest archon of the ogdoad, the demiurge Yahweh.[88] This trichotomy of Anthropos figures corresponds exactly to the three sonships of the non-existing God and to the division of human nature into three parts. We have therefore three trichotomies:

I	II	III
First sonship	*Christ of the Ogdoad*	*Spirit*
Second sonship	*Christ of the Hebdomad*	*So*
Third sonship	*Jesus the Son of Mary*	*Bo*

[119] It is in the sphere of the dark, heavy body that we must look for the ἀμορφία, the “formlessness” wherein the third sonship lies hidden. As suggested above, this formlessness seems to be practically the equivalent of “unconsciousness.” G. Quispel has drawn attention to the concepts of ἀγνωσία in Epiphanius[89] and ἀνόητον in Hippolytus,[90] which are best translated by

“unconscious.” ’Αμορφία, ἀγνωσία, and ἀνόητον all refer to the initial state of things, to the potentiality of unconscious contents, aptly formulated by Basilides as οὐκ ὂν σπέρμα τοῦ κόσμου πολύμορφον ὁμοῦ καὶ πολυούσιον (the non-existent, many-formed, and all-empowering seed of the world).[91]

[120] This picture of the third sonship has certain analogies with the medieval *filius philosophorum* and the *filius macrocosmi*, who also symbolize the world-soul slumbering in matter.[92] Even with Basilides the body acquires a special and unexpected significance, since in it and its materiality is lodged a third of the revealed Godhead. This means nothing less than that matter is predicated as having considerable numinosity in itself, and I see this as an anticipation of the “mystic” significance which matter subsequently assumed in alchemy and—later on—in natural science. From a psychological point of view it is particularly important that Jesus corresponds to the third sonship and is the prototype of the “awakener” because the opposites were separated in him through the Passion and so became conscious, whereas in the third sonship itself they remain unconscious so long as the latter is formless and undifferentiated. This amounts to saying that in unconscious humanity there is a latent seed that corresponds to the prototype Jesus. Just as the man Jesus became conscious only through the light that emanated from the higher Christ and separated the natures in him, so the seed in unconscious humanity is awakened by the light emanating from Jesus, and is thereby impelled to a similar discrimination of opposites. This view is entirely in accord with the psychological fact that the archetypal image of the self has been shown to occur in dreams even when no such conceptions exist in the conscious mind of the dreamer.[93]

*

[121] I would not like to end this chapter without a few final remarks that are forced on me by the importance of the material we have been discussing. The standpoint of a psychology whose subject is the phenomenology of the psyche is evidently something that is not easy to grasp and is very often misunderstood. If, therefore, at the risk of repeating myself, I come back to fundamentals, I do so only in order to forestall certain wrong impressions which might be occasioned by what I have said, and to spare my reader unnecessary difficulties.

[122] The parallel I have drawn here between Christ and the self is not to be taken as anything more than a psychological one, just as the parallel with the fish is mythological. There is no question of any intrusion into the sphere of

metaphysics, i.e., of faith. The images of God and Christ which man's religious fantasy projects cannot avoid being anthropomorphic and are admitted to be so; hence they are capable of psychological elucidation like any other symbols. Just as the ancients believed that they had said something important about Christ with their fish symbol, so it seemed to the alchemists that their parallel with the stone served to illuminate and deepen the meaning of the Christ-image. In the course of time, the fish symbolism disappeared completely, and so likewise did the *lapis philosophorum*. Concerning this latter symbol, however, there are plenty of statements to be found which show it in a special light—views and ideas which attach such importance to the stone that one begins to wonder whether, in the end, it was Christ who was taken as a symbol of the stone rather than the other way round. This marks a development which—with the help of certain ideas in the epistles of John and Paul—includes Christ in the realm of immediate inner experience and makes him appear as the figure of the total man. It also links up directly with the psychological evidence for the existence of an archetypal content possessing all those qualities which are characteristic of the Christ-image in its archaic and medieval forms. Modern psychology is therefore confronted with a question very like the one that faced the alchemists: Is the self a symbol of Christ, or is Christ a symbol of the self?

[123] In the present study I have affirmed the latter alternative. I have tried to show how the traditional Christ-image concentrates upon itself the characteristics of an archetype—the archetype of the self. My aim and method do not purport to be anything more in principle than, shall we say, the efforts of an art historian to trace the various influences which have contributed towards the formation of a particular Christ-image. Thus we find the concept of the archetype in the history of art as well as in philology and textual criticism. The psychological archetype differs from its parallels in other fields only in one respect: it refers to a living and ubiquitous psychic fact, and this naturally shows the whole situation in a rather different light. One is then tempted to attach greater importance to the immediate and living presence of the archetype than to the idea of the historical Christ. As I have said, there is among certain of the alchemists, too, a tendency to give the *lapis* priority over Christ. Since I am far from cherishing any missionary intentions, I must expressly emphasize that I am not concerned here with confessions of faith but with proven scientific facts. If one inclines to regard the archetype of the self as the real agent and hence takes Christ as a symbol of the self, one must bear in mind that there is a considerable difference between *perfection* and *completeness*. The Christ-image is as good as perfect (at least it is meant to be so), while the archetype (so far as

known) denotes completeness but is far from being perfect. It is a paradox, a statement about something indescribable and transcendental. Accordingly the realization of the self, which would logically follow from a recognition of its supremacy, leads to a fundamental conflict, to a real suspension between opposites (reminiscent of the crucified Christ hanging between two thieves), and to an approximate state of wholeness that lacks perfection. To strive after teleiosis in the sense of perfection is not only legitimate but is inborn in man as a peculiarity which provides civilization with one of its strongest roots. This striving is so powerful, even, that it can turn into a passion that draws everything into its service. Natural as it is to seek perfection in one way or another, the archetype fulfils itself in completeness, and this is a τελείωσις of quite another kind. Where the archetype predominates, completeness is *forced* upon us against all our conscious strivings, in accordance with the archaic nature of the archetype. The individual may strive after perfection ("Be you therefore perfect—τέλειοι—also your heavenly Father is perfect."[94]) but must suffer from the opposite of his intentions for the sake of his completeness. "I find then a law, that, when I would do good, evil is present with me."[95]

[124] The Christ-image fully corresponds to this situation: Christ is the perfect man who is crucified. One could hardly think of a truer picture of the goal of ethical endeavour. At any rate the transcendental idea of the self that serves psychology as a working hypothesis can never match that image because, although it is a symbol, it lacks the character of a revelatory historical event. Like the related ideas of *atman* and *tao* in the East, the idea of the self is at least in part a product of cognition, grounded neither on faith nor on metaphysical speculation but on the experience that under certain conditions the unconscious spontaneously brings forth an archetypal symbol of wholeness. From this we must conclude that some such archetype occurs universally and is endowed with a certain numinosity. And there is in fact any amount of historical evidence as well as modern case material to prove this.[96] These naive and completely uninfluenced pictorial representations of the symbol show that it is given central and supreme importance precisely because it stands for the conjunction of opposites. Naturally the conjunction can only be understood as a paradox, since a union of opposites can be thought of only as their annihilation. Paradox is a characteristic of all transcendental situations because it alone gives adequate expression to their indescribable nature.

[125] Whenever the archetype of the self predominates, the inevitable psychological consequence is a state of conflict vividly exemplified by the

Christian symbol of crucifixion—that acute state of unredeemedness which comes to an end only with the words “consummatum est.” Recognition of the archetype, therefore, does not in any way circumvent the Christian mystery; rather, it forcibly creates the psychological preconditions without which “redemption” would appear meaningless. “Redemption” does not mean that a burden is taken from one’s shoulders which one was never meant to bear. Only the “complete” person knows how unbearable man is to himself. So far as I can see, no relevant objection could be raised from the Christian point of view against anyone accepting the task of individuation imposed on us by nature, and the recognition of our wholeness or completeness, as a binding personal commitment. If he does this consciously and intentionally, he avoids all the unhappy consequences of repressed individuation. In other words, if he voluntarily takes the burden of completeness on himself, he need not find it “happening” to him against his will in a negative form. This is as much as to say that anyone who is destined to descend into a deep pit had better set about it with all the necessary precautions rather than risk falling into the hole backwards.

[126] The irreconcilable nature of the opposites in Christian psychology is due to their moral accentuation. This accentuation seems natural to us, although, looked at historically, it is a legacy from the Old Testament with its emphasis on righteousness in the eyes of the law. Such an influence is notably lacking in the East, in the philosophical religions of India and China. Without stopping to discuss the question of whether this exacerbation of the opposites, much as it increases suffering, may not after all correspond to a higher degree of truth, I should like merely to express the hope that the present world situation may be looked upon in the light of the psychological rule alluded to above. Today humanity, as never before, is split into two apparently irreconcilable halves. The psychological rule says that when an inner situation is not made conscious, it happens outside, as fate. That is to say, when the individual remains undivided and does not become conscious of his inner opposite, the world must perforce act out the conflict and be torn into opposing halves.

VI

THE SIGN OF THE FISHES

[127] The figure of Christ is not as simple and unequivocal as one could wish. I am not referring here to the enormous difficulties arising out of a comparison of the Synoptic Christ with the Johannine Christ, but to the remarkable fact that in the hermeneutic writings of the Church Fathers, which go right back to the days of primitive Christianity, Christ has a number of symbols or “allegories” in common with the devil. Of these I would mention the lion, snake (*coluber*, ‘viper’), bird (devil = *nocturna avis*), raven (Christ = *nycticorax*, ‘night-heron’), eagle, and fish. It is also worth noting that Lucifer, the Morning Star, means Christ as well as the devil.[1] Apart from the snake, the fish is one of the oldest allegories. Nowadays we would prefer to call them symbols, because these synonyms always contain more than mere allegories, as is particularly obvious in the case of the fish symbol. It is unlikely that ’Iχθῦς is simply an anagrammatic abbreviation of ’I[ησοῦς] X[ριστὸς] Θ[εοῦ] Y[ἱὸς] Σ[ωτήρ],[2] but rather the symbolical designation for something far more complex. (As I have frequently pointed out in my other writings, I do not regard the symbol as an allegory or a sign, but take it in its proper sense as the best possible way of describing and formulating an object that is not completely knowable. It is in this sense that the creed is called a “symbolum.”) The order of the words gives one more the impression that they were put together for the purpose of explaining an already extant and widely disseminated “Ichthys.”[3] For the fish symbol, in the Near and Middle East especially, has a long and colourful prehistory, from the Babylonian fish-god Oannes and his priests who clothed themselves in fish-skins, to the sacred fish-meals in the cult of the Phoenician goddess Derceto-Atargatis and the obscurities of the Abercius inscription.[4] The symbol ranges from the redeemer-fish of Manu in farthest India to the Eucharistic fish-feast celebrated by the “Thracian riders” in the Roman

Empire.[5] For our purpose it is hardly necessary to go into this voluminous material more closely. As Doelger and others have shown, there are plenty of occasions for fish symbolism within the original, purely Christian world of ideas. I need only mention the regeneration in the font, in which the baptized swim like fishes.[6]

[128] In view of this wide distribution of the fish symbol, its appearance at a particular place or at a particular moment in the history of the world is no cause for wonder. But the sudden activation of the symbol, and its identification with Christ even in the early days of the Church, lead one to conjecture a second source. This source is astrology, and it seems that Friedrich Muenter[7] was the first to draw attention to it. Jeremias[8] adopts the same view and mentions that a Jewish commentary on Daniel, written in the fourteenth century, expected the coming of the Messiah in the sign of the Fishes. This commentary is mentioned by Muenter in a later publication[9] as stemming from Don Isaac Abarbanel, who was born in Lisbon in 1437 and died in Venice in 1508.[10] It is explained here that the House of the Fishes (♓) is the house of justice and of brilliant splendour (♃ in ♓). Further, that in *anno mundi* 2365,[11] a great conjunction of Saturn (♄) and Jupiter (♃) took place in Pisces.[12] These two great planets, he says, are also the most important for the destiny of the world, and especially for the destiny of the Jews. The conjunction took place three years before the birth of Moses. (This is of course legendary.) Abarbanel expects the coming of the Messiah when there is a conjunction of Jupiter and Saturn in Pisces. He was not the first to express such expectations. Four hundred years earlier we find similar pronouncements; for instance, Rabbi Abraham ben Hiyya, who died about 1136, is said to have decreed that the Messiah was to be expected in 1464, at the time of the great conjunction in Pisces; and the same is reported of Solomon ben Gabirol (1020–70).[13] These astrological ideas are quite understandable when one considers that Saturn is the star of Israel, and that Jupiter means the "king" (of justice). Among the territories ruled by the Fishes, the house of Jupiter, are Mesopotamia, Bactria, the Red Sea, and Palestine.[14] Chiun (Saturn) is mentioned in Amos 5 : 26 as "the star of your god."[15] James of Sarug (d. 521) says the Israelites worshipped Saturn. The Sabaeans

called him the “god of the Jews.”[16] The Sabbath is Saturday, Saturn’s Day. Albumasar[17] testifies that Saturn is the star of Israel.[18] In medieval astrology Saturn was believed to be the abode of the devil.[19] Both Saturn and Ialdabaoth, the demiurge and highest archon, have lion’s faces. Origen elicits from the diagram of Celsus that Michael, the first angel of the Creator, has “the shape of a lion.”[20] He obviously stands in the place of Ialdabaoth, who is identical with Saturn, as Origen points out.[21] The demiurge of the Naassenes is a “fiery god, the fourth by number.”[22] According to the teachings of Apelles, who had connections with Marcion, there was a “third god who spoke to Moses, a fiery one, and there was also a fourth, the author of evil.”[23] Between the god of the Naassenes and the god of Apelles there is evidently a close relationship, and also, it appears, with Yahweh, the demiurge of the Old Testament.

[129] Saturn is a “black” star,[24] anciently reputed a “maleficus.” “Dragons, serpents, scorpions, vipéres, renards, chats et souris, oiseaux nocturnes et autres engeances sournoises sont le lot de Saturne,” says Bouché-Leclercq.[25] Remarkably enough, Saturn’s animals also include the ass,[26] which on that account was rated a theriomorphic form of the Jewish god. A pictorial representation of it is the well-known mock crucifixion on the Palatine.[27] Similar traditions can be found in Plutarch,[28] Diodorus, Josephus,[29] and Tacitus.[30] Sabaoth, the seventh archon, has the form of an ass.[31] Tertullian is referring to these rumours when he says: “You are under the delusion that our God is an ass’s head,” and that “we do homage only to an ass.”[32] As we have indicated, the ass is sacred to the Egyptian Set.[33] In the early texts, however, the ass is the attribute of the sun-god and only later became an emblem of the underworldly Apep and of evil (Set).[34]

[130] According to medieval tradition, the religion of the Jews originated in a conjunction of Jupiter with Saturn, Islam in ♃ ☌ ♀, Christianity in ♃ ☌ ☿, and the Antichrist in ♃ ☌ ☾.[35] Unlike Saturn, Jupiter is a beneficent star. In the Iranian view Jupiter signifies life, Saturn death.[36] The conjunction of the two therefore signifies the *union of extreme opposites*. In the year 7 B.C. this famed conjunction took place no less

than three times in the sign of the Fishes. The greatest approximation occurred on May 29 of that year, the planets being only 0.21 degrees apart, less than half the width of the full moon.[37] The conjunction took place in the middle of the commissure, “near the bend in the line of the Fishes.” From the astrological point of view this conjunction must appear especially significant, because the approximation of the two planets was exceptionally large and of an impressive brilliance. In addition, seen heliocentrically, it took place near the equinoctial point, which at that time was located between ♈ and ♓, that is, between fire and water.[38] The conjunction was characterized by the important fact that Mars was in opposition (♂ ☍ ♃ ♄), which means, astrologically, that the planet correlated with the instincts stood in a hostile relationship to it, which is peculiarly characteristic of Christianity. If we accept Gerhardt’s calculation that the conjunction took place on May 29, in the year 7 B.C., then the position of the sun—especially important in a man’s nativity—at Christ’s birth would be in the double sign of the *Twins*.[39] One thinks involuntarily of the ancient Egyptian pair of hostile brothers, Horus and Set, the sacrificer and the sacrificed (cf. n. 27, on Set’s “martyrdom”), who in a sense prefigure the drama of the Christian myth. In the Egyptian myth it is the evil one who is sacrificed on the “slave’s post.”[40] But the pair of brothers Heru-ur (the “older Horus”) and Set are sometimes pictured as having one body with two heads. The planet Mercury is correlated with Set, and this is interesting in view of the tradition that Christianity originated in a conjunction of Jupiter with Mercury. In the New Kingdom (XIXth dynasty) Set appears as Sutech in the Nile delta. In the new capital built by Rameses II, one district was dedicated to Amon, the other to Sutech.[41] It was here that the Jews were supposed to have done slave-labour.

[131] In considering the double aspect of Christ, mention might be made of the legend of Pistis Sophia (3rd cent.), which also originated in Egypt. Mary says to Jesus:

> When thou wert a child, before the spirit had descended upon thee, when thou wert in the vineyard with Joseph, the spirit came down from the height, and came unto me in the house, like unto thee, and I knew him

not, but thought that he was thou. And he said unto me, “Where is Jesus, my brother, that I may go to meet him?” And when he had said this unto me, I was in doubt, and thought it was a phantom tempting me. I seized him and bound him to the foot of the bed which was in my house, until I had gone to find you in the field, thee and Joseph; and I found you in the vineyard, where Joseph was putting up the vine-poles. And it came to pass, when thou didst hear me saying this thing unto Joseph, that thou didst understand, and thou wert joyful, and didst say, “Where is he, that I may see him?” And it came to pass, when Joseph heard thee say these words, that he was disturbed. We went up together, entered into the house and found the spirit bound to the bed, and we gazed upon thee and him, and found that thou wert like unto him. And he that was bound to the bed was unloosed, he embraced thee and kissed thee, and thou also didst kiss him, and you became one.[42]

[132] It appears from the context of this fragment that Jesus is the “truth sprouting from the earth,” whereas the spirit that resembled him is “justice [δικαιοσύνη] looking down from heaven.” The text says: “Truth is the power which issued from thee when thou wast in the lower regions of chaos. For this cause thy power hath said through David, ‘Truth hath sprouted out of the earth,’ because thou wert in the lower regions of chaos.”[43] Jesus, accordingly, is conceived as a double personality, part of which rises up from the chaos or *hyle*, while the other part descends as pneuma from heaven.

[133] One could hardly find the φυλοκρίνησις, or ‘discrimination of the natures’ that characterizes the Gnostic Redeemer, exemplified more graphically than in the astrological determination of time. The astrological statements that were quite possible in antiquity all point to the prominent double aspect[44] of the birth that occurred at this particular moment of time, and one can understand how plausible was the astrological interpretation of the Christ-Antichrist myth when it entered into manifestation at the time of the Gnostics. A fairly old authority, earlier anyway than the sixth century, which bears striking witness to the antithetical nature of the Fishes is the Talmud. This says:

Four thousand two hundred and ninety-one years after the Creation [A.D. 530], the world will be orphaned. There will follow the war of the *tanninim* [sea-monsters], the war of Gog and Magog,[45] and then the Messianic era; only after seven thousand years will the Holy One, blessed be He, set up his world anew. R. Abba, the son of Raba, said, It was taught: after five thousand years.[46]

The Talmud commentator Solomon ben Isaac, alias Rashi (1039–1105), remarks that the *tanninim* are fishes, presumably basing himself on an older source, since he does not give this as his own opinion, as he usually does. This remark is important, firstly because it takes the battle of the fishes as an eschatological event (like the fight between Behemoth and Leviathan), and secondly because it is probably the oldest testimony to the antithetical nature of the fishes. From about this period, too—the eleventh century—comes the apocryphal text of a Johannine Genesis in which the two fishes are mentioned, this time in unmistakably astrological form.[46a] Both documents fall within the critical epoch that opened with the second millennium of the Christian era, about which I shall have more to say in due course.

[134] The year 531 is characterized astronomically by a conjunction of ♃ and ♄ in Gemini. This sign stands for a pair of brothers, and they too have a somewhat antithetical nature. The Greeks interpreted them as the Dioscuri (‘boys of Zeus’), the sons of Leda who were begotten by the swan and hatched out of an egg. Pollux was immortal, but Castor shared the human lot. Another interpretation takes them as representing Apollo and Heracles or Apollo and Dionysus. Both interpretations suggest a certain polarity. Astronomically, at any rate, the air sign Gemini stands in a quartile and therefore unfavourable aspect to the conjunction that took place in the year 7 B.C. The inner polarity of ♊ may perhaps shed light on the prophecy about the war of the *tanninim*, which Rashi interprets as fishes. From the dating of Christ’s birth it would appear, as said, that the sun was in Gemini. The motif of the brothers is found very early in connection with Christ, for instance among the Jewish Christians and Ebionites.[47]

[135] From all this we may risk the conjecture that the Talmudic prophecy was based on astrological premises.

[136] The precession of the equinoxes was a fact well known to the astrologers of antiquity. Origen, helped out by the observations and calculations of Hipparchus,[48] uses it as a cogent argument against an astrology based on the so-called “morphomata” (the actual constellations).[49] Naturally this does not apply to the distinction already drawn in ancient astrology between the morphomata and the ζωδιὰ νοητά (the fictive signs of the zodiac).[50] If we take the 7,000 years mentioned in the prophecy as *anno mundi* 7000, the year denoted would be A.D. 3239. By then the spring-point will have moved from its present position 18 degrees into Aquarius, the next aeon, that of the Water Carrier. As an astrologer of the second or third century would be acquainted with the precession, we may surmise that these dates were based on astrological considerations. At all events the Middle Ages were much concerned with the calculation of *coniunctiones maximae* and *magnae*, as we know from Pierre d’Ailly and Cardan.[51] Pierre d’Ailly reckoned that the first *coniunctio maxima* (♃ ☌ ♄ in ♈) after the creation of the world took place in 5027 B.C., while Cardan relegated the tenth conjunction to A.D. 3613.[52] Both of them assumed the lapse of too large an interval between conjunctions in the same sign. The correct astronomical interval is about 795 years. Cardan’s conjunction would accordingly take place in the year A.D. 3234. For astrological speculation this date is naturally of the greatest importance.

[137] As to the 5,000 years, the date we get is A.D. 1239. This was an epoch noted for its spiritual instability, revolutionary heresies and chiliastic expectations, and at the same time it saw the founding of the mendicant orders, which injected new life into monasticism. One of the most powerful and influential voices to announce the coming of a “new age of the spirit” was Joachim of Flora (d. 1202), whose teachings were condemned by the Fourth Lateran Council in 1215. He expected the opening of the seventh seal in the fairly near future, the advent of the “everlasting gospel” and the reign of the “intellectus spiritualis,” the age of the Holy Ghost. This third aeon, he says, had already begun with St.

Benedict, the founder of the Benedictine Order (the first monastery was supposed to have been built a few years after 529). One of Joachim's followers, the Franciscan friar Gerard of Borgo San Donnino, proclaimed in his *Introductorius in evangelium aeternum*, which appeared in 1254 in Paris, that Joachim's three main treatises were in fact the everlasting gospel, and that in the year 1260 this would replace the gospel of Jesus Christ.[53] As we know, Joachim saw monasticism as the true vehicle of the Holy Ghost and for this reason he dated the secret inception of the new era from the lifetime of St. Benedict, whose founding of the Benedictine Order revived monasticism in the West.

[138] To Pierre d'Ailly the time of Pope Innocent III (1198–1216) had already seemed significant. About the year 1189, he says, the revolutions of Saturn were once again completed ("completae anno Christi 1189 vel circiter"). He complains that the Pope had condemned a treatise of Abbot Joachim,[54] and also the heretical doctrine of Almaricus.[55] This last is the theological philosopher Amalric of Bene (d. 1204), who took part in the widespread Holy Ghost movement of that age. It was then, too, he says, that the Dominican and Franciscan mendicant orders came into existence, "which was a great and wonderful thing for the Christian church." Pierre d'Ailly thus lays stress on the same phenomena that struck us as being characteristic of the time, and further regards this epoch as having been foretold in astrology.

[139] The date for the founding of the monastery of Monte Cassino brings us very close to the year 530, which the Talmud prophesied would be a critical one. In Joachim's view not only does a new era begin then, but a new "status" of the world—the age of monasticism and the reign of the Holy Ghost. Its beginning still comes within the domain of the Son, but Joachim surmises in a psychologically correct manner that a new status—or, as we would say, a new attitude—would appear first as a more or less latent preliminary stage, which would then be followed by the *fructificatio*, the flower and the fruit. In Joachim's day the fruition was still in abeyance, but one could observe far and wide an uncommon agitation and commotion of men's spirits. Everyone felt the rushing wind of the pneuma; it was an age of new and unprecedented ideas which were blazoned abroad by the Cathari, Patarenes, Concorricci, Waldenses, Poor

Men of Lyons, Beghards, Brethren of the Free Spirit, “Bread through God,”[56] and whatever else these movements were called. Their visible beginnings all lay in the early years of the eleventh century. The contemporary documents amassed by Hahn throw a revealing light on the ideas current in these circles:

> Item, they believe themselves to be God by nature without distinction … and that they are eternal … .
>
> Item, that they have no need of God or the Godhead.
>
> Item, that they constitute the kingdom of heaven.
>
> Item, that they are immutable in the new rock, that they rejoice in naught and are troubled by naught.
>
> Item, that a man is bound to follow his inner instinct rather than the truth of the Gospel which is preached every day. … They say that they believe the Gospel to contain poetical matters which are not true.[57]

[140] These few examples may suffice to show what kind of spirit animated these movements. They were made up of people who identified themselves (or were identified) with God, who deemed themselves supermen, had a critical approach to the gospels, followed the promptings of the inner man, and understood the kingdom of heaven to be within. In a sense, therefore, they were modern in their outlook, but they had a religious inflation instead of the rationalistic and political psychosis that is the affliction of our day. We ought not to impute these extremist ideas to Joachim, even though he took part in that great movement of the spirit and was one of its outstanding figures. One must ask oneself what psychological impulse could have moved him and his adherents to cherish such bold expectations as the substitution of the “everlasting gospel” for the Christian message or the supersession of the second Person in the Godhead by the third, who would reign over the new era. This thought is so heretical and subversive that it could never have occurred to him had he not felt himself supported and swept along by the revolutionary currents of the age. He felt it as a revelation of the Holy Ghost, whose life and procreative power no church could bring to a stop. The numinosity of this feeling was heightened by the temporal coincidence—“synchronicity”—of the epoch he lived in with the beginning of the sphere of the “antichristian” fish in Pisces. In

consequence, one might feel tempted to regard the Holy Ghost movement and Joachim's central ideas as a direct expression of the antichristian psychology that was then dawning. At any rate the Church's condemnation is thoroughly understandable, for in many ways his attitude to the Church of Jesus Christ comes very close to open insurrection, if not downright apostasy. But if we allow some credence to the conviction of these innovators that they were moved by the Holy Ghost, then another interpretation becomes not only possible but even probable.

[141] That is to say, just as Joachim supposed that the status of the Holy Ghost had secretly begun with St. Benedict, so we might hazard the conjecture that a new status was secretly anticipated in Joachim himself. Consciously, of course, he thought he was bringing the status of the Holy Ghost into reality, just as it is certain that St. Benedict had nothing else in mind than to put the Church on a firm footing and deepen the meaning of the Christian life through monasticism. But, unconsciously—and this is psychologically what probably happened—Joachim could have been seized by the archetype of the spirit. There is no doubt that his activities were founded on a numinous experience, which is, indeed, characteristic of all those who are gripped by an archetype. He understood the spirit in the dogmatic sense as the third Person of the Godhead, for no other way was possible, but not in the sense of the empirical archetype. This archetype is not of uniform meaning, but was originally an ambivalent dualistic figure[58] that broke through again in the alchemical concept of spirit after engendering the most contradictory manifestations within the Holy Ghost movement itself. The Gnostics in their day had already had clear intimations of this dualistic figure. It was therefore very natural, in an age which coincided with the beginning of the second Fish and which was, so to speak, forced into ambiguity, that an espousal of the Holy Ghost in its Christian form should at the same time help the archetype of the spirit to break through in all its characteristic ambivalence. It would be unjust to class so worthy a personage as Joachim with the bigoted advocates of that revolutionary and anarchic turbulence, which is what the Holy Ghost movement turned into in so many places. We must suppose, rather, that he himself unwittingly ushered in a new "status," a

religious attitude that was destined to bridge and compensate the frightful gulf that had opened out between Christ and Antichrist in the eleventh century. The antichristian era is to blame that the spirit became non-spiritual and that the vitalizing archetype gradually degenerated into rationalism, intellectualism, and doctrinairism, all of which leads straight to the tragedy of modern times now hanging over our heads like a sword of Damocles. In the old formula for the Trinity, as Joachim knew it, the dogmatic figure of the devil is lacking, for then as now he led a questionable existence somewhere on the fringes of theological metaphysics, in the shape of the *mysterium iniquitatis*. Fortunately for us, the threat of his coming had already been foretold in the New Testament—for the less he is recognized the more dangerous he is. Who would suspect him under those high-sounding names of his, such as public welfare, lifelong security, peace among the nations, etc.? He hides under idealisms, under -isms in general, and of these the most pernicious is doctrinairism, that most unspiritual of all the spirit's manifestations. The present age must come to terms drastically with the facts as they are, with the absolute opposition that is not only tearing the world asunder politically but has planted a schism in the human heart. We need to find our way back to the original, living spirit which, because of its ambivalence, is also a mediator and uniter of opposites,[59] an idea that preoccupied the alchemists for many centuries.

[142] If, as seems probable, the aeon of the fishes is ruled by the archetypal motif of the hostile brothers, then the approach of the next Platonic month, namely Aquarius, will constellate the problem of the union of opposites. It will then no longer be possible to write off evil as the mere privation of good; its real existence will have to be recognized. This problem can be solved neither by philosophy, nor by economics, nor by politics, but only by the individual human being, via his experience of the living spirit, whose fire descended upon Joachim, one of many, and, despite all contemporary misunderstandings, was handed onward into the future. The solemn proclamation of the *Assumptio Mariae* which we have experienced in our own day is an example of the way symbols develop through the ages. The impelling motive behind it did not come from the ecclesiastical authorities, who had given clear proof of their hesitation by

postponing the declaration for nearly a hundred years,[60] but from the Catholic masses, who have insisted more and more vehemently on this development. Their insistence is, at bottom, the urge of the archetype to realize itself.[61]

[143] The repercussions of the Holy Ghost movement spread, in the years that followed, to four minds of immense significance for the future. These were Albertus Magnus (1193–1280); his pupil Thomas Aquinas, the philosopher of the Church and an adept in alchemy (as also was Albertus); Roger Bacon (*c.* 1214–*c.* 1294), the English forerunner of inductive science; and finally Meister Eckhart (*c.* 1260–1327), the independent religious thinker, now enjoying a real revival after six hundred years of obscurity. Some people have rightly seen the Holy Ghost movement as the forerunner of the Reformation. At about the time of the twelfth and thirteenth centuries we find also the beginnings of Latin alchemy, whose philosophical and spiritual content I have tried to elucidate in my book *Psychology and Alchemy*. The image mentioned above (par. 139) of "immutability in the new rock" bears a striking resemblance to the central idea of philosophical alchemy, the *lapis philosophorum*, which is used as a parallel to Christ, the "rock," the "stone," the "cornerstone." Priscillian (4th cent.) says: "We have Christ for a rock, Jesus for a cornerstone."[62] An alchemical text speaks of the "rock which is smitten thrice with Moses' rod, so that the waters flow forth freely."[63] The *lapis* is called a "sacred rock" and is described as having four parts.[64] St. Ambrose says the water from the rock is a prefiguration of the blood that flowed from Christ's side.[65] Another alchemical text mentions the "water from the rock" as the equivalent of the universal solvent, the *aqua permanens.*[66] Khunrath, in his somewhat florid language, even speaks of the "Petroleum sapientum."[67] By the Naassenes, Adam was called the "rock" and the "cornerstone."[68] Both these allegories of Christ are mentioned by Epiphanius in his *Ancoratus*, and also by Firmicus Maternus.[69] This image, common to ecclesiastical and alchemical language alike, goes back to I Corinthians 10 : 4 and I Peter 2 : 4.

[144] The new rock, then, takes the place of Christ, just as the everlasting gospel was meant to take the place of Christ’s message. Through the descent and indwelling of the Holy Ghost the υἱοτῆς, sonship, is infused into every individual, so that everybody who possesses the Holy Ghost will be a new rock, in accordance with I Peter 2 : 5: “Be you also as living stones built up.”[70] This is a logical development of the teaching about the Paracletc and the filiation, as stated in Luke 6 : 35: “You shall be sons of the Highest,” and John 10 : 34: “Is it not written in your law: I said, you are gods?” The Naassenes, as we know, had already made use of these allusions and thus anticipated a whole tract of historical development—a development that led via monasticism to the Holy Ghost movement, via the *Theologia Germanica* direct to Luther, and via alchemy to modern science.

[145] Let us now turn back to the theme of Christ as the fish. According to Doelger, the Christian fish symbol first appeared in Alexandria around A.D. 200;[71] similarly, the baptismal bath was described as a *piscina* (fish-pond) quite early. This presupposes that the believers were fishes, as is in fact suggested by the gospels (for instance Matt. 4 : 19). There Christ wants to make Peter and Andrew “fishers of men,” and the miraculous draught of fishes (Luke 5 : 10) is used by Christ himself as a paradigm for Peter’s missionary activity.

[146] A direct astrological aspect of Christ’s birth is given us in Matthew 2 : 1ff. The Magi from the East were star-gazers who, beholding an extraordinary constellation, inferred an equally extraordinary birth. This anecdote proves that Christ, possibly even at the time of the apostles, was viewed from the astrological standpoint or was at least brought into connection with astrological myths. The latter alternative is fully confirmed when we consider the apocalyptic utterances of St. John. Since this exceedingly complex question has been discussed by those who are more qualified than I, we can support our argument on the well-attested fact that glimpses of astrological mythology may be caught behind the stories of the worldly and otherworldly life of the Redeemer.[72]

[147] Above all it is the connections with the age of the Fishes which are attested by the fish symbolism, either contemporaneously with the

gospels themselves ("fishers of men," fishermen as the first disciples, miracle of loaves and fishes), or immediately afterwards in the post-apostolic era. The symbolism shows Christ and those who believe in him as fishes, fish as the food eaten at the Agape,[73] baptism as immersion in a fish-pond, etc. At first sight, all this points to no more than the fact that the fish symbols and mythologems which have always existed had assimilated the figure of the Redeemer; in other words, it was a symptom of Christ's assimilation into the world of ideas prevailing at that time. But, to the extent that Christ was regarded as the new aeon, it would be clear to anyone acquainted with astrology that he was born as the first fish of the Pisces era, and was doomed to die as the last ram[74] (ἀρνίον, lamb) of the declining Aries era.[75] Matthew 27 : 15ff. hands down this mythologem in the form of the old sacrifice of the seasonal god. Significantly enough, Jesus's partner in the ceremony is called Barabbas, "son of the father." There would be some justification for drawing a parallel between the tension of opposites in early Christian psychology and the fact the zodiacal sign for Pisces (♓) frequently shows two fishes moving in opposite directions, but only if it could be proved that their contrary movement dates from pre-Christian times or is at least contemporary with Christ. Unfortunately, I know of no pictorial representation from this period that would give us any information about the position of the fishes. In the fine bas-relief of the zodia from the Little Metropolis in Athens, Pisces and Aquarius are missing. There is one representation of the fishes, near the beginning of our era, that is certainly free from Christian influence. This is the globe of the heavens from the Farnese Atlas in Naples. The first fish, depicted north of the equator, is vertical, with its head pointing to the celestial Pole; the second fish, south of the equator, is horizontal, with its head pointing West. The picture follows the astronomical configuration and is therefore naturalistic.[76] The zodiac from the temple of Hathor at Denderah (1st cent. B.C.) shows the fishes, but they both face the same way. The planisphere of Timochares,[77] mentioned by Hipparchus, has only *one* fish where Pisces should be. On coins and gems from the time of the emperors, and also on Mithraic monuments,[78] the fishes are shown either facing the same way or moving in opposite directions.[79] The polarity which the fishes later acquired may perhaps be due to the fact that the astronomical constellation shows the first (northerly) fish as vertical, and the second (southerly) fish as horizontal. They move almost at right angles to one another and hence form a cross. This countermovement, which was unknown to the majority of the oldest sources, was much emphasized in Christian times, and this leads one to suspect a certain tendentiousness.[80]

[148] Although no connection of any kind can be proved between the figure of Christ and the inception of the astrological age of the fishes, the simultaneity of the fish symbolism of the Redeemer with the astrological symbol of the new aeon seems to me important enough to warrant the emphasis we place upon it. If we try to follow up the complicated mythological ramifications of this parallel, we do so with intent to throw light on the multifarious aspects of an archetype that manifests itself on the one hand in a *personality*, and on the other hand synchronistically, in a moment of time determined in advance, before Christ's birth. Indeed, long before that, the archetype had been written in the heavens by projection, so as then, "when the time was fulfilled," to coincide with the symbols produced by the new era. The fish, appropriately enough, belongs to the winter rainy season, like Aquarius and Capricorn (αἰγόκερως, the goatfish).[81] As a zodiacal sign, therefore, it is not in the least remarkable. It becomes a matter for astonishment only when, through the precession of the equinoxes, the spring-point moves into this sign and thus inaugurates an age in which the "fish" was used as a name for the God who became a man, who was born as a fish and was sacrificed as a ram, who had fishermen for disciples and wanted to make them fishers of men, who fed the multitude with miraculously multiplying fishes, who was himself eaten as a fish, the "holier food," and whose followers are little fishes, the "pisciculi." Assume, if you like, that a fairly widespread knowledge of astrology would account for at least some of this symbolism in certain Gnostic-Christian circles.[82] But this assumption does not apply when it comes to eyewitness accounts in the synoptic gospels. There is no evidence of any such thing. We have no reason whatever to suppose that those stories are disguised astrological myths. On the contrary, one gets the impression that the fish episodes are

entirely natural happenings and that there is nothing further to be looked for behind them. They are “Just So” stories, quite simple and natural, and one wonders whether the whole Christian fish symbolism may not have come about equally fortuitously and without premeditation. Hence one could speak just as well of the seemingly fortuitous coincidence of this symbolism with the name of the new aeon, the more so as the age of the fishes seems to have left no very clear traces in the cultures of the East. I could not maintain with any certainty that this is correct, because I know far too little about Indian and Chinese astrology. As against this, the fact that the traditional fish symbolism makes possible a verifiable prediction that had already been made in the New Testament is a somewhat uncomfortable proposition to swallow.

[149] The northerly, or easterly, fish, which the spring-point entered at about the beginning of our era,[83] is joined to the southerly, or westerly, fish by the so-called commissure. This consists of a band of faint stars forming the middle sector of the constellation, and the spring-point gradually moved along its southern edge. The point where the ecliptic intersects with the meridian at the tail of the second fish coincides roughly with the sixteenth century, the time of the Reformation, which as we know is so extraordinarily important for the history of Western symbols. Since then the spring-point has moved along the southern edge of the second fish, and will enter Aquarius in the course of the third millennium.[84] Astrologically interpreted, the designation of Christ as one of the fishes identifies him with the first fish, the vertical one. Christ is followed by the Antichrist, at the end of time. The beginning of the enantiodromia would fall, logically, midway between the two fishes. We have seen that this is so. The time of the Renaissance begins in the immediate vicinity of the second fish, and with it comes that spirit which culminates in the modern age.[85]

VII

THE PROPHECIES OF NOSTRADAMUS

[150] The course of our religious history as well as an essential part of our psychic development could have been predicted more or less accurately, both as regards time and content, from the precession of the equinoxes through the constellation of Pisces. The prediction, as we saw, was actually made and coincides with the fact that the Church suffered a schism in the sixteenth century. After that an enantiodromian process set in which, in contrast to the "Gothic" striving *upwards* to the heights, could be described as a horizontal movement *outwards*, namely the voyages of discovery and the conquest of Nature. The vertical was cut across by the horizontal, and man's spiritual and moral development moved in a direction that grew more and more obviously antichristian, so that today we are confronted with a crisis of Western civilization whose outcome appears to be exceedingly dubious.

[151] With this background in mind, I would like to mention the astrological prophecies of Nostradamus, written in a letter[1] to Henry II of France, on June 27, 1558. After detailing a year characterized, among other things, by ♃ ☌ ☿ with ♂ □ ☿,[2] he says:

> Then the beginning of that year shall see a greater persecution against the Christian Church than ever was in Africa,[3] and it shall be in the year 1792, at which time everyone will think it a renovation of the age. … And at that time and in those countries the infernal power shall rise against the Church of Jesus Christ. This shall be the second Antichrist, which shall persecute the said Church and its true vicar by means of the power of temporal kings, who through their ignorance shall be seduced by tongues more sharp than any sword in the hands of a madman. … The persecution of the clergy shall have its beginning in the power of the Northern Kings joined by the Eastern ones. And that persecution shall

> last eleven years, or a little less, at which time the chief Northern king shall fail.[4]

[152] However, Nostradamus thinks that “a united Southern king” will outlast the Northern one by three years. He sees a return of paganism (“the sanctuary destroyed by paganism”), the Bible will be burned, and an immense blood-bath will take place: “So great tribulations as ever did happen since the first foundation of the Christian Church.” All Latin countries will be affected by it.

[153] There are historical determinants that may have moved Nostradamus to give the year 1792 as the beginning of the new aeon. For instance, Cardinal Pierre d’Ailly, basing himself on Albumasar, writes in his *Concordantia*[5] on the eighth *coniunctio maxima* (♃ ☌ ♄ in ♈), which had been calculated for 1693:

> And after that shall be the fulfilment of ten revolutions of Saturn in the year 1789, and this will happen after the said conjunction, in the course of ninety-seven years or thereabouts. … This being so, we say that if the world shall endure until then, which God alone knows, then there will be many and great and marvellous changes and transformations of the world, especially as concerns law-giving and religious sects, for the said conjunction and the revolutions of Saturn will coincide with the revolution or reversal of the upper orb, i.e., the eighth sphere, and from these and other premises the change of sects will be known. … Whence it may be concluded with some probability that this is the time when the Antichrist shall come with his law and his damnable sects, which are utterly contrary and inimical to the law of Christ; for, being human, we can have no certainty with regard to the time and the moment of his coming. … Yet, despite the indeterminate statement that he will come at approximately that time, it is possible to have a probable conjecture and a credible hypothesis in accordance with the astronomical indications. If, therefore, the astronomers say that a change of sects will occur about that time, then, according to them, a Mighty One will come after Mahomet, who will set up an evil and magical law. Thus we may surmise with

credible probability that after the sect of Mahomet none other will come save the law of the Antichrist.[6]

[154] In connection with the calculation of the year 1693, Pierre d’Ailly quotes Albumasar as saying that the first *coniunctio maxima* of Saturn and Jupiter took place *anno mundi* 3200. To this Albumasar added 960 years, which brings us to A.D. 1693 as the year of the eighth *coniunctio maxima.*[7] In Part III of his book, chapter 17, Pierre d’Ailly criticizes this view and calls it a “false deduction.” In his treatise against “superstitiosos astronomos,” 1410, he maintains that the Christian religion should not be brought under astrological laws. He was alluding in particular to Roger Bacon, who had revived the theory that Christianity was under the influence of the planet Mercury. Pierre d’Ailly held that only superstitions and heretical opinions were astrologically influenced, and especially the coming of the Antichrist.[8]

[155] We are probably right in assuming that these calculations were known to Nostradamus, who proposed 1792 as an improvement on 1789. Both dates are suggestive, and a knowledge of subsequent events confirms that the things that happened around that time were significant forerunners of developments in our own day. The enthronement of the “Déesse Raison” was, in fact, an anticipation of the antichristian trend that was pursued from then onwards.

[156] The “renovation of the age” might mean a new aeon, and it coincides in a remarkable way with the new system of dating, the revolutionary calendar, which began with September 22, 1792, and had a distinctly antichristian character.[9] What had been brewing up long beforehand then became a manifest event; in the French Revolution men witnessed the enantiodromia that had set in with the Renaissance and ran parallel with the astrological fish symbol. The time seemed a significant one astrologically, for a variety of reasons. In the first place this was the moment when the precession of the equinoxes reached the tail of the second fish.[10] Then, in the year 1791, Saturn was in ♈, a fiery sign. Besides that, tradition made use of the theory of maximal conjunctions[11] and regarded the year of the eighth *coniunctio maxima*—1693—as a

starting-point for future calculations.[12] This critical year was combined with another tradition basing itself on periods of ten revolutions of Saturn, each period taking three hundred years. Pierre d'Ailly cites Albumasar, who says in his *Magnae coniunctiones:* "They said that the change shall come when ten revolutions of Saturn have been completed, and that the permutation of Saturn is particularly appropriate to the movable signs" (♈, ♋, ♎, ♑).[13] According to Pierre d'Ailly, a Saturn period came to an end in 11 B.C., and he connects this with the appearance of Christ. Another period ended in A.D. 289: this he connects with Manichaeism. The year 589 foretells Islam, and 1189 the significant reign of Pope Innocent III; 1489 announces a schism of the Church, and 1789 signalizes—by inference—the coming of the Antichrist. Fantasy could do the rest, for the archetype had long been ready and was only waiting for the time to be fulfilled. That a usurper from the North would seize power[14] is easily understood when we consider that the Antichrist is something infernal, the devil or the devil's son, and is therefore Typhon or Set, who has his fiery abode in the North. Typhon's power is triadic, possessing two confederates, one in the East and one in the South. This power corresponds to the "lower triad."[15]

[157] Nostradamus, the learned physician and astrologer, would certainly have been familiar with the idea of the North as the region of the devil, unbelievers, and all things evil. The idea, as St. Eucherius of Lyons (d. 450) remarks,[16] goes back to Jeremiah 1 : 14: "From the north shall an evil wind break forth upon all the inhabitants of the land,"[17] and other passages such as Isaiah 14 : 12f.:

> How art thou fallen from heaven, O Lucifer, son of the morning! how art thou cut down to the ground, which didst weaken the nations! For thou hast said in thine heart, I will ascend into heaven, I will exalt my throne above the stars of God, I will sit on the mount of assembly in the far north.[18]

The Benedictine monk Rhabanus Maurus (d. 856) says that "the north wind is the harshness of persecution" and "a figure of the old enemy."[19] The north wind, he adds, signifies the devil, as is evident from Job 26 : 7:

"He stretcheth out the north over the empty space, and hangeth the earth upon nothing."[20] Rhabanus interprets this as meaning that "God allows the devil to rule the minds of those who are empty of his grace."[21] St. Augustine says: "Who is that north wind, save him who said: I will set up my seat in the north, I will be like the most High? The devil held rule over the wicked, and possessed the nations," etc.[22]

[158] The Victorine monk Garnerius says that the "malign spirit" was called Aquilo, the north wind. Its coldness meant the "frigidity of sinners."[23] Adam Scotus imagined there was a frightful dragon's head in the north from which all evil comes. From its mouth and snout it emitted smoke of a triple nature,[24] the "threefold ignorance, namely of good and evil, of true and false, of fitting and unfitting."[25] "That is the smoke," says Adam Scotus, "which the prophet Ezekiel, in his vision of God, saw coming from the north,"[26] the "smoke" of which Isaiah speaks.[27] The pious author never stops to think how remarkable it is that the prophet's vision of God should be blown along on the wings of the north wind, wrapped in this devilish smoke of threefold ignorance. Where there is smoke, there is fire. Hence the "great cloud" had "brightness round about it, and fire flashing forth continually, and in the midst of the fire, as it were gleaming bronze."[28] The north wind comes from the region of fire and, despite its coldness, is a "ventus urens" (burning wind), as Gregory the Great calls it, referring to Job 27 : 21.[29] This wind is the malign spirit, "who rouses up the flames of lust in the heart" and kindles every living thing to sin. "Through the breath of evil incitement to earthly pleasures he makes the hearts of the wicked to burn." As Jeremiah 1:13 says, "I see a boiling pot, facing away from the north." In these quotations from Gregory we hear a faint echo of the ancient idea of the fire in the north, which is still very much alive in Ezekiel, whose cloud of fire appears from the north, whence "an evil shall break forth upon all the inhabitants of the land."[30]

[159] In these circumstances it is hardly surprising that Nostradamus warns against the usurper from the north when foretelling the coming of the Antichrist. Even before the Reformation the Antichrist was a popular figure in folklore, as the numerous editions of the "Entkrist"[31] in the

second half of the fifteenth century show.[32] This is quite understandable in view of the spiritual events then impending: the Reformation was about to begin. Luther was promptly greeted as the Antichrist, and it is possible that Nostradamus calls the Antichrist who was to appear after 1792 the "second Antichrist" because the first had already appeared in the guise of the German reformer, or much earlier with Nero or Mohammed.[33] We should not omit to mention in this connection how much capital the Nazis made out of the idea that Hitler was continuing and completing the work of reformation which Luther had left only half finished.

[160] From the existing astrological data, therefore, and from the possibilities of interpreting them it was not difficult for Nostradamus to predict the imminent enantiodromia of the Christian aeon; indeed, by making this prediction, he placed himself firmly in the antichristian phase and served as its mouthpiece.

[161] After this excursion, let us turn back to our fish symbolism.

VIII

THE HISTORICAL SIGNIFICANCE OF THE FISH

[162] In addition to the “pisciculi Christianorum,” the shepherd and the lamb play, as we know only too well, an almost greater role in Christian allegory, and Hermes Kriophoros (the “rambearer”) became the prototype of the “good shepherd,” the tutelary god of flocks. Another prototype, in his capacity as shepherd, was Orpheus.[1] This aspect of the Poimen gave rise to a figure of similar name in the mystery cults, who was popularized in the “Shepherd” of Hermas (2nd century). Like the “giant fish” mentioned in the Abercius inscription,[2] the shepherd probably has connections with Attis, both temporally and regionally. Reitzenstein even conjectures that the “Shepherd” of Hermas derives from the Poimandres writings, which are of purely pagan origin.[3] Shepherd, ram, and lamb symbolism coincides with the expiring aeon of Aries. In the first century of our era the two aeons overlap, and the two most important mystery gods of this period, Attis and Christ, are both characterized as shepherds, rams, and fishes. The Poimen symbolism has undergone such thorough elaboration at the hands of Reitzenstein that I am in no position to add anything illuminating in this respect. The case is somewhat different with the fish symbol. Not only are the sources more copious, but the very nature of the symbol, and in particular its dual aspects, give rise to definite psychological questions which I should like to go into more closely.

[163] Like every hero, Christ had a childhood that was threatened (massacre of the innocents, flight into Egypt). The astrological “interpretation” of this can be found in Revelation 12 : 1: “A woman clothed with the sun, with the moon under her feet, and on her head a crown of twelve stars.” She is in the pangs of birth and is pursued by a dragon. She will give birth to a man-child who shall “rule the nations with a rod of iron.” This story carries echoes of numerous kindred motifs

in East and West, for instance that of Leto and Python, of Aphrodite and her son, who, when pursued, leapt into the Euphrates and were changed into fishes,[4] and of Isis and Horus in Egypt. The Syrian Greeks identified Derceto-Atargatis and her son Ichthys with the constellation of the Fishes.[5]

[164] The mother-goddess—and the star-crowned woman of the Apocalypse counts as one—is usually thought of as a virgin (*παρθένος*, *virgo*). The Christmas message, ʻΗ *παρθένος τέτοκεν*, αὐξεῖ φῶς (the virgin has brought forth, the light increases), is pagan. Speaking of the so-called Korion in Alexandria, Epiphanius[6] says that on the night of the Epiphany (January 5/6) the pagans held a great festival:

> They stay up the whole night singing songs and playing the flute, offering these to the images of the gods; and, when the revelries of the night are over, after cock-crow, they go down with torches into a subterranean sanctuary and bring up a carved wooden image, which is laid naked on a litter. On its forehead it has the sign of the cross, in gold, and on both its hands two other signs of the same shape, and two more on its knees; and the five signs are all fashioned in gold. They carry this carved image seven times round the middle of the temple precincts, to the sound of flutes and tambourines and hymns, and after the procession they carry it down again into the crypt. But if you ask them what this mysterious performance means, they answer: Today, at this hour, the Kore, that is to say the virgin, has given birth to the Aeon.

[165] Epiphanius expressly states that he is not telling this of a Christian sect, but of the worshippers of idols, and he does so in order to illustrate the idea that even the pagans bear involuntary witness to the truth of Christianity.

[166] Virgo, the zodiacal sign, carries either a wheat-sheaf or a child. Some authorities connect her with the “woman” of the Apocalypse.[7] At any rate, this woman has something to do with the prophecy of the birth of a Messiah at the end of time. Since the author of the Apocalypse was supposed to be a Christian, the question arises: To whom does the woman refer who is interpreted as the mother of the Messiah, or of Christ? And

to whom does the son of the woman refer who (translating the Greek literally) shall “pasture (*ποιμαίνειν*) the pagans with an iron staff”?

[167] As this passage contains an allusion on the one hand to the Messianic prophecy in Isaiah 66 : 7,[8] and on the other to Yahweh’s wrath (Psalm 2 : 9[9]), it would seem to refer in some way to the future rebirth of the Messiah. But such an idea is quite impossible in the Christian sphere. Boll[10] says of the description of the “lamb” in Revelation 5 : 6ff.: “This remarkably bizarre figure with seven horns and seven eyes cannot possibly be explained in Christian terms.” Also, the “lamb” develops some very unexpected peculiarities: he is a *bellicose* lamb, a conqueror (Rev. 17 : 14). The mighty ones of the earth will have to hide from his *wrath* (Rev. 6 : 15ff.). He is likened to the “*lion* of the tribe of Judah” (Rev. 5 : 5). This lamb, who is reminiscent of Psalm 2 : 9 (“Thou shalt break them with a rod of iron, thou shalt dash them in pieces like a potter’s vessel”), rather gives one the sinister impression of a daemonic ram,[11] and not at all of a lamb who is led meekly to the slaughter. The lamb of the Apocalypse belongs, without doubt, to the category of horned monsters mentioned in these prophecies. One must therefore consider the question whether the author of the Apocalypse was influenced by an idea that was in some sense antithetical to Christ, perhaps by a psychological shadow-figure, an “umbra Jesu” which was united at the end of time with the triumphant Christ, through an act of rebirth. This hypothesis would explain the repetition of the birth myth and also the curious fact that so important an eschatological expectation as the coming of the Antichrist receives but scant mention in the Apocalypse. The seven-horned ram is just about everything that Jesus appears not to be.[12] He is a real shadow-figure, but he could not be described as the Antichrist, who is a creature of Satan. For although the monstrous, warlike lamb is a shadow-figure in the sense that he is the counterpart of the lamb who was sacrificed, he is not nearly so irreconcilable with Christ as the Antichrist would have to be. The duplication of the Christ-figure cannot, therefore, be traced back to this split between Christ and Antichrist, but is due rather to the anti-Roman resentment felt by the Jewish Christians, who fell back on their god of vengeance and his warlike Messiah. The author of the Apocalypse may have been acquainted with Jewish speculations known to us through

later tradition. We are told in the *Bereshith Rabbati* of Moses ha-Darshan that Elias found in Bethlehem a young woman sitting before her door with a newborn child lying on the ground beside her, flecked with blood. She explained that her son had been born at an evil hour, just when the temple was destroyed. Elias admonished her to look after the child. When he came back again five weeks later, he asked about her son. "He neither walks, nor sees, nor speaks, nor hears, but lies there like a stone," said the woman. Suddenly a wind blew from the four corners of the earth, bore the child away, and plunged him into the sea. Elias lamented that it was now all up with the salvation of Israel, but a *bath kol* (voice) said to him:

> It is not so. He will remain in the great sea for four hundred years, and eighty years in the rising smoke of the children of Korah,[13] eighty years under the gates of Rome, and the rest of the time he will wander round in the great cities until the end of the days comes.[14]

[168] This story describes a Messiah who, though born in Bethlehem, is wafted by divine intervention into the Beyond (sea = unconscious). From the very beginning his childhood is so threatened that he is scarcely able to live. The legend is symptomatic of an extraordinary weakness of the Messianic element in Judaism and the dangers attending it, which would explain the delay in the Messiah's appearance. For 560 years he remains latent, and only then does his missionary work begin. This interlude is not so far off the 530 years mentioned in the Talmudic prophecy (cf. par. 133), near enough anyway for us to compare them, if we take this legend as referring to Christ. In the limitless sea of Jewish speculation mutual contacts of this sort are more likely to have occurred than not. Thus the deadly threat to the Messiah and his death by violence is a motif that repeats itself in other stories, too. The later, mainly Cabalistic tradition speaks of two Messiahs, the Messiah ben Joseph (or ben Ephraim) and the Messiah ben David. They were compared to Moses and Aaron, also to two roes, and this on the authority of the Song of Solomon 4 : 5: "Thy two breasts are like two young roes that are twins."[15] Messiah ben Joseph is, according to Deuteronomy 33 : 17, the "firstling of his bullock," and Messiah ben David rides on an ass.[16] Messiah ben Joseph is the first, Messiah ben David the second.[17] Messiah ben Joseph must die in order

to “atone with his blood for the children of Yahweh.”[18] He will fall in the fight against Gog and Magog, and Armilus will kill him. Armilus is the Anti-Messiah, whom Satan begot on a block of marble.[19] He will be killed by Messiah ben David in his turn. Afterwards, ben David will fetch the new Jerusalem down from heaven and bring ben Joseph back to life.[20] This ben Joseph plays a strange role in later tradition. Tabari, the commentator on the Koran, mentions that the Antichrist will be a king of the Jews,[21] and in Abarbanel’s *Mashmi‘a Yeshu‘ah* the Messiah ben Joseph actually is the Antichrist. So he is not only characterized as the suffering Messiah in contrast to the victorious one, but is ultimately thought of as his antagonist.[22]

[169] As these traditions show, the above-mentioned weakness of the Messianic element consists in a split which in the end becomes a complete polarity. This development is foreshadowed in Persian religious literature, in the pre-Christian idea of an enantiodromia of the great time-periods, and the deterioration of goodness. The Bahman Yast calls the fourth Iron Age “the evil sovereignty of the demons with dishevelled hair of the race of Wrath.”[23] On the other hand, the splitting of the Messiah into two is an expression of an inner disquiet with regard to the character of Yahweh, whose injustice and unreliability must have shocked every thoughtful believer ever since the time of Job.[24] Job puts the problem in unequivocal terms, and Christianity gave an equally unequivocal answer. Jewish mysticism, on the other hand, went its own way, and its speculations hover over depths which Christian thinkers have done their utmost to cover up. I do not want to elaborate this theme here, but will mention as an example a story told by Ibn Ezra. In Spain, he says, there was a great sage who was reputed to be unable to read the Eighty-ninth Psalm because it saddened him too much. The verses in question are:

> I will not remove from him my steadfast love,
>   or be false to my faithfulness.
> I will not violate my covenant,
>   or alter the word that went forth from my lips.
> Once for all I have sworn my holiness:
>   I will not lie to David.
> His line shall endure for ever,

his throne as long as the sun before me.
Like the moon it shall be established for ever;
the witness in the skies is sure. Selah!
But now thou hast cast off and rejected,
thou art full of wrath against thy anointed.
Thou hast renounced the covenant with thy servant;
thou hast trodden his crown in the dust.
Thou hast breached all his walls;
thou hast laid his strongholds in ruins.[25]

[170] It is the same problem as in Job. As the highest value and supreme dominant in the psychic hierarchy, the God-image is immediately related to, or identical with, the self, and everything that happens to the God-image has an effect on the latter. Any uncertainty about the God-image causes a profound uneasiness in the self, for which reason the question is generally ignored because of its painfulness. But that does not mean that it remains unasked in the unconscious. What is more, it is answered by views and beliefs like materialism, atheism, and similar substitutes, which spread like epidemics. They crop up wherever and whenever one waits in vain for the legitimate answer. The *ersatz* product represses the real question into the unconscious and destroys the continuity of historical tradition which is the hallmark of civilization. The result is bewilderment and confusion. Christianity has insisted on God’s goodness as a loving Father and has done its best to rob evil of substance. The early Christian prophecy concerning the Antichrist, and certain ideas in late Jewish theology, could have suggested to us that the Christian answer to the problem of Job omits to mention the corollary, the sinister reality of which is now being demonstrated before our eyes by the splitting of our world: *the destruction of the God-image is followed by the annulment of the human personality*. Materialistic atheism with its utopian chimeras forms the religion of all those rationalistic movements which delegate the freedom of personality to the masses and thereby extinguish it. The advocates of Christianity squander their energies in the mere preservation of what has come down to them, with no thought of building on to their house and making it roomier. Stagnation in these matters is threatened in the long run with a lethal end.

[171] As Bousset has plausibly suggested, the duality of the apocalyptic Christ is the outcome of Jewish-Gnostic speculations whose echoes we hear in the traditions mentioned above. The intensive preoccupation of the Gnostics with the problem of evil stands out in startling contrast to the peremptory nullification of it by the Church fathers, and shows that this question had already become topical at the beginning of the third century. In this connection we may recall the view expressed by Valentinus,[26] that Christ was born "not without a kind of shadow" and that he afterwards "cast off the shadow from himself."[27] Valentinus lived sometime in the first half of the second century, and the Apocalypse was probably written about A.D. 90, under Domitian. Like other Gnostics, Valentinus carried the gospels a stage further in his thinking, and for this reason it does not seem to me impossible that he understood the "shadow" as the Yahwistic law under which Christ was born. The Apocalypse and other things in the New Testament could easily have prompted him to such a view, quite apart from the more or less contemporaneous ideas about the demiurge and the prime Ogdoad that consists of light and shadow.[28] It is not certain whether Origen's doubt concerning the ultimate fate of the devil was original;[29] at all events, it proves that the possibility of the devil's reunion with God was an object of discussion in very early times, and indeed had to be if Christian philosophy was not to end in dualism. One should not forget that the theory of the *privatio boni* does not dispose of the eternity of hell and damnation. God's humanity is also an expression of dualism, as the controversy of the Monophysites and Dyopnysites in the early Church shows. Apart from the religious significance of the decision in favour of a complete union of both natures, I would mention in passing that the Monophysite dogma has a noteworthy psychological aspect: it tells us (in psychological parlance) that since Christ, as a man, corresponds to the ego, and, as God, to the self, he is at once both ego and self, part and whole. Empirically speaking, consciousness can never comprehend the whole, but it is probable that the whole is unconsciously present in the ego. This would be equivalent to the highest possible state of *τελείωσις* (completeness or perfection).

[172] I have dwelt at some length on the dualistic aspects of the Christ-figure because, through the fish symbolism, Christ was assimilated into a world of ideas that seems far removed from the gospels—a world of pagan origin, saturated with astrological beliefs to an extent that we can scarcely imagine today. Christ was born at the beginning of the aeon of the Fishes. It is by no means ruled out that there were educated Christians who knew of the *coniunctio maxima* of Jupiter and Saturn in Pisces in the year 7 B.C., just as, according to the gospel reports, there were Chaldaeans who actually found Christ's birthplace. The Fishes, however, are a double sign.

[173] At midnight on Christmas Eve, when (according to the old time-reckoning) the sun enters Capricorn, Virgo is standing on the eastern horizon, and is soon followed by the Serpent held by Ophiuchus, the "Serpent-bearer." This astrological coincidence seems to me worth mentioning, as also the view that the two fishes are mother and son. The latter idea has a quite special significance because this relationship suggests that the two fishes were originally one. In fact, Babylonian and Indian astrology know of only one fish.[30] Later, this mother evidently gave birth to a son, who was a fish like her. The same thing happened to the Phoenician Derceto-Atargatis, who, half fish herself, had a son called Ichthys. It is just possible that "the sign of the prophet Jonah"[31] goes back to an older tradition about an heroic night sea journey and conquest of death, where the hero is swallowed by a fish ("whale-dragon") and is then reborn.[32] The redemptory name Joshua[33] (Yehoshua, Yeshua, Gr. *Iesous*) is connected with the fish: Joshua is the son of Nun, and Nun means 'fish.' The Joshua ben Nun of the Khidr legend had dealings with a fish that was meant to be eaten but was revived by a drop of water from the fountain of life.[34]

[174] The mythological Great Mothers are usually a danger to their sons. Jeremias mentions a fish representation on an early Christian lamp, showing one fish devouring the other.[35] The name of the largest star in the constellation known as the Southern Fish—Fomalhaut, 'the fish's mouth'—might be interpreted in this sense, just as in fish symbolism every conceivable form of devouring *concupiscentia* is attributed to

fishes, which are said to be “ambitious, libidinous, voracious, avaricious, lascivious”—in short, an emblem of the vanity of the world and of earthly pleasures (“voluptas terrena”).[36] They owe these bad qualities most of all to their relationship with the mother- and love-goddess Ishtar, Astarte, Atargatis, or Aphrodite. As the planet Venus, she has her “exaltatio” in the zodiacal sign of the fishes. Thus, in astrological tradition as well as in the history of symbols, the fishes have always had these opprobrious qualities attached to them,[37] while on the other hand laying claim to a special and higher significance. This claim is based—at least in astrology—on the fact that anyone born under Pisces may expect to become a fisherman or a sailor, and in that capacity to catch fishes or hold dominion over the sea—an echo of the primitive totemistic identity between the hunter and his prey. The Babylonian culture-hero Oannes was himself a fish, and the Christian Ichthys is a fisher of men par excellence. Symbologically, he is actually the hook or bait on God’s fishing-rod with which the Leviathan—death or the devil—is caught.[38] In Jewish tradition the Leviathan is a sort of eucharistic food stored up for the faithful in Paradise. After death, they clothe themselves in fishrobes.[39] Christ is not only a fisher but the fish that is “eucharistically” eaten.[40] Augustine says in his *Confessions:* “But [the earth] eats the fish that was drawn from the deep, at the table which you have prepared for them that believe; for the fish was drawn from the deep in order to nourish the needy ones of the earth.”[41] St. Augustine is referring to the meal of fishes eaten by the disciples at Emmaus (Luke 24 : 43). We come across the “healing fish” in the story of Tobit: the angel Raphael helps Tobit to catch the fish that is about to eat him, and shows him how to make a magic “smoke” against evil spirits from the heart and liver of the fish, and how he can heal his father’s blindness with its gall (Tobit 6 : 1ff.).

[175] St. Peter Damian (d. 1072) describes monks as fishes, because all pious men are little fishes leaping in the net of the Great Fisher.[42] In the Pectorios inscription (beginning of the fourth century), believers are called the “divine descendants of the heavenly fish.”[43]

[176] The fish of Manu is a saviour,[44] identified in legend with Vishnu, who had assumed the form of a small goldfish. He begs Manu to take him home, because he was afraid of being de voured by the water monsters.[45] He then grows mightily, fairytale fashion, and in the end rescues Manu from the great flood.[46] On the twelfth day of the first month of the Indian year a golden fish is placed in a bowl of water and invoked as follows: “As thou, O God, in the form of a fish, hast saved the Vedas that were in the underworld, so save me also, O Keshava!”[47] De Gubernatis and other investigators after him tried to derive the Christian fish from India.[48] Indian influence is not impossible, since relations with India existed even before Christ and various spiritual currents from the East made themselves felt in early Christianity, as we know from the reports of Hippolytus and Epiphanius. Nevertheless, there is no serious reason to derive the fish from India, for Western fish symbolism is so rich and at the same time so archaic that we may safely regard it as autochthonous.

[177] Since the Fishes stand for mother and son, the mythological tragedy of the son’s early death and resurrection is already implicit in them. Being the twelfth sign of the Zodiac, Pisces denotes the end of the astrological year and also a new beginning. This characteristic coincides with the claim of Christianity to be the beginning and end of all things, and with its eschatological expectation of the end of the world and the coming of God’s kingdom.[49] *Thus the astrological characteristics of the fish contain essential components of the Christian myth; first, the cross; second, the moral conflict and its splitting into the figures of Christ and Antichrist; third, the motif of the son of a virgin; fourth, the classical mother-son tragedy; fifth, the danger at birth; and sixth, the saviour and bringer of healing*. It is therefore not beside the point to relate the designation of Christ as a fish to the new aeon then dawning. If this relationship existed even in antiquity, it must obviously have been a tacit assumption or one that was purposely kept secret; for, to my knowledge, there is no evidence in the old literature that the Christian fish symbolism was derived from the zodiac. Moreover, the astrological evidence up to the second century A.D. is by no means of such a kind that the Christ/Antichrist antithesis could be derived *causally* from the polarity of

the Fishes, since this, as the material we have cited shows, was not stressed as in any way significant. Finally, as Doelger rightly emphasizes, the Ichthys was always thought of as only *one* fish, though here we must point out that in the astrological interpretation Christ is in fact only one of the fishes, the role of the other fish being allotted to the Antichrist. There are, in short, no grounds whatever for supposing that the zodion of the Fishes could have served as the Ichthys prototype.

[178] Pagan fish symbolism plays in comparison a far greater role.[50] The most important is the Jewish material collected by Scheftelowitz. The Jewish "chalice of benediction"[51] was sometimes decorated with pictures of fishes, for fishes were the food of the blessed in Paradise. The chalice was placed in the dead man's grave as a funerary gift.[52] Fishes have a wide distribution as sepulchral symbols. The Christian fish occurs mainly in this connection. Devout Israelites who live "in the water of the doctrine" are likened to fishes. This analogy was self-evident around A.D. 100.[53] The fish also has a Messianic significance.[54] According to the Syrian Apocalypse of Baruch, Leviathan shall rise from the sea with the advent of the Messiah.[55] This is probably the "very great fish" of the Abercius inscription, corresponding to the "fish from the fountain" mentioned in a religious debate at the court of the Sassanids (5th century). The fountain refers to the Babylonian Hera, but in Christian language it means Mary, who in orthodox as well as in Gnostic circles (Acts of Thomas) was invoked as *πηγή*, 'fountain.' Thus we read in a hymn of Synesius (*c*. 350): Παγὰ παγῶν, ἀρχῶν ἀρχά, *ῥίζα, μονἀς ∈ἶ μονἀδων, κτλ*. (Fountain of fountains, source of sources, root of roots, monad of monads art thou.)[56] The fountain of Hera was also said to contain the one fish (μόνον ἰχθύν) that is caught by the "hook of divinity" and "feeds the whole world with its flesh."[57] In a Boeotian vase-painting the "lady of the beasts"[58] is shown with a fish between her legs, or in her body,[59] presumably indicating that the fish is her son. Although, in the Sassanid debate, the legend of Mary was transferred to Hera, the "one fish" that is hooked does not correspond to the Christian symbol, for in Christian symbology the crucifix is the hook or bait with which God catches Leviathan,[60] who is either death or the devil ("that ancient

serpent”) but not the Messiah. In Jewish tradition, on the other hand, the *pharmakon athanasias* is the flesh of Leviathan, the “Messianic fish,” as Scheftelowitz says. The Talmud Sanhedrin says that the Messiah “will not come until a fish is sought for an invalid and cannot be procured.”[61] According to the Apocalypse of Baruch, Behemoth as well as Leviathan[62] is a eucharistic food. This is assiduously overlooked. As I have explained elsewhere,[63] Yahweh’s two prehistoric monsters seem to represent a pair of opposites, the one being unquestionably a land animal, and the other aquatic.

[179] Since olden times, not only among the Jews but all over the Near East, the birth of an outstanding human being has been identified with the rising of a star. Thus Balaam prophesies (Num. 24 : 17):

> I shall see him, but not now,
> I shall behold him, but not nigh;
> a star shall come forth out of Jacob … .

[180] Always the hope of a Messiah is connected with the appearance of a star. According to the Zohar, the fish that swallowed Jonah died, but revived after three days and then spewed him out again. “Through the fish we shall find a medicament for the whole world.”[64] This text is medieval but comes from a trustworthy source. The “very great[65] and pure fish from the fountain” mentioned in the Abercius inscription is, in the opinion of Scheftelowitz,[66] none other than Leviathan, which is not only the biggest fish but is held to be pure, as Scheftelowitz shows by citing the relevant passages from Talmudic literature. In this connection we might also mention the “one and only fish” (εἷς μόνος ἰχθῦς) recorded in the “Happenings in Persia.”[67]

IX

THE AMBIVALENCE OF THE FISH SYMBOL

[181] According to the Syrian Apocalypse of Baruch (29 : 1ff.), the time preceding the coming of the Messiah falls into twelve parts, and the Messiah will appear in the twelfth. As a time-division, the number twelve points to the zodia, of which the twelfth is the Fishes. Leviathan will then rise out of the sea. “The two great sea monsters which I created on the fifth day of creation and which I have preserved until that time shall then be food for all who are left.”[1] Since Behemoth is unquestionably not a sea-animal, but one which, as a midrash says, “pastures on a thousand mountains,”[2] the two “sea monsters” must be a duplication of Leviathan. And as a matter of fact, he does appear to be divided as to sex, for there is a male and a female of the species.[3] A similar duplication is suggested in Isaiah 27 : 1: “In that day, the Lord with his sore and great strong sword shall punish Leviathan the piercing serpent, even Leviathan that crooked serpent, and he shall slay the dragon [Vulgate: whale] that is in the sea.” This duplication gave rise in medieval alchemy to the idea of two serpents fighting each other, one winged, the other wingless.[4] In the Book of Job, where Leviathan appears only in the singular, the underlying polarity comes to light in his opposite number, Behemoth. A poem by Meir ben Isaac describes the battle between Leviathan and Behemoth at the end of time, in which the two monsters wound each other to death. Yahweh then cuts them up and serves them as food to the devout.[5] This idea is probably connected with the old Jewish Passover, which was celebrated in the month of Adar, the fish. In spite of the distinct duplication of Leviathan in the later texts, it is very likely that originally there was only one Leviathan, authenticated at a very early date in the Ugarit texts from Ras Shamra (*c*. 2000 B.C.). Virolleaud gives the following translation:

> Quand tu frapperas Ltn, le serpent brh

Tu achèveras le serpent ‘qltn,
Le puissant aux sept têtes.

[182] He comments: “It is remarkable that the two adjectives *brḥ* and *‘qltn* are the ones which qualify, in Isaiah 27 : 1, a particularly dangerous species of serpent which we call Leviathan, in Hebrew Liviatan.”[6] From this period, too, there are pictures of a fight between Baal and the serpent Ltn,[7] remarkable in that the conflict is between a god and a monster and not between two monsters, as it was later.

[183] We can see from the example of Leviathan how the great “fish” gradually split into its opposite, after having itself been the opposite of the highest God and hence his shadow, the embodiment of his evil side.[8]

[184] With this splitting of the monster into a new opposite, its original opposition to God takes a back seat, and the monster is now in conflict either with itself or with an equivalent monster (e.g., Leviathan and Behemoth). This relieves God of his own inner conflict, which now appears outside him in the form of a hostile pair of brother monsters. In later Jewish tradition the Leviathan that Yahweh fought with in Isaiah develops a tendency, on the evidence cited by Scheftelowitz, to become “pure” and be eaten as “eucharistic” food, with the result that, if one wanted to derive the Ichthys symbol from this source, Christ as a fish would appear in place of Leviathan, the monstrous animals of tradition having meanwhile faded into mere attributes of death and the devil.

[185] This split corresponds to the doubling of the shadow often met with in dreams, where the two halves appear as different or even as antagonistic figures. This happens when the conscious ego-personality does not contain all the contents and components that it could contain. Part of the personality then remains split off and mixes with the normally unconscious shadow, the two together forming a double—and often antagonistic—personality. If we apply this experience from the domain of practical psychology to the mythological material under discussion, we find that God’s monstrous antagonist produces a double because the God-image is incomplete and does not contain everything it logically ought to contain. Whereas Leviathan is a fishlike creature, primitive and cold-blooded, dwelling in the depths of the ocean, Behemoth is a warm-

blooded quadruped, presumably something like a bull, who roams the mountains (at least in later tradition). Hence he is related to Leviathan as a higher, superior creature to a lower, inferior one, rather like the winged and the wingless dragon in alchemy. All winged beings are “volatile,” i.e., vapours and gases, in other words pneuma. Just as in Augustine Christ the fish is “drawn from the deep,”[9] so in II Esdras 13 : 2ff. the “man” came out of the sea like a wind. His appearance was heralded by an eagle and a lion, theriomorphic symbols which greatly affrighted the prophet in the same way that Behemoth inspired chiefly terror in Job. The fish drawn from the deep has a secret connection with Leviathan: he is the bait with which Leviathan is lured and caught. This fish is probably a duplication of the great fish and stands for its pneumatic aspect. It is evident that Leviathan has such an aspect, because he, like the Ichthys, is eucharistic food.[10] That this doubling represents an act of conscious realization is clear from Job 26 : 12, where we are told that Yahweh smote Rahab “by his understanding” (*tebūnā*). Rahab, the sea monster, is cousin german to Tiamat, whom Marduk split asunder by filling her up with Imhullu, the north wind.[11] The word *tebūnā* comes from *bīn*, ‘to separate, split, part asunder’—in other words, to discriminate, which is the essence of conscious realization.[12] In this sense Leviathan and Behemoth represent stages in the development of consciousness whereby they become assimilated and humanized. The fish changes, via the warm-blooded quadruped, into a human being, and in so far as the Messiah became, in Christianity, the second Person of the Trinity, the human figure split off from the fish hints at God’s incarnation.[13] What was previously missing in the God-image, therefore, was the human element.

[186] The role of the fish in Jewish tradition probably has some connections with the Syrophoenician fish cult of Atargatis. Her temples had pools with sacred fishes in them which no one was allowed to touch.[14] Similarly, meals of fish were ritually eaten in the temples. “This cult and these customs, which originated in Syria, may well have engendered the Ichthys symbolism in Christian times,” says Cumont.[15] In Lycia they worshipped the divine fish Orphos or Diorphos, the son of Mithras and the “sacred stone,” Cybele.[16] This god is a variant of the

Semitic fish-deities we have already mentioned, such as Oannes, the Babylonian Nun, Dagon, and Adonis, whom the Greeks called Ichthys. Fish offerings were made to Tanit in Carthage and to Ea and Nina in Babylon. Traces of a fish cult can be found in Egypt too. The Egyptian priests were forbidden to eat fish, for fishes were held to be as unclean as Typhon's sea. "All abstain from sea-fish," observes Plutarch. According to Clement of Alexandria, the inhabitants of Syene, Elephantine, and Oxyrhynchus worshipped a fish. Plutarch[17] says it was the custom to eat a broiled fish before the door of one's house on the ninth day of the first month. Doelger inclines to the view that this custom paved the way for the eucharistic fish in Christianity.[18]

[187] The ambivalent attitude towards the fish is an indication of its double nature. It is unclean and an emblem of hatred on the one hand, but on the other it is an object of veneration. It even seems to have been regarded as a symbol for the soul, if we are to judge by a painting on a late Hellenistic sarcophagus. The mummy lies on a lion-shaped bier, and under the bier are the four Canopic jars, the lids representing the four sons of Horus, three of them with animal heads and one with a human head. Over the mummy there floats a fish,[19] instead of the usual soul-bird. It is clear from the painting that the fish is an oxyrhynchus, or barbel, one of the three most abominated fishes, which was said to have devoured the phallus of Osiris after he had been dismembered by Typhon (Set).[20] Barbels were sacred to Typhon, who is "that part of the soul which is passionate, impulsive, irrational, and truculent."[21] Because of their voraciousness, fishes were regarded in the Middle Ages as an allegory of the damned.[22] The fish as an Egyptian soul-symbol is therefore all the more remarkable. The same ambivalence can be seen in the figure of Typhon/Set. In later times he was a god of death, destruction, and the desert, the treacherous opponent of his brother Osiris. But earlier he was closely connected with Horus and was a friend and helper of the dead. In one of the Pyramid Texts he and Heru-ur (the "older Horus") help Osiris to climb up to heaven. The floor of heaven consists of an iron plate, which in places is so close to the tops of the mountains that one can climb up to heaven with the help of a ladder. The four corners of the iron plate rest on four pillars, corresponding to the

four cardinal points. In the Pyramid Texts of Pepi I, a song of praise is addressed to the "ladder of the twin gods," and the Unas text says: "Unas cometh forth upon the Ladder which his father Ra hath made for him, and Horus and Set take the hand of Unas, and they lead him into the Tuat."[23] Other texts show that there was enmity between Heru-ur and Set because one was a god of the day and the other a god of the night. The hieroglyph for Set has as a determinative the sign for a stone, or else the unidentified Set-animal with long ears. There are paintings showing the heads of Heru-ur and Set growing out of the same body, from which we may infer the identity of the opposites they represent. Budge says: "The attributes of Heru-ur changed somewhat in early dynastic times, but they were always the opposite of those of Set, whether we regard the two gods as personifications of two powers of nature, i.e., Light and Darkness, Day and Night, or as Kosmos and Chaos, or as Life and Death, or as Good and Evil."[24]

[188] This pair of gods represent the latent opposites contained in Osiris, the higher divinity, just as Behemoth and Leviathan do in relation to Yahweh. It is significant that the opposites have to work together for a common purpose when it comes to helping the *one* god, Osiris, to reach the heavenly quaternity. This quaternity is also personified by the four sons of Horus: Mestha, Hapi, Tuamutef, and Qebhsennuf, who are said to dwell "behind the thigh of the northern heaven," that is, behind the thigh of Set, whose seat is in the constellation of the Great Bear. The four sons of Horus are Set's enemies, but on the other hand they are closely connected with him. They are an analogy of the four pillars of heaven which support the four-cornered iron plate. Since three of the sons are often shown with animal heads, and one with a human head, we may point to a similar state of affairs in the visions of Ezekiel, from whose cherubim-figures the well-known symbols of the evangelists (three animals, one angel) are derived.[25] Ezekiel says, furthermore (1 : 22): "Over the heads of the living creatures [the cherubim] there was the likeness of a solid plate, shining like terrible crystal, spread out above their heads," and (1 : 26, RSV): "And above the solid plate that was over their heads there was the likeness of a throne, in appearance like

sapphire; and seated above the likeness of a throne was a likeness as it were of a human form.”

[189] In view of the close ties between Israel and Egypt an intermingling of symbols is not unlikely. What is remarkable, however, is that in Arab tradition the region round the heavenly Pole is seen in the form of a *fish*. Qazvini says: “The Pole can be seen. Round it are the smaller *Benat na’sh*[26] and dark stars, which together form the picture of a fish, and in its midst is the Pole.”[27] This means that the Pole, which in ancient Egypt denoted the region of Set and was at the same time the abode of the four sons of Horus, was contained, so to speak, in the body of a fish. According to Babylonian tradition Anu has his seat in the northern heaven; likewise Marduk, as the highest god, world-creator and ruler of its courses, is the Pole. The *Enuma Elish* says of him: “He who fixes the course of the stars of heaven, like sheep shall pasture the gods all together.”[28]

[190] At the northern point of the ecliptic is the region of fire (purgatory and the entrance to the Anu-heaven). Hence the northern corner of the temple built around the tower at Nippur was called the *kibla* (point of orientation). In like manner the Sabaeans and Mandaeans, when praying, turn towards the north.[29] We might also mention the Mithraic liturgy in this connection: in the final vision Mithras appears, “holding the golden shoulder of a young bull. This is the constellation of the Bear, which moves and turns the heavens round.” The text piles endless fire-attributes on this god, who obviously hails from the north.[30]

[191] These Babylonian ideas about the significance of the north make it easier for us to understand why Ezekiel’s vision of God came from that quarter, despite the fact that it is the birthplace of all evil. The coincidence of opposites is the normal thing in a primitive conception of God, since God, not being an object of reflection, is simply taken for granted. At the level of conscious reflection, however, the coincidence of opposites becomes a major problem, which we do everything possible to circumvent. That is why the position of the devil in Christian dogma is so very unsatisfactory. When there are such gaps in our collective ideas, in the dominants of our conscious orientation, we can count with absolute

certainty on the existence of complementary or—to be more precise—compensatory developments in the unconscious. These compensating ideas can be found in the speculations of alchemy. We can hardly suppose that ideas of this sort remained totally unconscious so far as the adepts were concerned. What they were aiming at was a more or less conscious restoration of the primitive God-image. Hence they were able to propound paradoxes as shocking as that of God's love glowing in the midst of hell-fire,[31] which is represented as being no more than the Christian conception of God in a new but necessary relation to everything hell stands for. Above all it was Jakob Böhme who, influenced by alchemy and the Cabala equally, envisaged a paradoxical God-image in which the good and the bad aspects appertain to the same divine being in a way that bears comparison with the views of Clement of Rome.

[192] Ancient history gives us a divided picture of the region to the north: it is the seat of the highest gods and also of the adversary; thither men direct their prayers, and from thence blows an evil pneuma, the Aquilo, "by the name whereof is to be understood the evil spirit";[32] and finally, it is the navel of the world and at the same time hell. Bernard of Clairvaux apostrophizes Lucifer thus: "And dost thou strive perversely towards the north? The more thou dost hasten toward the heights, the more speedily shalt thou go down to thy setting."[33] The "king of the North" in Nostradamus has to be understood in the light of this passage. At the same time, it is clear from St. Bernard's words that the heights of power to which Lucifer strives are still associated with the north.[34]

X

THE FISH IN ALCHEMY

1. The Medusa

[193] Michel Nostradamus, physician and astrologer, must surely have been acquainted with alchemy, since this art was practised mainly by physicians. Whether he knew that the fish was a symbol for the arcane substance and the *lapis* is perhaps questionable, but it is more than likely that he had read the classics of alchemy. Of these one of the greatest authorities is the *Turba philosophorum*, which had been translated very early (11th–12th cent.) from the Arabic into Latin. At about the same time, or a little later, its appendices were also translated, namely the “Allegoriae super librum Turbae,” the “Allegoriae sapientum supra librum Turbae XXIX distinctiones,”[1] together with the “Aenigmata ex Visione Arislei” and “In Turbam philosophorum exercitationes.” The *Turba* belongs to the same sphere of thought as the *Tabula smaragdina*, and hence is one of those late Hellenistic products that were transmitted to us by the Arabs, mainly, perhaps, through the Neoplatonic school of Harran (Thabit ibn Qurrah and others), which flourished at the beginning of the eleventh century.[2] The ideas preserved in these treatises are “Alexandrian,” and the recipes, particularly those set forth in the “Allegoriae super librum Turbae,” adhere closely to the spirit and letter of the *Papyri Graecae Magicae*.[3]

[194] Now these “Allegoriae”[4] are our earliest source for the alchemical fish symbolism. For this reason we may assign a fairly early date to the alchemical fish—before the eleventh century, in any case.[5] There is nothing to suggest that it is of Christian origin. That, however, did not prevent it from becoming—through the transformation of the arcane substance which it had at first represented—a symbol of the *lapis*, the latter term denoting the *prima materia* as well as the end product of the process, variously called *lapis philosophorum*, *elixir vitae*, *aurum*

nostrum, infans, puer, filius philosophorum, Hermaphroditus, and so on. This *filius*, as I have shown elsewhere, was regarded as a parallel of Christ. Thus, by an indirect route, the alchemical fish attains the dignity of a symbol for the *Salvator mundi*. Its father is God, but its mother is the *Sapientia Dei*, or Mercurius as Virgo. The *filius philosophorum* (or *macrocosmi*), otherwise the *lapis*, means nothing other than the self, as I have explained in a detailed examination of its various attributes and peculiarities.

[195] The text containing the earliest reference to the fish runs: "There is in the sea a round fish, lacking bones and cortex, and having in itself a fatness, a wondrous virtue, which, if it is cooked on a slow fire until its fatness and moisture entirely disappear … is saturated with sea-water until it begins to shine."[6] This recipe is repeated in another, possibly later, treatise of the same kind, the "Aenigmata philosophorum."[7] Here the "piscis" has become a "pisciculus," and "lucescat" has become "candescat." Common to both treatises is the ironic conclusion of the recipe: When the *citrinitas (xanthosis*, 'yellowing') appears, "there is formed the *collyrium* [eyewash] of the philosophers." If they wash their eyes with it, they will easily understand the secrets of the philosophy.

[196] This round fish is certainly not a fish in the modern sense, but an invertebrate. This is borne out by the absence of bones and "cortex," which in medieval Latin simply means a musselshell or mollusc.[8] At all events, it is some kind of round organism that lives in the sea, presumably a scyphomedusa or jellyfish, which abounded in the seas of the ancient world. Its free-swimming form, the acrospedote medusa, has a round, bell-or disc-shaped body of radial construction, which as a rule is divided into eight sections by means of four perradials and four interradials (whose angles may again be halved by adradials). Like all Cnidaria[9] or Nematophora[10] (to which class the Scyphomedusae belong), they are equipped with tentacles; these contain the thread-cells or nematocysts with which they poison their prey.

[197] Our text remarks that when the "round fish" is warmed or cooked on a slow fire it "begins to shine." In other words, the heat already present in it becomes visible as light. This suggests that the author of the

recipe was influenced either by Pliny himself or by some one in the same tradition. Pliny describes a fish—the *stella marina*, ‘star of the sea’—which, he says, has puzzled several great philosophers.[11] This fish was said to be hot and burning, and to consume as with fire everything it touched in the sea.[12] Pliny mentions the *stella marina*[13] in the same breath[14] as the *pulmo marinus*, which swims freely on the surface,[15] and attributes to the latter so fiery a nature that when you rub it with a stick, you can straightway use the stick as a torch.[16] From this we might conclude that our author did not take zoological distinctions too seriously, and may have confused the *stella marina* with the *pulmones*. However that may be, the Middle Ages with its passion for symbols eagerly seized on the legend of the “starfish.” Nicholas Caussin regarded the “fish” as a starfish and describes it as such. This animal, he says, generates so much heat that it not only sets fire to everything it touches but also cooks its own food. Hence it signifies the “veri amoris vis inextinguibilis” (the inextinguishable power of true love).[17]

[198] Such an interpretation sounds very strange to modern ears. But for the Middle Ages “alles Vergängliche ist nur ein Gleichnis” was literally true: all ephemeral things were but a symbol of the divine drama, which to modern man has become almost meaningless. Picinellus interprets the fish in the same way, the only difference being that his amplification is much more elaborate. “This fish,” he says, “glows forever in the midst of the waters, and whatsoever it touches grows hot and bursts into flames.” This glow is a fire—the fire of the Holy Ghost. He cites as his authority Ecclesiasticus 48 : 1,[18] and refers also to the fiery tongues of the Pentecostal miracle. The miraculous fact that the fire of the *stella marina* does not go out in the water reminds him of the “divinae gratiae efficacitas” (action of divine grace), which sets on fire the hearts that are drowned in a “sea of sins.” For the same reason the fish means charity and divine love, as the Song of Solomon 8 : 7 testifies: “Many waters cannot quench love, neither can the floods drown it.” The fish, so our author supposes, spreads a radiance about itself from the first moment of its life and thus is an emblem of religion, by whose light the faithful live.

[199] As the quotation from the Song of Solomon shows, the interpretation of the burning starfish brings out its connection with profane love. Picinellus even says that the starfish is the “hieroglyph of a lover’s heart,” whose passion not even the entire sea can extinguish, no matter whether his love be divine or profane. This fish, says our author inconsequently, burns but gives no light. He quotes St. Basil: “Then conceive in your mind a deep pit, impenetrable darkness, fire that has no brightness, having all fire’s power of burning, but without any light. … Such a conception describes the fire of hell.”[19] This fire is “concupiscentia,” the “scintilla voluptatis” (spark of lechery).

[200] It is curious how often the medieval symbolists give diametrically opposed interpretations of the same symbol, apparently without becoming aware of the far-reaching and dangerous possibility that the unity of the symbol implies the identity of the opposites. Thus we can find certain views in alchemy which maintain that God himself “glows” in this subterranean or submarine[20] fire. The “Gloria mundi,” for instance, says:[21]

> Take fire or unslaked lime, which the Philosophers say grows on trees. In this fire God himself glows in divine love. … Likewise the Natural Master says regarding the art of fire, that Mercurius is to be decomposed … and fixed in the unquenchable or living fire, wherein God himself glows, together with the sun, in divine love, for the solace of all men; and without this fire can the art never be brought to perfection. It is also the fire of the Philosophers, which they keep hidden away and concealed. … It is also the noblest fire which God created upon earth, for it has a thousand virtues. To these things the teacher replies that God has bestowed upon it such virtue and efficacy … that with this fire is mingled the Godhead itself. And this fire purifies, as purgatory does in the lower regions.[22]

The fire is “inextinguishable.” “The Philosophers call this fire the fire of the Holy Ghost.”[23] It unites Mercurius with the sun “so that all three make but one thing, which no man shall part asunder.”[24] “Just as in these three God the Father, God the Son, and God the Holy Ghost are united, [i.e., as] the Holy Trinity in three Persons, and there yet remains the one single true God, so also the fire unites these three things: body, spirit, and soul, that is, Sun, Mercurius, and Soul."[25] "In this invisible fire the mystery of the Art is enclosed, as God the Father, Son, and Spirit in three Persons is verily included in one essence."[26] This fire is "fire and water at once." The Philosophers name it the "living fire" in honour of God, "who mingles himself with himself in the living water."[27]

[201] Another treatise says of the water that it is the "hiding-place and dwelling-place of the whole treasure."[28] For in its midst is the "fire of Gehenna" which "contains this engine of the world in its own being."[29] The fire is caused by the "primum mobile" and is kindled by the influence of the stars. It never ceases its universal motion and is continually lit through the "influence of celestial forces."[30]

[202] It is an "unnatural" fire, "contrary to nature." It puts bodies to the torture, it is itself the dragon that "burns furiously like hell-fire."[31] The life-spirit dwelling in nature, Phyton, has a double aspect: there is an infernal form of it, namely hell-fire, from which a hellish bath can be prepared. The treatise of Abraham Eleazar speaks of Phyton as a "god."[32]

[203] According to Blaise de Vigenère, the fire has not two but four aspects: the intelligible, which is all light; the heavenly, partaking of heat and light; the elemental, pertaining to the lower world and compounded of light, heat, and glow (*ardor*); and finally the infernal, opposed to the intelligible, glowing and burning without any light.[33] Here again we encounter the quaternity which the ancients associated with fire, as we saw from the Egyptian conception of Set and the four sons of Horus,[34] and from Ezekiel's vision of the fiery region to the north. It is not at all likely that Vigenère was thinking of Ezekiel in this connection.[35]

[204] In the "Introitus apertus" of Philalethes the arcane substance is named "chalybs" (steel). This, he says, is the "auri minera" (the *prima materia* of the gold), "the true key of our Work, without which no skill can kindle the fire of the lamp." Chalybs is a "spirit pre-eminently pure," a "secret, infernal, and yet most volatile fire,"[36] the "wonder of the world, the system of the higher powers in the lower. For this reason the

Almighty has assigned to it a most glorious and rare heavenly conjunction, even that notable sign whose nativity is declared throughout the Philosophical East to the furthest horizon of its hemisphere. The wise Magi saw it at the [beginning of the] era, and were astonished, and straightway they knew that the most serene King was born in the world. Do you, when you see his star, follow it to the cradle, and there you shall behold the fair infant. Cast aside your defilements, honour the royal child, open your treasure, offer a gift of gold; and after death he will give you flesh and blood, the supreme Medicine in the three monarchies of the earth."[37]

[205] This passage is particularly interesting because it allows us to look deep into the world of obscure archetypal ideas that fill the mind of the alchemist. The author goes on to say that the steel, which is at the same time the "infernal fire," the "key of our Work," is attracted by the magnet, for which reason "our magnet" is the true "minera" (raw material) of the steel. The magnet has a hidden centre which "with an archetic appetite[38] turns towards the Pole, where the virtue of the steel is exalted." The centre "abounds in salt"—evidently the *sal sapientiae,* for immediately afterwards the text says: "The wise man will rejoice, but the fool will pay small heed to these things, and will not learn wisdom, even though he see the outward-turned central Pole marked with the notable sign[39] of the Almighty."

[206] In the Pole is found the heart of Mercurius, "which is the true fire wherein its Lord has his rest. He who journeys through this great and wide sea may touch at both Indies, may guide his course by the sight of the North Star, which our Magnet will cause to appear unto you." This is an allusion to the mystic journey, the "peregrinatio." As I have explained elsewhere, it leads to the four quarters, here indicated by the two Indies—East, West—and by the turning of the compass to the north.[40] Together they form a cross, i.e., a quaternity, which characterizes the nature of the Pole. For from the Pole the four directions radiate out, and also the division of the hemispheres (east and west of the Greenwich meridian). Thus the northern hemisphere resembles the round body of the

hydromedusa, whose spherical surface is divided by four (or multiples of four) radials, and therefore looks like a globe seen from the Pole.

[207] In this connection I would like to mention the dream of a twenty-year-old student, who got into a state of confusion when he found that the philosophical faculty for which he had opted did not suit him. He could discover no reason for this. His disorientation reached the point where he simply did not know what profession he wanted to take up. Then a dream came to his help and showed him his goal in the fullest sense:

[208] *He dreamt that he was walking in a wood. Gradually this grew more and more lonely and wild, and finally he realized that he was in a primeval forest. The trees were so high and the foliage so thick that it was almost dark on the ground. All trace of a path had long since disappeared, but, driven on by a vague sense of expectation and curiosity, he pressed forward and soon came to a circular pool, measuring ten to twelve feet across. It was a spring, and the crystal-clear water looked almost black in the dark shadows of the trees. In the middle of the pool there floated a pearly organism, about eighteen inches in diameter, that emitted a faint light. It was a jelly-fish.*[40a] Here the dreamer awoke with a violent emotion: he decided there and then to study science, and he kept to this decision. I must emphasize that the dreamer was not under any psychological influence that might have suggested such an interpretation. The conclusion he drew from the dream was undoubtedly the right one, but it does not by any means exhaust the meaning of the symbol. The dream is archetypal—a “big” dream. The wood that grows dusky and turns into a primeval forest means entry into the unconscious. The round pool with the jelly-fish in it represents a three-dimensional mandala, the self: wholeness as the goal to which the “archetic appetite” points, the magnetic north which gives the traveller his bearings on the “sea of the world.”

[209] Turning back to our text, I would emphasize, by way of recapitulation, that the infernal fire is nothing other than the *Deus absconditus* (hidden God) who dwells at the North Pole and reveals himself through magnetism. His other synonym is Mercurius, whose heart is to be found at the Pole, and who guides men on their perilous

voyage over the sea of the world. The idea that the whole machinery of the world is driven by the infernal fire at the North Pole, that this is hell, and that hell is a system of upper powers reflected in the lower—this is a shattering thought. But the same note is struck by Meister Eckhart when he says that, on returning to his true self, he enters an abyss "deeper than hell itself." Scurrilous as it is, the alchemical idea cannot be denied a certain grandeur. What is particularly interesting, psychologically, is the nature of the image: it is the projection of an archetypal pattern of order,[41] the mandala, which represents the idea of totality. The centering of the image on hell, which at the same time is God, is grounded on the experience that highest and lowest both come from the depths of the soul, and either bring the frail vessel of consciousness to shipwreck or carry it safely to port, with little or no assistance from us. The experience of this "centre" is therefore a numinous one in its own right.

[210] Picinellus feels that his *stella maris*, "this fish which burns in the midst of the water but gives no light," besides meaning the Holy Ghost, love, grace, and religion, also symbolizes something in man, namely his *tongue*, speech, and powers of expression, for it is in these faculties that all psychic life is manifest. He is evidently thinking of an instinctive, unreflecting psychic activity, because at this point he cites James 3 : 6: "And the tongue is a fire, a world of iniquity among our members, defiling the whole body, setting on fire the wheel of birth, and set on fire by hell."[42]

[211] Hence the evil "fish" coincides with our untamed and apparently untameable propensities, which, like a "small fire that sets a great forest ablaze,"[43] defiles the whole body and even sets on fire the "wheel of birth." The τροχός τής ϒενἐσεως (*rota nativitatis*) is a distinctly curious expression to use in this connection. The wheel, it is explained, symbolizes the circle or course or cycle of life. This interpretation presupposes ideas akin to Buddhism, if we are not to conceive the wheel merely as the banal statistical cycle of births and deaths. How the wheel could ever be set on fire is a difficult question that cannot be answered without further reflection. We must consider, rather, that it is meant as a

parallel to the defilement of the whole body—in other words, a destruction of the *soul*.

[212] Ever since the *Timaeus* it has been repeatedly stated that the soul is a sphere.[44] As the *anima mundi*, the soul revolves with the world wheel, whose hub is the Pole. That is why the "heart of Mercurius" is found there, for Mercurius is the *anima mundi*.[45] The *anima mundi* is really the motor of the heavens. The wheel of the starry universe is reflected in the horoscope, called the "thema" of birth. This is a division of the heavens into twelve houses, calculated at the moment of birth, the first house coinciding with the ascendent. Divided up in this way the firmament looks like a wheel turning, and the astronomer Nigidius[46] is said to have received the name Figulus ("potter") because the wheel of heaven turns like a potter's wheel.[47] The "thema" (that which is "set" or "ordained") is indeed a τροχός, 'wheel'. The basic meaning of the horoscope is that, by mapping out the positions of the planets and their relations to one another (aspects), together with the distribution of the signs of the zodiac at the cardinal points, it gives a picture first of the psychic and then of the physical constitution of the individual. It represents, in essence, a system of original and fundamental qualities in a person's character, and can therefore be regarded as an equivalent of the individual psyche. Priscillian (d. 385) evidently took the wheel in this sense. He says of Christ: "He alone has the power to join together the Pleiades and to loose the bands of Orion. Knowing the changes of the firmament and destroying the wheel of generation, he has overcome the day of our birth by the renewal of baptism."[48] From this it is plain that in the fourth century the wheel of birth was in fact regarded as the horoscope. "Setting fire to the wheel" is therefore a figurative expression for a catastrophic revolt of all the original components of the psyche, a conflagration resembling panic or some other uncontrollable, and hence fatal outburst of emotion.[49] The total nature of the catastrophe is explained by the central position of the so-called "tongue," the diabolical element whose destructiveness is an essential part of every psyche. Seen in this light, the *stella maris* stands for the fiery centre in us from which creative or destructive influences come.

2. The Fish

[213] In our discussion of medieval fish symbolism we have so far been concerned with a fish only in name, the jelly-fish, without taking due account of the fact that this is not a fish at all in the zoological sense, and —more important still—is not shaped like one. It was simply the description of the "round fish" that brought it to our attention. That, however, was not the case in the Middle Ages, for we have the testimony of a sixteenth-century adept, Theobald de Hoghelande, which shows that he at least understood the fish to be a real fish. Listing the numerous synonyms for the tincture, he remarks: "Likewise they compared it to fishes. Hence Mundus says in the *Turba:* Take one part fish-gall and one part calf's urine, etc. And in the 'Aenigmata sapientum' it says: There is in our sea a small round fish, without bones or legs [*cruribus*]."[50] Since the gall mentioned in the quotation can only come from a real fish, Hoghelande obviously took the "small round fish" to be a real one, and since one can imagine a fish without bones, but hardly without skin or some kind of integument, the incomprehensible "corticibus" of the original version[51] had to be changed into "cruribus" (legs). Of course, fishes don't have legs either. But this passage from a sixteenth-century text proves that the "small round fish" of the "Aenigmata" was understood, in alchemical tradition, as a real fish and not as a jelly-fish. A round and transparent fish of a peculiar sort, without "cortices," is described in the *Cyranides:* the "cinedian fish" lives in the sea on the shores of Syria, Palestine, and Libya, is six fingers long, and is a "pisciculus rotundus." It has two stones in its head and another one in the third vertebra of the tail (*spondilo*), or notochord. This stone is especially potent and is used as a love-potion.[52] The cinedian stone is practically unknown, because it is very rare. It is also called "opsianus,"[53] which is interpreted as "serotinus" (of late growth or origin) and "tardus" (slow, hesitant). It pertains to Saturn. "This stone is twin or twofold: the one is opaque and black, but the other though black is brilliant and shining like a mirror."[54] This is the stone which many seek, without finding it: for it is the dragon's stone (*dracontius lapis*).[55]

[214] The only thing that can be elicited with certainty from this involved description is that the animal in question must be a vertebrate, and is therefore presumably a genuine fish. What exactly is the justification for calling it "round" is far from clear. It is obvious that the fish is mainly a mythologem, since it is said to contain the dragon's stone. This stone was known to Pliny[56] and also to the medieval alchemists, who named it *draconites*, *dracontias*, or *drachates*.[57] It was reputed to be a precious stone, which could be obtained by cutting off the head of a sleeping dragon. But it becomes a gem only when a bit of the dragon's soul remains inside,[58] and this is the "hate of the monster as it feels itself dying." The gem is of a *white* colour, and a powerful alexipharmic. Even though there are no dragons nowadays, the text says, these draconites are occasionally found in the heads of water-snakes. Ruland asserts that he has seen such stones, blue or black in colour.

[215] The cinedian stone has a double nature, though, as the text shows, it is not at all clear.[59] One might almost conjecture that its double nature consisted originally in a white and a black variety, and that a copyist, puzzled by the contradiction, inserted "niger quidem" ('though black'). But Ruland distinctly emphasizes that "the colour of the Draconite is white."[60] Its affinity with Saturn may shed light on this dilemma. Saturn, in astrology the "star of the sun," is alchemically interpreted as black; it is even called "sol niger" and has a double nature as the arcane substance,[61] being black outside like lead, but white inside. Johannes Grasseus cites the opinion of the Augustinian monk Degenhardus concerning the lead: the lead of the Philosophers, named lead of the air (*Pb aeris*), contains the "shining white dove" which is called the "salt of the metals."[62] Vigenère assures us that lead, "than which nothing is more opaque," can be turned into "hyacinth" and back again to lead.[63] Quicksilver, says Mylius,[64] comes from the "heart of Saturn," in fact *is* Saturn, the bright silveriness of mercury contrasting with the "blackness" of lead. The "bright" water[65] that flows from the plant Saturnia is, according to Sir George Ripley, "the most perfect water and the bloom of the world."[66] How old this idea is can be seen from the remark of

Hippolytus,[67] that Chronos (Saturn) is a “power of the colour of water, and all-destructive.”

[216] In view of all this, the double nature of the cinedian stone might signify the polarity and union of opposites, which is just what gives the *lapis philosophorum* its peculiar significance as a uniting symbol,[68] and hence its magical and divine properties. Our draconite, too, is endowed with extraordinary powers (“potentissimus valde”), which make it eminently suitable as the “ligature of Aphrodite,” i.e., love-magic. Magic exercises a *compulsion* that prevails over the conscious mind and will of the victim: an alien will rises up in the bewitched and proves stronger than his ego. The only comparable effect capable of psychological verification is that exerted by unconscious contents, which by their compelling power demonstrate their affinity with or dependence on man’s totality, that is, the self and its “karmic” functions.[69] We have already seen that the alchemical fish symbol points ultimately to an archetype of the order of magnitude of the self. So it should not surprise us to see that the principle of “outward uncomeliness,” which applies to the lead and the *lapis*, is also applied to Christ. The same that is said of the *lapis* is said of Christ by Ephrem the Syrian (d. 373): “He is clothed in figures, he is the bearer of types. … His treasure is hidden and of small account, but when it is laid open, it is wonderful to look upon.”[70]

[217] In a treatise of the seventeenth century, by an anonymous French author,[71] our strange hybrid, the “round fish,” finally becomes a verifiable vertebrate known to zoology: *Echeneis remora*, the common remora or sucking-fish. It belongs to the mackerel family, and is distinguished by a large, flat, oval-shaped sucker on the top of the head in place of the dorsal fin. By means of this it attaches itself either to a larger fish or to a ship’s bottom and in this wise is transported about the world.

[218] The text says of this fish:

> For that which we take, in order to prepare from it the Philosophical Work, is naught else but that little fish the *Echeneis*, which has no blood or spiny bones, and is shut up in that deep mid region of the great universal sea. This little fish is extremely small, alone, and unique in its

shape, but the sea is great and vast, and hence it is impossible for those to catch it who do not know in what part of the world it dwells. Believe me verily, that he who, as Theophrastus says, does not well understand the art by which he can draw down the moon from the sky and bring it from heaven to earth, and change it into water and then into earth, will never find the material of the stone of the wise, for it is not more difficult to perform the one than to find the other. Yet none the less, when we speak somewhat in confidence in the ear of a trusted friend, we teach him that hidden secret of the wise, how he can naturally, speedily, and easily catch the little fish called Remora, which is able to hold back the proud vessels of the great Ocean sea (that is the spirit of the world). Those who are not sons of the art are altogether ignorant and know not those precious treasures which are concealed by nature in the precious and heavenly Aqua Vitae of our sea. But, that I may declare to you the clear light of our unique material, or our virgin soil, and teach you in what wise you may acquire the supreme art of the sons of wisdom, it is needful that I instruct you concerning the magnet of the wise, which has the power of attracting the little fish called Echeneis or Remora from out the centre and depth of the sea. If it is caught in accordance with nature, it changes in a natural way first into water and then into earth. And this, when properly prepared by the cunning secret of the wise, has the power of dissolving all solid bodies and making them volatile, and of purifying all bodies that are poisoned.[72]

[219] We learn from this text that the fish is found, if it can be found at all, in the centre of the ocean. But the ocean is the "spirit of the world." Our text, as the above sample shows, derives from a time when alchemy had almost given up its laboratory work and was becoming more and more of a philosophy. For an alchemist living in the early part of the seventeenth century, the "spirit of the world" is a somewhat unusual term, because the expression more commonly used was the "anima mundi." The world-soul or, in this case, the world-spirit is a projection of the unconscious, there being no method or apparatus which could provide an objective experience of this kind and thus furnish objective proof of the world's animation. This idea is nothing more than an analogy of the animating principle in man which inspires his thoughts and acts of cognition.

"Soul" and "spirit," or psyche as such, is in itself totally unconscious. If it is assumed to be somewhere "outside," it cannot be anything except a projection of the unconscious. This may mean a lot or a little, according to the way you look at it. At any rate, we know that in alchemy "our sea" is a symbol for the unconscious in general, just as it is in dreams. The extremely small fish that dwells in the centre of the universal sea nevertheless has the power to stop the largest ships. From the description of the Echeneis it is evident that the author was acquainted with the "pisciculus rotundus ossibus et corticibus carens" of the "Aenigmata." Our interpretation of the round fish as the self can, accordingly, be extended to the Echeneis. The symbol of the self appears here as an "extremely small" fish in the vast ocean of the unconscious, like a man alone on the sea of the world. Its symbolization as a fish characterizes the self, in this state, as an unconscious content. There would be no hope whatever of catching this insignificant creature if a "magnet of the wise" did not exist in the conscious subject. This "magnet" is obviously something a master can teach to his pupil; it is the "theoria," the one solid possession from which the adept can proceed. For the *prima materia* always remains to be found, and the only thing that helps him is the "cunning secret of the wise," a theory that can be communicated.

[220] This is affirmed by Bernardus Trevisanus (1406–1490) in his treatise "De secretissimo philosophorum opere chemico": it was the sermons of Parmenides in the *Turba* that first freed him from error and guided him into the right way.[73] But Parmenides says the same thing as Arisleus[74] in the *Turba:* "Nature is not improved save through its own nature,"[75] and Bernardus adds by way of confirmation: "Thus our material cannot be improved save through itself." It was the *theory* of Parmenides that helped Bernardus on to the right track after much fruitless laboratory work, and there is a legend that he even succeeded in making the philosophers' stone. As to the theory, he is obviously of the opinion that its basic thought is expressed in the saying quoted above, that "nature"[76] can improve or free itself from error only in and through itself. The same idea is expressed in the repeated warning of other treatises not to mix anything from outside with the content of the Hermetic vessel, because the *lapis* "has everything it needs."[77]

[221] It is not exactly probable that the alchemists always knew what they were writing, otherwise they would have dropped dead at their own enormities, and of this there is no sign in the literature. *Who* has everything he needs? Even the loneliest meteor circles round some distant sun, or hesitantly draws near to a cluster of brother meteors. Everything hangs together with everything else. By definition, only absolute totality contains everything in itself, and neither need nor compulsion attaches it to anything outside. This is undoubtedly the same as the idea of an absolute God who encompasses everything that exists. But which of us can pull himself out of the bog by his own pigtail? Which of us can improve himself in total isolation? Even the holy anchorite who lives three days' journey off in the desert not only needs to eat and drink but finds himself utterly and terribly dependent on the ceaseless presence of God.[78] Only absolute totality can renew itself out of itself and generate itself anew.

[222] What is it, then, that one adept whispers into the ear of another, fearfully looking round lest any betray them, or even guess their secret? Nothing less than this: that through this teaching the One and All, the Greatest in the guise of the Smallest, God himself in his everlasting fires, may be caught like a fish in the deep sea. Further, that he may be "drawn from the deep" by a eucharistic act of integration (called *teoqualo*, 'God-eating,' by the Aztecs[79]), and incorporated in the human body.

[223] This teaching is the secret and "cunning" magnet by virtue of which the remora ("little in length / mighty in strength") stops the proud frigates in the sea, an adventure which befell the quinquereme of the emperor Caligula "in our own day," as Pliny says in his interesting and edifying tale. The little fish, that was only half a foot long, had sucked fast to the rudder on the return journey from Stura to Entium, and had brought the ship to a standstill. On returning to Rome after this journey, Caligula was murdered by his soldiers. So the Echeneis turned out to be an omen, as Pliny points out. The fish played another such trick on Mark Antony before the naval engagement with Augustus, during which Antony was killed. Pliny cannot marvel enough at the mysterious powers of the Echeneis. His amazement obviously impressed the alchemists so much that they identified the "round fish in our sea" with the remora, and in

this way the remora came to symbolize that extremely small thing in the vastness of the unconscious which is charged with such fateful significance: it is the self, the *atman*, “smaller than small, greater than great.”

[224] The alchemical fish symbol, the Echeneis, clearly derives from Pliny. But fishes also crop up in the writings of Sir George Ripley.[80] What is more, they appear in their “messianic” role: together with the birds, they bring the stone, just as in the Oxyrhynchus sayings of Jesus[81] it is the “fowls of the air and the fishes of the sea and whatsoever is upon or beneath the earth” that point the way to the kingdom of heaven (motif of the “helpful animals”). In Lambspringk’s symbols[82] the zodiacal fishes that move in opposite directions symbolize the arcane substance. All this theriomorphism is simply a visualization of the unconscious self manifesting itself through “animal” impulses. Some of these can be attributed to known instincts, but for the most part they consist of feelings of certainty, beliefs, compulsions, idiosyncrasies, and phobias that may run directly counter to the so-called biological instincts without necessarily being pathological on that account. Wholeness is perforce paradoxical in its manifestations, and the two fishes going in opposite directions, or the co-operation of birds and fishes, are an instructive illustration of this.[83] The arcane substance, as its attributes show, refers to the self, and so, in the Oxyrhynchus sayings, does the “kingdom of heaven” or the conjectural “city.”

3. The Fish Symbol of the Cathars

[225] The use of fishes as symbols for the psychopompos and for the antithetical nature of the self points to another tradition that seems to run parallel with the Echeneis. And there is, in fact, a very remarkable clue to be found, not in the literature of alchemy, but in heresiology. The document in question comes from the archives of the Inquisition at Carcassonne, published by Benoist in his *Histoire des Albigeois et des Vaudois*, in 1691.[84] It concerns an alleged revelation which Christ’s favourite disciple John was vouchsafed as he “rested in the Lord’s bosom.” John wished to know what Satan’s state was before his fall, and the Lord answered: “He was in such splendour that he ruled the powers

of heaven.” He wanted to be like God, and to this end he descended through the elements of air and water, and found that the earth was covered with water. Penetrating beneath the surface of the earth, “he found two fishes lying upon the waters, and they were like oxen yoked for ploughing the whole earth from sunset to sunrise [or, from West to East] at the command of the invisible Father. And when he went down, he found hanging clouds which covered the broad sea. … And when he went down, he found set apart therefrom his ‘Osob,’ which is a kind of fire.” On account of the flames he could not descend any further, so he went back to heaven and announced to the angels that he was going to set up his throne on the clouds and be like the All-highest. He then treated the angels as the unjust steward treated his master’s debtors, whereupon he and the angels were cast out of heaven by God.[85] But God took pity on him and allowed him and his angels to do what they liked for a week. During this time Satan, using Genesis 1 as a model, created the world and mankind.

[226] A prominent Cathar, John de Lugio, confesses to a similar belief.[86] This belief seems to have been known in Catharist circles during the eleventh and twelfth centuries, for the conviction that the world was created by the devil is found in many of the sects. The alchemist Johannes de Rupescissa was in all probability a member of the Poor Men of Lyons,[87] who were influenced by the Cathars. In any case, he could be considered as a connecting link with this tradition.

[227] What strikes us most of all in this text is the fact that it contains the Old Bulgarian word *Osob*. Karl Meyer, in his Old Church Slavonic dictionary,[88] gives особь as κατ’ ἰδίαν: особа (*osóba*) means in Russian, Polish, and Czech ‘individual, personality.’ “His osob” could therefore be translated as “that which is peculiar to him.”[89] This, in the case of the devil, would naturally be fire.[90]

[228] The idea of the two fishes lying on the waters, yoked like oxen for ploughing, is very strange and needs some elucidation. To this end I must recall to the reader St. Augustine’s interpretation of the two fishes in the miraculous feeding of the five thousand: for him they represent the *kingly* and the *priestly* person or power,[91] because, like fishes surviving the

tempests of the sea, they outlast the turbulence of the multitude. These two powers are united in Christ: he is the king and priest.[92]

[229] Although the two fishes in the Cathar text certainly do not refer to the miraculous fishes, Augustine's interpretation tells us something of importance about the way people thought in those days: the fishes were regarded as *ruling powers*. Since the text is indubitably heretical and a Bogomil document at that, there can be no question of a uniform interpretation of the two fishes as Christ. It may be that they symbolize, as might easily be conjectured, two different persons or powers, from before the creation of the world: Satanaël the elder son of God, and Christ the younger. In the thirtieth heresy of his *Panarium*, Epiphanius reports that the Ebionites believed in a double sonship: "Two, they maintain, were begotten by God, one of them Christ, the other the devil."[93] This doctrine must obviously have spread throughout the Near and Middle East, for it was there that the Bogomil doctrine of Satanaël as the demiurge arose among the Paulicians and Euchites.[94] Our document is nothing but a Latin version of the report in the *Panoplia* of Euthymios Zigabenos, which in its turn goes back to the confession of faith made before the emperor Alexius Comnenus by the Bogomil bishop Basilius in the year 1111.[95]

[230] Note that Satan finds the two fishes *before* the creation, i.e., "in the beginning," when the spirit of God still brooded upon the dark face of the waters (Gen. 1 : 2). Had it been *one* fish only, we could interpret it as a prefiguration of the Redeemer, as the pre-existent Christ of St. John's gospel, the Logos that "was in the beginning with God." (Christ himself says in this document, with reference to John 1 : 2: "But I shall sit with my Father.") There are, however, two fishes, joined by a commissure (= the yoke), which can refer only to the zodiacal fishes. The zodia are important determinants in horoscopes, modifying the influence of the planets that have moved into them, or, even if there are no planets, giving the individual houses a special character. In the present instance the fishes would characterize the ascendent, the moment of the world's birth.[96] Now we know that cosmogonic myths are, at bottom, symbols for the coming of consciousness (though I cannot go into this here).[97] The

dawn-state corresponds to the unconscious; in alchemical terms, it is the chaos, the *massa confusa* or *nigredo;* and by means of the *opus*, which the adept likens to the creation of the world, the *albedo* or *dealbatio* is produced, the whitening, which is compared sometimes to the full moon, sometimes to sunrise.[98] It also means illumination, the broadening of consciousness that goes hand in hand with the "work." Expressed psychologically, therefore, the two fishes which the devil found on the primeval waters would signify the newly arisen world of consciousness.

[231] The comparison of the fishes with a yoke of oxen ploughing merits special attention. Oxen stand for the motive power of the plough. In the same way, the fishes represent the driving forces of the coming world of consciousness. Since olden times the plough has stood for man's mastery over the earth: wherever man ploughs, he has wrested a patch of soil from the primal state and put it to his own use. That is to say: the fishes will rule this world and subdue it by working astrologically through man and moulding his consciousness. Oddly enough, the ploughing does not begin, like all other things, in the east, but in the west. This motif turns up again in alchemy. "Know," says Ripley, "that your beginning should be made towards sunset, and from there you should turn towards midnight, when the lights cease altogether to shine, and you should remain ninety nights in the dark fire of purgatory without light. Then turn your course towards the east, and you will pass through many different colours," etc.[99] The alchemical work starts with the descent into darkness (*nigredo*), i.e., the unconscious. The ploughing or mastery of the earth is undertaken "at the command of the Father." Thus God not only foresaw the enantiodromia that began in the year 1000, but also intended it. The Platonic month of the Fishes is to be ruled by two principles. The fishes in our text are parallel, like the oxen, and point to the same goal, although one is Christ and the other the Antichrist.

[232] This, roughly, would be the early medieval line of reasoning (if we can speak of "reasoning" here). I do not know whether the argument we have outlined was ever discussed consciously. Yet it would be possible; the Talmudic prophecy concerning the year 530 (pars. 133ff.) leads one to conjecture astronomical calculations on the one hand and on the other an astrological allusion to the sign of Fishes favoured by the Jewish

masters. As against this, it is possible that the fishes in our text are not a conscious reference to astrological ideas but rather a product of the unconscious. That the unconscious is quite capable of "reflections" of this kind we know well enough from dreams and the analysis of myths and fairytales.[100] The image of the fishes as such belonged to the common stock of conscious ideas and may—unconsciously—have expressed the meaning in symbolic form. For it was about this time (11th cent.) that the Jewish astrologers began calculating the birth of the Messiah in Pisces, and the universal feeling that a new age had commenced was given clear expression by Joachim of Flora.

[233] The text of our Johannine revelation can hardly be earlier, or much later, than the eleventh century. With the beginning of this century, which is astrologically the middle of the Pisces aeon, heresies sprang up everywhere like mushrooms, and at the same time Christ's adversary, the second fish, alias the devil, appears as the demiurge. Historically speaking, this idea represents a kind of Gnostic Renaissance, since the Gnostic demiurge was regarded as an inferior being from whom all evil comes.[101] The significant thing about this phenomenon is its synchronicity, that is, its occurrence at a time that had been fixed astrologically.

[234] That Catharist ideas found their way into alchemy is not altogether surprising. I have not, however, come across any texts which would prove that the Catharist fish symbol was assimilated into the alchemical tradition and so could be held responsible for Lambspringk's fish symbol, signifying the arcane substance and its inner antinomy. Lambspringk's symbol appeared not much earlier than the end of the sixteenth century and represented a revitalization of the archetype. It shows two reversed fishes swimming in the *sea—nostro mari*—by which was meant the *aqua permanens* or arcane substance. They are designated "spiritus et anima," and like the stag and unicorn, the two lions, the dog and wolf, and the two fighting birds, they indicate the double nature of Mercurius.[102]

[235] If my reflections, which are based on some knowledge of the symbolic thinking of the Middle Ages, are justified, then we have here a remarkable confirmation of the views I expressed in an earlier chapter.

With the year 1000 a new world begins, proclaiming its advent in a strange medley of religious movements such as the Bogomils, Cathari, Albigenses, Waldenses, Poor Men of Lyons, Brethren of the Free Spirit, Beguins, Beghards, etc., and in the Holy Ghost Movement of Joachim of Flora. These movements are also associated with the rise of alchemy, Protestantism, the Enlightenment, and natural science, leading ultimately to the increasingly devilish developments we have lived to experience in our own day, and to the evaporation of Christianity under the assaults of rationalism, intellectualism, materialism, and "realism."

[236] In conclusion, I would like to give a concrete example of the way the symbol of the fish springs out of the unconscious autochthonously. The case in question is that of a young woman who had uncommonly lively and plastic dreams. She was very much under the influence of her father, who had a materialistic outlook and was not happily married. She shut herself off from these unfavourable surroundings by developing, at a very early age, an intense inner life of her own. As a small child, she replaced her parents by two trees in the garden. In her sixth or seventh year, she dreamt that God had promised her a golden fish. From this time forth she frequently dreamt of fishes. Later, a little while before starting psychological treatment on account of her manifold problems, she dreamt that she was "*standing on the bank of the Limmat and looking down into the water. A man threw a gold coin into the river, the water became transparent and I could see the bottom.*[103] *There was a coral reef and a lot of fishes. One of them had a shining silver belly and a golden back.*" During treatment she had the following dream: "*I came to the bank of a broad, flowing river. I couldn't see much at first, only water, earth, and rock. I threw the pages with my notes on them into the water, with the feeling that I was giving something back to the river. Immediately afterwards I had a fishing-rod in my hand. I sat down on a rock and started fishing. Still I saw nothing but water, earth, and rock. Suddenly a big fish bit. He had a silver belly and a golden back. As I drew him to land, the whole landscape became alive: the rock emerged like the primeval foundation of the earth, grass and flowers sprang up, and the bushes expanded into a great forest. A gust of wind blew and set everything in motion. Then, suddenly, I heard behind me the voice of Mr.*

X [an older man whom she knew only from photographs and from hearsay, but who seems to have been some kind of authority for her]. *He said, quietly but distinctly: ‘The patient ones in the innermost realm are given the fish, the food of the deep.’ At this moment a circle ran round me, part of it touching the water. Then I heard the voice again: ‘The brave ones in the second realm may be given victory, for there the battle is fought.’ Immediately another circle ran round me, this time touching the other bank. At the same time I saw into the distance and a colourful landscape was revealed. The sun rose over the horizon. I heard the voice, speaking as if out of the distance: ‘The third and the fourth realms come, similarly enlarged, out of the other two. But the fourth realm’—and here the voice paused for a moment, as if deliberating—‘the fourth realm joins on to the first.*[104] *It is the highest and the lowest at once, for the highest and the lowest come together. They are at bottom one*.’” Here the dreamer awoke with a roaring in her ears.

[237] This dream has all the marks of a “big” dream, and it also has the quality of something “thought,” which is characteristic of the intuitive type. Even though the dreamer had acquired some knowledge of psychology by this time, she had no knowledge whatever of the historical fish symbol. The details of the dream may be commented on as follows: The bank of the river represents the threshold, so to speak, to the unconscious. Fishing is an intuitive attempt to “catch” unconscious contents (fishes). Silver and gold, in alchemical language, signify feminine and masculine, the hermaphrodite aspect of the fish, indicating that it is a *complexio oppositorum*.[105] It also brings about a magical animation.[106] The older man is a personification of the archetype of the “wise old man.” We know already that the fish is a “miraculous food,” the eucharistic food of the *τέλειοι*. The first circle that touches the water illustrates the partial integration of the unconscious. The battle is the conflict of opposites, maybe between consciousness and the shadow. The second circle touches the “other bank,” where the union of opposites takes place. In the Indian “quicksilver system” the arcane substance is called *para-da*, ‘leading to the other shore’; in the West it is Mercurius.[107] The fourth realm, stressed by a weighty pause, is the One that adds itself to the three and makes all four into a unity.[108] The circles

naturally produce a mandala, the outermost circle paradoxically coinciding with the centre, and recalling the old image for God. “God is a circle whose centre is everywhere and the circumference nowhere.”[109] The motif of the first coinciding with the fourth was expressed long ago in the axiom of Maria: “One becomes two, two becomes three, and out of the third comes the One as the fourth.”

[238] The dream sums up in condensed form the whole symbolism of the individuation process in a person who was totally unacquainted with the literature of the subject. Cases of this kind are by no means rare and ought to make us think. They demonstrate the existence of an unconscious “knowledge” of the individuation process and its historical symbolism.

XI

THE ALCHEMICAL INTERPRETATION OF THE FISH

[239] We shall now turn to the problem raised by the anonymous French author of the “Instructio de arbore solari,” the problem of how the fish is caught. The Echeneis exercises an attraction on ships that could best be compared with the influence of a magnet on iron. The attraction, so the historical tradition says, emanates from the fish and brings the vessel, whether powered by sail or oarsmen, to a standstill.[1] I mention this seemingly unimportant feature because, as we shall see, in the alchemical view the attraction no longer proceeds from the fish but from a magnet which man possesses and which exerts the attraction that was once the mysterious property of the fish. If we bear in mind the significance of the fish, it is easy to understand why a powerful attraction should emanate from this arcane centre, which might aptly be compared with the magnetism of the North Pole.[2] As we shall see in a later chapter, the Gnostics said the same thing about the magnetic effect of their central figure (point, monad, son, etc.). It is therefore a remarkable innovation when the alchemists set out to manipulate an instrument that would exert the same powers as the Echeneis, but on the Echeneis itself. This reversal of direction is important for the psychology of alchemy because it offers a parallel to the adept’s claim to be able to produce the *filius macrocosmi*, the equivalent of Christ—Deo *concedente*—through his art. In this way the artifex or his instrument comes to replace the Echeneis and everything it stood for as the arcane substance. He has, so to speak, inveigled the secret out of the fish and seeks to draw the arcane substance to the surface in order to prepare from it the *filius philosophorum*, the *lapis*.

[240] The “magnet of the wise” which is to draw the wonder-working fish to the surface can, our text says, be *taught*. The content of this secret teaching is the real arcanum of alchemy: the discovery or production of

the *prima materia*. The “doctrine” or “theory” is personified—or rather, concretized—as “Mercurius non vulgi,” the philosophical mercury. This conception is as ambiguous as the antique Hermes; sometimes Mercurius is a substance like quicksilver, sometimes it is a philosophy. Dom Pernety formulates it somewhat drastically: “[La matière du mercure philosophique] a une vertu aimantive qui attire des rayons du Soleil et de la Lune le mercure des Sages.”[3] Concerning the *prima materia* the adepts talk a great deal but say very little—so little that in most cases one can form no conception of it whatever.[4] This attitude is proof of serious intellectual difficulties—understandably so, because in the first place no such material existed from which the *lapis* could be prepared, nor did anyone ever succeed in making a *lapis* that would have come up to expectations. Secondly, the names given to the *prima materia* show that it was not a definite substance at all, but rather an intuitive concept for an *initial psychic situation*, symbolized by such terms as water of life, cloud, heaven, shadow, sea, mother, moon, dragon, Venus, chaos, *massa confusa*, Microcosmos, etc.

[241] In the long lists of names one that frequently figures is “magnesia,” though this should certainly not be understood as the magnesium oxide of the pharmacopoeia.[5] Magnesia is rather the “complete or conjoined mixture from which this moisture is extracted,[6] i.e., the root-matter of our stone.”[7] The complicated procedure for producing the magnesia is described in the treatise “Aristoteles de perfecto Magisterio.”[8] It is the whitened arcane substance.[9] Pandolfus says in the *Turba:* “I command you to take the hidden and venerable secret thing, which is the white magnesia.”[10] In Khunrath, magnesia is synonymous with “chaos” and “Aes Hermetis.” He calls it “A Catholic or Universal, that is, a Cosmic Ens or Entity, Three-in-One, naturally compounded of Body, Spirit, and Soul, the one and only true Subiectum Catholicon and true Universal Materia lapidis Philosophorum.”[11] The magnesia is feminine,[12] just as the magnet is masculine by nature.[13] Hence it carries “in its belly the sal Armoniacum et vegetabile,” meaning the arcane substance of the stone.[14] Even in Greek alchemy magnesia or “magnes” denoted the hermaphroditic transformative substance.[15] For the alchemists, magnesia

is associated with "magnes" (magnet) not only phonetically, but also in meaning, as a recipe of Rosinus shows: "Take therefore this animate stone, the stone which has a soul in it, the mercurial,[16] which is sensible and sensitive to the presence and influence of the magnesia and the magnet, and [which is] the calaminary and the living Stone, yielding and repelling by local motion."[17]

[242] This text shows clearly enough that the real alchemical procedure was not concerned at all with chemical processes, for if it were, the substance to be transformed would not need to be animate or endowed with sensitivity. But a psychic function was absolutely necessary to it when, as in the case of the magnesia, the adept was preoccupied with one of the innumerable expressions used for the unconscious, that is, for the hidden part of the psyche that had slipped into the unknown chemical compound by projection, and that bedevilled and befooled him in the guise of a hundred "arcane substances." Naturally only the most stupid and unobservant of the alchemists were hoodwinked in this way, for there were plenty of hints in the classical texts that could have put them on the right track. Unfortunately, we today are not so far removed from the Middle Ages: we still have to overcome considerable difficulties before we can begin to understand the real purpose of alchemy.

[243] The "lapis animalis" of Rosinus, then, is a live thing, credited with the ability to *feel* or *perceive* the influence of the magnesia and the magnet. But the magnet, too, is a live thing. Thus, the jurisconsult and alchemist Chrysippus Fanianus, of Basel, says: "But if Thales of Miletus chose to call that stone of Hercules, the magnet, an animate thing, because we see it attract and move iron, why shall we not likewise call salt, which in wondrous wise penetrates, purges, contracts, expands, hinders, and reduces, a living thing?"[18] Dorn writes: "The magnetic stone teaches us, for in it the power of magnetizing and attracting iron is not seen [with the eyes]; it is a spirit hidden within, not perceptible to the sense."[19] The numinous effect which the incomprehensible power of magnetism had upon our forefathers is graphically described by St. Augustine: "We know that the lodestone draws iron strangely; the which, when I saw it for the first time, did send a cold shiver through me

[*vehementer inhorrui*].”[20] Even the humanist Andrea Alciati (d. 1550) exclaims: “Wherefore he who first perceives and beholds the power of the magnet to attract iron cannot but be rapt in admiration. … And it is not enough for some to obtrude upon us that there is a certain secret power in these things, which is generally known. For how will they define that hidden force, of which they can tell us nothing but the name?”[21] The famous anatomist and astrologer Gabriel Fallopius (1490–1563) is said to have considered the magnet, together with quicksilver and purgatives, to be inexplicable marvels, “whose effect is to be wondered at with amazement,” as Libavius relates in his “Ars prolatoria.”[22] These utterances bear witness to the naïve reaction of intelligent and thoughtful people who took what they saw to be an inexplicable miracle. So it is quite understandable if they felt that such an astonishing object was *alive* (like the “lapis *animatus*,” “calx *viva*,” etc.). The magnet, too, had a soul, like the mysterious stone that could feel. In the “Duodecim tractatus”[23] the magnet appears as the symbol of the *aqua roris nostri* (water of our dew), “whose mother is the midpoint of the heavenly and earthly Sun and Moon.” This water, the famed *aqua permanens*, is apostrophized by the anonymous author as follows: “O holy and wonderful nature, which permittest not the sons of the doctrine to err, as thou showest in man’s daily life. Further in these … treatises I have put forward so many natural reasons, that … the reader may understand all those things which, by God’s blessing, I have seen with my own eyes.”[24]

[244] The underlying thought here is the idea of the doctrine, the “aqua doctrinae.” As we have seen, the “magnet” or “heavenly dew” can be *taught*. Like the water, it symbolizes the doctrine itself. This is contrasted with the “animate stone” that “perceives” the influence of the magnetic pair, magnes and magnesia. The animate stone, like the magnet, is an arcane substance, and only such substances can enter into a combination finally leading to the goal of the *lapis philosophorum*. Dorn says: “The pagan Gentiles say that nature seeks after a nature like to itself, and rejoices in its own nature; if it is joined to another, the work of nature is destroyed.”[25] This is an allusion to the axiom usually attributed to the

alchemist Democritus: “Nature rejoices in nature; nature subdues nature; nature rules over nature.”[26]

[245] Just as magnes and magnesia form a pair, so the *lapis animatus sive vegetabilis*[27] is a Rebis or hermaphrodite that is born of the royal marriage. We have, then, two contrasting pairs, forming by mutual attraction a *quaternio*, the fourfold basis of wholeness.[28] As the symbolism shows, the pairs both signify the same thing: a *complexio oppositorum* or uniting symbol.[29] If our texts do not represent them as the same thing and as coinciding with the arcane substance, then there must be a reason for this, though it cannot be ascertained from the symbols used for the two substances to be combined. Sometimes the arcane substance is magnesia, sometimes the water, sometimes the magnet, sometimes the fish; and yet they all mean the *prima materia* from which the miraculous birth ensues. The distinction that the alchemists had in mind is made clear by a passage from a seventeenth-century treatise written by John Collesson, prior of the Benedictine Order:[30] “But as to that substance whereby common gold and silver are naturally and Philosophically dissolved, let no man imagine that it is any other than the general soul of the world, which by magnets and Philosophical means is attracted and drawn down from the higher bodies, and especially from the rays of the Sun and Moon. And hence it is clear that they have no knowledge whatever of Mercurius or of the Philosophical fluid who think to dissolve perfect metals by natural and physical means.”[31]

[246] Obviously a distinction must be made between two categories of symbols: first, those which refer to the extrapsychic chemical substance or its metaphysical equivalent, e.g., *serpens mercurialis, spiritus, anima mundi, veritas, sapientia*, etc.; second, those denoting the chemical preparations produced by the adept, such as solvents (*aqua, acetum, lac virginis*) or their “philosophical” equivalent, the *theoria* or *scientia*, which, when it is “right,” has miraculous effects on matter, as Dorn explains in his philosophical treatises.[32]

[247] These two categories continually overlap: sometimes the arcane substance is apparently nothing but a chemical body, sometimes an idea,

which today we would call a psychic content. Pernety describes this confusion very clearly in his explanation of the magnet: “But it must not be supposed that this magnet is the common magnet. They [the alchemists] have given it this name only because of its natural sympathy with what they call their steel [*adamas*]. This is the ore [*prima materia*] of their gold, and the magnet is the ore of their steel. The centre of this magnet contains a hidden salt, a menstruum for calcining the philosophical gold. This prepared salt forms their Mercury, with which they perform the magistery of the Sages in white and in red. It becomes an ore of heavenly fire, which acts as a ferment for their stone.”[33] In his view, therefore, the secret of the magnet’s effect lies in a salt prepared by the adept. Whenever an alchemist speaks of “salt,” he does not mean sodium chloride or any other salt, or only in a very limited sense. He could not get away from its symbolic significance, and therefore included the *sal sapientiae* in the chemical substance. That is the salt hidden in the magnet and prepared by the adept—on the one hand, a product of his art; on the other, already present in nature. This contradiction can be resolved very easily by taking it simply as the projection of a psychic content.

[248] A similar state of affairs can be found in Dorn’s writings. In his case it is not a question of the *sal sapientiae* but of the “veritas,” which for him is hidden in natural things and at the same time is obviously a “moral” concept. This truth is the “medicine, improving and transforming that which *is no longer* into that which it *was before* its corruption, and that which *is not* into that which it *ought to be.*”[34] It is a “metaphysical substance,” hidden not only in things, but in the human body: “In the human body is concealed a certain metaphysical substance known to very few, which needeth no medicament, being itself an incorrupt medicament.”[35] Therefore “it is the study of the Chemists to liberate that unsensual truth from its fetters in things of sense.”[36] He that would acquire the chemical art must study the “true Philosophy” and not the “Aristotelian,” adds Dorn, because the true doctrine, in Colleson’s words, is the magnet whereby the “centre of truth” is liberated from bodies and whereby the bodies are transformed. “The Philosophers, through a kind of divine inspiration, knew that this virtue and heavenly vigour can be freed from its fetters; not by its contrary … but by its like.

Since therefore some such a thing is found, whether within man or outside him, which is conformable to this substance, the wise concluded that like things are to be fortified by like, by peace rather than by war."[37]

[249] Thus the doctrine, which may be consciously acquired "through a kind of divine inspiration," is at the same time the instrument whereby the object of the doctrine or theory can be freed from its imprisonment in the body, because the symbol for the doctrine—the "magnet"—is at the same time the mysterious "truth" of which the doctrine speaks. The doctrine enters the consciousness of the adept as a gift of the Holy Ghost. It is a thesaurus of knowledge about the secret of the art, of the treasure hidden in the *prima materia*, which was thought to be outside man. The treasure of the doctrine and the precious secret concealed in the darkness of matter are one and the same thing. For us this is not a discovery, as we have known for some time that such secrets owe their existence to unconscious projections. Dorn was the first thinker to recognize with the utmost clarity the extraordinary dilemma of alchemy: *the arcane substance is one and the same, whether it is found within man or outside him*. The "alchymical" procedure takes place within and without. He who does not understand how to free the "truth" in his own soul from its fetters will never make a success of the physical opus, and he who knows how to make the stone can only do so on the basis of right doctrine, through which he himself is transformed, or which he creates through his own transformation.

[250] Helped by these reflections, Dorn comes to realize the fundamental importance of self-knowledge: "See, therefore, that thou goest forth such as thou desirest the work to be which thou seekest."[38] In other words, the expectations you put into the work must be applied to your own ego. The production of the arcane substance, the "generatio Mercurii," is possible only for one who has full knowledge of the doctrine; but "we cannot be resolved of any doubt except by experiment, and there is no better way to make it than on ourselves."[39] The doctrine formulates our inner experience or is substantially dependent upon it: "Let him know that man's greatest treasure is to be found within man, and not outside him. From him it goes forth inwardly … whereby that is outwardly brought to

pass which he sees with his own eyes. Therefore unless his mind be blinded, he will see, that is, understand, who and of what sort he is inwardly, and by the light of nature he will know himself through outward things."[40] The secret is first and foremost *in man;* it is his *true self,*[41] which he does not know but learns to know by experience of outward things. Therefore Dorn exhorts the alchemist: "Learn from within thyself to know all that is in heaven and on earth, that thou mayest be wise in all things. Knowest thou not that heaven and the elements were formerly one, and were separated by a divine act of creation from one another, that they might bring forth thee and all things?"[42]

[251] Since knowledge of the world dwells in his own bosom, the adept should draw such knowledge out of his knowledge of himself, for the self he must seek to know is a part of that nature which was bodied forth by God's original oneness with the world. It is manifestly *not* a knowledge of the nature of the ego, though this is far more convenient and is fondly confused with self-knowledge. For this reason anyone who seriously tries to know himself as an object is accused of selfishness and eccentricity. But such knowledge has nothing to do with the ego's subjective knowledge of itself. *That* is a dog chasing its own tail. The other, on the contrary, is a difficult and morally exacting study of which so-called psychology knows nothing and the educated public very little. The alchemist, however, had at the very least an indirect inkling of it: he knew definitely that as part of the whole he had an image of the whole in himself, the "firmament" or "Olympus," as Paracelsus calls it.[43] This interior microcosm was the unwitting object of alchemical research. Today we would call it the collective unconscious, and we would describe it as "objective" because it is identical in all individuals and is therefore *one*. Out of this universal One there is produced in every individual a *subjective* consciousness, i.e., the ego. This is, roughly, how we today would understand Dorn's "formerly one" and "separated by a divine act of creation."

[252] This objective knowledge of the self is what the author means when he says: "No one can know himself unless he knows *what*, and not *who*, he is, on what he depends, or whose he is [or: to whom or what he

belongs] and for what end he was made."[44] The distinction between "quis" and "quid" is crucial: whereas "quis" has an unmistakably personal aspect and refers to the ego, "quid" is neuter, predicating nothing except an object which is not endowed even with personality. Not the subjective ego-consciousness of the psyche is meant, but the psyche itself as the unknown, unprejudiced object that still has to be investigated. The difference between knowledge of the ego and knowledge of the self could hardly be formulated more trenchantly than in this distinction between "quis" and "quid." An alchemist of the sixteenth century has here put his finger on something that certain psychologists (or those of them who allow themselves an opinion in psychological matters) still stumble over today. "What" refers to the neutral self, the objective fact of totality, since the ego is on the one hand causally "dependent on" or "belongs to" it, and on the other hand is directed towards it as to a goal. This recalls the impressive opening sentence of Ignatius Loyola's "Foundation": "Man was created to praise, do reverence to, and serve God our Lord, and thereby to save his soul."[45]

[253] Man knows only a small part of his psyche, just as he has only a very limited knowledge of the physiology of his body. The causal factors determining his psychic existence reside largely in unconscious processes outside consciousness, and in the same way there are final factors at work in him which likewise originate in the unconscious. Freud's psychology gives elementary proof of the causal factors, Adler's of the final ones. Causes and ends thus transcend consciousness to a degree that ought not to be underestimated, and this implies that their nature and action are unalterable and irreversible so long as they have not become objects of consciousness. They can only be corrected through conscious insight and moral determination, which is why self-knowledge, being so necessary, is feared so much. Accordingly, if we divest the opening sentence of the "Foundation" of its theological terminology, it would run as follows: "Man's consciousness was created to the end that it may (1) recognize (*laudet*) its descent from a higher unity (*Deum*); (2) pay due and careful regard to this source (*reverentiam exhibeat*); (3) execute its commands intelligently and responsibly (*serviat*); and (4) thereby afford the psyche

as a whole the optimum degree of life and development (*salvet animam suam*).”

[254] This paraphrase not only sounds rationalistic but is meant to be so, for despite every effort the modern mind no longer understands our two-thousand-year-old theological language unless it “accords with reason.” As a result, the danger that lack of understanding will be replaced by lip-service, affectation, and forced belief or else by resignation and indifference has long since come to pass.

[255] The final factors at work in us are nothing other than those talents which “a certain nobleman” entrusted to his “servants,” that they might trade with them (Luke 19 : 12ff.). It does not require much imagination to see what this involvement in the ways of the world means in the moral sense. Only an infantile person can pretend that evil is not at work everywhere, and the more unconscious he is, the more the devil drives him. It is just because of this inner connection with the black side of things that it is so incredibly easy for the mass man to commit the most appalling crimes without thinking. Only ruthless self-knowledge on the widest scale, which sees good and evil in correct perspective and can weigh up the motives of human action, offers some guarantee that the end-result will not turn out too badly.

[256] We find the crucial importance of self-knowledge for the alchemical process of transformation expressed most clearly in Dorn, who lived in the second half of the sixteenth century. The idea itself is much older and goes back to Morienus Romanus (7th-8th cent.), in the saying which he wrote on the rim of the Hermetic vessel: “All those who have all things with them have no need of outside aid.”[46] He is not referring to the possession of all the necessary chemical substances; it is far more a moral matter, as the text makes clear.[47] God, says Morienus, made the world out of four unequal elements and set man as the “greater ornament” between them: “This thing is extracted from thee, for thou art its ore; in thee they find it, and, to speak more plainly, from thee they take it; and when thou hast experienced this, the love and desire for it will be increased in thee.”[48] This “thing” is the *lapis*, and Morienus says that it contains the four elements and is likened to the cosmos and its

structure. The procedure for making the stone "cannot be performed with hands,"[49] for it is a "human attitude" (*dispositio hominum*). This alone accomplishes the "changing of the natures." The transformation is brought about by the *coniunctio*, which forms the essence of the work.[50]

[257] The "Rosinus ad Sarratantam Episcopum"—which, if not altogether Arabic in origin, is one of the oldest texts in Arabic style—cites Magus Philosophus:[51] "This stone is below thee, as to obedience; above thee, as to dominion; therefore from thee, as to knowledge; about thee, as to equals."[52] The passage is somewhat obscure. Nevertheless, it can be elicited that the stone stands in an undoubted psychic relationship to man: the adept can expect obedience from it, but on the other hand the stone exercises dominion over him. Since the stone is a matter of "knowledge" or science, it springs from man. But it is outside him, in his surroundings, among his "equals," i.e., those of like mind. This description fits the paradoxical situation of the self, as its symbolism shows. It is the smallest of the small, easily overlooked and pushed aside. Indeed, it is in need of help and must be perceived, protected, and as it were built up by the conscious mind, just as if it did not exist at all and were called into being only through man's care and devotion. As against this, we know from experience that it had long been there and is older than the ego, and that it is actually the secret *spiritus rector* of our fate. The self does not become conscious by itself, but has always been taught, if at all, through a tradition of knowing (the *purusha/atman* teaching, for instance). Since it stands for the essence of individuation, and individuation is impossible without a relationship to one's environment, it is found among those of like mind with whom individual relations can be established. The self, moreover, is an archetype that invariably expresses a situation within which the ego is contained. Therefore, like every archetype, the self cannot be localized in an individual ego-consciousness, but acts like a circumambient atmosphere to which no definite limits can be set, either in space or in time. (Hence the synchronistic phenomena so often associated with activated archetypes.)

[258] The treatise of Rosinus contains a parallel to Morienus:[53] "This stone is something which is fixed more in thee [than elsewhere], created

> of God, and thou art its ore, and it is extracted from thee, and wheresoever thou art it remains inseparably with thee. … And as man is made up of four elements, so also is the stone, and so it is [dug] out of man, and thou art its ore, namely by working; and from thee it is extracted, that is by division; and in thee it remains inseparably, namely by knowledge. [To express it] otherwise, fixed in thee: namely in the Mercurius of the wise; thou art its ore: that is, it is enclosed in thee and thou holdest it[54] secretly; and from thee it is extracted when it is reduced [to its essence] by thee and dissolved; for without thee it cannot be fulfilled, and without it canst thou not live, and so the end looks to the beginning, and contrariwise."[55]

[259] This looks like a commentary on Morienus. We learn from it that the stone is implanted in man by God, that the laborant is its *prima materia*, that the extraction corresponds to the so-called *divisio* or *separatio* of the alchemical procedure, and that through his knowledge of the stone man remains inseparably bound to the self. The procedure here described could easily be understood as the realization of an unconscious content. Fixation in the Mercurius of the wise would then correspond to the traditional Hermetic knowledge, since Mercurius symbolizes the Nous;[56] through this knowledge the self, as a content of the unconscious, is made conscious and "fixed" in the mind. For without the existence of conscious concepts apperception is, as we know, impossible. This explains numerous neurotic disturbances which arise from the fact that certain contents are constellated in the unconscious but cannot be assimilated owing to the lack of apperceptive concepts that would "grasp" them. That is why it is so extremely important to tell children fairytales and legends, and to inculcate religious ideas (dogmas) into grown-ups, because these things are instrumental symbols with whose help unconscious contents can be canalized into consciousness, interpreted, and integrated. Failing this, their energy flows off into conscious contents which, normally, are not much emphasized, and intensifies them to pathological proportions. We then get apparently groundless phobias and obsessions—crazes, idiosyncrasies, hypochondriac ideas, and intellectual perversions suitably camouflaged in social, religious, or political garb.

[260] The old master saw the alchemical *opus* as a kind of apocatastasis, the restoring of an initial state in an "eschatological" one ("the end looks to the beginning, and contrariwise"). This is exactly what happens in the individuation process, whether it take the form of a Christian transformation ("Except ye become as little children"), or a *satori* experience in Zen ("show me your original face"), or a psychological process of development in which the original propensity to wholeness becomes a conscious happening.

[261] For the alchemist it was clear that the "centre," or what we would call the self, does not lie in the ego but is outside it, "in us" yet not "in our mind," being located rather in that which we unconsciously are, the "quid" which we still have to recognize. Today we would call it the unconscious, and we distinguish between a personal unconscious which enables us to recognize the shadow and an impersonal unconscious which enables us to recognize the archetypal symbol of the self. Such a point of view was inaccessible to the alchemist, and having no idea of the theory of knowledge, he had to exteriorize his archetype in the traditional way and lodge it in matter, even though he felt, as Dorn and others undoubtedly did, that the centre was paradoxically in man and yet at the same time outside him.

[262] The "incorrupt medicament," the *lapis*, says Dorn, can be found nowhere save in heaven, for heaven "pervades all the elements with invisible rays meeting together from all parts at the centre of the earth, and generates and hatches forth all creatures." "No man can generate in himself, but [only] in that which is like him, which is from the same [heaven]."[57]

[263] We see here how Dorn gets round his paradox: no one can produce anything without an object that is like him. But it is like him because it comes from the same source. If he wants to produce the incorrupt medicament, he can only do so in something that is akin to his own centre, and this is the centre in the earth and in all creatures. It comes, like his own, from the same fountainhead, which is God. Separation into apparently dissimilar things, such as heaven, the elements, man, etc., was necessary only for the work of generation. Everything separated must be

united again in the production of the stone, so that the original state of unity shall be restored. But, says Dorn, “thou wilt never make from others the One which thou seekest, except first there be made one thing of thyself. … For so is the will of God, that the pious shall pursue the pious work which they seek, and the perfect shall perfect the other on which they were intent. … See therefore that thou goest forth such as thou desirest the work to be which thou seekest.”[58]

[264] The union of opposites in the stone is possible only when the adept has become One himself. The unity of the stone is the equivalent of individuation, by which man is made one; we would say that the stone is a projection of the unified self. This formulation is psychologically correct. It does not, however, take sufficient account of the fact that the stone is a *transcendent* unity. We must therefore emphasize that though the self can become a symbolic content of consciousness, it is, as a supraordinate totality, necessarily transcendental as well. Dorn recognized the identity of the stone with the transformed man when he exclaimed: “Transmute yourselves from dead stones into living philosophical stones!”[59] But he lacked the concept of an unconscious existence which would have enabled him to express the identity of the subjective psychic centre and the objective alchemical centre in a satisfactory formula. Nevertheless, he succeeded in explaining the magnetic attraction between the imagined symbol—the “theoria”—and the “centre” hidden in matter, or in the interior of the earth or in the North Pole, as the identity of two extremes. That is why the theoria and the arcanum in matter are both called *veritas*. This truth “shines” in us, but it is not of us: it “is to be sought not in us, but in the image of God which is in us.”[60]

[265] Dorn thus equates the transcendent centre in man with the God-image. This identification makes it clear why the alchemical symbols for wholeness apply as much to the arcanum in man as to the Deity, and why substances like mercury and sulphur, or the elements fire and water, could refer to God, Christ, and the Holy Ghost. Indeed, Dorn goes even further and allows the predicate of *being* to this truth, and to this truth alone: “Further, that we may give a satisfactory definition of the truth, we

say *it is*, but nothing can be added to it; for what, pray, can be added to the One, what is lacking to it, or on what can it be supported? For in truth nothing exists beside that One."[61] The only thing that truly exists for him is the transcendental self, which is identical with God.

[266] Dorn was probably the first alchemist to sum up the results of all the symbolical terms and to state clearly what had been the impelling motive of alchemy from the very beginning. It is remarkable that this thinker, who is far more lucid in his formulations than his successor Jakob Bôhme, has remained completely unknown to historians of philosophy until today. He thus shares the fate of Hermetic philosophy in general, which, for those unacquainted with modern psychology, remains a closed book sealed with seven seals. But this book has to be opened sometime if we wish to understand the mentality of the present day; for alchemy is the mother of the essential substance as well as the concreteness of modern scientific thinking, and not scholasticism, which was responsible in the main only for the discipline and training of the intellect.

XII

BACKGROUND TO THE PSYCHOLOGY OF CHRISTIAN ALCHEMICAL SYMBOLISM

[267] "Mater Alchimia" could serve as the name of a whole epoch. Beginning, roughly, with Christianity, it gave birth in the sixteenth and seventeenth centuries to the age of science, only to perish, unrecognized and misunderstood, and sink from sight in the stream of the centuries as an age that had been outlived. But, just as every mother was once a daughter, so too was alchemy. It owes its real beginnings to the Gnostic systems, which Hippolytus rightly regarded as philosophic, and which, with the help of Greek philosophy and the mythologies of the Near and Middle East, together with Christian dogmatics and Jewish cabalism, made extremely interesting attempts, from the modern point of view, to synthetize a unitary vision of the world in which the physical and the mystical aspects played equal parts. Had this attempt succeeded, we would not be witnessing today the curious spectacle of two parallel world-views neither of which knows, or wishes to know, anything about the other. Hippolytus was in the enviable position of being able to see Christian doctrine side by side with its pagan sisters, and similar comparisons had also been attempted by Justin Martyr. To the honour of Christian thinking it must be said that up till the time of Kepler there was no lack of praiseworthy attempts to interpret and understand Nature, in the broadest sense, on the basis of Christian dogma.

[268] These attempts, however, inevitably came to grief for lack of any adequate knowledge of natural processes. Thus, in the course of the eighteenth century, there arose that notorious rift between faith and knowledge. Faith lacked experience and science missed out the soul. Instead, science believed fervently in absolute objectivity and assiduously overlooked the fundamental difficulty that the real vehicle and begetter of all knowledge is the *psyche*, the very thing that scientists knew the least about for the longest time. It was regarded as a symptom

of chemical reactions, an epiphenomenon of biological processes in the brain-cells—indeed, for some time it did not exist at all. Yet all the while scientists remained totally unaware of the fact that they were using for their observations a photographic apparatus of whose nature and structure they knew practically nothing, and whose very existence many of them were unwilling to admit. It is only quite recently that they have been obliged to take into their calculations the objective reality of this psychic factor. Significantly enough, it is microphysics that has come up against the psyche in the most tangible and unexpected way. Obviously, we must disregard the psychology of the unconscious in this connection, since its working hypothesis consists precisely in the reality of the psyche. What is significant here is the exact opposite, namely the psyche's collision with physics.[1]

[269] Now for the Gnostics—and this is their real secret—the psyche existed as a source of knowledge just as much as it did for the alchemists. Aside from the psychology of the unconscious, contemporary science and philosophy know only of what is outside, while faith knows only of the inside, and then only in the Christian form imparted to it by the passage of the centuries, beginning with St. Paul and the gospel of St. John. Faith, quite as much as science with its traditional objectivity, is *absolute*, which is why faith and knowledge can no more agree than Christians can with one another.

[270] Our Christian doctrine is a highly differentiated symbol that expresses the transcendent psychic—the God-image and its properties, to speak with Dorn. The Creed is a "symbolum." This comprises practically everything of importance that can be ascertained about the manifestations of the psyche in the field of inner experience, but it does not include Nature, at least not in any recognizable form. Consequently, at every period of Christianity there have been subsidiary currents or undercurrents that have sought to investigate the empirical aspect of Nature not only from the outside but also from the inside.

[271] Although dogma, like mythology in general, expresses the quintessence of inner experience and thus formulates the operative principles of the objective psyche, i.e., the collective unconscious, it does

so by making use of a language and outlook that have become alien to our present way of thinking. The word “dogma” has even acquired a somewhat unpleasant sound and frequently serves merely to emphasize the rigidity of a prejudice. For most people living in the West, it has lost its meaning as a symbol for a virtually unknowable and yet “actual”—i.e., operative—fact. Even in theological circles any real discussion of dogma had as good as ceased until the recent papal declarations, a sign that the symbol has begun to fade, if it is not already withered. This is a dangerous development for our psychic health, as we know of no other symbol that better expresses the world of the unconscious. More and more people then begin looking round for exotic ideas in the hope of finding a substitute, for example in India. This hope is delusory, for though the Indian symbols formulate the unconscious just as well as the Christian ones do, they each exemplify their own spiritual past. The Indian teachings constitute the essence of several thousand years of experience of Indian life. Though we can learn a lot from Indian thought, it can never express the past that is stored up within us. The premise we start from is and remains Christianity, which covers anything from eleven to nineteen centuries of Western life. Before that, there was for most Western peoples a considerably longer period of polytheism and polydemonism. In certain parts of Europe Christianity goes back not much more than five hundred years—a mere sixteen generations. The last witch was burnt in Europe the year my grandfather was born, and barbarism with its degradation of human nature has broken out again in the twentieth century.

[272] I mention these facts in order to illustrate how thin is the wall that separates us from pagan times. Besides that, the Germanic peoples never developed organically out of primitive polydemonism to polytheism and its philosophical subtleties, but in many places accepted Christian monotheism and its doctrine of redemption only at the sword’s point of the Roman legions, as in Africa the machine-gun is the latent argument behind the Christian invasion.[2] Doubtless the spread of Christianity among barbarian peoples not only favoured, but actually necessitated, a certain inflexibility of dogma. Much the same thing can be observed in the spread of Islam, which was likewise obliged to resort to fanaticism

and rigidity. In India the symbol developed far more organically and pursued a less disturbed course. Even the great Hindu Reformation, Buddhism, is grounded, in true Indian fashion, on yoga, and, in India at least, it was almost completely reassimilated by Hinduism in less than a millennium, so that today the Buddha himself is enthroned in the Hindu pantheon as the avatar of Vishnu, along with Christ, Matsya (the fish), Kurma (the tortoise), Vamana (the dwarf), and a host of others.

[273] The historical development of our Western mentality cannot be compared in any way with the Indian. Anyone who believes that he can simply take over Eastern forms of thought is uprooting himself, for they do not express our Western past, but remain bloodless intellectual concepts that strike no chord in our inmost being. We are rooted in Christian soil. This foundation does not go very deep, certainly, and, as we have seen, it has proved alarmingly thin in places, so that the original paganism, in altered guise, was able to regain possession of a large part of Europe and impose on it its characteristic economic pattern of slavery.

[274] This modern development is in line with the pagan currents that were clearly present in alchemy and had remained alive beneath the Christian surface ever since the days of antiquity. Alchemy reached its greatest efflorescence in the sixteenth and seventeenth centuries, then to all appearances it began to die out. In reality it found its continuation in natural science, which led in the nineteenth century to materialism and in the twentieth century to so-called “realism,” whose end is not yet in sight. Despite well-meaning assurances to the contrary, Christianity is a helpless bystander. The Church still has a little power left, but she pastures her sheep on the ruins of Europe. Her message works, *if* one knows how to combine her language, ideas, and customs with an understanding of the present. But for many she no longer speaks, as Paul did in the market-place of Athens, the language of the present, but wraps her message in sacrosanct words hallowed by age. What success would Paul have had with his preaching if he had had to use the language and myths of the Minoan age in order to announce the gospel to the Athenians? We overlook the unfortunate fact that far greater demands are made on present-day man than were ever made on people living in the apostolic era: for them there was no difficulty at all in believing in the

virgin birth of the hero and demigod, and Justin Martyr was still able to use this argument in his apology. Nor was the idea of a redeeming God-man anything unheard of, since practically all Asiatic potentates together with the Roman Emperor were of divine nature. But we have no further use even for the divine right of kings! The miraculous tales in the gospels, which easily convinced people in those days, would be a *petra scandali* in any modern biography and would evoke the very reverse of belief. The weird and wonderful nature of the gods was a self-evident fact in a hundred living myths and assumed a special significance in the no less credible philosophic refinements of those myths. “Hermes ter unus” (Hermes-Thrice-One) was not an intellectual absurdity but a philosophical truth. On these foundations the dogma of the Trinity could be built up convincingly. For modern man this dogma is either an impenetrable mystery or an historical curiosity, preferably the latter. For the man of antiquity the virtue of the consecrated water or the transmutation of substances was in no sense an enormity, because there were dozens of sacred springs whose workings were incomprehensible, and any amount of chemical changes whose nature appeared miraculous. Nowadays every schoolboy knows more, in principle, about the ways of Nature than all the volumes of Pliny’s Natural History put together.

[275] If Paul were alive today, and should undertake to reach the ear of intelligent Londoners in Hyde Park, he could no longer content himself with quotations from Greek literature and a smattering of Jewish history, but would have to accommodate his language to the intellectual faculties of the modern English public. If he failed to do this, he would have announced his message badly, for no one, except perhaps a classical philologist, would understand half of what he was saying. That, however, is the situation in which Christian kerygmatics[3] finds itself today. Not that it uses a dead foreign language in the literal sense, but it speaks in images that on the one hand are hoary with age and look deceptively familiar, while on the other hand they are miles away from a modern man’s conscious understanding, addressing themselves, at most, to his unconscious, and then only if the speaker’s whole soul is in his work. The best that can happen, therefore, is that the effect remains stuck in the sphere of feeling, though in most cases it does not get even that far.

[276] The bridge from dogma to the inner experience of the individual has broken down. Instead, dogma is "believed";[4] it is hypostatized, as the Protestants hypostatize the Bible, illegitimately making it the supreme authority, regardless of its contradictions and controversial interpretations. (As we know, anything can be authorized out of the Bible.) Dogma no longer formulates anything, no longer expresses anything; it has become a tenet to be accepted in and for itself, with no basis in any experience that would demonstrate its truth.[5] Indeed, faith has itself become that experience. The faith of a man like Paul, who had never seen our Lord in the flesh, could still appeal to the overwhelming apparition on the road to Damascus and to the revelation of the gospel in a kind of ecstasy. Similarly, the faith of the man of antiquity and of the medieval Christian never ran counter to the *consensus omnium* but was on the contrary supported by it. All this has completely changed in the last three hundred years. But what comparable change has kept pace with this in theological circles?

[277] The danger exists—and of this there can be no doubt—that the new wine will burst the old bottles, and that what we no longer understand will be thrown into the lumber-room, as happened once before at the time of the Reformation. Protestantism then discarded (except for a few pallid remnants) the ritual that every religion needs, and now relies solely on the *sola fides* standpoint. The content of faith, of the symbolum, is continually crumbling away. What is still left of it? The person of Jesus Christ? Even the most benighted layman knows that the personality of Jesus is, for the biographer, the obscurest item of all in the reports of the New Testament, and that, from a human and psychological point of view, his personality must remain an unfathomable enigma. As a Catholic writer pithily remarked, the gospels record the history of a man and a god at the same time. Or is only God left? In that case, what about the Incarnation, the most vital part of the symbolum? In my view one would be well advised to apply the papal dictum: "Let it be as it is, or not be at all,"[6] to the Creed and leave it at that, because nobody really understands what it is all about. How else can one explain the notorious drift away from dogma?

[278] It may strike my reader as strange that a physician and psychologist should be so insistent about dogma. But I *must* emphasize it, and for the same reasons that once moved the alchemist to attach special importance to his "theoria." His doctrine was the quintessence of the symbolism of unconscious processes, just as the dogmas are a condensation or distillation of "sacred history," of the myth of the divine being and his deeds. If we wish to understand what alchemical doctrine means, we must go back to the historical as well as the individual phenomenology of the symbols, and if we wish to gain a closer understanding of dogma, we must perforce consider first the myths of the Near and Middle East that underlie Christianity, and then the whole of mythology as the expression of a universal disposition in man. This disposition I have called the collective unconscious, the existence of which can be inferred only from individual phenomenology. In both cases the investigator comes back to the individual, for what he is all the time concerned with are certain complex thought-forms, the archetypes, which must be conjectured as the unconscious organizers of our ideas. The motive force that produces these configurations cannot be distinguished from the transconscious factor known as instinct. There is, therefore, no justification for visualizing the archetype as anything other than the image of instinct in man.[7]

[279] From this one should not jump to the conclusion that the world of religious ideas can be reduced to "nothing but" a biological basis, and it would be equally erroneous to suppose that, when approached in this way, the religious phenomenon is "psychologized" and dissolved in smoke. No reasonable person would conclude that the reduction of man's morphology to a four-legged saurian amounts to a nullification of the human form, or, alternatively, that the latter somehow explains itself. For behind all this looms the vast and unsolved riddle of life itself and of evolution in general, and the question of overriding importance in the end is not the origin of evolution but its goal. Nevertheless, when a living organism is cut off from its roots, it loses the connections with the foundations of its existence and must necessarily perish. When that happens, anamnesis of the origins is a matter of life and death.

[280] Myths and fairytales give expression to unconscious processes, and their retelling causes these processes to come alive again and be recollected, thereby re-establishing the connection between conscious and unconscious. What the separation of the two psychic halves means, the psychiatrist knows only too well. He knows it as dissociation of the personality, the root of all neuroses: the conscious goes to the right and the unconscious to the left. As opposites never unite at their own level (*tertium non datur!*), a supraordinate "third" is always required, in which the two parts can come together. And since the symbol derives as much from the conscious as from the unconscious, it is able to unite them both, reconciling their conceptual polarity through its form and their emotional polarity through its numinosity.

[281] For this reason the ancients often compared the symbol to water, a case in point being *tao*, where *yang* and *yin* are united. *Tao* is the "valley spirit," the winding course of a river. The symbolum of the Church is the *aqua doctrinae*, corresponding to the wonder-working "divine" water of alchemy, whose double aspect is represented by Mercurius. The healing and renewing properties of this symbolical water—whether it be *tao*, the baptismal water, or the elixir—point to the therapeutic character of the mythological background from which this idea comes. Physicians who were versed in alchemy had long recognized that their arcanum healed, or was supposed to heal, not only the diseases of the body but also those of the mind. Similarly, modern psychotherapy knows that, though there are many interim solutions, there is, at the bottom of every neurosis, a moral problem of opposites that cannot be solved rationally, and can be answered only by a supraordinate third, by a symbol which expresses both sides. This was the "veritas" (Dorn) or "theoria" (Paracelsus) for which the old physicians and alchemists strove, and they could do so only by incorporating the Christian revelation into their world of ideas. They continued the work of the Gnostics (who were, most of them, not so much heretics as theologians) and the Church Fathers in a new era, instinctively recognizing that new wine should not be put into old bottles, and that, like a snake changing its skin, the old myth needs to be clothed anew in every renewed age if it is not to lose its therapeutic effect.

[282] The problems which the integration of the unconscious sets modern doctors and psychologists can only be solved along the lines traced out by history, and the upshot will be a new assimilation of the traditional myth. This, however, presupposes the continuity of historical development. Naturally the present tendency to destroy all tradition or render it unconscious could interrupt the normal process of development for several hundred years and substitute an interlude of barbarism. Wherever the Marxist utopia prevails, this has already happened. But a predominantly scientific and technological education, such as is the usual thing nowadays, can also bring about a spiritual regression and a considerable increase of psychic dissociation. With hygiene and prosperity alone a man is still far from health, otherwise the most enlightened and most comfortably off among us would be the healthiest. But in regard to neuroses that is not the case at all, quite the contrary. Loss of roots and lack of tradition neuroticize the masses and prepare them for collective hysteria. Collective hysteria calls for collective therapy, which consists in abolition of liberty and terrorization. Where rationalistic materialism holds sway, states tend to develop less into prisons than into lunatic asylums.

*

[283] I have tried, in the foregoing, to indicate the kind of psychic matrix into which the Christ-figure was assimilated in the course of the centuries. Had there not been an affinity—magnet!—between the figure of the Redeemer and certain contents of the unconscious, the human mind would never have been able to perceive the light shining in Christ and seize upon it so passionately. The connecting link here is the archetype of the Godman, which on the one hand became historical reality in Christ, and on the other, being eternally present, reigns over the soul in the form of a supraordinate totality, the self. The God-man, like the priest in the vision of Zosimos, is a Κύριος τῶν πνευμάτων, not only “Lord of the spirits,” but “Lord over the (evil) spirits,” which is one of the essential meanings of the Christian Kyrios.[8]

[284] The noncanonical fish symbol led us into this psychic matrix and thus into a realm of experience where the unknowable archetypes become living things, changing their name and guise in never-ending succession and, as it were, disclosing their hidden nucleus by perpetually circumambulating round it. The *lapis* that signifies God become man or man become God "has a thousand names." It is not Christ; it is his parallel in the subjective realm, which dogma calls Christ. Alchemy gives us, in the *lapis*, a concrete idea of what Christ means in the realm of subjective experience, and under what delusive or illuminative disguises his actual presence may be experienced in its transcendent ineffability. One could demonstrate the same thing in the psychology of a modern individual, as I attempted to do in Part II of *Psychology and Alchemy*.[9] Only, this would be a much more exacting task, running into great detail and requiring a mass of personal biographical data with which one could fill volumes. Such an undertaking would exceed my powers. I must therefore rest content with having laid some of the historical and conceptual foundations for this work of the future.

[285] In conclusion, I would like to emphasize once again that the fish symbol is a spontaneous assimilation of the Christ-figure of the gospels, and is thus a symptom which shows us in what manner and with what meaning the symbol was assimilated by the unconscious. In this respect the patristic allegory of the capture of Leviathan (with the Cross as the hook, and the Crucified as the bait) is highly characteristic: a content (fish) of the unconscious (sea) has been caught and has attached itself to the Christ-figure. Hence the expression used by St. Augustine: "de profundo levatus" (drawn from the deep). This is true enough of the fish; but of Christ? The image of the fish came out of the depths of the unconscious as an equivalent of the historical Christ figure, and if Christ was invoked as "Ichthys," this name referred to what had come up out of the depths. The fish symbol is thus the bridge between the historical Christ and the psychic nature of man, where the archetype of the Redeemer dwells. In this way Christ became an inner experience, the "Christ within."

[286] As I have shown, the alchemical fish symbolism leads direct to the *lapis*, the *salvator, servator*, and *deus terrenus;* that is, psychologically, to

the self. We now have a new symbol in place of the fish: a psychological concept of human wholeness. In as much or in as little as the fish is Christ does the self mean God. It is something that corresponds, an inner experience, an assimilation of Christ into the psychic matrix, a new realization of the divine Son, no longer in theriomorphic form, but expressed in a conceptual or “philosophic” symbol. This, compared with the mute and unconscious fish, marks a distinct increase in conscious development.[10]

XIII

GNOSTIC SYMBOLS OF THE SELF

1

[287] Since all cognition is akin to recognition, it should not come as a surprise to find that what I have described as a gradual process of development had already been anticipated, and more or less prefigured, at the beginning of our era. We meet these images and ideas in Gnosticism, to which we must now give our attention; for Gnosticism was, in the main, a product of cultural assimilation and is therefore of the greatest interest in elucidating and defining the contents constellated by prophecies about the Redeemer, or by his appearance in history, or by the synchronicity of the archetype.[1]

[288] In the *Elenchos* of Hippolytus the attraction between the magnet and iron is mentioned, if I am not mistaken, three times. It first appears in the doctrine of the Naassenes, who taught that the four rivers of Paradise correspond to the eye, the ear, the sense of smell, and the mouth. The mouth, through which prayers go out and food goes in, corresponds to the fourth river, the Euphrates. The well-known significance of the "fourth" helps to explain its connection with the "whole" man, for the fourth always makes a triad into a totality. The text says: "This is the water above the firmament,[2] of which, they say, the Saviour spoke: 'If you knew who it is that asks, you would have asked him, and he would have given you a spring of living water to drink.'[3] To this water comes every nature to choose its own substances, and from this water goes forth to every nature that which is proper to it, more [certainly] than iron to the Heracleian stone,"[4] etc.

[289] As the reference to John 4 : 10 shows, the wonderful water of the Euphrates has the property of the *aqua doctrinae*, which perfects every nature in its individuality and thus makes man whole too. It does this by

giving him a kind of magnetic power by which he can attract and integrate that which belongs to him. The Naassene doctrine is, plainly, a perfect parallel to the alchemical view already discussed: the doctrine is the magnet that makes possible the integration of man as well as the *lapis*.

[290] In the PERATIC doctrine, so many ideas of this kind reappear that Hippolytus even uses the same metaphors, though the meaning is more subtle. No one, he says, can be saved without the Son:

> But this is the serpent. For it is he who brought the signs of the Father down from above, and it is he who carries them back again after they have been awakened from sleep, transferring them thither from hence as substances proceeding from the Substanceless. This, they say, is [what is meant by] the saying, "I am the Door."[5] But they say he transfers them to those whose eyelids are closed,[6] as naphtha draws everywhere the fire to itself,[7] more than the Heracleian stone draws iron … [8] Thus, they say, the perfect race of men, made in the image [of the Father] and of the same substance [*homoousion*], is drawn from the world by the Serpent, even as it was sent down by him; but naught else [is so drawn].[9]

[291] Here the magnetic attraction does not come from the doctrine or the water but from the "Son," who is symbolized by the serpent, as in John 3 : 14.[10] Christ is the magnet that draws to itself those parts or substances in man that are of divine origin, the πατρικοὶ χαρακτῆρες (signs of the Father), and carries them back to their heavenly birthplace. The serpent is an equivalent of the fish. The consensus of opinion interpreted the Redeemer equally as a fish and a serpent; he is a fish because he rose from the unknown depths, and a serpent because he came mysteriously out of the darkness. Fishes and snakes are favourite symbols for describing psychic happenings or experiences that suddenly dart out of the unconscious and have a frightening or redeeming effect. That is why they are so often expressed by the motif of helpful animals. The comparison of Christ with the serpent is more authentic than that with the fish, but, for all that, it was not so popular in primitive Christianity. The Gnostics favoured it because it was an old-established symbol for the "good" *genius loci*, the Agathodaimon, and also for their beloved Nous.

Both symbols are of inestimable value when it comes to the natural, instinctive interpretation of the Christ-figure. Theriomorphic symbols are very common in dreams and other manifestations of the unconscious. They express the psychic level of the content in question; that is to say, such contents are at a stage of unconsciousness that is as far from human consciousness as the psyche of an animal. Warm-blooded or cold-blooded vertebrates of all kinds, or even invertebrates, thus indicate the degree of unconsciousness. It is important for psychopathologists to know this, because these contents can produce, at all levels, symptoms that correspond to the physiological functions and are localized accordingly. For instance, the symptoms may be distinctly correlated with the cerebrospinal and the sympathetic nervous system. The Sethians may have guessed something of this sort, for Hippolytus mentions, in connection with the serpent, that they compared the "Father" with the cerebrum (*ἐγκέφαλον*) and the "Son" with the cerebellum and spinal cord (*παρεγκεφαλίς δροκοντοειδής*). The snake does in fact symbolize "cold-blooded," inhuman contents and tendencies of an abstractly intellectual as well as a concretely animal nature: in a word, the extra-human quality in man.

[292] The third reference to the magnet is to be found in Hippolytus' account of the Sethian doctrine. This has remarkable analogies with the alchemical doctrines of the Middle Ages, though no direct transmission can be proved. It expounds, in Hippolytus' words, a theory of "composition and mixture": the ray of light from above mingles with the dark waters below in the form of a minute spark. At the death of the individual, and also at his figurative death as a mystical experience, the two substances unmix themselves. This mystical experience is the *divisio* and *separatio* of the composite (*τὸ διχάσαι καὶ χωρίσαι τὰ συγκεκραμένα*). I purposely give the Latin terms used in medieval alchemy, because they denote essentially the same thing as do the Gnostic concepts. The separation or unmixing enables the alchemist to extract the *anima* or *spiritus* from the *prima materia*. During this operation the helpful Mercurius appears with the dividing sword (used also by the adept!), which the Sethians refer to Matthew 10 : 34: "I came not to send peace, but a sword." The result of the unmixing is that what was previously

mixed up with the “other” is now drawn to “its own place” and to that which is “proper” or “akin” to it, “like iron to the magnet” (ὣς σίδηρος [πρὸς] ’Ηράκλειον λίθον).[11] In the same way, the spark or ray of light, “having received from the teaching and learning its proper place, hastens to the Logos, which comes from above in the form of a slave … more [quickly] than iron [flies] to the magnet.”[12]

[293] Here the magnetic attraction comes from the Logos. This denotes a thought or idea that has been formulated and articulated, hence a content and a product of consciousness. Consequently the Logos is very like the *aqua doctrinae*, but whereas the Logos has the advantage of being an autonomous personality, the latter is merely a passive object of human action. The Logos is nearer to the historical Christ-figure, just as the “water” is nearer to the magical water used in ritual (ablution, aspersion, baptism). Our three examples of magnetic action suggest three different forms of magnetic agent:

1. The agent is an inanimate and in itself passive substance, *water*. It is drawn from the depths of the well, handled by human hands, and used according to man’s needs. It signifies the visible doctrine, the *aqua doctrinae* or the Logos, communicated to others by word of mouth and by ritual.

2. The agent is an animate, autonomous being, the *serpent*. It appears spontaneously or comes as a surprise; it fascinates; its glance is staring, fixed, unrelated; its blood cold, and it is a stranger to man: it crawls over the sleeper, he finds it in a shoe or in his pocket. It expresses his fear of everything inhuman and his awe of the sublime, of what is beyond human ken. It is the lowest (devil) and the highest (son of God, Logos, Nous, Agathodaimon). The snake’s presence is frightening, one finds it in unexpected places at unexpected moments. Like the fish, it represents and personifies the dark and unfathomable, the watery deep, the forest, the night, the cave. When a primitive says “snake,” he means an experience of something extrahuman. The snake is not an allegory or metaphor, for its own peculiar form is symbolic in itself, and it is essential to note that the “Son” has the form of a snake and not the other way round: the snake does not signify the “Son.”

3. The agent is the *Logos*, a philosophical idea and abstraction of the bodily and personal son of God on the one hand, and on the other the dynamic power of thoughts and words.

[294] It is clear that these three symbols seek to describe the unknowable essence of the incarnate God. But it is equally clear that they are hypostatized to a high degree: it is real water, and not figurative water, that is used in ritual. The Logos was in the beginning, and God was the Logos, long before the Incarnation. The emphasis falls so much on the "serpent" that the Ophites celebrated their eucharistic feast with a live snake, no less realistic than the Aesculapian snake at Epidaurus. Similarly, the "fish" is not just the secret language of the mystery, but, as the monuments show, it meant something in itself. Moreover, it acquired its meaning in primitive Christianity without any real support from the written tradition, whereas the serpent can at least be referred back to an authentic logion.

[295] All three symbols are phenomena of assimilation that are in themselves of a numinous nature and therefore have a certain degree of autonomy. Indeed, had they never made their appearance, it would have meant that the annunciation of the Christ-figure was ineffective. These phenomena not only prove the effectiveness of the annunciation, but provide the necessary conditions in which the annunciation can take effect. In other words, the symbols represent the prototypes of the Christ-figure that were slumbering in man's unconscious and were then called awake by his actual appearance in history and, so to speak, magnetically attracted. That is why Meister Eckhart uses the same symbolism to describe Adam's relation to the Creator on the one hand and to the lower creatures on the other.[13]

[296] This magnetic process revolutionizes the ego-oriented psyche by setting up, in contradistinction to the ego, another goal or centre which is characterized by all manner of names and symbols: fish, serpent, centre of the sea-hawk,[14] point, monad, cross, paradise, and so on. The myth of the ignorant demiurge who imagined he was the highest divinity illustrates the perplexity of the ego when it can no longer hide from itself the knowledge that it has been dethroned by a supraordinate authority.

The “thousand names” of the *lapis philosophorum* correspond to the innumerable Gnostic designations for the Anthropos, which make it quite obvious what is meant: the greater, more comprehensive Man, that indescribable whole consisting of the sum of conscious and unconscious processes. This objective whole, the antithesis of the subjective ego-psyche, is what I have called the self, and this corresponds exactly to the idea of the Anthropos.

2

[297] When, in treating a case of neurosis, we try to supplement the inadequate attitude (or adaptedness) of the conscious mind by adding to it contents of the unconscious, our aim is to create a wider personality whose centre of gravity does not necessarily coincide with the ego, but which, on the contrary, as the patient’s insights increase, may even thwart his ego-tendencies. Like a magnet, the new centre attracts to itself that which is proper to it, the “signs of the Father,” i.e., everything that pertains to the original and unalterable character of the individual ground-plan. All this is older than the ego and acts towards it as the “blessed, nonexistent God” of the Basilidians acted towards the archon of the Ogdoad, the demiurge, and—paradoxically enough—as the son of the demiurge acted towards his father. The son proves superior in that he has knowledge of the message from above and can therefore tell his father that he is not the highest God. This apparent contradiction resolves itself when we consider the underlying psychological experience. On the one hand, in the products of the unconscious the self appears as it were *a priori*, that is, in well-known circle and quaternity symbols which may already have occurred in the earliest dreams of childhood, long before there was any possibility of consciousness or understanding. On the other hand, only patient and painstaking work on the contents of the unconscious, and the resultant synthesis of conscious and unconscious data, can lead to a “totality,” which once more uses circle and quaternity symbols for purposes of self-description.[15] In this phase, too, the original dreams of childhood are remembered and understood. The alchemists, who in their own way knew more about the nature of the individuation

process than we moderns do, expressed this paradox through the symbol of the uroboros, the snake that bites its own tail.

[298] The same knowledge, formulated differently to suit the age they lived in, was possessed by the Gnostics. The idea of an unconscious was not unknown to them. For instance, Epiphanius quotes an excerpt from one of the Valentinian letters, which says: “In the beginning the Autopator contained in himself everything that is, in a state of unconsciousness [lit., ‘not-knowing’: *ὰγνωσίạ*].”[16] It was Professor G. Quispel who kindly drew my attention to this passage. He also points out the passage in Hippolytus: ὁ Πατὴρ … ὁ ἀνεννόητος καὶ ἀνούσιος, ὁ μήτε ἄρρεν μήτε θῆλυ, which he translates: “le Père … qui est dépourvu de conscience et de substance, celui qui est ni masculin, ni féminin.”[17] So the “Father” is not only unconscious and without the quality of being, but also *nirdvandva*, without opposites, lacking all qualities and therefore unknowable. This describes the state of the unconscious. The Valentinian text gives the Autopator more positive qualities: “Some called him the ageless Aeon, eternally young, male and female, who contains everything in himself and is [himself] contained by nothing.” In him was *ἔννοια*, consciousness, which “conveys the treasures of the greatness to those who come from the greatness.” But the presence of *ἔννοια* does not prove that the Autopator himself is conscious, for the differentiation of consciousness results only from the syzygies and tetrads that follow afterwards, all of them symbolizing processes of conjunction and composition. *Εννοια* must be thought of here as the latent possibility of consciousness. Oehler translates it as *mens*, Cornarius as *intelligentia* and *notio*.

[299] St. Paul’s concept of *ἄγνοια* (*ignorantia*) may not be too far removed from *ἀγνωσία*, since both mean the initial, unconscious condition of man. When God “looked down” on the times of ignorance, the Greek word used here, ὑπεριδών (Vulgate: *despiciens*) has the connotation ‘to disdain, despise.’[18] At all events, Gnostic tradition says that when the highest God saw what miserable, unconscious creatures these human beings were whom the demiurge had created, who were not even able to walk upright, he immediately got the work of redemption

under way.[19] And in the same passage in the Acts, Paul reminds the Athenians that they were “God’s offspring,”[20] and that God, looking back disapprovingly on “the times of ignorance,” had sent the message to mankind, commanding “all men every-where to repent.” Because that earlier condition seemed to be altogether too wretched, the *μετάνοια* (transformation of mind) took on the moral character of repentance of sins, with the result that the Vulgate could translate it as “poenitentiam agere.”[21] The sin to be repented, of course, is *ἄγνοια* or *ἀγνωσία*, unconsciousness.[22] As we have seen, it is not only man who is in this condition, but also, according to the Gnostics, the *ἀνεννόητς*, the God without consciousness. This idea is more or less in line with the traditional Christian view that God was transformed during the passage from the Old Testament to the New, and, from being the God of wrath, changed into the God of Love—a thought that is expressed very clearly by Nicolaus Caussin in the seventeenth century.[23]

[300] In this connection I must mention the results of Riwkah Schärf’s examination of the figure of Satan in the Old Testament.[24] With the historical transformation of the concept of Satan the image of Yahweh changes too, so that one can well say that there was a differentiation of the God-image even in the Old Testament, not to speak of the New. The idea that the world-creating Deity is not conscious, but may be dreaming, is found also in Hindu literature:

> Who knows how it was, and who shall declare
> Whence it was born and whence it came?
> The gods are later than this creation;
> Who knows, then, whence it has sprung?
>
> Whence this created world came,
> And whether he made it or not,
> He alone who sees all in the highest heaven
> Knows—or does not know.[25]

[301] Meister Eckhart’s theology knows a “Godhead” of which no qualities, except unity and being,[26] can be predicated;[27] it “is becoming,” it is not yet Lord of itself, and it represents an absolute

coincidence of opposites: “But its simple nature is of forms formless; of becoming becomingless; of beings beingless; of things thingless,” etc.[28] Union of opposites is equivalent to unconsciousness, so far as human logic goes, for consciousness presupposes a differentiation into subject and object and a relation between them. Where there is no “other,” or it does not yet exist, all possibility of consciousness ceases. Only the Father, the God “welling” out of the Godhead, “notices himself,” becomes “beknown to himself,” and “confronts himself as a Person.” So, from the Father, comes the Son, as the Father’s thought of his own being. In his original unity “he knows nothing” except the “suprareal” One which he *is*. As the Godhead is essentially unconscious,[29] so too is the man who lives in God. In his sermon on “The Poor in Spirit” (Matt. 5 : 3), the Meister says: “The man who has this poverty has everything he was when he lived not in any wise, neither in himself, nor in truth, nor in God. He is so quit and empty of all knowing that no knowledge of God is alive in him; for while he stood in the eternal nature of God, there lived in him not another: what lived there was himself. And so we say this man is as empty of his own knowledge as he was when he was not anything; he lets God work what he will, and he stands empty as when he came from God.”[30] Therefore he should love God in the following way: “Love him as he is: a not-God, a not-spirit, a not-person, a not-image; as a sheer, pure, clear One, which he is, sundered from all secondness; and in this One let us sink eternally, from nothing to nothing. So help us God. Amen.”[31]

[302] The world-embracing spirit of Meister Eckhart knew, without discursive knowledge, the primordial mystical experience of India as well as of the Gnostics, and was itself the finest flower on the tree of the “Free Spirit” that flourished at the beginning of the eleventh century. Well might the writings of this Master lie buried for six hundred years, for “his time was not yet come.” Only in the nineteenth century did he find a public at all capable of appreciating the grandeur of his mind.

[303] These utterances on the nature of the Deity express transformations of the God-image which run parallel with changes in human

consciousness, though one would be at a loss to say which is the cause of the other. The God-image is not something *invented*, it is an *experience* that comes upon man spontaneously—as anyone can see for himself unless he is blinded to the truth by theories and prejudices. The unconscious God-image can therefore alter the state of consciousness, just as the latter can modify the God-image once it has become conscious. This, obviously, has nothing to do with the "prime truth," the unknown God—at least, nothing that could be verified. Psychologically, however, the idea of God's *ἀγνωσία*, or of the *ἀνεννόητος θεός*, is of the utmost importance, because it identifies the Deity with the numinosity of the unconscious. The *atman / purusha* philosophy of the East and, as we have seen, Meister Eckhart in the West both bear witness to this.

[304] Now if psychology is to lay hold of this phenomenon, it can only do so if it expressly refrains from passing metaphysical judgments, and if it does not presume to profess convictions to which it is ostensibly entitled on the ground of scientific experience. But of this there can be no question whatever. The one and only thing that psychology can establish is the presence of pictorial symbols, whose interpretation is in no sense fixed beforehand. It can make out, with some certainty, that these symbols have the character of "wholeness" and therefore presumably *mean* wholeness. As a rule they are "uniting" symbols, representing the conjunction of a single or double pair of opposites, the result being either a dyad or a quaternion. They arise from the collision between the conscious and the unconscious and from the confusion which this causes (known in alchemy as "chaos" or "nigredo"). Empirically, this confusion takes the form of restlessness and disorientation. The circle and quaternity symbolism appears at this point as a compensating principle of order, which depicts the union of warring opposites as already accomplished, and thus eases the way to a healthier and quieter state ("salvation"). For the present, it is not possible for psychology to establish more than that the symbols of wholeness mean the wholeness of the individual.[32] On the other hand, it has to admit, most emphatically, that this symbolism uses images or schemata which have always, in all the religions, expressed the universal "Ground," the Deity itself. Thus the circle is a well-known symbol for God; and so (in a certain sense) is the

cross, the quaternity in all its forms, e.g., Ezekiel’s vision, the *Rex gloriae* with the four evangelists, the Gnostic Barbelo (“God in four”) and Kolorbas (“all four”); the duality (*tao,* hermaphrodite, father-mother); and finally, the human form (child, son, anthropos) and the individual personality (Christ and Buddha), to name only the most important of the motifs here used.

[305] All these images are found, empirically, to be expressions for the unified wholeness of man. The fact that this goal goes by the name of “God” proves that it has a numinous character; and indeed, experiences, dreams, and visions of this kind do have a fascinating and impressive quality which can be spontaneously felt even by people who are not prejudiced in their favour by prior psychological knowledge. So it is no wonder that naïve minds make no distinction between God and the image they have experienced. Wherever, therefore, we find symbols indicative of psychic wholeness, we encounter the naive idea that they stand for God. In the case of those quite common Romanesque pictures of the Son of Man accompanied by three angels with animal heads and one with a human head, for example, it would be simpler to assume that the Son of Man meant the ordinary man and that the problem of one against three referred to the well-known psychological schema of one differentiated and three undifferentiated functions. But this interpretation would, according to the traditional view, devalue the symbol, for it means the second Person of the Godhead in its universal, fourfold aspect. Psychology cannot of course adopt this view as its own; it can only establish the existence of such statements and point out, by way of comparison, that essentially the same symbols, in particular the dilemma of one and three, often appear in the spontaneous products of the unconscious, where they demonstrably refer to the psychic totality of the individual. They indicate the presence of an archetype of like nature, one of whose derivates would seem to be the quaternity of functions that orient consciousness. But, since this totality exceeds the individual’s consciousness to an indefinite and indeterminable extent, it invariably includes the unconscious in its orbit and hence the totality of all archetypes. But the archetypes are complementary equivalents of the

"outside world" and therefore possess a "cosmic" character. This explains their numinosity and "godlikeness."

3

[306] To make my exposition more complete, I would like to mention some of the Gnostic symbols for the universal "Ground" or arcanum, and especially those synonyms which signify the "Ground." Psychology takes this idea as an image of the unconscious background and begetter of consciousness. The most important of these images is the figure of the demiurge. The Gnostics have a vast number of symbols for the source or origin, the centre of being, the Creator, and the divine substance hidden in the creature. Lest the reader be confused by this wealth of images, he should always remember that each new image is simply another aspect of the divine mystery immanent in all creatures. My list of Gnostic symbols is no more than an amplification of a single transcendental idea, which is so comprehensive and so difficult to visualize in itself that a great many different expressions are required in order to bring out its various aspects.

[307] According to Irenaeus, the Gnostics held that Sophia represents the world of the Ogdoad,[33] which is a double quaternity. In the form of a dove, she descended into the water and begot Saturn, who is identical with Yahweh. Saturn, as we have already mentioned, is the "other sun," the *sol niger* of alchemy. Here he is the "primus Anthropus." He created the first man, who could only crawl like a worm.[34] Among the Naassenes, the demiurge Esaldaios, "a fiery god, the fourth by number," is set up against the Trinity of Father, Mother, and Son. The highest is the Father, the Archanthropos, who is without qualities and is called the higher Adam. In various systems Sophia takes the place of the Protanthropos.[35] Epiphanius mentions the Ebionite teaching that Adam, the original man, is identical with Christ.[36] In Theodor Bar-Kuni the original man is the five elements (i.e., 4 + 1).[37] In the Acts of Thomas, the dragon says of itself: "I am the son … of him that hurt and smote the four brethren which stood upright."[38]

[308] The primordial image of the quaternity coalesces, for the Gnostics, with the figure of the demiurge or Anthropos. He is, as it were, the victim

of his own creative act, for, when he descended into Physis, he was caught in her embrace.[39] The image of the *anima mundi* or Original Man latent in the dark of matter expresses the presence of a transconscious centre which, because of its quaternary character and its roundness, must be regarded as a symbol of wholeness. We may assume, with due caution, that some kind of psychic wholeness is meant (for instance, conscious + unconscious), though the history of the symbol shows that it was always used as a God-image. Psychology, as I have said, is not in a position to make metaphysical statements. It can only establish that the symbolism of psychic wholeness coincides with the God-image, but it can never prove that the God-image is God himself, or that the self takes the place of God.

[309] This coincidence comes out very clearly in the ancient Egyptian Heb-Sed festival, of which Colin Campbell gives the following description: "The king comes out of an apartment called the sanctuary, then he ascends into a pavilion open at the four sides, with four staircases leading up to it. Carrying the emblems of Osiris, he takes his seat on a throne, and turns to the four cardinal points in succession. … It is a kind of second enthronement … and sometimes the king acts as a priest, making offerings to himself. This last act may be regarded as the climax of the deification of the king."[40]

[310] All kingship is rooted in this psychology, and therefore, for the anonymous individual of the populace, every king carries the symbol of the self. All his insignia—crown, mantle, orb, sceptre, starry orders, etc.—show him as the cosmic Anthropos, who not only begets, but himself is, the world. He is the *homo maximus*, whom we meet again in Swedenborg's speculations. The Gnostics, too, constantly endeavoured to give visible form and a suitable conceptual dress to this being, suspecting that he was the matrix and organizing principle of consciousness. As the "Phrygians" (Naassenes) say in Hippolytus,[41] he is the "undivided point," the "grain of mustard seed" that grows into the kingdom of God. This point is "present in the body." But this is known only to the *πνευματικοί* the "spiritual" men as opposed to the *ψυχικοί* and the ὑλικοί ("material" men). He is τὸ ῥῆμα τοῦ the utterance of God (*sermo Dei*),

and the “matrix of the Aeons, Powers, Intelligences, Gods, Angels, and Emissary Spirits, of Being and Non-Being, of Begotten and Unbegotten, of the Non-Intelligible Intelligible, of the Years, Moons, Days, Hours … .” This point, “being nothing and consisting of nothing,” becomes a “certain magnitude incomprehensible by thought.” Hippolytus accuses the Naassenes of bundling everything into their thought like the syncretists, for he obviously cannot quite understand how the point, the “utterance of God,” can have a human form. The Naassenes, he complains, also call him the “polymorphous Attis,” the young dying son of the Great Mother, or, as the hymn cited by Hippolytus says, *τὸ κατέϕες ἄκοναμα* ‘Ρ’*έας*, the ‘dark rumour of Rhea.’ In the hymn he has the synonyms Adonis, Osiris, Adam, Korybas, Pan, Bacchus, and ποιμὴν λευκῶν ἀστρῶν, ‘shepherd of white stars.’

[311] The Naassenes themselves considered Naas, the serpent, to be their central deity, and they explained it as the “moist substance,” in agreement with Thales of Miletus, who said water was the prime substance on which all life depended. Similarly, all living things depend on the Naas; “it contains within itself, like the horn of the one-horned bull, the beauty of all things.” It “pervades everything, like the water that flows out of Eden and divides into four sources” (ἄρχας). “This Eden, they say, is the brain.” Three of the rivers of Paradise are sensory functions (Pison = sight, Gihon = hearing, Tigris = smell), but the fourth, the Euphrates, is the mouth, “the seat of prayer and the entrance of food.” As the fourth function it has a double significance,[42] denoting on the one hand the purely material activity of bodily nourishment, while on the other hand it “gladdens,[43] feeds, and forms [*χαρακτηρίζει*] the spiritual, perfect [*τέλειον*] man.”[44] The “fourth” is something special, ambivalent—a daimonion. A good example of this is in Daniel 3 : 24f., where the three men in the burning fiery furnace are joined by a fourth, whose form was “like a son of God.”

[312] The water of the Euphrates is the “water above the firmament,” the “living water of which the Saviour spoke,”[45] and possessing, as we have seen, magnetic properties. It is that miraculous water from which the olive draws its oil and the grape the wine. “That man,” continues

Hippolytus, as though still speaking of the water of the Euphrates, “is without honour in the world.”[46] This is an allusion to the τέλειος ἄνθρωπος. Indeed, this water *is* the “perfect man,” the ῥῆμα θεοῦ, the Word sent by God. “From the living water we spiritual men choose that which is ours,”[47] for every nature, when dipped in this water, “chooses its own substances … and from this water goes forth to every nature that which is proper to it.”[48] The water or, as we could say, this Christ is a sort of panspermia, a matrix of all possibilities, from which the πνευματικός chooses “his Osob,” his idiosyncrasy,[49] that “flies to him more [quickly] than iron to the magnet.” But the “spiritual men” attain their proper nature by entering in through the “true door,” Jesus Makarios (the blessed), and thus obtaining knowledge of their own wholeness, i.e., of the complete man. This man, unhonoured in the world, is obviously the inner, spiritual man, who becomes conscious for those who enter in through Christ, the door to life, and are illuminated by him. Two images are blended here: the image of the “strait gate,” [50] and that of John 14 : 6: “I am the way, and the truth, and the life. No one comes to the Father but through me.”[51] They represent an integration process that is characteristic of psychological individuation. As formulated, the water symbol continually coalesces with Christ and Christ with the inner man. This, it seems to me, is not a confusion of thought but a psychologically correct formulation of the facts, since Christ as the “Word” is indeed the “living water” and at the same time the symbol of the inner “complete” man, the self.

[313] For the Naassenes, the universal “Ground” is the Original Man, Adam, and knowledge of him is regarded as the beginning of perfection and the bridge to knowledge of God.[52] He is male/female; from him come “father and mother”;[53] he consists of three parts: the rational (νοερόν), the psychic, and the earthly (χοικόν). These three “came down together into one man, Jesus,” and “these three men spoke together, each of them from his own substance to his own,” i.e., from the rational to the rational, etc. Through this doctrine Jesus is related to the Original Man (Christ as second Adam). His soul is “of three parts and (yet) one”—a Trinity.[54] As examples of the Original Man the text mentions the

Cabiros[55] and Oannes. The latter had a soul capable of suffering, so that the “figure (πλάσμα) of the great, most beautiful and perfect man, humbled to a slave,” might suffer punishment. He is the “blessed nature, at once hidden and revealed, of everything that has come to be and will be,” “the kingdom of heaven which is to be sought within man” (ἐντός ἀνθρώπου), even “in children of seven years.”[56] For the Naassenes, says Hippolytus, place the “procreative nature of the Whole in the procreative seed.”[57] On the face of it, this looks like the beginnings of a “sexual theory” concerning the underlying psychic substance, reminiscent of certain modern attempts in the same vein. But one should not overlook the fact that in reality man’s procreative power is only a special instance of the “procreative nature of the Whole.” “This, for them, is the hidden and mystical Logos,” which, in the text that follows, is likened to the phallus of Osiris—“and they say Osiris is water.” Although the substance of this seed is the cause of all things, it does not partake of their nature. They say therefore: “I become what I will, and I am what I am.” For he who moves everything is himself unmoved. “He, they say, is alone good.”[58] A further synonym is the ithyphallic Hermes Kyllenios. “For they say Hermes is the Logos, the interpreter and fashioner of what has been, is, and will be.” That is why he is worshipped as the phallus, because he, like the male organ, “has an urge [ὁρμὴν] from below upwards.”[59]

4

[314] The fact that not only the Gnostic Logos but Christ himself was drawn into the orbit of sexual symbolism is corroborated by the fragment from the *Interrogationes maiores Mariae*, quoted by Epiphanius.[60] It is related there that Christ took this Mary with him on to a mountain, where he produced a woman from his side and began to have intercourse with her: “ … seminis sui defluxum assumpsisset, indicasse illi, quod oporteat sic facere, ut vivamus.”[61] It is understandable that this crude symbolism should offend our modern feelings. But it also appeared shocking to Christians of the third and fourth centuries; and when, in addition, the symbolism became associated with a concretistic misunderstanding, as appeared to be the case in certain sects, it could only be rejected. That the

author of the *Interrogationes* was by no means ignorant of some such reaction is evident from the text itself. It says that Mary received such a shock that she fell to the ground. Christ then said to her: “Wherefore do you doubt me, O you of little faith?” This was meant as a reference to John 3: 12: “If I have told you earthly things and you do not believe, how can you believe if I tell you heavenly things?” and also to John 6 : 53: “Unless you eat the flesh of the Son of man and drink his blood, you have no life in you” (RSV).

[315] This symbolism may well have been based, originally, on some visionary experience, such as happens not uncommonly today during psychological treatment. For the medical psychologist there is nothing very lurid about it. The context itself points the way to the right interpretation. The image expresses a psychologem that can hardly be formulated in rational terms and has, therefore, to make use of a concrete symbol, just as a dream must when a more or less “abstract” thought comes up during the *abaissement du niveau mental* that occurs in sleep. These “shocking” surprises, of which there is certainly no lack in dreams, should always be taken “as-if,” even though they clothe themselves in sensual imagery that stops at no scurrility and no obscenity. They are unconcerned with offensiveness, because they do not really mean it. It is as if they were stammering in their efforts to express the elusive meaning that grips the dreamer’s attention.[62]

[316] The context of the vision (John 3 : 12) makes it clear that the image should be taken not concretistically but symbolically; for Christ speaks not of earthly things but of a heavenly or spiritual mystery—a “mystery” not because he is hiding something or making a secret of it (indeed, nothing could be more blatant than the naked obscenity of the vision!) but because its meaning is still hidden from consciousness. The modern method of dream-analysis and interpretation follows this heuristic rule.[63] If we apply it to the vision, we arrive at the following result:

[317] 1. The MOUNTAIN means ascent, particularly the mystical, spiritual ascent to the heights, to the place of revelation where the spirit is present. This motif is so well known that there is no need to document it.[64]

[318] 2. The central significance of the CHRIST-FIGURE for that epoch has been abundantly proved. In Christian Gnosticism it was a visualization of God as the Archanthropos (Original Man = Adam), and therefore the epitome of man as such: "Man and the Son of Man." Christ is the inner man who is reached by the path of self-knowledge, "the kingdom of heaven within you." As the Anthropos he corresponds to what is empirically the most important archetype and, as judge of the living and the dead and king of glory, to the real organizing principle of the unconscious, the quaternity, or squared circle of the self.[65] In saying this I have not done violence to anything; my views are based on the experience that mandala structures have the meaning and function of a centre of the unconscious personality.[66] The quaternity of Christ, which must be borne in mind in this vision, is exemplified by the cross symbol, the *rex gloriae*, and Christ as the year.

[319] 3. The production of the WOMAN from his side suggests that he is interpreted as the second Adam. Bringing forth a woman means that he is playing the role of the Creator-god in Genesis.[67] Just as Adam, before the creation of Eve, was supposed by various traditions to be male/female,[68] so Christ here demonstrates his androgyny in a drastic way.[69] The Original Man is usually hermaphroditic; in Vedic tradition too he produces his own feminine half and unites with her. In Christian allegory the woman sprung from Christ's side signifies the Church as the Bride of the Lamb.

[320] The splitting of the Original Man into husband and wife expresses an act of nascent consciousness; it gives birth to a pair of opposites, thereby making consciousness possible. For the beholder of the miracle, Mary, the vision was the spontaneous visualization or projection of an unconscious process in herself. Experience shows that unconscious processes are compensatory to a definite conscious situation. The splitting in the vision would therefore suggest that it is compensating a conscious condition of unity. This unity probably refers in the first place to the figure of the Anthropos, the incarnate God, who was then in the forefront of religious interest. He was, in Origen's words, the "Vir Unus,"[70] the One Man. It was with this figure that Mary was confronted

in her vision. If we assume that the recipient of the vision was in reality a woman—an assumption that is not altogether without grounds—then what she had been missing in the pure, deified masculinity of Christ was the counterbalancing femininity. Therefore it was revealed to her: "I am both, man and woman." This psychologem is still incorporated today in the Catholic conception of Christ's androgyny as the "Virgo de Virgine," though this is more a *sententia communis* than a *conclusio*. Medieval iconography sometimes shows Christ with breasts, in accordance with Song of Solomon 1 : 1 : "For thy breasts are better than wine" (DV). In Mechthild of Magdeburg, the soul remarks that when the Lord kissed her,[71] he had, contrary to expectation, no beard. The tokens of masculinity were lacking. Mechthild had a vision similar to Mary's, dealing with the same problem from a different angle: she saw herself transported to a "rocky mountain" where the Blessed Virgin sat, awaiting the birth of the divine child. When it was born, she embraced it and kissed it three times. As the text points out, the mountain is an allegory of the "spiritualis habitus," or spiritual attitude. "Through divine inspiration she knew how the Son is the innermost core [*medulla*] of the Father's heart." This *medulla* is "strengthening, healing, and most sweet"; God's "strength and greatest sweetness" are given to us through the Son, the "Saviour and strongest, sweetest Comforter," but "the innermost [core] of the soul is that sweetest thing."[72] From this it is clear that Mechthild equates the "medulla" with the Father's heart, the Son, and the inner man. Psychologically speaking, "that sweetest thing" corresponds to the self, which is indistinguishable from the God-image.

[321] There is a significant difference between the two visions. The antique revelation depicts the birth of Eve from Adam on the spiritual level of the second Adam (Christ), from whose side the feminine pneuma, or second Eve, i.e., the soul, appears as Christ's daughter. As already mentioned, in the Christian view the soul is interpreted as the Church: she is the woman who "embraces the man"[73] and anoints the Lord's feet. Mechthild's vision is a continuation of the sacred myth: the daughter-bride has become a mother and bears the Father in the shape of the Son. That the Son is closely akin to the self is evident from the emphasis laid on the quaternary nature of Christ: he has a "fourfold

voice" (*quadruplex vox*),[74] his heart has four kinds of pulse,[75] and from his countenance go forth four rays of light.[76] In this image a new millennium is speaking. Meister Eckhart, using a different formulation, says that "God is born from the soul," and when we come to the *Cherubinic Wanderer*[77] of Angelus Silesius, God and the self coincide absolutely. The times have undergone a profound change: the procreative power no longer proceeds from God, rather is God born from the soul. The mythologem of the young dying god has taken on psychological form—a sign of further assimilation and conscious realization.

[322] 4. But to turn back to the first vision: the bringing forth of the woman is followed by COPULATION. The *hieros gamos* on the mountain is a well-known motif,[78] just as, in the old alchemical pictures, the hermaphrodite has a fondness for elevated places. The alchemists likewise speak of an Adam who always carries his Eve around with him. Their *coniunctio* is an incestuous act, performed not by father and daughter but, in accordance with the changed times, by brother and sister or mother and son. The latter variant corresponds to the ancient Egyptian mythologem of Amen as Ka-mutef, which means 'husband of his mother,' or of Mut, who is the "mother of her father and daughter of her son."[79] The idea of self-copulation is a recurrent theme in descriptions of the world creator: for instance, God splits into his masculine and feminine halves,[80] or he fertilizes himself in a manner that could easily have served as a model for the *Interrogationes* vision, if literary antecedents must be conjectured. Thus the relevant passage in the Heliopolitan story of the Creation runs: "I, even I, had union with my clenched hand, I joined myself in an embrace with my shadow, I poured seed into my mouth, my own, I sent forth issue in the form of Shu, I sent forth moisture in the form of Tefnut."[81]

[323] Although the idea of self-fertilization is not touched on in our vision, there can be no doubt that there is a close connection between this and the idea of the cosmogonic self-creator. Here, however, world creation gives place to spiritual renewal. That is why no visible creature arises from the taking in of seed; it means a nourishing of life, "that we may live." And because, as the text itself shows, the vision should be

understood on the “heavenly” or spiritual plane, the pouring out (ἀπόρροια) refers to a λόγος σπερματικός, which in the language of the gospels means a living water “springing up into eternal life.” The whole vision reminds one very much of the related alchemical symbolisms. Its drastic naturalism, unpleasantly obtrusive in comparison with the reticence of ecclesiastical language, points back on the one hand to archaic forms of religion whose ideas and modes of expression had long since been superseded, but forwards, on the other, to a still crude observation of Nature that was just beginning to assimilate the archetype of man. This attempt continued right up to the seventeenth century, when Johannes Kepler recognized the Trinity as underlying the structure of the universe—in other words, when he assimilated this archetype into the astronomer’s picture of the world.[82]

5

[324] After this digression on the phallic synonyms for the Original Man, we will turn back to Hippolytus’ account of the central symbols of the Naassenes and continue with a list of statements about Hermes.

[325] Hermes is a conjurer of spirits (Ψυχαγωγός), a guide of souls (Ψνχοπομπός), and a begetter of souls (ψυχῶν αἴτιος). But the souls were “brought down from the blessed Man on high, the archman Adamas, … into the form of clay, that they might serve the demiurge of this creation, Esaldaios, a fiery god, the fourth by number.”[83] Esaldaios corresponds to Ialdabaoth, the highest archon, and also to Saturn.[84] The “fourth” refers to the fourth Person—the devil—who is opposed to the Trinity. Ialdabaoth means “child of chaos”; hence when Goethe, borrowing from alchemical terminology, calls the devil the “strange son of chaos,” the name is a very apt one.

[326] Hermes is equipped with the golden wand.[85] With it he “drops sleep on the eyes of the dead and wakes up the sleepers.” The Naassenes referred this to Ephesians 5 : 14: “Awake, O sleeper, and arise from the dead, and Christ shall give you light.” Just as the alchemists took the well-known allegory of Christ, the *lapis angularis* or cornerstone, for their *lapis philosophorum*, so the Naassenes took it as symbolizing their

Protanthropos Adam, or more precisely, the “inner man,” who is a rock or stone, since he came from the πέτρη τοῦ ’Αδάμαντος, “fallen from Adamas the archman on high.”[86] The alchemists said their stone was “cut from the mountain without hands,”[87] and the Naassenes say the same thing of the inner man, who was brought down “into the form of oblivion.”[88] In Epiphanius the mountain is the Archanthropos Christ, from whom the stone or inner man was cut. As Epiphanius interprets it, this means that the inner man is begotten “without human seed,” “a small stone that becomes a great mountain.”[89]

[327] The Archanthropos is the Logos, whom the souls follow “twittering,” as the bats follow Hermes in the *nekyia*. He leads them to Oceanus and—in the immortal words of Homer—to “the doors of Helios and the land of dreams.” “He [Hermes] is Oceanus, the begetter of gods and men, ever ebbing and flowing, now forth, now back.” Men are born from the ebb, and gods from the flow. “It is this, they say, that stands written: ‘I have said, you are gods, and all of you the sons of the most High.’”[90] Here the affinity or identity of God and man is explicit, in the Holy Scriptures no less than in the Naassene teachings.

6

[328] The Naassenes, as Hippolytus says,[91] derived all things from a triad, which consists firstly of the “blessed nature of the blessed Man on high, Adamas,” secondly of the mortal nature of the lower man, and thirdly of the “kingless race begotten from above,” to which belong “Mariam the sought-for one, and Jothor[92] the great wise one, and Sephora[93] the seer, and Moses whose generation was not in Egypt.”[94] Together these four form a marriage *quaternio*[95] of the classic type:

HUSBAND — WIFE
| |
SISTER — BROTHER

Their synonyms are:

MOTHER — FATHER

QUEEN — KING
THE UNKNOWN WOMAN — THE DISTANT LOVER
ANIMA — ANIMUS

[329] Moses corresponds to the husband, Sephora to the wife; Mariam (Miriam) is the sister of Moses; Jothor (Jethro) is the archetype of the wise old man and corresponds to the father-animus, if the *quaternio* is that of a woman. But the fact that Jothor is called “the great wise one” suggests that the *quaternio* is a man’s. In the case of a woman the accent that falls here on the wise man would fall on Mariam, who would then have the significance of the Great Mother. At all events our *quaternio* lacks the incestuous brother-sister relationship, otherwise very common. Instead, Miriam has something of a mother significance for Moses (cf. Exodus 2 : 4ff.). As a prophetess (Exodus 15 : 20f.) she is a “magical” personality. When Moses took a Moor to wife—the “Ethiopian woman”—this incensed Miriam so much that she was smitten with leprosy and became “as white as snow” (Numbers 12 : 10). Miriam is therefore not altogether unsuited to play the role of the anima. The best-known anima-figure in the Old Testament, the Shulamite, says: “I am black, but comely” (Song of Songs 1 : 5). In the *Chymical Wedding* of Christian Rosenkreutz, the royal bride is the concubine of the Moorish king. Negroes, and especially Ethiopians, play a considerable role in alchemy as synonyms of the *caput corvi* and the *nigredo*.[96] They appear in the Passion of St. Perpetua[97] as representatives of the sinful pagan world.

[330] The triad is characterized by various names that may be onomatopoetic: Kaulakau, Saulasau, Zeesar.[98] Kaulakau means the higher Adam, Saulasau the lower, mortal man, and Zeesar is named the “upwards-flowing Jordan.” The Jordan was caused by Jesus to flow upstream; it is the rising flood and this, as already mentioned, is the begetter of gods. “This, they say, is the human hermaphrodite in all creatures, whom the ignorant call ‘Geryon of the threefold body’ [that is, ὡς ἐκ γῆς ῥέοντα, ‘flowing from the earth’]; but the Greeks name it the celestial horn of the moon.” The text defines the above-mentioned *quaternio*, which is identical with Zeesar, the upwards-flowing Jordan, the

hermaphrodite, Geryon of the threefold body, and the horn of the moon, as the cosmogonic Logos (John 1 : 1ff.), and the "life that was in him" (John 1 : 4) as a "generation of perfect men" (τέλειοι ἀνθρώποι).[99]

[331] This Logos or quaternity is "the cup from which the king, drinking, draws his omens,"[100] or the beaker of Anacreon. The cup leads Hippolytus on to the wine miracle at Cana, which, he says, "showed forth the kingdom of heaven"; for the kingdom of heaven lies within us, like the wine in the cup. Further parallels of the cup are the ithyphallic gods of Samothrace and the Kyllenic Hermes, who signify the Original Man as well as the spiritual man who is reborn. This last is "in every respect consubstantial" with the Original Man symbolized by Hermes. For this reason, says Hippolytus, Christ said that one must eat of his flesh and drink of his blood, for he was conscious of the *individual nature* of each of his disciples, and also of the need of each "to come to his own special nature."[101]

[332] Another synonym is Korybas, who was descended from the crown of the head and from the unformed (ἀχαρακτηρίστον) brain, like the Euphrates from Eden, and permeates all things. His image exists—unrecognized—"in earthly form." He is the god who *dwells in the flood*. I need not describe this symbol here, as I have already discussed it at some length in one of my Paracelsus studies.[102] So far as Korybas is concerned, the parallel between him and the Protanthropos is explained by the ancient view that the corybants were the original men.[103] The name "Korybas" does not denote a particular personality, but rather the anonymous member of a collectivity, such as the Curetes, Cabiri, Dactyls, etc. Etymologically, it has been brought into connection with κορνφή (crown of the head), though this is not certain.[104] Korybas seems in our text to be the name of a single personality—the Kyllenian Hermes, who appears here as synonymous with the Cabiri of Samothrace. With reference to this Hermes the text says: "Him the Thracians … call Korybas."[105] I have suggested in an earlier publication[106] that this unusual single personality may perhaps be a product of contamination with Korybas, known to us from the Dionysus legend, because he too

seems to have been a phallic being, as we learn from a scholium to Lucian's *De dea Syria*.[107]

[333] From the centre of the "perfect man" flows the ocean (where, as we have said, the god dwells). The "perfect" man is, as Jesus says, the "true door," through which the "perfect" man must go in order to be reborn. Here the problem of how to translate "teleios" becomes crucial; for—we must ask—why should anyone who is "perfect" need renewal through rebirth?[108] One can only conclude that the perfect man was not so perfected that no further improvement was possible. We encounter a similar difficulty in Philippians 3 : 12, where Paul says: "Not that I … am already perfect" (τετελείωμαι). But three verses further on he writes: "Let us then, as many as are perfect (τέλειοι) be of this mind." The Gnostic use of τέλειος obviously agrees with Paul's. The word has only an approximate meaning and amounts to much the same thing as πνευματικός, 'spiritual,'[109] which is not connected with any conception of a definite degree of perfection or spirituality. The word "perfect" gives the sense of the Greek τέλειος correctly only when it refers to God. But when it applies to a man, who in addition is in need of rebirth, it can at most mean "whole" or "complete," especially if, as our text says, the complete man cannot even be saved unless he passes through this door.[110]

[334] The father of the "perfectus" is the higher man or Protanthropos, who is "not clearly formed" and "without qualities." Hippolytus goes on to say that he is called Papa (Attis) by the Phrygians. He is a bringer of peace and quells "the war of the elements" in the human body,[111] a statement we meet again word for word in medieval alchemy, where the *filius philosophorum* "makes peace between enemies or the elements."[112] This "Papa" is also called νέκυς (cadaver), because he is buried in the body like a mummy in a tomb. A similar idea is found in Paracelsus; his treatise *De vita longa* opens with the words: "Life, verily, is naught but a kind of embalmed mummy, which preserves the mortal body from the mortal worms."[113] The body lives only from the "Mumia," through which the "peregrinus microcosmus," the wandering microcosm (corresponding to the macrocosm), rules the physical body.[114] His

synonyms are the Adech, Archeus, Protothoma, Ides, Idechtrum, etc. He is the "Protoplast" (the first-created), and, as Ides, "the door whence all created things have come."[115] (Cf. the "true door" above!) The Mumia is born together with the body and sustains it,[116] though not to the degree that the "supercelestial Mumia" does.[117] The latter would correspond to the higher Adam of the Naassenes. Of the Ideus or Ides Paracelsus says that in it "there is but One Man … and he is the Protoplast."[118]

[335] The Paracelsian Mumia therefore corresponds in every way to the Original Man, who forms the microcosm in the mortal man and, as such, shares all the powers of the macrocosm. Since it is often a question of cabalistic influences in Paracelsus, it may not be superfluous in this connection to recall the figure of the cabalistic *Metatron*. In the *Zohar* the Messiah is described as the "central column" (i.e., of the Sephiroth system), and of this column it is said: "The column of the centre is Metatron, whose name is like that of the Lord. It is created and constituted to be his image and likeness, and it includes all gradations from Above to Below and from Below to Above, and binds [them] together in the centre."[119]

[336] The dead man, Hippolytus continues, will rise again by passing through the "door of heaven." Jacob saw the gate of heaven on his way to Mesopotamia, "but they say Mesopotamia is the stream of the great ocean that flows from the midst of the perfect man." This is the gate of heaven of which Jacob said: "How terrible is this place! This is no other but the house of God, and the gate of heaven."[120] The stream that flows out of the Original Man (the gate of heaven) is interpreted here as the flood-tide of Oceanus, which, as we have seen, generates the gods. The passage quoted by Hippolytus probably refers to John 7 : 38 or to an apocryphal source common to both. The passage in John—"He who believes in me, as the scripture has said, Out of his belly shall flow rivers of living water"—refers to a nonbiblical source, which, however, seemed scriptural to the author. Whoever drinks of this water, in him it shall be a fountain of water springing up into eternal life, says Origen.[121] This water is the "higher" water, the *aqua doctrinae*, the rivers from the belly of Christ, and the divine life as contrasted with the "lower" water, the

aqua abyssi, where the darknesses are, and where dwell the Prince of this world and the deceiving dragon and his angels.[122] The river of water is the "Saviour" himself.[123] Christ is the river that pours into the world through the four gospels,[124] like the rivers of Paradise. I have purposely cited the ecclesiastical allegories in greater detail here, so that the reader can see how saturated Gnostic symbolism is in the language of the Church, and how, on the other hand, particularly in Origen, the liveliness of his amplifications and interpretations has much in common with Gnostic views. Thus, to him as to many of his contemporaries and successors, the idea of the cosmic correspondence of the "spiritual inner man" was something quite familiar: in his first Homily on Genesis he says that God first created heaven, the whole spiritual substance, and that the counterpart of this is "our mind, which is itself a spirit, that is, it is our spiritual inner man which sees and knows God."[125]

[337] These examples of Christian parallels to the partly pagan views of the Gnostics may suffice to give the reader a picture of the mentality of the first two centuries of our era, and to show how closely the religious teachings of that age were connected with psychic facts.

[338] Now let us come back to the symbols listed by Hippolytus. The Original Man in his *latent state*—so we could interpret the term ἀχαρακτηριστός—is named *Aipolos*, "not because he feeds he-goats and she-goats," but because he is ἀειπόλος, the Pole that turns the cosmos round.[126] This recalls the parallel ideas of the alchemists, previously mentioned, about Mercurius, who is found at the North Pole. Similarly the Naassenes named Aipolos—in the language of the Odyssey—*Proteus*. Hippolytus quotes Homer as follows: "This place is frequented by the Old Man of the Sea, immortal Proteus the Egyptian … who always tells the truth … "[127] Homer then continues: " … who owes allegiance to Poseidon and knows the sea in all its depths."[128] Proteus is evidently a personification of the unconscious:[129] it is difficult to "catch this mysterious old being … he might see me first, or know I am there and keep away." One must seize him quickly and hold him fast, in order to force him to speak. Though he lives in the sea, he comes to the lonely shore at the sacred noon-tide hour, like an amphibian, and lies down to

sleep among his seals. These, it must be remembered, are warm-blooded—that is to say, they can be thought of as contents of the unconscious that are capable of becoming conscious, and at certain times they appear spontaneously in the light and airy world of consciousness. From Proteus the wandering hero learns how he may make his way homewards “over the fish-giving sea,” and thus the Old Man proves to be a psychopomp.[130] Οὐ πιπρασκέται, Hippolytus says of him, which can best be translated by the French colloquialism “il ne se laisse pas rouler.” “But,” the text goes on, “he spins round himself and changes his shape.” He behaves, therefore, like a revolving image that cannot be grasped. What he says is νημερτής, ‘in sooth,’ infallible; he is a “soothsayer.” So it is not for nothing that the Naassenes say that “knowledge of the complete man is deep indeed and hard to comprehend.”

[339] Subsequently, Proteus is likened to the green ear of corn in the Eleusinian mysteries. To him is addressed the cry of the celebrants: “The Mistress has borne the divine boy, Brimo has borne Brimos!” A “lower” correspondence to the high Eleusinian initiations, says Hippolytus, is the dark path of Persephone, who was abducted by the god of the underworld; it leads “to the grove of adored Aphrodite, who rouses the sickness of love.” Men should keep to this lower path in order to be initiated “into the great and heavenly” mysteries.[131] For this mystery is “the gate of heaven” and the “house of God,” where alone the good God dwells, who is destined only for the spiritual men. They should put off their garments and all become νυμφίοι, ‘bridegrooms,’ “robbed of their virility by the virgin spirit.”[132] This is an allusion to Revelation 14 : 4: “ … for they are virgins. These … follow the Lamb whithersoever he goeth.”[133]

[340] Among the objective symbols of the self I have already mentioned the Naassene conception of the ἀμέριστος στιγμή, the indivisible point. This conception fully accords with that of the “Monad” and “Son of Man” in Monoïmos. Hippolytus says:

> Monoïmos … thinks that there is some such Man as Oceanus, of whom the poet speaks somewhat as follows: Oceanus, the origin of gods and of men.[134] Putting this into other words, he says that the Man is All, the

> source of the universe, unbegotten, incorruptible, everlasting; and that there is a Son of the aforesaid Man, who is begotten and capable of suffering, and whose birth is outside time, neither willed nor predetermined … This Man is a single Monad, uncompounded [and] indivisible, [yet] compounded [and] divisible; loving and at peace with all things [yet] warring with all things and at war with itself in all things; unlike and like [itself], as it were a musical harmony containing all things … showing forth all things and giving birth to all things. It is its own mother, its own father, the two immortal names. The emblem of the perfect Man, says Monoïmos, is the jot or tittle.[135] This one tittle is the uncompounded, simple, unmixed Monad, having its composition from nothing whatsoever, yet composed of many forms, of many parts. That single, indivisible jot is the many-faced, thousand-eyed and thousand-named, the jot of the iota. This is the emblem of that perfect and indivisible Man. … The Son of the Man is the one iota, the one jot flowing from on high, full and filling all things, containing in himself everything that is in the Man, the Father of the Son of Man.[136]

[341] This paradoxical idea of the Monad in Monoïmos describes the psychological nature of the self as conceived by a thinker of the second century under the influence of the Christian message.

[342] A parallel conception is to be found in Plotinus, who lived a little later (*c*. 205–70). He says in the *Enneads:* “Self-knowledge reveals the fact that the soul’s natural movement is not in a straight line, unless indeed it have undergone some deviation. On the contrary, it circles around something interior, around a centre. Now the centre is that from which proceeds the circle, that is, the soul. The soul will therefore move around the centre, that is, around the principle from which she proceeds; and, trending towards it, she will attach herself to it, as indeed all souls should do. The souls of the divinities ever direct themselves towards it, and that is the secret of their divinity; for divinity consists in being attached to the centre. … Anyone who withdraws from it is a man who has remained un-unified, or who is a brute.”[137]

[343] Here the point is the centre of a circle that is created, so to speak, by the circumambulation of the soul. But this point is the “centre of all

things," a God-image. This is an idea that still underlies the mandala-symbols in modern dreams.[138]

[344] Of equal significance is the idea, also common among the Gnostics, of the σπινθήρ or spark.[139] It corresponds to the *scintilla vitae*, the "little spark of the soul" in Meister Eckhart,[140] which we meet with rather early in the teachings of Saturninus.[141] Similarly Heraclitus, "the physicist," is said to have conceived the soul as a "spark of stellar essence."[142] Hippolytus says that in the doctrine of the Sethians the darkness held "the brightness and the spark of light in thrall,"[143] and that this "very small spark" was finely mingled in the dark waters[144] below.[145] Simon Magus[146] likewise teaches that in semen and milk there is a very small spark which "increases and becomes a power boundless and immutable."[147]

[345] The symbol of the point is found also in alchemy, where it stands for the arcane substance; in Michael Maier[148] it signifies "the purity or homogeneity of the essence." It is the "punctum solis"[149] in the egg-yolk, which grows into a chick. In Khunrath it represents Sapientia in the form of the "salt-point";[150] in Maier it symbolizes gold.[151] To the scholiast of the "Tractatus aureus" it is the midpoint, the "circulus exiguus" and "mediator" which reconciles the hostile elements and "by persistent rotation changes the angular form of the square into a circular one like itself."[152] For Dorn the "punctum vix intelligibile" is the starting point of creation.[153] Similarly John Dee says that all things originated from the point and the monad.[154] Indeed, God himself is simultaneously both the centre and the circumference. In Mylius the point is called the bird of Hermes.[155] In the "Novum lumen" it is spirit and fire, the life of the arcane substance, similar to the spark.[156] This conception of the point is more or less the same as that of the Gnostics.

[346] From these citations we can see how Christ was assimilated to symbols that also meant the kingdom of God, for instance the grain of mustard-seed, the hidden treasure, and the pearl of great price. He and his kingdom have the same meaning. Objections have always been made to this dissolution of Christ's personality, but what has not been realized is

that it represents at the same time an assimilation and integration of Christ into the human psyche.[157] The result is seen in the growth of the human personality and in the development of consciousness. These specific attainments are now gravely threatened in our antichristian age, not only by the sociopolitical delusional systems, but above all by the rationalistic hybris which is tearing our consciousness from its transcendent roots and holding before it immanent goals.

XIV

THE STRUCTURE AND DYNAMICS OF THE SELF

[347] The examples given in the previous chapter should be sufficient to describe the progressive assimilation and amplification of the archetype that underlies ego-consciousness. Rather than add to their number unnecessarily, I will try to summarize them so that an over-all picture results. From various hints dropped by Hippolytus, it is clear beyond a doubt that many of the Gnostics were nothing other than psychologists. Thus he reports them as saying that "the soul is very hard to find and to comprehend,"[1] and that knowledge of the whole man is just as difficult. "For knowledge of man is the beginning of wholeness (*τελείωσις*), but knowledge of God is perfect wholeness (*ἀπηρτισμένη τελείωσις*)." Clement of Alexandria says in the *Paedagogus* (III, 1): "Therefore, as it seems, it is the greatest of all disciplines to know oneself; for when a man knows himself, he knows God." And Monoïmos, in his letter to Theophrastus, writes: "Seek him from out thyself, and learn who it is that taketh possession of everything in thee, saying: *my* god, *my* spirit, *my* understanding, *my* soul, *my* body; and learn whence is sorrow and joy, and love and hate, and waking though one would not, and sleeping though one would not, and getting angry though one would not, and falling in love though one would not. And if thou shouldst closely investigate these things, thou wilt find Him in thyself, the One and the Many, like to that little point [*κεραία*], for it is in thee that he hath his origin and his deliverance."[2]

[348] One cannot help being reminded, in reading this text, of the Indian idea of the Self as brahman and atman, for instance in the Kena Upanishad: "By whom willed and directed does the mind fly forth? By whom commanded does the first breath move? Who sends forth the speech we utter here? What god is it that stirs the eye and ear? The hearing of the ear, the thinking of the mind, the speaking of the speech …

That which speech cannot express, by which speech is expressed … which the mind cannot think, by which the mind thinks, know that as Brahman."[3]

[349] Yajñyavalkya defines it in indirect form in the Brihadāranyaka Upanishad: "He who dwells in all beings, yet is apart from all beings, whom no beings know, whose body is all beings, who controls all beings from within, he is your Self, the inner controller, the immortal. … There is no other seer but he, no other hearer but he, no other perceiver but he, no other knower but he. He is your Self, the inner controller, the immortal. All else is of sorrow.[4]

[350] In Monoïmos, who was called "the Arab," Indian influences are not impossible. His statement is significant because it shows that even in the second century[5] the ego was considered the exponent of an all-embracing totality, the self—a thought that by no means all psychologists are familiar with even today. These insights, in the Near East as in India, are the product of intense introspective observation that can only be psychological. *Gnosis is undoubtedly a psychological knowledge whose contents derive from the unconscious*. It reached its insights by concentrating on the "subjective factor,"[6] which consists empirically in the demonstrable influence that the collective unconscious exerts on the conscious mind. This would explain the astonishing parallelism between Gnostic symbolism and the findings of the psychology of the unconscious.

[351] I would like to illustrate this parallelism by summarizing the symbols previously discussed. For this purpose we must first of all review the facts that led psychologists to conjecture an archetype of wholeness, i.e., the self. These are in the first place dreams and visions; in the second place, products of active imagination in which symbols of wholeness appear. The most important of these are geometrical structures containing elements of the circle and quaternity;[7] namely, circular and spherical forms on the one hand, which can be represented either purely geometrically or as objects; and, on the other hand, quadratic figures divided into four or in the form of a cross. They can also be four objects or persons related to one another in meaning or by the way they are

arranged. Eight, as a multiple of four, has the same significance. A special variant of the quaternity motif is the dilemma of 3 + 1. Twelve (3 × 4) seems to belong here as a solution of the dilemma and as a symbol of wholeness (zodiac, year). Three can be regarded as a relative totality, since it usually represents either a spiritual totality that is a product of thought, like the Trinity,[8] or else an instinctual, chthonic one, like the triadic nature of the gods of the underworld—the "lower triad." Psychologically, however, three—if the context indicates that it refers to the self—should be understood as a defective quaternity or as a stepping-stone towards it.[9] Empirically, a triad has a trinity opposed to it as its complement. The complement of the quaternity is unity.[10]

[352] From the circle and quaternity motif is derived the symbol of the geometrically formed crystal and the wonder-working stone. From here analogy formation leads on to the city,[11] castle, church,[12] house,[13] and vessel.[14] Another variant is the wheel (*rota*). The former motif emphasizes the ego's containment in the greater dimension of the self; the latter emphasizes the rotation which also appears as a ritual circumambulation. Psychologically, it denotes concentration on and preoccupation with a centre, conceived as the centre of a circle and thus formulated as a point. This leads easily enough to a relationship to the heavenly Pole and the starry bowl of heaven rotating round it. A parallel is the horoscope as the "wheel of birth."

[353] The image of the city, house, and vessel brings us to their content—the inhabitant of the city or house, and the water contained in the vessel. The inhabitant, in his turn, has a relationship to the quaternity, and to the fifth as the unity of the four. The water appears in modern dreams and visions as a blue expanse reflecting the sky, as a lake, as four rivers (e.g., Switzerland as the heart of Europe with the Rhine, Ticino, Rhone, and Inn, or the Garden of Eden with the Gihon, Pison, Hiddekel, and Euphrates), as healing water and consecrated water, etc. Sometimes the water is associated with fire, or even combined with it as fire-water (wine, alcohol).

[354] The inhabitant of the quadratic space leads to the human figure. Apart from the geometrical and arithmetical symbols, this is the

commonest symbol of the self. It is either a god or a godlike human being, a prince, a priest, a great man, an historical personality, a dearly loved father, an admired example, the successful elder brother—in short, a figure that transcends the ego personality of the dreamer. There are corresponding feminine figures in a woman’s psychology.

[355] Just as the circle is contrasted with the square, so the quaternity is contrasted with the 3 + 1 motif, and the positive, beautiful, good, admirable, and lovable human figure with a daemonic, misbegotten creature who is negative, ugly, evil, despicable and an object of fear. Like all archetypes, the self has a paradoxical, antinomial character. It is male and female, old man and child, powerful and helpless, large and small. The self is a true “complexio oppositorum,”[15] though this does not mean that it is anything like as contradictory in itself. It is quite possible that the seeming paradox is nothing but a reflection of the enantiodromian changes of the conscious attitude which can have a favourable or an unfavourable effect on the whole. The same is true of the unconscious in general, for its frightening figures may be called forth by the fear which the conscious mind has of the unconscious. The importance of consciousness should not be underrated; hence it is advisable to relate the contradictory manifestations of the unconscious causally to the conscious attitude, at least in some degree. But consciousness should not be overrated either, for experience provides too many incontrovertible proofs of the autonomy of unconscious compensatory processes for us to seek the origin of these antinomies only in the conscious mind. Between the conscious and the unconscious there is a kind of “uncertainty relationship,” because the observer is inseparable from the observed and always disturbs it by the act of observation. In other words, exact observation of the unconscious prejudices observation of the conscious and vice versa.

[356] Thus the self can appear in all shapes from the highest to the lowest, inasmuch as these transcend the scope of the ego personality in the manner of a daimonion. It goes without saying that the self also has its theriomorphic symbolism. The commonest of these images in modern dreams are, in my experience, the elephant, horse, bull, bear, white and black birds, fishes, and snakes. Occasionally one comes across tortoises,

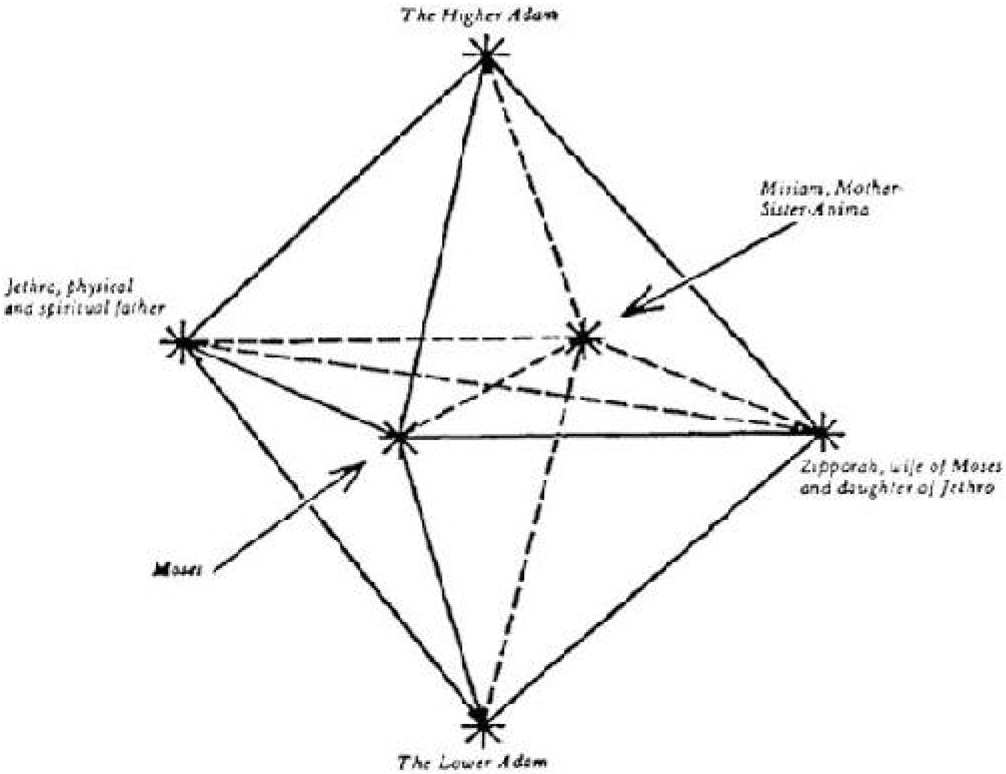
snails, spiders, and beetles. The principal plant symbols are the flower and the tree. Of the inorganic products, the commonest are the mountain and lake.

[357] Where there is an undervaluation of sexuality the self is symbolized as a phallus. Undervaluation can consist in an ordinary repression or in overt devaluation. In certain differentiated persons a purely biological interpretation and evaluation of sexuality can also have this effect. Any such conception overlooks the spiritual and "mystical" implications of the sexual instinct.[16] These have existed from time immemorial as psychic facts, but are devalued and repressed on rationalistic and philosophical grounds. In all such cases one can expect an unconscious phallicism by way of compensation. A good example of this is the mainly sexualistic approach to the psyche that is to be found in Freud.

2

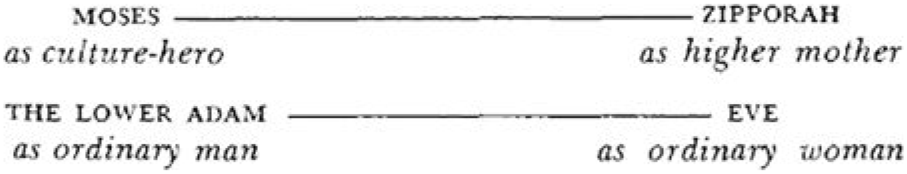
[358] Coming now to the Gnostic symbols of the self, we find that the Naassenes of Hippolytus lay most emphasis on the human images; of the geometrical and arithmetical symbols the most important are the quaternity, the ogdoad, the trinity, and unity. Here we shall give our attention mainly to the totality symbol of the quaternity, and above all to the symbol mentioned in section 6 of the last chapter, which I would like to call, for short, the Moses Quaternio. We shall then consider the second Naassene Quaternio, the one with the four rivers of Paradise, which I shall call the Paradise Quaternio. Though differently constituted, the two quaternios express roughly the same idea, and in what follows I shall try not only to relate them to one another psychologically, but also to bring out their connection with later (alchemical) quaternary structures. In the course of these investigations, we shall see how far the two quaternios are characteristic of the Gnostic age, and how far they can be correlated with the archetypal history of the mind in the Christian aeon.

[359] The quaternity in the Moses Quaternio[17] is evidently constructed according to the following schema:



The Moses Quaternio

[360] The “lower Adam” corresponds to the ordinary mortal man, Moses to the culture-hero and lawgiver, and thus, on a personalistic level, to the “father”; Zipporah, as the daughter of a king and priest, to the “higher mother.” For the ordinary man, these two represent the “royal pair,”[18] which for Moses corresponds on the one hand to his “higher man,” and on the other hand to his anima, Miriam. The “higher” man is synonymous with the “spiritual, inner” man, who is represented in the quaternio by Jethro. Such is the meaning of the quaternio when seen from the standpoint of Moses. But since Moses is related to Jethro as the lower Adam, or ordinary man, is to Moses, the quaternio cannot be understood merely as the structure of Moses’ personality, but must be looked at from the standpoint of the lower Adam as well. We then get the following quaternio:



MOSES ——— ZIPPORAH
as culture-hero *as higher mother*

THE LOWER ADAM ——— EVE
as ordinary man *as ordinary woman*

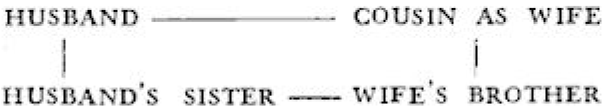
[361] From this we can see that the Naassene quaternio is in a sense unsymmetrical, since it leads to a senarius (hexad) with an exclusively upward tendency: Jethro and Miriam have to be added to the above four as a kind of third storey, as the higher counterparts of Moses and Zipporah. We thus get a gradual progression, or series of steps leading from the lower to the higher Adam. This psychology evidently underlies the elaborate lists of Valentinian syzygies. The lower Adam or somatic man consequently appears as the lowest stage of all, from which there can be only an ascent. But, as we have seen, the four persons in the Naassene quaternio are chosen so skilfully that it leaves room not only for the incest motif [Jethro-Miriam], which is never lacking in the marriage quaternio, but also for the extension of the ordinary man's psychic structure downwards, towards the sub-human, the dark and evil side represented by the shadow. That is to say, Moses marries the "Ethiopian woman," and Miriam, the prophetess and mother-sister, becomes "leprous," which is clear proof that her relation to Moses has taken a negative turn. This is further confirmed by the fact that Miriam "spoke against" Moses and even stirred up his brother Aaron against him. Accordingly, we get the following senarius:

THE LOWER ADAM
____ EVE MOSES
______________________________ ETHIOPIAN WOMAN JETHRO, *the heathen priest* _____ MIRIAM, *the "white" leper*

[362] Though nothing is said against Jethro, "the great wise one," in the Bible story, yet as a Midianite priest he did not serve Yahweh and did not belong to the chosen people, but departs from them to his own country.[19] He seems also to have borne the name Reguel ("friend of God") and to have helped Moses with his superior wisdom. He is, accordingly, a numinous personality, the embodiment of an archetype, obviously that of the "wise old man" who personifies the spirit in myth and folklore. The spirit, as I have shown elsewhere,[20] has a dichotomous nature. Just as Moses in this case represents his own shadow by taking to wife the black daughter of the earth, so Jethro, in his capacity as heathen priest and stranger, has to be included in the quaternio as the "lower" aspect of

himself, with a magical and nefarious significance (though this is not vouched for in the text).[21]

[363] As I have already explained, the Moses Quaternio is an individual variant of the common marriage quaternio found in folklore.[22] It could therefore be designated just as well with other mythical names. The basic schema of the cross-cousin marriage:



has numerous variants; for instance the sister can be replaced by the mother or the wife's brother by a fatherlike figure. But the incest motif remains a characteristic feature. Since the schema is a primary one characterizing the psychology of love relationships and also of the transference, it will, like all characterological schemata, obviously manifest itself in a "favourable" and an "unfavourable" form, for the relationships in question also exhibit the same ambivalence: everything a man does has a positive and a negative aspect.

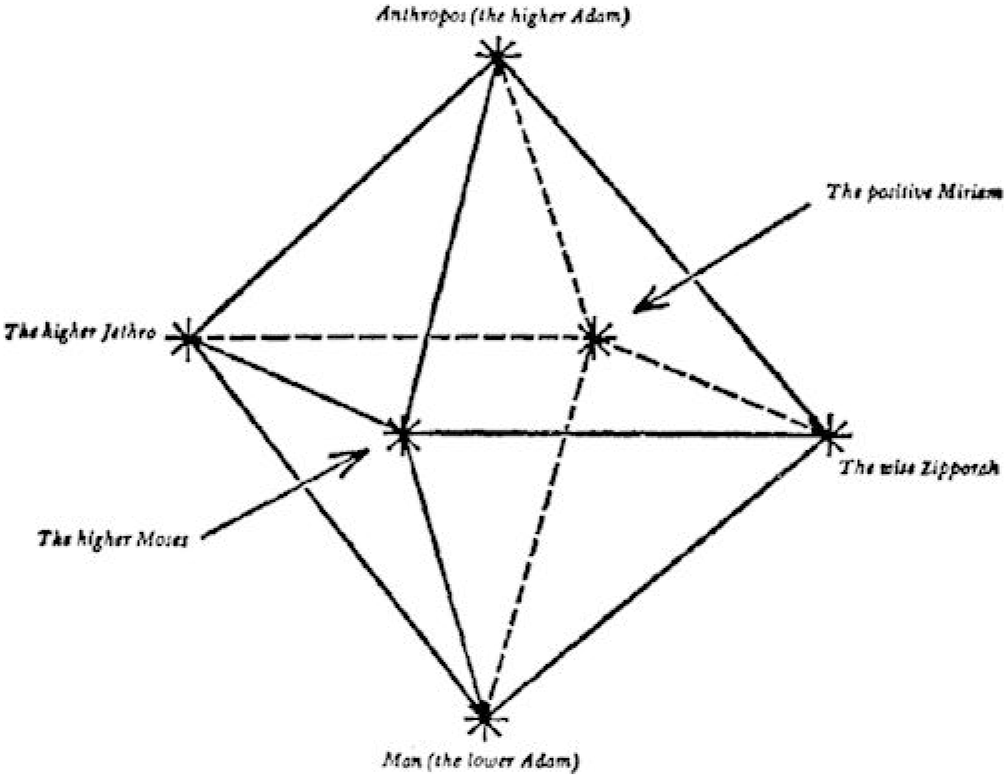
[364] The reader, therefore, should not let himself be put off by the somewhat scurrilous Gnostic nomenclature. The names are accidental, whereas the schema itself is universally valid. The same is true of the "Shadow Quaternio," for which I have kept the same names because the biography of Moses offers certain features that are well suited to illustrate the shadow.

[365] The lower senarius reaches its nadir not in the "lower Adam" but in his dark, theriomorphic prefiguration—the *serpent* who was created before man, or the Gnostic *Naas*. Accordingly we have the structures shown on the facing page.

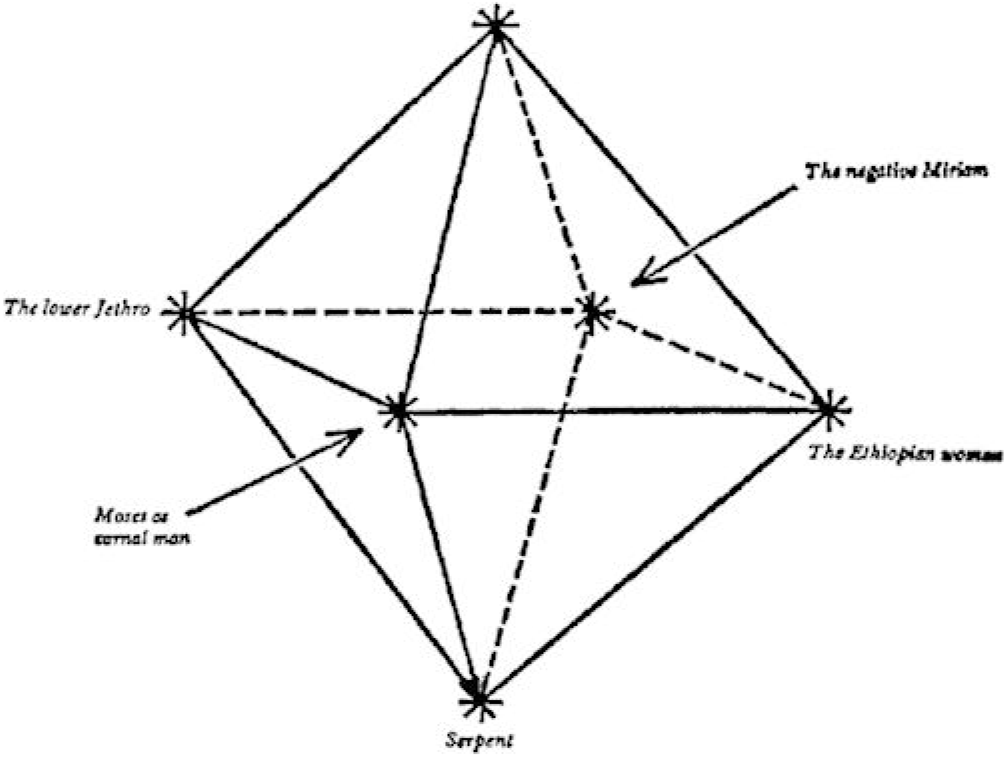
[366] This schema is no idle parlour game, because the texts make it abundantly clear that the Gnostics were quite familiar with the dark aspect of their metaphysical figures, so much so that they caused the greatest offence on that account. (One has only to think of the identification of the good God with Priapus,[23] or of the Anthropos with the ithyphallic Hermes.) It was, moreover, the Gnostics—e.g., Basilides —who exhaustively discussed the problem of evil (*πόθεν τὀ κακὀν*;

—‘whence comes evil?’). The serpentine form of the Nous and the Agathodaimon does not mean that the serpent has only a good aspect. Just as the Apophis-serpent was the traditional enemy of the Egyptian sun-god, so the devil, “that ancient serpent,”[24] is the enemy of Christ, the “novus Sol.” The good, perfect, spiritual God was opposed by an imperfect, vain, ignorant, and incompetent demiurge. There were archontic Powers that gave to mankind a corrupt “chirographum” (handwriting) from which Christ had to redeem them.[25]

[367] With the dawn of the second millennium the accent shifted more and more towards the dark side. The demiurge became the devil who had created the world, and, a little later, alchemy began to develop its conception of Mercurius as the partly material, partly immaterial spirit that penetrates and sustains all things, from stones and metals to the highest living organisms. In the form of a snake he dwells inside the earth, has a body, soul, and spirit, was believed to have a human shape as the homunculus or *homo altus*, and was regarded as the chthonic God.[26] From this we can see clearly that the serpent was either a forerunner of man or a distant copy of the Anthropos, and how justified is the equation Naas = Nous = Logos = Christ = Higher Adam. The medieval extension of this equation towards the dark side had, as I have said, already been prepared by Gnostic phallicism. This appears as early as the fifteenth century in the alchemical Codex Ashburnham 1166,[27] and in the sixteenth century Mercurius was identified with Hermes Kyllenios.[28]



A. The Anthropos Quaternio



B. The Shadow Quaternio

[368] It is significant that Gnostic philosophy found its continuation in alchemy.[29] “Mater Alchimia” is one of the mothers of modern science, and modern science has given us an unparalleled knowledge of the “dark” side of matter. It has also penetrated into the secrets of physiology and evolution, and made the very roots of life itself an object of investigation. In this way the human mind has sunk deep into the sublunary world of matter, thus repeating the Gnostic myth of the Nous, who, beholding his reflection in the depths below, plunged down and was swallowed in the embrace of Physis. The climax of this development was marked in the eighteenth century by the French Revolution, in the nineteenth century by scientific materialism, and in the twentieth century by political and social “realism,” which has turned the wheel of history back a full two thousand years and seen the recrudescence of the despotism, the lack of individual rights, the cruelty, indignity, and slavery of the pre-Christian world, whose “labour problem” was solved by the “ergastulum” (convict-camp). The “transvaluation of all values” is being enacted before our eyes.

[369] The development briefly outlined here seems to have been anticipated in medieval and Gnostic symbolism, just as the Antichrist was in the New Testament. How this occurred I will endeavour to describe in what follows. We have seen that, as the higher Adam corresponds to the lower, so the lower Adam corresponds to the serpent. For the mentality of the Middle Ages and of late antiquity, the first of the two double pyramids, the *Anthropos Quaternio*, represents the world of the spirit, or metaphysics, while the second, the *Shadow Quaternio*, represents sublunary nature and in particular man’s instinctual disposition, the “flesh”—to use a Gnostic-Christian term—which has its roots in the animal kingdom or, to be more precise, in the realm of warm-blooded animals. The nadir of this system is the cold-blooded vertebrate, the snake,[30] for with the snake the psychic rapport that can be established with practically all warm-blooded animals comes to an end. That the snake, contrary to expectation, should be a counterpart of the Anthropos is corroborated by the fact—of especial significance for the Middle Ages—that it is on the one hand a well-known allegory of Christ, and on the other hand appears to be equipped with the gift of wisdom and of

supreme spirituality.[31] As Hippolytus says, the Gnostics identified the serpent with the spinal cord and the medulla. These are synonymous with the reflex functions.

[370] The second of these quaternios is the negative of the first; it is its shadow. By “shadow” I mean the inferior personality, the lowest levels of which are indistinguishable from the instinctuality of an animal. This is a view that can be found at a very early date, in the idea of the *προσφύης ψυχή*, the ‘excrescent soul’[32] of Isidorus.[33] We also meet it in Origen, who speaks of the animals contained in man.[34] Since the shadow, in itself, is unconscious for most people, the snake would correspond to what is totally unconscious and incapable of becoming conscious, but which, as the collective unconscious and as instinct, seems to possess a peculiar wisdom of its own and a knowledge that is often felt to be supernatural. This is the treasure which the snake (or dragon) guards, and also the reason why the snake signifies evil and darkness on the one hand and wisdom on the other. Its unrelatedness, coldness, and dangerousness express the instinctuality that with ruthless cruelty rides roughshod over all moral and any other human wishes and considerations and is therefore just as terrifying and fascinating in its effects as the sudden glance of a poisonous snake.

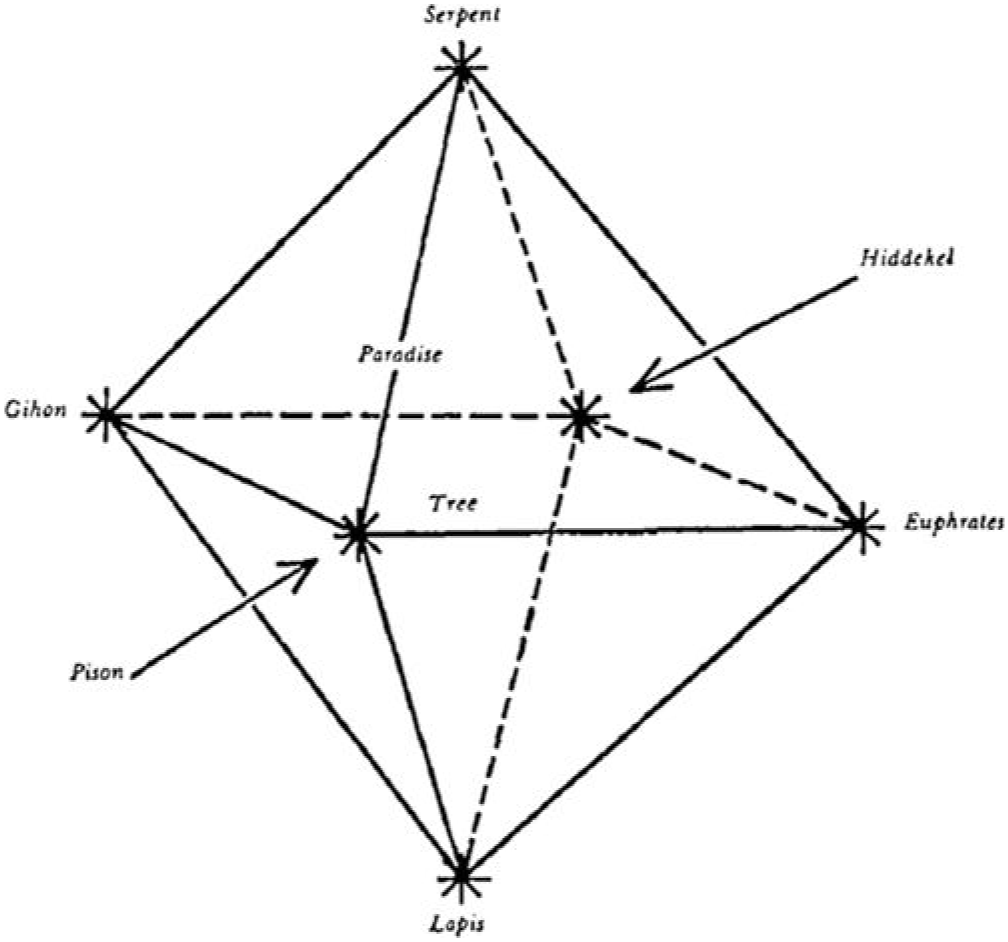
[371] In alchemy the snake is the symbol of *Mercurius non vulgi*, who was bracketed with the god of revelation, Hermes. Both have a pneumatic nature. The *serpens Mercurii* is a chthonic spirit who dwells in matter, more especially in the bit of original chaos hidden in creation, the *massa confusa* or *globosa*. The snake-symbol in alchemy points back to historically earlier images. Since the *opus* was understood by the alchemists as a recapitulation or imitation of the creation of the world, the serpent of Mercurius, that crafty and deceitful god, reminded them of the serpent in the Garden of Eden, and therefore of the devil, the tempter, who on their own admission played all sorts of tricks on them during their work. Mephistopheles, whose “aunt is the snake,” is Goethe’s version of the alchemical familiar, Mercurius. Like the dragon, Mercurius is the slippery, evasive, poisonous, dangerous forerunner of the hermaphrodite, and for that reason he has to be overcome.

[372] For the Naassenes Paradise was a quaternity parallel with the Moses quaternio and of similar meaning. Its fourfold nature consisted in the four rivers, Pison, Gihon, Hiddekel, and Phrat.[35] The serpent in Genesis is an illustration of the personified treenumen; hence it is traditionally represented in or coiled round the tree. It is the tree's voice, which persuades Eve—in Luther's version—that "it would be good to eat of the tree, and pleasant to behold that it is a lusty tree." In the fairytale of "The Spirit in the Bottle," Mercurius can likewise be interpreted as a treenumen.[36] In the Ripley "Scrowle" Mercurius appears as a snake in the shape of a Melusina descending from the top of the Philosophical Tree ("tree of knowledge").[37] The tree stands for the development and phases of the transformation process,[38] and its fruits or flowers signify the consummation of the work.[39] In the fairytale Mercurius is hidden in the roots of a great oak-tree, i.e., in the earth. For it is in the interior of the earth that the Mercurial serpent dwells.

[373] For the alchemists Paradise was a favourite symbol of the *albedo*[40] the regained state of innocence, and the source of its rivers is a symbol of the *aqua permanens*.[41] For the Church Fathers Christ is this source,[42] and Paradise means the ground of the soul from which the fourfold river of the Logos bubbles forth.[43] We find the same symbol in the alchemist and mystic John Pordage: divine Wisdom is a "New Earth, the heavenly Land. … For from this Earth grew all the Trees of Life. … Thus did Paradise … rise up from the Heart and Centre of this New Earth, and thus did the lost Garden of Eden flourish in greenness."[44]

4

[374] The snake symbol brings us to the images of Paradise, tree, and earth. This amounts to an evolutionary regression from the animal kingdom back to plants and inorganic nature, epitomized in alchemy by the secret of matter, the *lapis*. Here the *lapis* is not to be understood as the end product of the *opus* but rather as its initial material. This arcane substance was also called *lapis* by the alchemists. The symbolism here described can be represented diagrammatically as another quaternio or double pyramid:



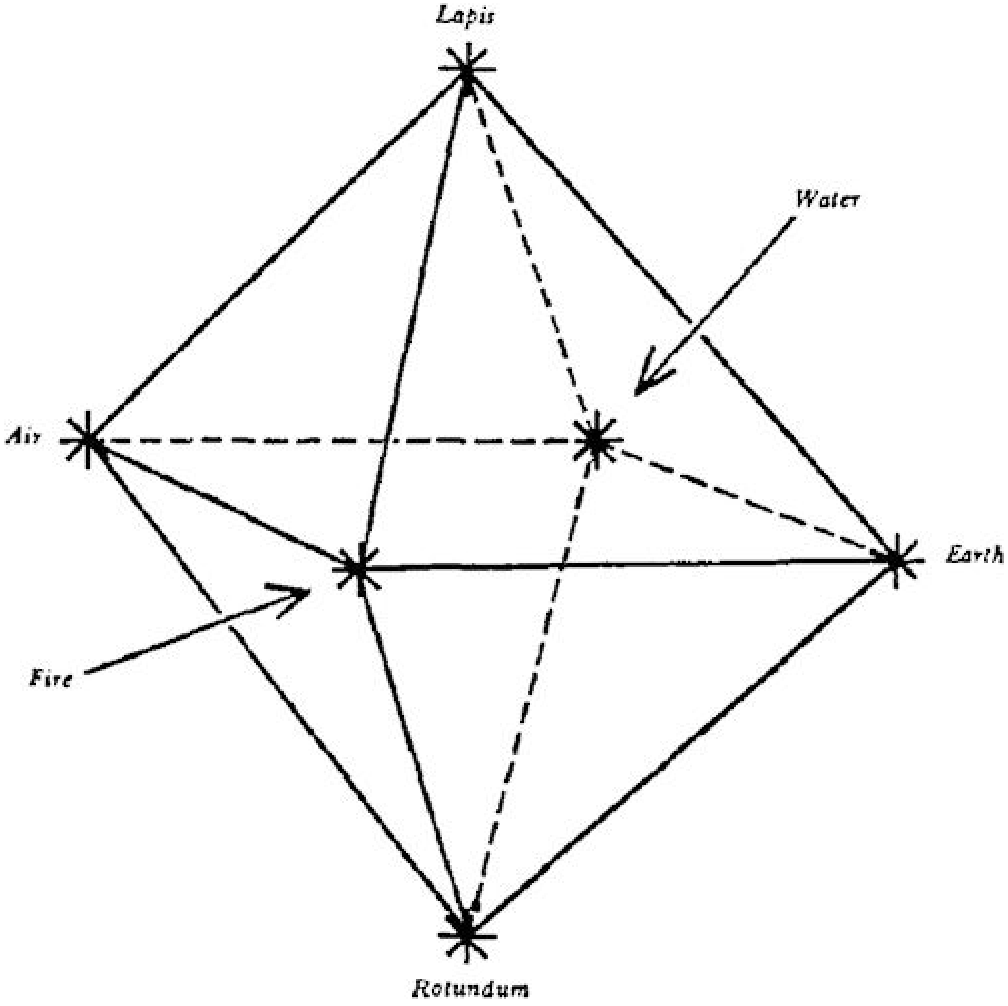
C. The Paradise Quaternio

[375] The *lapis* was thought of as a unity and therefore often stands for the *prima materia* in general. But just as the latter is a bit of the original chaos which was believed to be hidden somewhere in metals, particularly in mercury, or in other substances, and is not in itself a simple thing (as the name “massa confusa” shows), so too the *lapis* consists of the four elements or has to be put together from them.[45] In the chaos the elements are not united, they are merely coexistent and have to be combined through the alchemical procedure. They are even hostile to one another and will not unite of their own accord. They represent, therefore, an original state of conflict and mutual repulsion. This image serves to illustrate the splitting up or unfolding of the original unity into the multiplicity of the visible world. Out of the split-up quaternity the *opus* puts together the unity of the *lapis* in the realm of the inorganic. As the *filius macrocosmi* and a living being, the *lapis* is not just an allegory but

is a direct parallel of Christ[46] and the higher Adam, of the heavenly Original Man, of the second Adam (Christ), and of the serpent. The nadir of this third quaternio is therefore a further counterpart of the Anthropos.

[376] As already mentioned, the constitution of the *lapis* rests on the union of the four elements,[47] which in their turn represent an unfolding of the unknowable inchoate state, or chaos. This is the *prima materia*, the arcanum, the primary substance, which in Paracelsus and his followers is called the *increatum* and is regarded as coeternal with God—a correct interpretation of the Tehom in Genesis 1 : 2: “And the [uncreated] earth was without form and void, and darkness was upon the face of the deep; and the Spirit of God [brooded] over the face of the waters.” This primary substance is round (*massa globosa, rotundum*, στοιχεῖον στρογγύλον), like the world and the world-soul; it is in fact the world-soul and the world-substance in one. It is the “stone that has a spirit,”[48] in modern parlance the most elementary building-stone in the architecture of matter, the atom, which is an intellectual model. The alchemists describe the “round element” now as primal water, now as primal fire, or as pneuma, primal earth, or “corpusculum nostrae sapientiae,” the little body of our wisdom.[49] As water or fire it is the universal solvent; as stone and metal it is something that has to be dissolved and changed into air (pneuma, spirit).

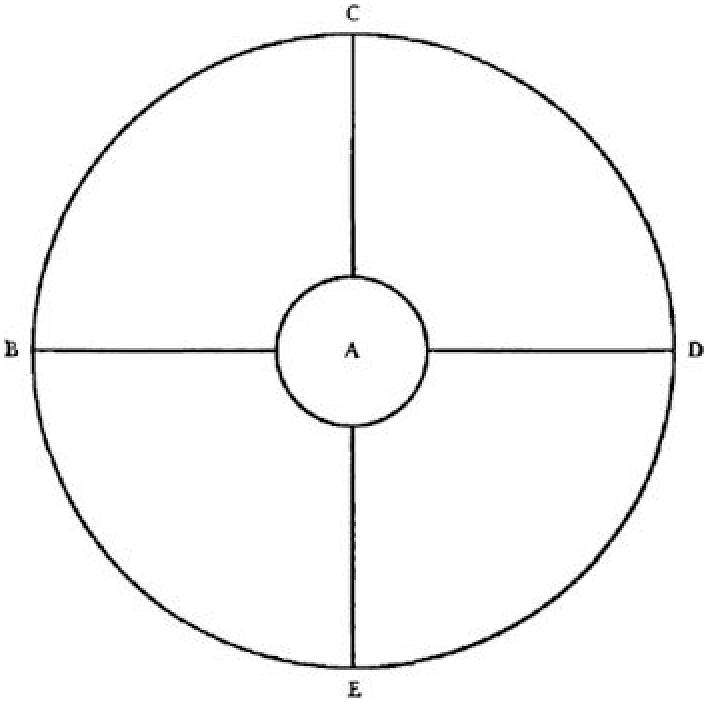
[377] This *lapis* symbolism can once more be visualized diagrammatically as a double pyramid:



D. The Lapis Quaternio

Zosimos calls the *rotundum* the omega element (Ω), which probably signifies the head.[50] The skull is mentioned as the vessel of transformation in the Sabaean treatise “Platonis liber quartorum,”[51] and the “Philosophers” styled themselves “children of the golden head,”[52] which is probably synonymous with “filii sapientiae.” The *vas* is often synonymous with the *lapis*, so that there is no difference between the vessel and its content; in other words, it is the same arcanum.[53] According to the old view the soul is round[54] and the vessel must be round too, like the heavens or the world.[55] The form of the Original Man is round. Accordingly Dorn says that the vessel “should be made from a kind of squaring of the circle, so that the spirit and the soul of our material, separated from its body, may raise the body with them to the height of their own heaven.”[56] The anonymous author of the scholia to the “Tractatus aureus” also writes about the squaring of the circle and shows a square whose corners are formed by the four elements. In the centre there is a small circle. The author says: “Reduce your stone to the four elements, rectify and combine them into one, and you will have the whole magistery. This One, to which the elements must be reduced, is that little circle in the centre of this squared figure. It is the mediator, making peace between the enemies or elements.”[57] In a later chapter he depicts the vessel, “the true philosophical Pelican,”[58] as shown on the next page.[59]

[378] He comments: “A is the inside, as it were the origin and source from which the other letters flow, and likewise the final goal to which all the others flow back, as rivers flow into the ocean or into the great sea.” This explanation is enough to show that the vessel is nothing else but a mandala, symbolizing the self or the higher Adam with his four emanations (like Horus with his four sons). The author calls it the “Septenarius magicus occultus” (the hidden magic number, seven).[60] Likewise Maria the Prophetess says: “The Philosophers teach everything except the Hermetic vessel, because that is divine and is hidden from the Gentiles by the Lord’s wisdom; and they who know it not, know not the true method, because of their ignorance of the vessel of Hermes.” Theobald de Hoghelande adds: “Senior says that the vision thereof is more to be sought after than [knowledge of] the Scriptures.” Maria the Prophetess says: “This is the vessel of Hermes, which the Stoics hid, and it is no nigromantic vessel, but is the measure of thy fire [*mensura ignis tui*].”[61]



[379] It is clear from these quotations that the vessel had a great and unusual significance.[62] Philalethes, summing up the innumerable synonyms for Mercurius, says that Mercurius is not only the key to the alchemical art, and “that two-edged sword in the hand of the cherub who guards the way to the tree of life,” but also “our true, hidden vessel, the Philosophic garden, wherein our Sun rises and sets.”[63] This helps us to understand, more or less, the strange advice given by Johannes de Rupescissa: “Have a vessel made after the manner of a cherub, which is the figure of God, and have six wings, after the fashion of six arms, turning back on themselves; and above, a round head … and put within this vessel the said burning water,” etc.[64] The definition of the cherub as “the figure of God” suggests that Rupescissa is referring here to the vision of Ezekiel, which was arranged in such a way that a horizontal section through it would produce a mandala divided into four parts. This, as I have already mentioned, is equivalent to the squaring of the circle, from which, according to one alchemical recipe, the vessel should be constructed. The mandala signifies the human or divine self, the totality or vision of God, as in this case is quite clear. Naturally a recipe of this sort can only be understood “philosophically,” that is psychologically. It then reads: make the Hermetic vessel out of your psychic wholeness and

pour into it the *aqua permanens,* or *aqua doctrinae,* one of whose synonyms is the *vinum ardens* (cf. Rupescissa's "burning water"). This would be a hint that the adept should "inwardly digest" and transform himself through the alchemical doctrine.

[380] In this connection we can also understand what the *Aurora consurgens* (Part II) means when it speaks of the *vas naturale* as the *matrix:* it is the "One in which there are three things, namely water, air, and fire. They are three glass alembics, in which the son of the Philosophers is begotten. Therefore they have named it tincture, blood, and egg."[65] The three alembics are an allusion to the Trinity. That this is in fact so can be seen from the illustration on page 249 of the 1588 edition of *Pandora*, where, beside the three alembics immersed in a great cooking-pot, there stands the figure of Christ, with blood pouring from the lance wound in his breast ("flumina de ventre Christi"!).[66] The round Hermetic vessel in which the mysterious transformation is accomplished is God himself, the (Platonic) world-soul and man's own wholeness. It is, therefore, another counterpart of the Anthropos, and at the same time the universe in its smallest and most material form. So it is easy to see why the first attempts to construct a model of the atom took the planetary system as a prototype.

5

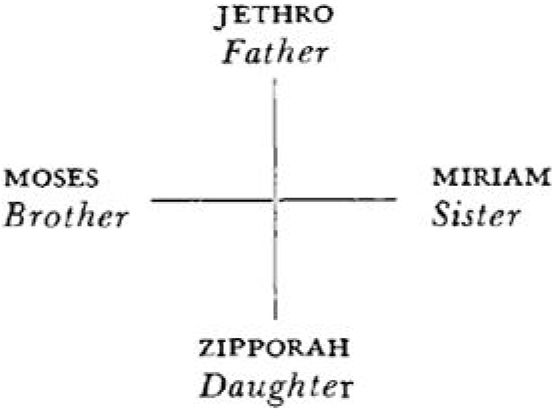
[381] The quaternity is an organizing schema par excellence, something like the crossed threads in a telescope. It is a system of co-ordinates that is used almost instinctively for dividing up and arranging a chaotic multiplicity, as when we divide up the visible surface of the earth, the course of the year, or a collection of individuals into groups,[67] the phases of the moon, the temperaments, elements, alchemical colours, and so on. Thus, when we come upon a quaternio among the Gnostics, we find in it an attempt, more or less conscious, to organize the chaotic medley of numinous images that poured in upon them. As we have seen, the arrangement took a form that derives from the primitive cross-cousin marriage, namely the marriage quaternio.[68] This differs from the primitive form in that the sister-exchange marriage has sloughed off its biological character, the sister's husband no longer being the wife's

brother but another close relative (such as the wife's father in the Moses Quaternio), or even a stranger. The loss of the cousin- and brother-attribute is compensated as a rule by magical qualities, such as more exalted rank, magical powers, and the like, both in the case of the husband's sister and the wife's brother. That is to say, an anima-animus projection takes place. This modification brings with it a great cultural advance, for the very fact of projection points to a constellation of the unconscious in the husband-wife relationship, which means that the marriage has become *psychologically* complicated. It is no longer a state of mere biological and social coexistence, but is beginning to turn into a conscious relationship. This happens when the original cross-cousin marriage becomes obsolete as a result of the further differentiation of marriage classes into a six-, eight-, or twelve-class system. The cause of the activation of the unconscious that goes hand in hand with this development is the regression of the endogamous tendency—the "kinship libido"—which can no longer find adequate satisfaction owing to the increasing strangeness of the marriage partner.[69]

[382] Besides the marriage quaternio, the Gnostics also used the quaternity of the rivers of Paradise as a means of organizing their numerous symbols. There are thus two (compensatory) attempts, in the symbols we have listed, to organize the apparently disconnected images. This accords with our experience of the series of pictures produced during active imagination and in chaotic psychic states. In both cases quaternity symbols appear from time to time.[70] They signify stabilization through order as opposed to the instability caused by chaos, and have a compensatory meaning.

[383] The four quaternios depicted above are first and foremost an attempt to arrange systematically the almost limitless wealth of symbols in Gnosticism and its continuation, alchemy. But such an arrangement of principles also proves useful for understanding the individual symbolism of modern dreams. The images we encounter in this field are even more varied, and so confusing in their complexity that some kind of organizing schema is absolutely essential. As it is advisable to proceed historically, I have taken the Moses Quaternio as a starting point, because it derives directly from the primitive schema of the cross-cousin marriage.

Naturally this quaternio has only a paradigmatic significance. One could base the system just as easily on any other marriage quaternio, but not on any other quaternity, such as, for instance, Horus and his four sons. This quaternity is not aboriginal enough, for it misses out the antagonistic, feminine element.[71] It is most important that just the extreme opposites, masculine-feminine and so on, should appear linked together. That is why the alchemical pairs of opposites are linked together in quaternities, e.g., warm-cold, dry-moist. Applied to the Moses Quaternio, the following schema of relationships would result:



[384] Whereas the first double pyramid, the Anthropos Quaternio, corresponds to the Gnostic model, the second one is a construction derived psychologically from the first, but based on the data contained in the Biblical text used by the Gnostics. The psychological reasons for constructing a second quaternio have already been discussed. That the second must be the "shadow" of the first is due to the fact that the lower Adam, the mortal man, possesses a chthonic psyche and is therefore not adequately expressed by a quaternity supraordinate to him. If he were, he would be an unsymmetrical figure, just as the higher Adam is unsymmetrical and has to be complemented by a subordinate quaternity related to him like his shadow or his darker reflection.

[385] Now just as the Anthropos Quaternio finds its symmetrical complement in the lower Adam, so the lower Adam is balanced by the subordinate Shadow Quaternio, constructed after the pattern of the upper one. The symmetrical complement of the lower Adam is the *serpent*. The choice of this symbol is justified firstly by the well-known association of Adam with the snake: it is his chthonic daemon, his familiar spirit.

Secondly, the snake is the commonest symbol for the dark, chthonic world of instinct. It may—as frequently happens—be replaced by an equivalent cold-blooded animal, such as a dragon, crocodile, or fish. But the snake is not just a nefarious, chthonic being; it is also, as we have already mentioned, a symbol of wisdom, and hence of light, goodness, and healing.[72] Even in the New Testament it is simultaneously an allegory of Christ and of the devil, just as we have seen that the fish was. Similarly the dragon, which for us has only a negative meaning, has a positive significance in China, and sometimes in Western alchemy too. The inner polarity of the snake-symbol far exceeds that of man. It is overt, whereas man's is partly latent or potential. The serpent surpasses Adam in cleverness and knowledge and can outwit him. She is older than he, and is evidently equipped by God with a superhuman intelligence, like that son of God who took over the role of Satan.[73]

[386] Just as man culminates above in the idea of a "light" and good God, so he rests below on a dark and evil principle, traditionally described as the devil or as the serpent that personifies Adam's disobedience. And just as we symmetrized man by the serpent, so the serpent has its complement in the second Naassene quaternio, or Paradise Quaternio. Paradise takes us into the world of plants and animals. It is, in fact, a plantation or garden enlivened by animals, the epitome of all the growing things that sprout out of the earth. As *serpens mercurialis*, the snake is not only related to the god of revelation, Hermes, but, as a vegetation numen, calls forth the "blessed greenness," all the budding and blossoming of plant life.[74] Indeed, this serpent actually dwells in the interior of the earth and is the pneuma that lies hidden in the *stone*.[75]

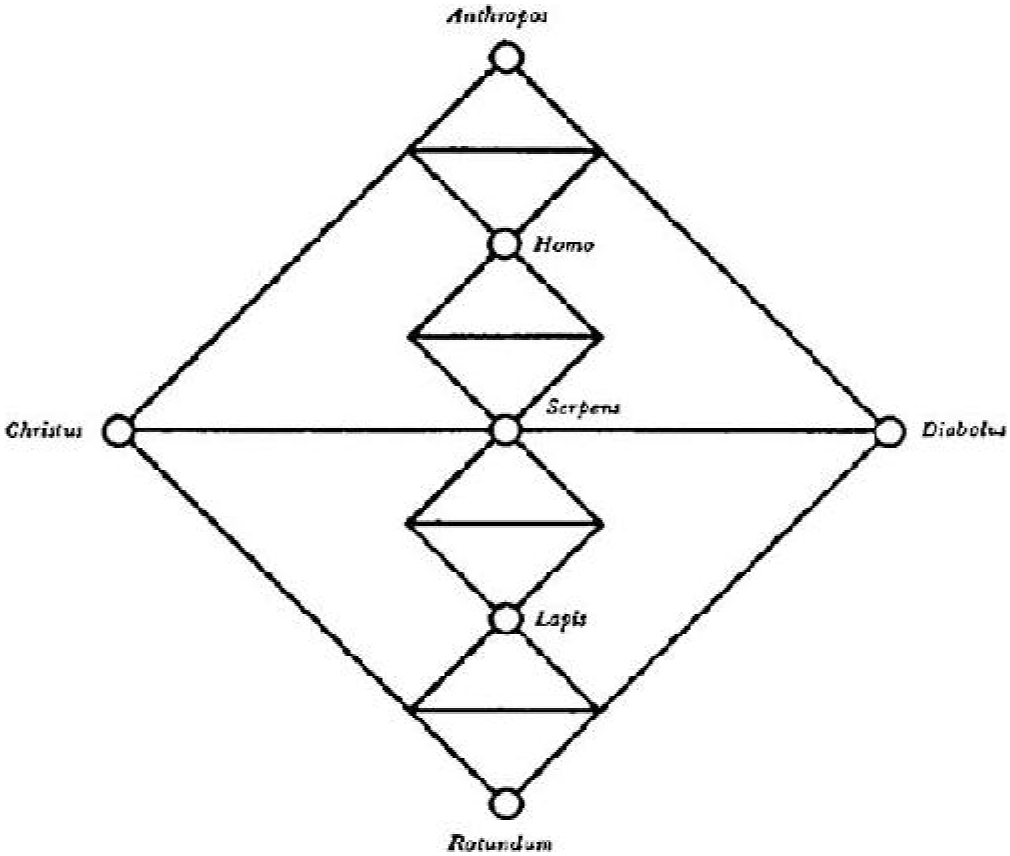
[387] The symmetrical complement of the serpent, then, is the *stone* as representative of the earth. Here we enter a later developmental stage of the symbolism, the alchemical stage, whose central idea is the *lapis*. Just as the serpent forms the lower opposite of man, so the *lapis* complements the serpent. It corresponds, on the other hand, to man, for it is not only represented in human form but even has "body, soul, and spirit," is an homunculus and, as the texts show, a symbol of the self. It is, however, not a human ego but a collective entity, a collective soul, like the Indian

hiranyagarbha, ‘golden seed.’ The stone is the “father-mother” of the metals, an hermaphrodite. Though it is an ultimate unity, it is not an elementary but a composite unity that has evolved. For the stone we could substitute all those “thousand names” which the alchemists devised for their central symbol, but nothing different or more fitting would have been said.

[388] This choice of symbol, too, is not arbitrary, but is documented by alchemical literature from the first to the eighteenth century. The *lapis* is produced, as we have already seen, from the splitting and putting together of the four elements, from the *rotundum*. The *rotundum* is a highly abstract, transcendent idea, which by reason of its roundness[76] and wholeness refers to the Original Man, the Anthropos.

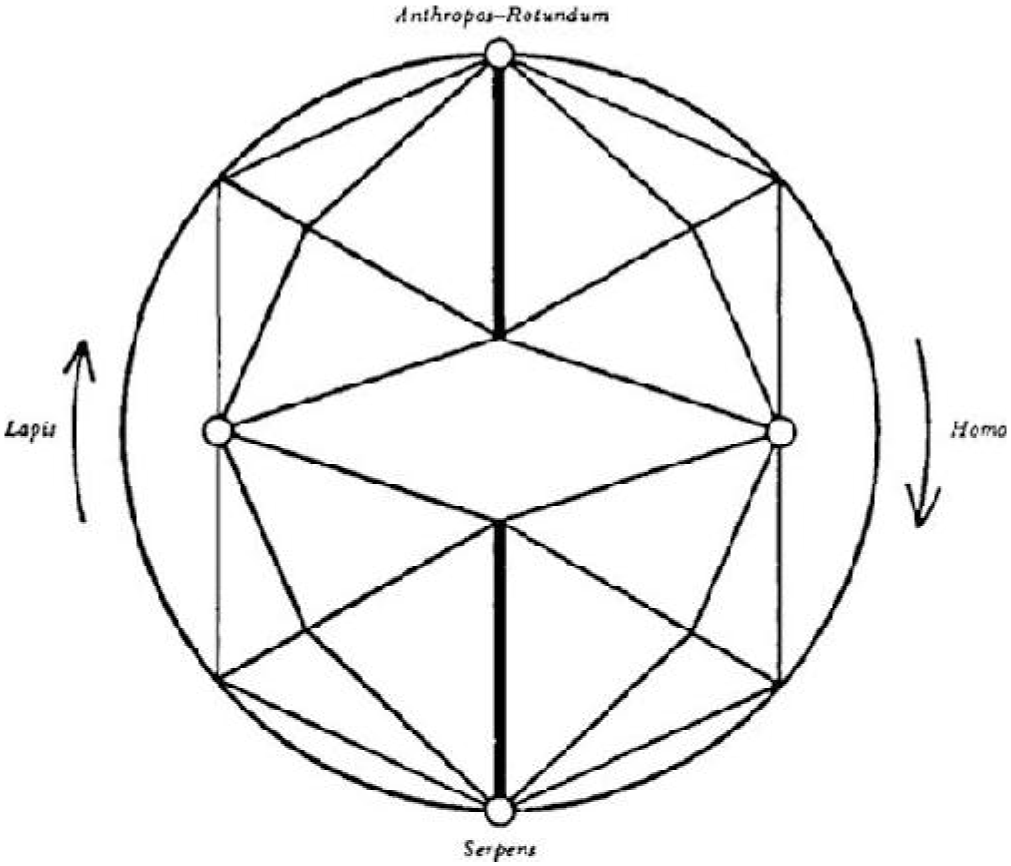
[389] Accordingly our four double pyramids would arrange themselves in a *circle* and form the well-known *uroboros*. As the fifth stage, the *rotundum* would then be identical with the first; that is to say, the heavy darkness of the earth, *metal*, has a secret relationship to the Anthropos. That is obvious in alchemy, but occurs also in the history of religion, where the metals grow from Gayomart’s blood.[77] This curious relationship is explained by the identity of the lowest, most material thing with the highest and most spiritual, which we have already met in the interpretation of the serpent as a chthonic and at the same time the “most spiritual” animal. In Plato the *rotundum* is the world-soul and a “blessed God.”[78]

[390] We shall now try to condense the argument of the previous chapter and represent it graphically. Vertically arranged, our schema looks like this:



In the diagram I have emphasized the point of greatest tension between the opposites, namely the double significance of the serpent, which occupies the centre of the system. Being an allegory of Christ as well as of the devil, it contains and symbolizes the strongest polarity into which the Anthropos falls when he descends into Physis. The ordinary man has not reached this point of tension: he has it merely in the unconscious, i.e., in the serpent.[79] In the *lapis*, the counterpart of man, the opposites are so to speak united, but with a visible seam or suture as in the symbol of the hermaphrodite. This mars the idea of the *lapis* just as much as the all-too-human element mars *Homo sapiens*. In the higher Adam and in the *rotundum* the opposition is invisible. But presumably the one stands in absolute opposition to the other, and if both are identical as indistinguishable transcendental entities, this is one of those paradoxes that are the rule: a statement about something metaphysical can only be antinomial.

[391] The arrangement in the uroboros gives the following picture:



This arrangement shows the stronger tension between *anthropos-rotundum* and *serpens* on the one hand, and the lesser tension between *homo* and *lapis* on the other, expressed by the distance of the points in question from one another. The arrows indicate the descent into Physis and the ascent towards the spiritual. The lowest point is the serpent. The *lapis*, however, though of decidedly material nature, is also a spiritual symbol, while the *rotundum* connotes a transcendent entity symbolized by the secret of matter and thus comparable to the concept of the atom. The antinomial development of the concepts is in keeping with the paradoxical nature of alchemy.

[392] The *lapis* quaternity, which is a product of alchemical gnosis, brings us to the interesting physical speculations of alchemy. In the *Scrutinium chymicum* (1687) of Michael Maier (1568-1622), there is a picture[80] of the four elements as four different stages of fire (Plate I).

[393] As the picture shows, the four spheres are filled with fire. The author comments with the following verses:

Naturae qui imitaris opus, tibi quattuor orbes
  Quaerendi, interius quos levis ignis agat.
Imus Vulcanum referat, bene monstret at alter
  Mercurium, Lunam tertius orbis habet:
Quartus, Apollo, tuus, naturae auditur et ignis,
  Ducat in arte manus illa catena tuas.

From this we learn that the lowest sphere corresponds to Vulcan, the earthly (?) fire; the second to Mercurius, the vegetative life-spirit; the third to the moon, the female, psychic principle; and the fourth to the sun, the male, spiritual principle. It is evident from Maier's commentary that he is concerned on the one hand with the four *elements* and on the other with the four kinds of *fire* which are responsible for producing different states of aggregation. His *ignis elementalis re et nomine* would, according to its place in the sequence, correspond to Vulcan; the fire of Mercurius to air; the third fire to water and the moon; and the fourth, which would correspond to the sun, he calls "terreus" (earthly). According to Ripley, whom Maier quotes, the *ignis elementalis* is the fire "which lights wood"; it must therefore be the ordinary fire. The sun-fire, on the other hand, seems to be the fire in the earth, which today we would call "volcanic," and corresponds to the solid state of aggregation ("terreus"). We thus get the following series:

VIGENÈRE SERIES[81]	RIPLEY SERIES	
ignis mundi intelligibilis	= *ignis naturalise*[82]	=
ignis caelestis	= *ignis innaturalis*[83]	=
ignis elementaris	= *ignis contra naturam*[84]	=
ignis infernalis[81]	= *ignis elementalis*	=

MAIER SERIES

ignis terreus	= *Sulfura et Mercurii*	= *Sun (Apollo*)	= *earth*
ignis aqueus	= *aquae*	= *Moon (Luna*)	= *water*
ignis aerius	= *dracones*	= *Mercurius*	= *air*
ignis elementalis	= *ignis elementalis re et nomine*	= *Ordinary fire (Vulca*)	= *fire*

STATES OF AGGREGATION

= *solid*

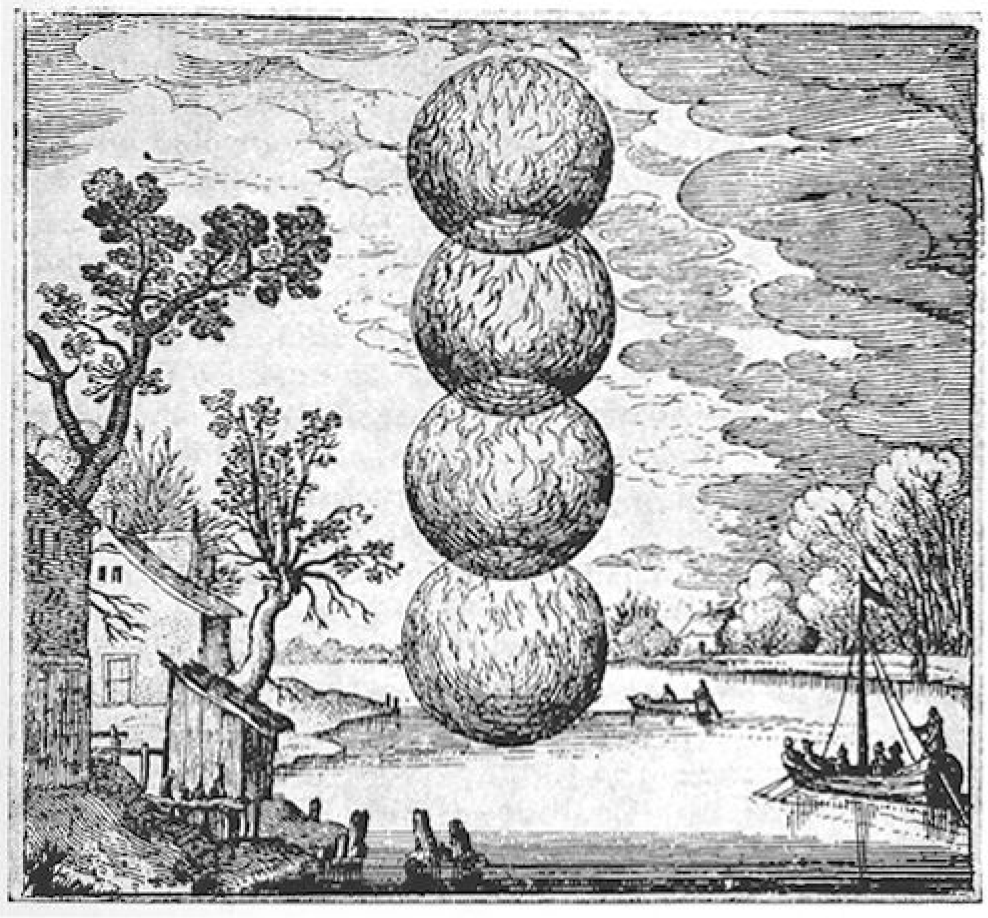
= *liquid*

= *gas*

= *flame*

[394] The remarkable thing about this paralleling of states of aggregation with different kinds of fire is that it amounts to a kind of *phlogiston theory*—not, of course, explicit, but clearly hinted at: fire is peculiar to all the states of aggregation and is therefore responsible for their constitution. This idea is old[85] and can be found as early as the *Turba*, where Dardaris says: “The sulphurs are four souls [*animae*] which were hidden in the four elements.”[86] Here the active principle (*anima*) is not fire, but sulphur. The idea, however, is the same, namely that the elements or states of aggregation can be reduced to a common denominator. Today we know that the factor common to antagonistic elements is *molecular movement*, and that the states of aggregation correspond to different degrees of this movement. Molecular movement in its turn corresponds to a certain quantum of energy, so that the

common denominator of the elements is energy. One of the stepping-stones to the modern concept of energy is Stahl's phlogiston theory,[87] which is based on the alchemical premises discussed above. We can see in them, therefore, the earliest beginnings of a theory of energy.[88]

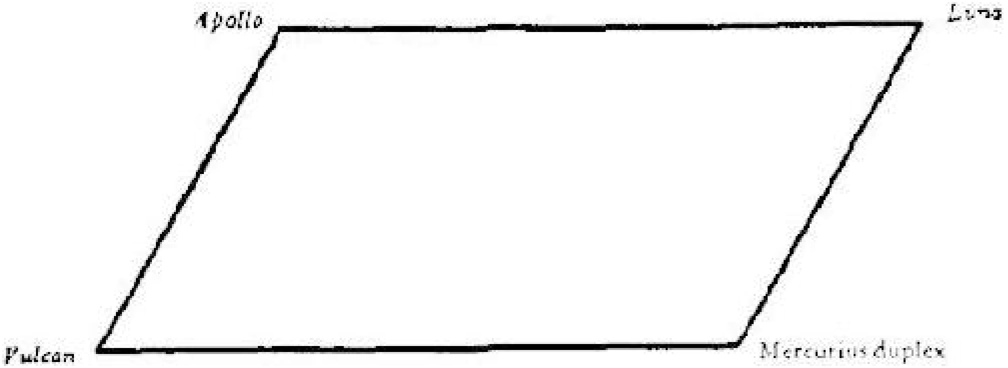


I. The Four Elements From Michael Maier, *Scrutinium chymicum* (1687)

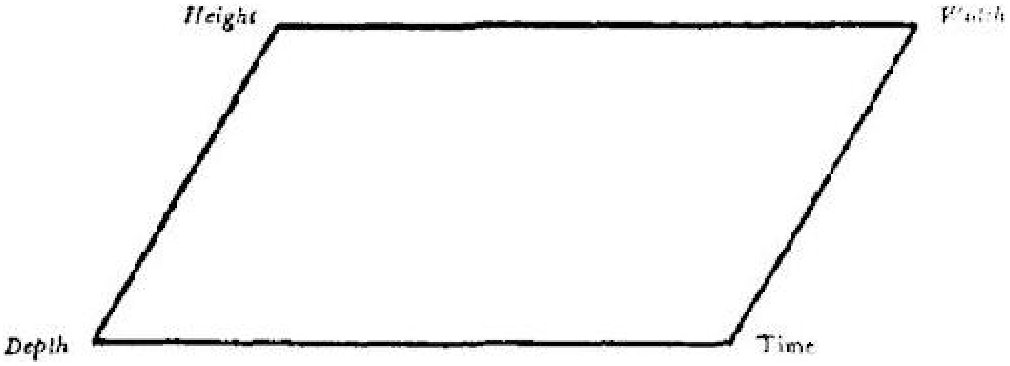
[395] The phlogiston theory adumbrated by the alchemists did not get as far as that, but it points unmistakably in that direction. Moreover, all the mathematical and physical elements from which a theory of energy could have been constructed were known in the seventeenth century. Energy is an abstract concept which is indispensable for exact description of the behaviour of bodies in motion. In the same way bodies in motion can only be apprehended with the help of the system of space-time co-ordinates. Wherever movement is established, it is done by means of the space-time quaternio, which can be expressed either by the axiom of Maria, 3 + 1, or by the sesquitertian proportion, 3 : 4. This quaternio

could therefore replace that of the four elements, where the unit that corresponds to the time-coordinate, or the fourth in the alchemical series of elements, is characterized by the fact that *one* element has an exceptional position, like fire or earth.[89]

[396] The exceptional position of one of the factors in a quaternity can also be expressed by its *duplex nature*. For instance, the fourth of the rivers of Paradise, the Euphrates, signifies the mouth through which food goes in and prayers go out, as well as the Logos. In the Moses Quaternio, the wife of Moses plays the double role of Zipporah and of the Ethiopian woman. If we construct a quaternity from the divine equivalents of Maier’s four elements—Apollo, Luna, Mercurius, Vulcan—we get a marriage quaternio with a brother-sister relationship:



In alchemy Mercurius is male-female and frequently appears as a virgin too. This characteristic (3 + 1, or 3 : 4) is also apparent in the space-time quaternio:



[397] If we look at this quaternio from the standpoint of the three-dimensionality of space, then time can be conceived as a fourth dimension. But if we look at it in terms of the three qualities of time—

past, present, future—then static space, in which changes of state occur, must be added as a fourth term. In both cases, the fourth represents an incommensurable Other that is needed for their mutual determination. Thus we measure space by time and time by space. The Other, the fourth, corresponds in the Gnostic quaternities to the fiery god, "the fourth by number," to the dual wife of Moses (Zipporah and the Ethiopian woman), to the dual Euphrates (river and Logos), to the fire[90] in the alchemical quaternio of elements, to Mercurius duplex in Maier's quaternio of gods, and in the "Christian Quaternity"—if such an expression be permitted[91]—to Mary or the devil. These two incompatible figures are united in the Mercurius duplex of alchemy.[92]

[398] The space-time quaternio is the archetypal *sine qua non* for any apprehension of the physical world—indeed, the very possibility of apprehending it. It is the organizing schema par excellence among the psychic quaternities. In its structure it corresponds to the psychological schema of the functions.[93] The 3 : 1 proportion frequently occurs in dreams and in spontaneous mandala-drawings.

[399] A modern parallel to the diagram of quaternities arranged on top of one another (cf. par. 390), coupled with the idea of ascent and descent, can be found among the illustrations to my paper on mandala pictures.[94] The same idea also appears in the pictures relating to a case described there at some length, and dealing with vibrations that formed "nodes."[95] Each of these nodes signified an outstanding personality, as was true also of the picture in the first case. A similar motif may well underlie the representation of the Trinity here appended (Plate II), from the manuscript of a treatise by Joachim of Flora.[96]

[400] I would like, in conclusion, to mention the peculiar theory of world creation in the Clementine Homilies. In God, pneuma and soma are one. When they separate, pneuma appears as the Son and "archon of the future Aeon," but soma, actual substance (*ούοία*) or matter ὕλη, divides into four, corresponding to the four elements (which were always solemnly invoked at initiations). From the mixing of the four parts there arose the devil, the "archon of this Aeon," and the *psyche* of this world. Soma had become psychized (ἐμψῦχον): "God rules this world as much through the

devil as through the Son, for both are in his hands.”[97] God unfolds himself in the world in the form of syzygies (paired opposites), such as heaven/earth, day/night, male/female, etc. The last term of the first series is the Adam/Eve syzygy. At the end of this fragmentation process there follows the return to the beginning, the consummation of the universe (τελευτὴ τῶν πάντων) through purification and annihilation.[98]

[401] Anyone who knows alchemy can hardly avoid being struck by the likeness which pseudo-Clement’s theory bears to the basic conceptions of the alchemists, if we disregard its moral aspects. Thus we have the “hostile brothers,” Christ and the devil, who were regarded as brothers in the Jewish-Christian tradition; the tetrameria into four parts or elements; the paired opposites and their ultimate unity; the parallel of the *lapis* and Mercurius with Christ and, because of the snake or dragon symbolism, also with the devil; and finally, the figure of Mercurius duplex and of the *lapis*, which unites the opposites indivisibly in itself.

*

[402] If we look back over the course our argument has taken, we see at the beginning of it two Gnostic quaternities, one of which is supraordinate, and the other subordinate, to man, namely the “Positive Moses” or Anthropos Quaternio, and the Paradise Quaternio.[99] It is probably no accident that Hippolytus mentions precisely these two quaternities, or that the Naassenes knew only these, for the position of man is, in their system, closely connected with the higher Adam but is separated from the chthonic world of plants and animals, namely Paradise. Only through his shadow has he a relationship to the serpent with its dual meaning. This situation is altogether characteristic of the age of Gnosticism and early Christianity. Man in those days was close to the “kingless [i.e., independent] race,” that is, to the upper quaternity, the kingdom of heaven, and looked upward. But what begins above does not rise higher, but ends below. Thus we felt impelled to symmetrize the lower Adam of the Naassenes by a Shadow Quaternio, for just as he cannot ascend direct to the higher Adam—since the Moses Quaternio lies in between—so we have to assume a lower, shadowy quaternity

corresponding to the upper one, lying between him and the lower principle, the serpent. This operation was obviously unknown in the Gnostic age, because the unsymmetrical upward trend seemed to disturb nobody, but rather to be the very thing desired and “on the programme.” If, therefore, we insert between Man and Serpent a quaternity not mentioned in the texts, we do so because we can no longer conceive of a psyche that is oriented exclusively upwards and that is not balanced by an equally strong consciousness of the lower man. This is a specifically modern state of affairs and, in the context of Gnostic thinking, an obnoxious anachronism that puts man in the centre of the field of consciousness where he had never consciously stood before. Only through Christ could he actually see this consciousness mediating between God and the world, and by making the person of Christ the object of his devotions he gradually came to acquire Christ’s position as mediator. Through the Christ crucified between the two thieves man gradually attained knowledge of his shadow and its duality. This duality had already been anticipated by the double meaning of the serpent. Just as the serpent stands for the power that heals as well as corrupts, so one of the thieves is destined upwards, the other downwards, and so likewise the shadow is on one side regrettable and reprehensible weakness, on the other side healthy instinctivity and the prerequisite for higher consciousness.

II. The Trinity From a manuscript by Joachim of Flora

[403] Thus the Shadow Quaternio that counterbalances man’s position as mediator only falls into place when that position has become sufficiently real for him to feel his consciousness of himself or his own existence more strongly than his dependence on and governance by God. Therefore, if we complement the upward-tending pneumatic attitude that characterizes the early Christian and Gnostic mentality by adding its opposite counterpart, this is in line with the historical development. Man’s original dependence on a pneumatic sphere, to which he clung like a child to its mother, was threatened by the kingdom of Satan. From him the pneumatic man was delivered by the Redeemer, who broke the gates of hell and deceived the archons; but he was bound to the kingdom of

heaven in exactly the same degree. He was separated from evil by an abyss. This attitude was powerfully reinforced by the immediate expectation of the Second Coming. But when Christ did not reappear, a regression was only to be expected. When such a great hope is dashed and such great expectations are not fulfilled, then the libido perforce flows back into man and heightens his consciousness of himself by accentuating his personal psychic processes; in other words, he gradually moves into the centre of his field of consciousness. This leads to separation from the pneumatic sphere and an approach to the realm of the shadow. Accordingly, man's moral consciousness is sharpened, and, as a parallel to this, his feeling of redemption becomes relativized. The Church has to exalt the significance and power of her ritual in order to put limits to the inrush of reality. In this way she inevitably becomes a "kingdom of this world." The transition from the Anthropos to the Shadow Quaternio illustrates an historical development which led, in the eleventh century, to a widespread recognition of the evil principle as the world creator.

[404] The serpent and its chthonic wisdom form the turning-point of the great drama. The Paradise Quaternio with the *lapis*, that comes next, brings us to the beginnings of natural science (Roger Bacon, 1214–94; Albertus Magnus, 1193–1280; and the alchemists), whose main trend differs from the pneumatic not by 180° but only by 90°—that is to say, it cuts across the spiritual attitude of the Church and is more an embarrassment for faith than a contradiction of it.

[405] From the *lapis*, i.e., from alchemy, the line leads direct to the quaternio of alchemical states of aggregation, which, as we have seen, is ultimately based on the space-time quaternio. The latter comes into the category of archetypal quaternities and proves, like these, to be an indispensable principle for organizing the sense-impressions which the psyche receives from bodies in motion. Space and time form a psychological *a priori*, an aspect of the archetypal quaternity which is altogether indispensable for acquiring knowledge of physical processes.

[406] The development from the Shadow to the Lapis Quaternio illustrates the change in man's picture of the world during the course of the second

millennium. The series ends with the concept of the *rotundum*, or of rotation as contrasted with the static quality of the quaternity, which, as we have said, proves to be of prime importance for apprehending reality. The rise of scientific materialism connected with this development appears on the one hand as a logical consequence, on the other hand as a deification of matter. This latter aspect is based, psychologically, on the fact that the *rotundum* coincides with the archetype of the Anthropos.

[407] With this insight the ring of the uroboros closes, that symbol of the *opus circulare* of Nature as well as of the "Art."

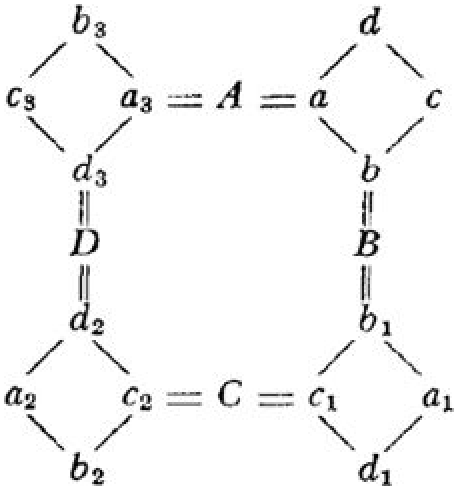
7

[408] Our quaternio series could also be expressed in the form of an equation, where *A* stands for the initial state (in this case the Anthropos) and for the end state, and *B C D* for intermediate states. The formations that split off from them are denoted in each case by the small letters *a b c d*. With regard to the construction of the formula, we must bear in mind that we are concerned with the continual process of transformation of one and the same substance. This substance, and its respective state of transformation, will always bring forth its like; thus *A* will produce *a* and *B b;* equally, *b* produces *B* and *c C*. It is also assumed that *a* is followed by *b* and that the formula runs from left to right. These assumptions are legitimate in a psychological formula.

[409] Naturally the formula cannot be arranged in linear fashion but only in a circle, which for that reason moves to the right. *A* produces its like, *a*. From *a* the process advances by contingence to *b*, which in turn produces *B*. The transformation turns rightwards with the sun; that is, it is a process of becoming conscious, as is already indicated by the splitting (discrimination) of *A B C D* each time into four qualitatively discrete units.[100] Our scientific understanding today is not based on a quaternity but on a trinity of principles (space, time, causality).[101] Here, however, we are moving not in the sphere of modern scientific thinking, but in that of the classical and medieval view of the world, which up to the time of Leibniz recognized the principle of *correspondence* and applied it naïvely and unreflectingly. In order to give our judgment on A—

expressed by *abc*—the character of wholeness, we must supplement our time-conditioned thinking by the principle of correspondence or, as I have called it, *synchronicity*.[102] The reason for this is that our description of Nature is in certain respects incomplete and accordingly excludes observable facts from our understanding or else formulates them in an unjustifiably negative way, as for instance in the paradox of "an effect without a cause."[103] Our Gnostic quaternity is a naïve product of the unconscious and therefore represents a psychic fact which can be brought into relationship with the four orienting functions of consciousness; for the rightward movement of the process is, as I have said, the expression of conscious discrimination[104] and hence an application of the four functions that constitute the essence of a conscious process.

[410] The whole cycle necessarily returns to its beginning, and does so at the moment when *D*, in point of contingence the state furthest removed from *A*, changes into a_3 by a kind of enantiodromia. We thus have:



The formula reproduces exactly the essential features of the symbolic process of transformation. It shows the rotation of the mandala,[105] the antithetical play of complementary (or compensatory) processes, then the apocatastasis, i.e., the restoration of an original state of wholeness, which the alchemists expressed through the symbol of the uroboros, and finally the formula repeats the ancient alchemical tetrameria,[106] which is implicit in the fourfold structure of unity: $A = \begin{tikzcd} & d \arrow[dr, dash] & \\ a \arrow[ur, dash] \arrow[dr, dash] & & c \\ & b \arrow[ur, dash] & \end{tikzcd}$. What the formula can only hint at, however, is the higher plane that is reached through the process of transformation and integration. The "sublimation" or progress or qualitative change consists in an unfolding of totality into four parts four times, which means nothing less than its becoming conscious. When psychic contents are split up into four aspects, it means that they have been subjected to discrimination by the four orienting functions of consciousness. Only the production of these four aspects makes a total description possible. The process depicted by our formula changes the originally unconscious totality into a conscious one. The Anthropos A descends from above through his Shadow B into Physis C (= serpent), and, through a kind of crystallization process D (= *lapis*) that reduces chaos to order, rises again to the original state, which in the meantime has been transformed from an unconscious into a conscious one. Consciousness and understanding arise from discrimination, that is, through analysis (dissolution) followed by synthesis, as stated in symbolical terms by the alchemical dictum: "Solve et coagula" (dissolve and coagulate). The correspondence is represented by the identity of the letters a, a_1, a_2, a_3, and so on. That is to say, we are dealing all the time with the same factor, which in the formula merely changes its place, whereas psychologically its name and quality change too. At the same time it becomes clear that the change of place is always an enantiodromian change of situation, corresponding to the complementary or compensatory changes in the psyche as a whole. It was in this way that the changing of the hexagrams in the *I Ching* was understood by the classical Chinese commentators. Every archetypal arrangement has its own numinosity, as is apparent from the very names given to it. Thus a to d is the "kingless race," a_1 to d_2 is the Shadow Quaternio, which is annoying, because it stands for the all-too-human human being (Nietzsche's "Ugliest Man"),[107] a_2 to d_2 is "Paradise," which speaks for itself, and finally a_3 to d_3 is the world of matter, whose numinosity in the shape of materialism threatens to suffocate our world. What changes these correspond to in the history of the human mind over the last two thousand years I need hardly specify in detail.

[411] The formula presents a symbol of the self, for the self is not just a static quantity or constant form, but is also a dynamic process. In the same way, the ancients saw the *imago Dei* in man not as a mere imprint, as a sort of lifeless, stereotyped impression, but as an active force. The four transformations represent a process of restoration or rejuvenation taking place, as it were, inside the self, and comparable to the carbon-nitrogen cycle in the sun, when a carbon nucleus captures four protons (two of which immediately become neutrons) and releases them at the end of the cycle in the form of an alpha particle. The carbon nucleus itself comes out of the reaction unchanged, "like the Phoenix from the ashes."[108] The secret of existence, i.e., the existence of the atom and its components, may well consist in a continually repeated process of rejuvenation, and one comes to similar conclusions in trying to account for the numinosity of the archetypes.

[412] I am fully aware of the extremely hypothetical nature of this comparison, but I deem it appropriate to entertain such reflections even at the risk of being deceived by appearances. Sooner or later nuclear physics and the psychology of the unconscious will draw closer together as both of them, independently of one another and from opposite directions, push forward into transcendental territory, the one with the concept of the atom, the other with that of the archetype.

[413] The analogy with physics is not a digression since the symbolical schema itself represents the descent into matter and requires the identity of the outside with the inside. Psyche cannot be totally different from matter, for how otherwise could it move matter? And matter cannot be alien to psyche, for how else could matter produce psyche? Psyche and matter exist in one and the same world, and each partakes of the other, otherwise any reciprocal action would be impossible. If research could only advance far enough, therefore, we should arrive at an ultimate agreement between physical and psychological concepts. Our present attempts may be bold, but I believe they are on the right lines. Mathematics, for instance, has more than once proved that its purely

logical constructions which transcend all experience subsequently coincided with the behaviour of things. This, like the events I call synchronistic, points to a profound harmony between all forms of existence.

[414] Since analogy formation is a law which to a large extent governs the life of the psyche, we may fairly conjecture that our—to all appearances—purely speculative construction is not a new invention, but is prefigured on earlier levels of thought. Generally speaking, these prefigurations can be found in the multifarious stages of the mystic transformation process, as well as in the different degrees of initiation into the mysteries. We also find them in the classical as well as Christian trichotomy consisting of the pneumatic, the psychic, and the hylic. One of the most comprehensive attempts of this kind is the sixteenfold schema in the Book of Platonic Tetralogies.[109] I have dealt with this in detail in *Psychology and Alchemy* and can therefore limit myself here to the basic points. The schematization and analogy-formation start from four first principles: 1. the work of nature, 2. water, 3. composite natures, 4. the senses. Each of these four starting-points has three stages of transformation, which together with the first stage make sixteen parts in all. But besides this fourfold horizontal division of each of the principles, each stage has its correspondence in the vertical series:

	I	II	II	IV
1.	*Opus naturalium*	*Aqua*	*Naturae compositae*	*Sensus*
2.	*Divisio naturae*	*Terra*	*Naturae discretae*	*Discretio intellectualis*
3.	*Anima*	*Aer*	*Simplicia*	*Ratio*
4.	*Intellectus*	*Ignis*	*Aetheris simplicioris*	*Arcanum*

[415] This table of correspondences shows the various aspects of the *opus alchemicum*, which was also bound up with astrology and the so-called necromantic arts. This is evident from the use of significant numbers and the invocation or conjuring up of the familiar spirit. Similarly, the age-old art of geomancy[110] is based on a sixteen-part schema: four central figures (consisting of Sub-or Superiudex, Iudex, and two Testes), four *nepotes* (grandsons), four sons, four mothers. (The series is written from right to left.) These figures are arranged in a schema of astrological houses, but the centre that is empty in the horoscope is replaced by a square containing the four central figures.

[416] Athanasius Kircher[111] produced a quaternity system that is worth mentioning in this connection:

I. *Unum = Monas monadikē = Deus = Radix omnium = Mens simplicissima = Divina essentia = Exemplar divinum*.

(The One = First Monad = God = Root of all things = Simplest understanding = Divine Essence = Divine Exemplar.)

II. *10 (1 + 2 + 3 + 4 = 10) = Secunda Monas = dekadikē = Dyas = Mundus intellectualis = Angelica intelligentia = Compositio ab uno et altero = i.e., ex oppositis*.

(… Second Monad = tenth = duality = spiritual world = intelligence of the angels = composition of the One and the Other = i.e., from opposites.)

III. 10^2 *= 100 = Tertia Monas = hekatontadikē = Anima = Intelligentia*.

(… Third Monad = hundredth = soul = intelligence.)

IV. 10^3 *= 1000 = Quarta Monas = chiliadikē = Omnia sensibilia = Corpus = ultima et sensibilis Unionum explicatio*.

(… Fourth Monad = thousandth = all concrete things = body = final and concrete unfolding of unities.)

[417] Kircher comments that whereas the senses affect only the body, the first three unities are objects of understanding. So if one wants to understand what is perceived by the senses (*sensibilia*), this can only be done through the mind. "Everything perceived by the senses must therefore be elevated to reason or to the intelligence or to absolute unity. When in this way we shall have brought the absolute unity back to the infinitely simple from all perceptible, rational or intellectual multiplicity, then nothing more remains to be said, and then the Stone too is not so much *a* Stone as *no* Stone, but everything is the simplest unity. And even as the absolute unity of that concrete and rational Stone has God for an

exemplar, so likewise its intellectual unity is the intelligence. You can see from these unities how the perceiving senses go back to reason, and reason to intelligence, and intelligence to God, where in a perfect cycle is found the beginning and the consummation."[112] That Kircher should choose the *lapis* as an example of concrete things and of God's unity is obvious enough in terms of alchemy, because the *lapis* is the arcanum that contains God or that part of God which is hidden in matter.

[418] Kircher's system shows certain affinities with our series of quaternios. Thus the Second Monad is a duality consisting of opposites, corresponding to the angelic world that was split by Lucifer's fall. Another significant analogy is that Kircher conceives his schema as a cycle set in motion by God as the prime cause, and unfolding out of itself, but brought back to God again through the activity of human understanding, so that the end returns once more to the beginning. This, too, is an analogy of our formula. The alchemists were fond of picturing their *opus* as a circulatory process, as a circular distillation or as the uroboros, the snake biting its own tail, and they made innumerable pictures of this process. Just as the central idea of the *lapis Philosophorum* plainly signifies the self, so the *opus* with its countless symbols illustrates the process of individuation, the step-by-step development of the self from an unconscious state to a conscious one. That is why the *lapis*, as *prima materia*, stands at the beginning of the process as well as at the end.[113] According to Michael Maier, the gold, another synonym for the self, comes from the *opus circulatorium* of the sun. This circle is "the line that runs back upon itself (like the serpent that with its head bites its own tail), wherein that eternal painter and potter, God, may be discerned."[114] In this circle, Nature "has related the four qualities to one another and drawn, as it were, an equilateral square, since contraries are bound together by contraries, and enemies by enemies, with the same everlasting bonds." Maier compares this squaring of the circle to the "homo quadratus," the four-square man, who "remains himself" come weal come woe.[115] He calls it the "golden house, the twicebisected circle, the four-cornered phalanx, the rampart, the city wall, the four-sided line of battle."[116] This circle is a magic circle consisting of the union of opposites, "immune to all injury."

[419] Independently of Western tradition, the same idea of the circular *opus* can be found in Chinese alchemy: “When the light is made to move in a circle, all the energies of heaven and earth, of the light and the dark, are crystallized,” says the text of the *Golden Flower*.[117]

[420] The *ὄργανον κυκλικόν*, the circular apparatus that assists the circular process, is mentioned as early as Olympiodorus.[118] Dorn is of the opinion that the “circular movement of the Physiochemists” comes from the earth, the lowest element. For the fire originates in the earth and transforms the finer minerals and water into air, which, rising up to the heavens, condenses there and falls down again. But during their ascent the volatilized elements take “from the higher stars male seeds, which they bring down into the four matrices, the elements, in order to fertilize them spagyrically.” This is the “circular distillation”[119] which Rupescissa says must be repeated a thousand times.[120]

[421] The basic idea of ascent and descent can be found in the *Tabula smaragdina*, and the stages of transformation have been depicted over and over again, above all in the Ripley “Scrowle” and its variants. These should be understood as indirect attempts to apprehend the unconscious processes of individuation in the form of pictures.

XV
CONCLUSION

[422] I have tried, in this book, to elucidate and amplify the various aspects of the archetype which it is most important for modern man to understand—namely, the archetype of the self. By way of introduction, I described those concepts and archetypes which manifest themselves in the course of any psychological treatment that penetrates at all deeply. The first of these is the SHADOW, that hidden, repressed, for the most part inferior and guilt-laden personality whose ultimate ramifications reach back into the realm of our animal ancestors and so comprise the whole historical aspect of the unconscious. Through analysis of the shadow and of the processes contained in it we uncover the ANIMA/ANIMUS syzygy. Looked at superficially, the shadow is cast by the conscious mind and is as much a privation of light as the physical shadow that follows the body. For this superficial view, therefore, the psychological shadow with its moral inferiority might also be regarded as a privation of good. On closer inspection, however, it proves to be a darkness that hides influential and autonomous factors which can be distinguished in their own right, namely anima and animus. When we observe them in full operation—as the devastating, blindly obstinate demon of opinionatedness in a woman, and the glamorous, possessive, moody, and sentimental seductress in a man—we begin to doubt whether the unconscious can be merely the insubstantial comet's tail of consciousness and nothing but a privation of light and good.

[423] If it has been believed hitherto that the human shadow was the source of all evil, it can now be ascertained on closer investigation that the unconscious man, that is, his shadow, does not consist only of morally reprehensible tendencies, but also displays a number of good qualities, such as normal instincts, appropriate reactions, realistic insights, creative impulses, etc. On this level of understanding, evil appears more as a distortion, a deformation, a misinterpretation and misapplication of facts that in themselves are natural. These falsifications

and caricatures now appear as the specific effects of anima and animus, and the latter as the real authors of evil. But we cannot stop even at this realization, for it turns out that all archetypes spontaneously develop favourable and unfavourable, light and dark, good and bad effects. In the end we have to acknowledge that the self is a *complexio oppositorum* precisely because there can be no reality without polarity. We must not overlook the fact that opposites acquire their moral accentuation only within the sphere of human endeavour and action, and that we are unable to give a definition of good and evil that could be considered universally valid. In other words, we do not know what good and evil are in themselves. It must therefore be supposed that they spring from a need of human consciousness and that for this reason they lose their validity outside the human sphere. That is to say a hypostasis of good and evil as metaphysical entities is inadmissible because it would deprive these terms of meaning. If we call everything that God does or allows "good," then evil is good too, and "good" becomes meaningless. But suffering, whether it be Christ's passion or the suffering of the world, remains the same as before. Stupidity, sin, sickness, old age, and death continue to form the dark foll that sets off the joyful splendour of life.

[424] The recognition of anima and animus is a specific experience that seems to be reserved mostly, or at any rate primarily, for psychotherapists. Nevertheless, anyone who has a little knowledge of *belles-lettres* will have no difficulty in forming a picture of the anima; she is a favourite subject for novelists, particularly west of the Rhine.[1] Nor is a careful study of dreams always necessary. It is not quite so easy to recognize the woman's animus, for his name is legion. But anyone who can stand the animosity of his fellows without being infected by it, and is capable at the same time of examining it critically, cannot help discovering that they are possessed. It is, however, more advantageous and more to the point to subject to the most rigorous scrutiny one's own *moods* and their changing influence on one's personality. To know where the other person makes a mistake is of little value. It only becomes interesting when you know where *you* make the mistake, for then you can do something about it. What we can improve in others is of doubtful utility as a rule, if, indeed, it has any effect at all.

[425] Although, to begin with, we meet the anima and animus mostly in their negative and unwelcome form, they are very far from being only a species of bad spirit. They have, as we have said, an equally positive aspect. Because of their numinous, suggestive power they have formed since olden times the archetypal basis of all masculine and feminine divinities and therefore merit special attention, above all from the psychologist, but also from thoughtful laymen. As numina, anima and animus work now for good, now for evil. Their opposition is that of the sexes. They therefore represent a supreme pair of opposites, not hopelessly divided by logical contradiction but, because of the mutual attraction between them, giving promise of union and actually making it possible. The *coniunctio oppositorum* engaged the speculations of the alchemists in the form of the "Chymical Wedding," and those of the cabalists in the form of Tifereth and Malchuth or God and the Shekhinah,[2] not to speak of the marriage of the Lamb.

[426] The dual being born of the alchemical union of opposites, the Rebis or Lapis Philosophorum, is so distinctively marked in the literature that we have no difficulty in recognizing it as a symbol of the self. Psychologically the self is a union of conscious (masculine) and unconscious (feminine). It stands for the psychic totality. So formulated, it is a psychological concept. Empirically, however, the self appears spontaneously in the shape of specific symbols, and its totality is discernible above all in the mandala and its countless variants. Historically, these symbols are authenticated as God-images.

[427] The anima/animus stage is correlated with polytheism, the self with monotheism.[3] The natural archetypal symbolism, describing a totality that includes light and dark, contradicts in some sort the Christian but not the Jewish or Yahwistic viewpoint, or only to a relative degree. The latter seems to be closer to Nature and therefore to be a better reflection of immediate experience. Nevertheless, the Christian heresiarchs tried to sail round the rocks of Manichaean dualism, which was such a danger to the early Church, in a way that took cognizance of the natural symbol, and among the symbols for Christ there are some very important ones which he has in common with the devil, though this had no influence on dogma.

[428] By far the most fruitful attempts, however, to find suitable symbolic expressions for the self were made by the Gnostics. Most of them—Valentinus and Basilides, for instance—were in reality theologians who, unlike the more orthodox ones, allowed themselves to be influenced in large measure by natural inner experience. They are therefore, like the alchemists, a veritable mine of information concerning all those natural symbols arising out of the repercussions of the Christian message. At the same time, their ideas compensate the asymmetry of God postulated by the doctrine of the *privatio boni*, exactly like those well-known modern tendencies of the unconscious to produce symbols of totality for bridging the gap between the conscious and the unconscious, which has widened dangerously to the point of universal disorientation.

[429] I am well aware that this work, far from being complete, is a mere sketch showing how certain Christian ideas look when observed from the standpoint of psychological experience. Since my main concern was to point out the parallelism or the difference between the empirical findings and our traditional views, a consideration of the disparities due to time and language proved unavoidable. This was particularly so in the case of the fish symbol. Inevitably, we move here on uncertain ground and must now and then have recourse to a speculative hypothesis or tentatively reconstruct a context. Naturally every investigator must document his findings as fully as possible, but he should also venture an occasional hypothesis even at the risk of making a mistake. Mistakes are, after all, the foundations of truth, and if a man does not know what a thing *is*, it is at least an increase in knowledge if he knows what it is *not*.

BIBLIOGRAPHY

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A*. Ancient volumes containing collections of alchemical tracts by various authors; *B*. General bibliography, including cross-references to the material in section *A*. Short titles of the ancient volumes are printed in capital letters.

A. ANCIENT VOLUMES CONTAINING COLLECTIONS OF ALCHEMICAL TRACTS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum. … Argentorati [Strasbourg], 1566.

Contents quoted in this volume:

- i Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to "Tractatus aureus"]
- ii Tabula smaragdina [pp. 32–33]

ARTIS AURIFERAE quam chemiam vocant. … Basileae [Basel], [1593]. 2 vols.

Contents quoted in this volume:

VOLUME I

- i Turba philosophorum [two versions: pp. 1–65, 66–139]
- i-a Allegoriae super librum Turbae [pp. 139–45]
- ii Aenigmata ex Visione Arislei philosophi et allegoriis sapientum [pp. 146–54; usually refer to as "Visio Arislei"]
- iii In Turbam philosophorum exercitationes [pp. 154–82]
- iv Aurora consurgens, quae dicitur Aurea hora [pp. 185–246]
- v [Zosimus]: Rosinus ad Sarratantam episcopum [pp. 277–319]
- vi Maria Prophetissa: Practica … in artem alchemicam [pp. 319–24]

vii Tractatulus Aristotelis de practica lapidis philosophici [pp. 361–73]

viii Interpretatio cuiusdam epistolae Alexandri Macedonum regis [pp. 382–88]

ix Tractatulus Avicennae [pp. 405–37]

VOLUME II

x Morienus Romanus: Sermo de transmutatione metallica [pp. 7–54]

xi Rosarium philosophorum [pp. 204–384]

MANGETUS, JOANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum ad alchemiam pertinentium thesaurus instructissimus* … Coloniae Allobrogum [Geneva], 1702. 2 vols.

Contents quoted in this volume:

VOLUME I

i Allegoriae sapientum supra librum Turbae philosophorum XXIX distinctiones [pp. 467–79]

ii Turba philosophorum [pp. 445–65; another version, pp. 480–94]

iii Allegoriae supra librum Turbae [pp. 494–95]

MUSAEUM HERMETICUM reformatum et amplificatum … continens tractatus chimicos XXI praestantissimos … Francofurti [Frankfurt a. M.], 1678. For translation, see (*B*) WAITE, *The Hermetic Museum*.

Contents quoted in this volume:

i [Barcius (F. von Sternberg)]: Gloria mundi, alias Paradysi tabula [pp. 203–304]

ii Lambspringk: De lapide philosophico figurae et emblemata [pp. 337–72]

iii Sendivogius: Novum lumen chemicum e naturae fonte et manuali experientia depromptum [545–600]

iv [Sendivogius:] Novi luminis chemici Tractatus alter de sulphure [pp. 601–46]

v Philalethes: Introitus apertus ad occlusum regis palatium [pp. 647–700]

vi Philalethes: Metallorum metamorphosis [pp. 741–74]

THEATRUM CHEMICUM, praecipuos selectorum auctorum tractatus … continens. Ursellis [Ursel] and Argentorati [Strasbourg], 1602–61. 6 vols. (Vols. I–III, Ursel, 1602; Vols. IV–VI, Strasbourg, 1613, 1622, 1661 respectively.)

Contents quoted in this volume:

VOLUME I

i Fanianus: De arte metallicae metamorphoseos ad Philoponum [pp. 28–48]

ii Hoghelande: Liber de alchemiae difficultatibus [pp. 121–215]

iii Dorn: Ars chemistica [pp. 217–54]

iv Dorn: Speculativae philosophiae, gradus septem vel decem continens [pp. 255–310]

v Dorn: Physica genesis [pp. 367–404]

v-a Dorn: Physica Trismegisti [pp. 405–37]

vi Dorn: Philosophia meditativa [pp. 450–72]

vii Dorn: Philosophia chemica ad meditativam comparata [pp. 472–517]

viii Dorn: Congeries Paracelsicae chemicae de transmutationibus metallorum [pp. 557–646]

ix Bernardus Trevisanus: Liber de alchemia [pp. 773–803]

VOLUME II

x Ripley: Duodecim portarum axiomata philosophica [pp. 123–39]

xi Hollandus: Fragmentum de lapide [pp. 142–46]

xii Dee: Monas hieroglyphica [pp. 218–43]

VOLUME III

xiii Aristoteles de perfecto Magisterio [pp. 56–118]

VOLUME IV

xiv Artefius: Clavis maioris sapientiae [pp. 221–40]

xv Duodecim tractatus de lapide philosophorum [pp. 478–502]

xvi Beatus: Aurelia occulta philosophorum [pp. 525–81]

xvii Hermetis Trismegisti Tractatus vere aureus de lapide philosophici secreto [pp. 672–7 usually referred to as “Tractatus aureus”]

VOLUME V

xvii-a Turba philosophorum [pp. 1–57]

xviii Allegoriae sapientum et distinctiones XXIX supra librum Turbae [pp. 64–100]

xix Platonis liber quartorum [pp. 114–208]

xx Tractatus Aristotelis alchymistae ad Alexandrum Magnum de lapide philosophico [880–92]

VOLUME VI

xxi Blaise de Vigenère: Tractatus de igne et sale [pp. 1–139]

xxii Collesson: Idea perfecta philosophiae hermeticae [pp. 143–61]

xxiii Fidelissima et jucunda instructio de arbore solari [pp. 163–194]

xxiv Grasseus: Arca arcani artificiosissimi de summis naturae mysteriis [pp. 294–381]

xxv [Barchius:] Summa libri quae vocatur Gloria mundi, seu Tabula comprehensa [pp. 513–

xxvi Chartier: Scientia plumbi sacri sapientum [pp. 569–99]

INDEX

INDEX

In entries relating to the books of the Bible, the numbers in parentheses indicate the chapter and verse(s) referred to.

THE COLLECTED WORKS OF *C. G. JUNG*

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation;* works originally written in English, such as *Psychology and Religion;* works not previously translated, such as *Aion;* and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

*3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)
The Content of the Psychoses (1908/1914)
On Psychological Understanding (1914)
A Criticism of Bleuler’s Theory of Schizophrenic Negativism (1911)
On the Importance of the Unconscious in Psychopathology (1914)
On the Problem of Psychogenesis in Mental Disease (1919)
Mental Disease and the Psyche (1928)
On the Psychogenesis of Schizophrenia (1939)
Recent Thoughts on Schizophrenia (1957)
Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud’s Theory of Hysteria: A Reply to Aschaffenburg (1906)
The Freudian Theory of Hysteria (1908)
The Analysis of Dreams (1909)
A Contribution to the Psychology of Rumour (1910–11)
On the Significance of Number Dreams (1910–11)
Morton Prince, “The Mechanism and Interpretation of Dreams”: A Critical Review (1911)
On the Criticism of Psychoanalysis (1910)
Concerning Psychoanalysis (1912)
The Theory of Psychoanalysis (1913)
General Aspects of Psychoanalysis (1913)
Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to “Collected Papers on Analytical Psychology” (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt’s “Secret Ways of the Mind” (1930)

Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero

Symbols of the Mother and of Rebirth

The Battle for Deliverance from the Mother

The Dual Mother

The Sacrifice

Epilogue

Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller’s Ideas on the Type Problem

The Apollinian and the Dionysian
The Type Problem in Human Character
The Type Problem in Poetry
The Type Problem in Psychopathology
The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)
Psychological Factors Determining Human Behavior (1937)
Instinct and the Unconscious (1919)
The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)

Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

*9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept (1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

*9. PART II. AION (1951)

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego
The Shadow
The Syzygy: Anima and Animus
The Self
Christ, a Symbol of the Self
The Sign of the Fishes

The Prophecies of Nostradamus
The Historical Significance of the Fish
The Ambivalence of the Fish Symbol
The Fish in Alchemy
The Alchemical Interpretation of the Fish
Background to the Psychology of Christian Alchemical Symbolism
Gnostic Symbols of the Self
The Structure and Dynamics of the Self
Conclusion

*10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)
Mind and Earth (1927/1931)
Archaic Man (1931)
The Spiritual Problem of Modern Man (1928/1931)
The Love Problem of a Student (1928)
Woman in Europe (1927)
The Meaning of Psychology for Modern Man (1933/1934)
The State of Psychotherapy Today (1934)
Preface and Epilogue to “Essays on Contemporary Events” (1946)
Wotan (1936)
After the Catastrophe (1945)
The Fight with the Shadow (1946)
The Undiscovered Self (Present and Future) (1957)
Flying Saucers: A Modern Myth (1958)
A Psychological View of Conscience (1958)
Good and Evil in Analytical Psychology (1959)
Introduction to Wolff’s “Studies in Jungian Psychology” (1959)
The Swiss Line in the European Spectrum (1928)
Reviews of Keyserling’s “America Set Free” (1930) and “La Revolution Mondiale” (1934)

The Complications of American Psychology (1930)
The Dreamlike World of India (1939)
What India Can Teach Us (1939)
Appendix: Documents (1933–1938)

†11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)
A Psychological Approach to the Dogma of the Trinity (1942/1948)
Transformation Symbolism in the Mass (1942/1954)
Forewords to White's "God and the Unconscious" and Werblowsky's "Lucifer and Prometheus" (1952)
Brother Klaus (1933)
Psychotherapists or the Clergy (1932)
Psychoanalysis and the Cure of Souls (1928)
Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on "The Tibetan Book of the Great Liberation" (1939/1954) and "The Tibetan Book of the Dead" (1935/1953)
Yoga and the West (1936)
Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)
The Psychology of Eastern Meditation (1943)
The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)
Foreword to the "I Ching" (1950)

*12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967) Introduction to the Religious and Psychological Problems of Alchemy Individual Dream Symbolism in Relation to Alchemy (1936)
Religious Ideas in Alchemy (1937)

Epilogue

*13. ALCHEMICAL STUDIES

Commentary on “The Secret of the Golden Flower” (1929)
The Visions of Zosimos (1938/1954)
Paracelsus as a Spiritual Phenomenon (1942)
The Spirit Mercurius (1943/1948)
The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND
SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio
The Paradoxa
The Personification of the Opposites
Rex and Regina
Adam and Eve
The Conjunction

*15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)
Paracelsus the Physician (1941)
Sigmund Freud in His Historical Setting (1932)
In Memory of Sigmund Freud (1939)
Richard Wilhelm: In Memoriam (1930)
On the Relation of Analytical Psychology to Poetry (1922)
Psychology and Literature (1930/1950)
“Ulysses”: A Monologue (1932)
Picasso (1932)

†16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)

What Is Psychotherapy? (1935)

Some Aspects of Modern Psychotherapy (1930)

The Aims of Psychotherapy (1931)

Problems of Modern Psychotherapy (1929)

Psychotherapy and a Philosophy of Life (1943)

Medicine and Psychotherapy (1945)

Psychotherapy Today (1945)

Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928) The Practical Use of Dream-Analysis (1934)

The Psychology of the Transference (1946)

Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)

Introduction to Wickes's "Analyse der Kinderseele" (1927/1931)

Child Development and Education (1928)

Analytical Psychology and Education: Three Lectures (1926/1946)

The Gifted Child (1943)

The Significance of the Unconscious in Individual Education (1928)

The Development of Personality (1934)

Marriage as a Psychological Relationship (1925)

*18. THE SYMBOLIC LIFE

Miscellaneous Writings

†19. GENERAL BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

VOL. 2: 1951–1961

THE FREUD/JUNG LETTERS

Edited by William McGuire, translated by
Ralph Manheim and R.F.C. Hull

C. G. JUNG SPEAKING: Interviews and Encounters

Edited by William McGuire and R.F.C. Hull

[1] [In the Swiss edition, this foreword begins as follows: “In this volume (VIII of the Psychologische Abhandlungen) I am bringing out two works which, despite their inner and outer differences, belong together in so far as they both treat of the great theme of this book, namely the idea of the Aeon (Greek, *Aion*). While the contribution of my co-worker, Dr. Marie-Louise von Franz, describes the psychological transition from antiquity to Christianity by analysing the Passion of St. Perpetua, my own investigation seeks, with the help of” etc., as above. Dr. von Franz’s “Die Passio Perpetuae” is omitted from the present volume.—EDITORS.]

[2] [Ch. 5, “The Lapis-Christ Parallel.”]

[1] Pars. 371ff.

[1] “Instinct and the Unconscious” and “On the Nature of the Psyche,” pars. 397ff.

[2] The contents of this and the following chapter are taken from a lecture delivered to the Swiss Society for Practical Psychology, in Zurich, 1948. The material was first published in the *Wiener Zeitschrift für Nervenheilkunde und deren Grenzgebiete,* I (1948) : 4.

[1] Erwin Rousselle, “Seelische Führung im lebenden Taoismus,” Pl. I, pp. 150, 170. Rousselle calls the spinning woman the “animal soul.” There is a saying that runs, “The spinner sets in motion.” I have defined the anima as a personification of the unconscious.

[2] Here and in what follows, the word “mother” is not meant in the literal sense but as a symbol of everything that functions as a mother.

[3] Naturally, she is a typical figure in *belles-lettres*. Recent publications on the subject of the anima include Linda Fierz-David, *The Dream of Poliphilo*, and my “Psychology of the Transference.” The anima as a psychological idea first appears in the 16th-cent. humanist Richardus Vitus. Cf. my *Mysterium Coniunctionis*, pars. 91ff.

[4] The fallacy, which stems from Eubulides the Megarian, runs: “Can you recognize your father?” Yes. “Can you recognize this veiled one?” No. “This veiled one is your father. Hence you can recognize your father and not recognize him.”

[5] Naturally this is not meant as a psychological definition, let alone a metaphysical one. As I pointed out in “The Relations between the Ego and the Unconscious” (pars. 296ff.), the syzygy consists of three elements: the femininity pertaining to the man and the masculinity pertaining to the woman; the experience which man has of woman and vice versa; and, finally, the masculine and feminine archetypal image. The first element can be integrated into the personality by the process of conscious realization, but the last one cannot.

[6] “For the Scripture says, God made man male and female; the male is Christ, the female is the Church.”—Second Epistle of Clement to the Corinthians, xiv, a (trans. by Lake, I, p. 151). In pictorial representations, Mary often takes the place of the Church.

[7] “The Psychology of the Transference,” pars. 425ff. Cf. infra, pars. 358ff., the Naassene *quaternio*.

[8] Cf. infra, par. 347.

1 The material for this chapter is drawn from a paper, “Über das Selbst,” published in the *Eranos-Jahrbuch 1948*.

2 “The Relations between the Ego and the Unconscious.”

3 In the sense of the words used in I Cor. 5 : 2: “Inflati estis [*πεφνσιὤμενοι*] et non magis luctum habuistis” (And you are puffed up, and have not rather mourned)—with reference to a case of tolerated incest with the mother (“that a man should have his father’s wife”).

4 Cf. “On the Nature of the Psyche,” pars. 414ff., 439ff.

5 Cf. *Psychological Types*, Defs., “Rational” and “Irrational.”

6 *Les Fonctions mentales dans les sociétés inférieures*.

7 “On Psychic Energy,” pars. 14ff., 20ff.

8 *Sämtliche Werke*, I, p. 126.

9 Cf. my “Psychology of the Child Archetype”; also *Psychology and Alchemy*, index, s.v. “filius Philosophorum,” “child,” “hermaphrodite.”

10 Cf. *Psychology and Alchemy*, Part II, ch. 3.

11 [Cf. infra, par. 340.]

12 A classic case is the one published by Nelken: “Analytische Beobachtungen über Phantasien eines Schizophrenen.” Another is Schreber’s *Memoirs of My Nervous Illness*.

[1] I John 2 : 22 (DV).

[2] I John 4 : 3 (DV). The traditional view of the Church is based on II Thessalonians 2 : 3ff., which speaks of the apostasy, of the ἄνθρωπος τῆς ἀνομίας (man of lawlessness) and the υἱὸς τῆς ἀπωλείας (son of perdition) who herald the coming of the Lord. This "lawless one" will set himself up in the place of God, but will finally be slain by the Lord Jesus "with the breath of his mouth." He will work wonders κατ᾽ ἐνέργειαν τοῦ σατανᾶ (according to the working of Satan). Above all, he will reveal himself by his *lying and deceitfulness*. Daniel 11 : 36ff. is regarded as a prototype.

[3] For "city" cf. *Psychology and Alchemy*, pp. 104ff.

[4] ‘Η βασιλεία τοῦ θεοῦ ἐντὸς ὑμῶν ἔστιν (The kingdom of God is within you [or "among you"]). "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there!" for it is within and everywhere. (Luke 17 : 20f.) "It is not of this [external] world." (John 18 : 36.) The likeness of the kingdom of God to man is explicitly stated in the parable of the sower (Matthew 13 : 24. Cf. also Matthew 13 : 45, 18 : 23, 22 : 2). The papyrus fragments from Oxyrhynchus say: … ἡ βασ[ιλεία τῶν οὐρανῶν] ἐντὸς ὑμῶν [ἐ]στι [καὶ ὅστις ἂν ἑαυτὸν] γνῶ ταύτην εὑρή[σει] ἑαυταὺς γνώσεσθε κτλ. (The kingdom of heaven is within you, and whosoever knoweth himself shall find it. Know yourselves.) Cf. James, *The Apocryphal New Testament*, p. 26, and Grenfell and Hunt, *New Sayings of Jesus*, p. 15.

[5] Cf. my observations on Christ as archetype in "A Psychological Approach to the Dogma of the Trinity," pars. 226ff.

[6] "Et haec ergo imago censenda est Dei in homine, quod eosdem motus et sensus habeat humanus animus, quos et Deus, licet non tales quales Deus" (*Adv. Marcion., II*, xvi; in Migne, *P.L.*, vol. 2, col. 304).

[7] *Contra Celsum*, VIII, 49 (Migne, *P.G.*, vol. 11, col. 1590): "In anima, non in corpore impressus sit imaginis conditoris character" (The character of the image of the Creator is imprinted on the soul, not on the body). (Cf. trans. by H. Chadwick, p. 488.)

[8] *In Lucam homilia*, VIII (Migne, *P.G.*, vol. 13, col. 1820): "Si consideremus Dominum Salvatorem imaginem esse invisibilis Dei, et videam animam meam factam ad imaginem conditoris, ut imago esset imaginis: neque enim anima mea specialiter imago est Dei, sed ad similitudinem imaginis prioris effecta est" (If I consider that the Lord and Saviour is the image of the invisible God, I see that my soul is made after the image of the Creator, so as to be an image of an image; for my soul is not directly the image of God, but is made after the likeness of the former image).

[9] De *principiis*, I, ii, 8 (Migne, *P.G.*, vol. 11, col. 156): "Salvator figura est substantiae vel subsistentiae Dei" (The Saviour is the figure of the substance or subsistence of God). *In Genesim homilia*, I, 13 (Migne, *P.G.*, vol. 12, col. 156): "Quae est ergo alia imago Dei ad cuius imaginis similitudinem factus est homo, nisi Salvator noster, qui est primogenitus omnis creaturae?" (What else therefore is the image of God after the likeness of which image man was made, but our Saviour, who is the first born of every creature?) *Selecta in Genesim*, IX, 6 (Migne, *P.G.*, vol. 12, col. 107): "Imago autem Dei invisibilis salvator" (But the image of the invisible God is the saviour).

[10] *In Gen. hom.*, I, 13 (Migne, *P.G.*, vol. 12, col. 155): "Is autem qui ad imaginem Dei factus est et ad similitudinem, interior homo noster est, invisibilis et incorporalis, et incorruptus atque immortalis" (But that which is made after the image and similitude of God is our inner man, invisible, incorporeal, incorrupt, and immortal).

[11] *De princip.*, IV, 37 (Migne, *P.G.*, vol. 11. col. 412).

12 *Retractationes*, I, xxvi (Migne, *P.L.*, vol. 32, col. 626): “(Unigenitus) … tantummodo imago est, non ad imaginem” (The Only-Begotten … alone is the image, not after the image).

13 *Enarrationes in Psalmos*, XLVIII. Sermo II (Migne, *P.L.*, vol. 36, col. 564): “Imago Dei intus est, non est in corpore … ubi est intellectus, ubi est mens, ubi ratio investigandae veritatis etc. ibi habet Deus imaginem suam.” Also ibid., Psalm XLII, 6 (Migne, *P.L.*, vol. 36, col. 480): “Ergo intelligimus habere nos aliquid ubi imago Dei est, mentem scilicet atque rationem” (Therefore we understand that we have something in which the image of God is, namely mind and reason). Sermo XC, 10 (Migne, *P.L.*, vol. 38, col. 566): “Veritas quaeritur in Dei imagine” (Truth is sought in the image of God), but against this the *Liber de vera religione* says: “in interiore homine habitat veritas” (truth dwells in the inner man). From this it is clear that the *imago Dei* coincides with the *interior homo*.

14 *Enarr. in Ps.*, LIV, 3 (Migne, *P.L.*, vol. 36, col. 629): “ … ubi autem homo ad imaginem Dei factum se novit, ibi aliquid in se agnoscit amplius esse quam datum est pecoribus.”

15 I Cor. 15 : 47.

16 In *Joannis Evangelium*, Tract. LXXVIII, 3 (Migne, *P.L.*, vol. 35, col. 1836): “Christus est Deus, anima rationalis et caro” (Christ is God, a rational soul and a body).

17 Sermo CCXXXVII, 4 (Migne, *P.L.*, vol. 38, col. 1124): “(Verbum) suscepit totum quasi plenum hominem, animam et corpus hominis. Et si aliquid scrupulosius vis audire; quia animam et carnem habet et pecus, cum dico animam humanam et carnem humanam, totam animam humanam accepit.”

18 *Enarr. in Ps.*, LIV, 1 (Migne, *P.L.*, vol. 36, col. 628).

19 *Contra Faustum*, XXII, 38 (Migne, *P.L.*, vol. 42, col. 424): “Est enim et sancta Ecclesia Domino Jesu Christo in occulto uxor. Occulte quippe atque intus in abscondito secreto spirituali anima humana inhaeret Verbo Dei, ut sint duo in carne una.” Cf. St. Augustine’s *Reply to Faustus the Manichaean* (trans. by Richard Stothert, p. 433): “The holy Church, too, is in secret the spouse of the Lord Jesus Christ, For it is secretly, and in the hidden depths of the spirit, that the soul of man is joined to the word of God, so that they are two in one flesh.” St. Augustine is referring here to Eph. 5 : 31f.: “For this cause shall a man leave his father and mother, and shall be joined unto his wife, and they two shall be one flesh. This is a great mystery: but I speak concerning Christ and the Church.”

20 Augustine, *De Trinitate*, XIV, 22 (Migne, *P.L.*, vol. 42, col. 1053): “Reformamini in novitate mentis vostrae, ut incipiat ilia imago ab illo reforman, a quo formata est” (Be reformed in the newness of your mind; the beginning of the image’s reforming must come from him who first formed it) (trans. by John Burnaby, p. 120).

21 Cf. “Concerning Mandala Symbolism,” in Part I of vol. 9.

22 *Psychology and Alchemy*, pars. 323ff.

23 Irenaeus (*Adversus haereses*, II, 5, 1) records the Gnostic teaching that when Christ, as the demiurgic Logos, created his mother’s being, he “cast her out of the Pleroma—that is, he cut her off from knowledge.” For creation took place outside the pleroma, in the shadow and the void. According to Valentinus (*Adv. haer.*, I, 11, 1), Christ did not spring from the Aeons of the pleroma, but from the mother who was outside it. She bore him, he says, “not without a kind of shadow.” But he, “being masculine,’ cast off the shadow from himself and returned to the Pleroma (καὶ τοῦτον [Χριστὸν] μὲν ἅτε ἄρρενα ὑπάρχοντα ἀποκόψαντα ἀφ’ ἑαυτοῦ τὴν σκιάν, ἀναδραμεῖν εἰς τὸ Πλήρωμα κτλ.), while his mother, “being left behind in the shadow, and deprived of spiritual substance,’ there gave birth to the real “Demiurge and Pantokrator of the lower world.’ But the shadow which lies over the world is, as we know from the Gospels, the *princeps huius mundi*, the devil. Cf. *The Writings of Irenaeus*, I, pp. 45f.

24 Cf. R. Schärf, “Die Gestalt des Satans im Alten Testament.”

25 “The Spirit Mercurius,” par. 271.

26 Jewish Christians who formed a Gnostic-syncretistic party.

27 A Gnostic sect mentioned in Epiphanius, *Panarium adversus octoginta haereses*, LXXX, 1–3, and in Michael Psellus, *De daemonibus* (in Marsilius Ficinus, *Auctores Platonici [lamblichus de mysteriis Aegyptiorum]*, Venice, 1497).

28 “Oportuit autem ut alter illorum extremorum isque optimus appellaretur Dei filius propter suam excellentiam; alter vero ipsi *ex diametro oppositus*, mali daemonis, Satanae diabolique filius diceretur” (But it is fitting that one of these two extremes, and that the best, should be called the Son of God because of his excellence, and the other, *diametrically opposed* to him, the son of the evil demon, of Satan and the devil) (Origen, *Contra Celsum*, VI, 45; in Migne, *P.G.*, vol. 11, col. 1367; cf. trans. by Chadwick, p. 362). The opposites even condition one another: “Ubi quid malum est … ibi necessario bonum esse malo contrarium. … Alterum ex altero sequitur: proinde aut utrumque tollendum est negandumque bona et mala esse; aut admisso altero maximeque malo, bonum quoque admissum oportet.” (Where there is evil … there must needs be good contrary to the evil. … The one follows from the other; hence we must either do away with both, and deny that good and evil exist, or if we admit the one, and particularly evil, we must also admit the good.) (*Contra Celsum*, II, 51; in Migne, *P.G.*, vol. 11, col. 878; cf. trans. by Chadwick, p. 106.) In contrast to this clear, logical statement Origen cannot help asserting elsewhere that the “Powers, Thrones, and Principalities” down to the evil spirits and impure demons “do not have it—the contrary virtue—substantially” (“non substantialiter id habeant scl. virtus adversaria”), and that they were not created evil but chose the condition of wickedness (“malitiae gradus”) of their own free will. (*De principiis*, I, vm, 4; in Migne, *P.G.*, vol. 11, col. 179.) Origen is already committed, at least by implication, to the definition of God as the Summum Bonum, and hence betrays the inclination to deprive evil of substance. He comes very close to the Augustinian conception of the *privatio boni* when he says: “Certum namque est malum esse bono carere” (For it is certain that to be evil means to be deprived of good). But this sentence is immediately preceded by the following: “Recedere autem a bono, non aliud est quam effici in malo” (To turn aside from good is nothing other than to be perfected in evil) (*De principiis*, II, ix, 2; in Migne, *P.G.*, vol. 11, cols. 226–27). This shows clearly that an increase in the one means a diminution of the other, so that good and evil represent equivalent halves of an opposition.

38 “Nunc vero ideo sunt omnia bona, quia sunt aliis alia meliora, et bonitas inferiorum add it laudibus meliorum. … Ea vero quae dicuntur mala, aut vitia sunt rerum bonarum, quae omnino extra res bonas per se ipsa alicubi esse non possunt. … Sed ipsa quoque vitia testimonium perhibent bonitati naturarum. Quod enim malum est per vitium, profecto bonum est per naturam. Vitium quippe

contra naturam est, quia naturae nocet; nec noceret, nisi bonum eius minueret. *Non est ergo malum nisi privatio boni*. Ac per hoc nusquam est nisi in re aliqua bona. … Ac per hoc bona sine malis esse possunt, sicut ipse Deus, et quaeque superiora coelestia; mala vero sine bonis esse non possunt. Si enim nihil nocent, mala non sunt; si autem nocent, bonum minuunt; et si amplius nocent, habent adhuc bonum quod minuant; et si totum consumunt, nihil naturae remanebit qui noceatur; ac per hoc nec malum erit a quo noceatur, quando natura defuerit, cuius bonum nocendo minuatur.” (*Contra adversarium legis et prophetarum*, I, 4f.; in Migne, *P.L.*, vol. 42, cols. 606–7.) Although the *Dialogus Quaestionum LXV* is not an authentic writing of Augustine’s, it reflects his standpoint very clearly. Quaest. XVI: “Cum Deus omnia bona creaverit, nihilque sit quod non ab illo conditum sit, unde malum? Resp. Malum natura non est; sed *privatio boni* hoc nomen accepit. Denique bonum potest esse sine malo, sed malum non potest esse sine bono, nec potest esse malum ubi non fuerit bonum. … Ideoque quando dicimus bonum, naturam laudamus; quando dicimus malum, non naturam sed vitium, quod est bonae naturae contrarium reprehendimus.” (Question XVI: Since God created all things good and there is nothing which was not created by him, whence arises evil? Answer: Evil is not a natural thing, it is rather the name given to the privation of good. Thus there can be good without evil, but there cannot be evil without good, nor can there be evil where there is no good. … Therefore, when we call a thing good, we praise its inherent nature; when we call a thing evil, we blame not its nature, but some defect in it contrary to its nature, which is good.)

39 “Iniquity has no substance” (CCXXVIII). “There is a nature in which there is no evil—in which, indeed, there can be no evil. But it is impossible for a nature to exist in which there is no good” (CLX).

43 Ibid., I, q. 48, ad 3 (trans., p. 268).

44 “ … Quod autem conveniens est alicui est illi bonum. Ergo omne agens agit propter bonum” (*Summa contra Gentiles, 111*, ch. 3, trans. by the English Dominican Fathers, vol. III, p. 7).

45 *Summa theologica*, I, q. 48, ad 2 (trans., II, p. 266, citing Aristotle’s *Topics*, iii, 4).

46 In the Decrees of the 4th Lateran Council we read: “For the devil and the other demons as created by God were naturally good, but became evil of their own motion.” Denzinger and Bannwart, *Enchiridion symbolorum*, p. 189.

47 Harnack (*Lehrbuch der Dogmengeschichte*, p. 332) ascribes the Clementine Homilies to the beginning of the 4th cent. and is of the opinion that they contain “no source that could be attributed with any certainty to the 2nd century.” He thinks that Islam is far superior to this theology. Yahweh and Allah are unreflected God-images, whereas in the Clementine Homilies there is a psychological and reflective spirit at work. It is not immediately evident why this should bring about a disintegration of the God-concept, as Harnack thinks. Fear of psychology should not be carried too far.

48 *Der Dialog des Adamantius*, III, 4 (ed. by van de Sande Bakhuyzen, p, 119).

49 The female or somatic triad consist of έπιθυμία (desire), ὀργή (anger), and λύπη (grief); the male, of λογισμός (reflection), λογισμός (knowledge), and φόβος (fear). Cf. the triad of functions in “The Phenomenology of the Spirit in Fairytales,” Part I of vol. 9, pars. 425ff.

50 P. de Lagarde (*Clementina*, p. 190) has here … πάσης οὐσίας … οὔσης. The reading γνώμης.. seems to me to make more sense.

73 *Aurora*, trans. by John Sparrow, p. 423.

74 My learned friend Victor White, O.P., in his *Dominican Studies* (II, p. 399), thinks he can detect a Manichaean streak in me. I don't go in for metaphysics, but ecclesiastical philosophy undoubtedly does, and for this reason I must ask what are we to make of hell, damnation, and the devil, if these things are eternal? Theoretically they consist of nothing, and how does that square with the dogma of eternal damnation? But if they consist of something, that something can hardly be good. So where is the danger of dualism? In addition to this my critic should know how very much I stress the unity of the self, this central archetype which is a *complexio oppositorum* par excellence, and that my leanings are therefore towards the very reverse of dualism.

75 It has been objected that Christ cannot have been a valid symbol of the self, or was only an illusory substitute for it. I can agree with this view only if it refers strictly to the present time, when psychological criticism has become possible, but not if it pretends to judge the pre-psychological age. Christ did not merely *symbolize* wholeness, but, as a psychic phenomenon, he *was* wholeness. This is proved by the symbolism as well as by the phenomenology of the past, for which—be it noted-evil was a *privatio boni*. The idea of totality is, at any given time, as total as one is oneself. Who can

guarantee that our conception of totality is not equally in need of completion? The mere concept of totality does not by any means posit it.

76 Just as the transcendent nature of light can only be expressed through the image of waves *and* particles.

83 Ibid., VII, 22, 10 (cf. II, pp. 69–70).

84 Ibid., VII, 22, 15 (II, p. 70). The eagle has the same significance in alchemy.

85 This word also occurs in the well-known passage about the *krater* in Zosimos. (Berthelot, *Alch. grecs*, III, li, 8: ἀναδραμε ἐπὶ τὸ γένος τὸ σόν.

86 I must say a word here about the *horos* doctrine of the Valentinians in Irenaeus (*Adv. haer*, I, 2, 2ff.) *Horos* (boundary) is a “power” or numen identical with Christ, or at least proceeding from him. It has the following synonyms: *ὁροθέτης* (boundary-fixer), μεταγωγεύς (he who leads across), *καρπιστής* (emancipator), *λυτρώτης* (redeemer), *σταυρός* (cross). In this capacity he is the regulator and mainstay of the universe, like Jesus. When Sophia was “formless and shapeless as an embryo, Christ took pity on her, stretched her out through his Cross and gave her form through his power,” so that at least she acquired substance (*Adv. haer*., I, 4). He also left behind for her an “intimation of immortality.” The identity of the Cross with Horos, or with Christ, is clear from the text, an image that we find also in Paulinus of Nola:

> “… regnare deum super omnia Christum,
> qui cruce dispensa per quattuor extima ligni
> quattuor adtingit dimensum partibus orbem,
> ut trahat ad uitam populos ex omnibus oris.”

(Christ reigns over all things as God, who, on the outstretched cross, reaches out through the four extremities of the wood to the four parts of the wide world, that he may draw unto life the peoples from all lands.) (*Carmina*, ed. by Wilhelm Hartel, Carm. XIX, 639ff., p. 140.) For the Cross as God’s “lightning” cf. “A Study in the Process of Individuation,” pars. 535f.

91 Ibid., 20, 5 (cf. II, p. 66). Quispel, “Note sur ‘Basilide’.”

92 With reference to the psychological nature of Gnostic sayings, see Quispel’s “Philo und die altchristliche Háresie,” p. 432, where he quotes Irenaeus (*Adv. haer*., II, 4, 2): “Id quod extra et quod intus dicere eos secundum agnitionem et ignorantiam, sed non secundum Iocalem sententiam” (In

speaking of what is outward and what is inward, they refer, not to place, but to what is known and what is not known). (Cf. Legge, I, p. 127.) The sentence that follows immediately after this—"But in the Pleroma, or in that which is contained by the Father, everything that the demiurge or the angels have created is contained by the unspeakable greatness, as the centre in a circle"—is therefore to be taken as a description of unconscious contents. Quispel's view of projection calls for the critical remark that projection does not do away with the *reality* of a psychic content. Nor can a fact be called "unreal" merely because it cannot be described as other than "psychic." Psyche is reality par excellence.

[93] Cf. *Psychology and Alchemy*, pars. 528ff., 122ff., and "A Study in the Process of Individuation," pars. 542, 550, 581f.

[94] Matt. 5 : 48 (DV).

[95] Rom. 7 : 21 (AV).

1 Early collections of such allegories in the *Ancoratus* of Epiphanius, and in Augustine, *Contra Faustum*. For *nycticorax* and *aquila* see Eucherius, *Liber formularum spiritalis intelligentiae*, cap. 5 (Migne, *P.L.*, vol. 50, col. 740).

2 Augustine (City *of God*, trans. by J. Healey, II, p. 196) relates how the former proconsul Flaccianus, with whom he had a conversation about Jesus, produced a book containing the songs of the Erythraean Sibyl, and showed him the passage where the above words, forming the acrostic ’ Iχθῦς, are themselves the acrostic for a whole poem, an apocalyptic prophecy of the Sibyls:

“Iudicii signum tellus sudore madescet,
E coelo Rex adveniet per saecla futurus:
Scilicet in carne praesens ut iudicet orbem.
Unde Deum cernent incredulus atque fidelis
Celsum cum Sanctis, aevi iam termino in ipso.
Sic animae cum carne aderunt quas judicat ipse … ”
(In sign of doomsday the whole earth shall sweat.
Ever to reign a king in heavenly seat
Shall come to judge all flesh. The faithful and
Unfaithful too before this God shall stand,
Seeing him high with saints in time’s last end.
Corporeal shall he sit, and thence extend
His doom on souls …) (Ibid., p. 437.)

The Greek original is in *Oracula Sibyllina*, ed. John Geffcken, p. 142. [For Augustine’s explanation of the discrepancy in the acrostic, see Healey trans., II, p. 196.—EDITORS.]

3 Cf. Jeremias, *The Old Testament in the Light of the Ancient East*, I, p. 76, n. 2.

4 *From* this inscription I will cite only the middle portion, which says: “Everywhere I had a travelling companion, since I had Paul sitting in the chariot. But everywhere Faith drew me onward, and everywhere he set before me for food a fish from the source, exceeding great and pure, which a holy virgin had caught. And he offered this fish to the friends to eat, having good wine, a mixed drink with bread.” See Ramsay, “The Cities and Bishoprics of Phrygia,” p. 424.

14 Gerhardt, p. 57. Ptolemy and, following him, the Middle Ages associate Palestine with Aries.

15 “Ye have borne Siccuth your king and Chiun your images, the star of your god, which ye made to yourselves” (RV). Stephen refers to this in his defence (Acts 7: 43): “And you took unto you the tabernacle of Moloch and the star of your god Rempham.” “Rempham” (‘Ρομφά), is a corruption of Kewan (Chiun).

16 Dozy and de Goeje, “Nouveaux documents pour l’étude de la religion des Harraniens,” p. 350.

17 Abu Ma’shar, d. 885.

18 Gerhardt, p. 57. Also Pierre d’Ailly, *Concordantia astronomie cum theologia*, etc., fol. g4 (Venice, 1490): “But Saturn, as Messahali says, has a meaning which concerns the Jewish people or their faith.”

19 Reitzenstein, *Poimandres*, p. 76.

20 *Contra Celsum*, VI, 30 (trans. by H. Chadwick, p. 345).

21 Ibid., VI, 31: “But they say that this angel like unto a lion has a necessary connection with the star Saturn.” Cf. *Pistis Sophia*, trans. by Mead, p. 47, and Bousset, *Hauptprobleme der Gnosis*, pp. 352ff.

22 Hippolytus, *Elenchos*, V, 7, 30 (Legge trans., I, p. 128).

23 Ibid., VII, 38, 1 (cf. Legge trans., II, p. 96).

24 Hence the image of Saturn worshipped by the Sabaeans was said to be made of lead or black stone. (Chwolsohn, *Die Ssabier und der Ssabismus*, II, p. 383.)

25 *L’Astrologie grecque*, p. 317.

26 Bouché-Leclercq (p. 318) conjectures one of the known classical “etymologies,” namely an *onos* (ass) contained in *Kronos* (Saturn), based on a joke aimed at the Megarian philosopher Diodoros. But the reason for the Saturn-ass analogy probably lies deeper, that is, in the nature of the ass itself, which was regarded as a “cold, intractable, slow-witted, long-lived animal.” (From the Greek bestiary cited by Bouché-Leclercq.) In Polcmon’s bestiary I find the following description of the wild ass: “Given to flight, timid, stupid, untamed, lustful, jealous, killing its females” (*Scriptores physiognomici graeci et latini*, I, p. 182).

27 A possible model might be the Egyptian tradition of the martyrdom of Set, depicted at Denderah. He is shown tied to the “slave’s post,” has an ass’s head, and Horus stands before him with a knife in his hand. (Mariette, *Dendérah*, plates vol. IV, pl. 56.)

28 *Quaestiones convivales*, IV, 5.

29 *Contra Apionem*, II, 7–8 (80ff.). (Cf. trans. by H. St. J. Thackeray and R. Marcus, I, pp. 325ff.)

30 *The Histories*, trans. by W. H. Fyfe, II, pp. 204ff.

31 Epiphanius, *Panarium*, ed. Oehler, I, p. 184.

32 *Apologeticus adversus gentes*, XVI (Migne, *P.L.*, vol. 1, cols. 364–65; cf. trans. by S. Thelwall, I, pp. 84f.).

33 Plutarch, *De Iside et Osiride*, in *Moralia*, pp. 77, 123. In ch. 31 Plutarch states that the legend of Set’s flight on an ass and of the fathering of his two sons Hierosolymus and Judaeus is not Egyptian, but pertained to the ’Ιουδαϊκά.

34 In the Papyrus of Ani (ed. E. A. W. Budge, p. 248) a hymn to Ra says: “May I advance upon the earth; may I smite the Ass; may I crush the evil one (Sebau); may I destroy Apep in his hour.”

35 Albumasar, Lib. II, *De magnis coniunctionibus*, tract. I, diff. 4, p. a8^{r} (1489): “If (Jupiter) is in conjunction with Saturn, it signifies that the faith of the citizens thereof is Judaism. … And if the moon is in conjunction with Saturn it signifies doubt and revolution and change, and this by reason of the speed of the corruption of the moon and the rapidity of its motion and the shortness of its delay

in the sign.” Cf. also Pierre d’Ailly, *Concordantia*, etc., fol. d8^{r}. J. H. Heidegger (*Quaestiones ad textum Lucae VII, 12–17*, 1655) says in ch. IX that Abu Mansor (= Albumasar), in his sixth tractate, in the *Introductio maior*, connects the life of Christ, like that of Mahomet, with the stars. Cardan ascribes ☿ ☌ ♃ to Christianity, ☿ ☌ ♄ to Judaism, ☿ ☌ ♂ to Islam, and according to him ☿ ☌ ♀ signifies idolatry (“Commentarium in Ptolemaeum De astrorum Judiciis,” p. 188).

36 Christensen, *Le Premier Homme et le premier roi dans l’histoire légendaire des Iraniens*, part 1, p. 24.

37 Gerhardt, *Stern des Messias*, p. 74.

38 Calculated on the basis of Peters and Knobel, *Ptolemy’s Catalogue of Stars*.

39 Medieval astrologers cast a number of ideal horoscopes for Christ. Albumasar and Albertus Magnus took Virgo as the ascendent; Pierre d’Ailly (1356–1420), on the other hand, took Libra, and so did Cardan. Pierre d’Ailly says: “For Libra is the human sign, that is, of the Liberator of men, [the sign] of a prudent and just and spiritual man” (*Concordantia*, etc., cap. 2). Kepler, in his *Discurs von der grossen Conjunction* (1623; p. 701), says that God himself marked “such great conjunctions as these with extraordinary and marvellous stars visible in high heaven, also with notable works of his divine Providence.” He continues: “Accordingly he appointed the birth of his Son Christ our Saviour exactly at the time of the great conjunction in the signs of the Fishes and the Ram, near the equinoctial point.” Seen heliocentrically, the conjunction took place just in front of the equinoctial point, and this gives it a special significance astrologically. Pierre d’Ailly (*Concordantia*, etc., fol. b^{r}) says: “But a great conjunction is that of Saturn and Jupiter in the beginning of the Ram.” These conjunctions occur every 20 years and take place every 200 years in the same trigon. But the same position can only recur every 800 years. The most significant positions are those between two trigons. Albumasar (*De magnis coniunc*., tract. 3, diff. 1, fol. D 8^{r}) says they manifest themselves “in changes of parties and offices and in changes of the laws and … in the coming of prophets and of prophesying and of miracles in parties and offices of state.”

40 Crucifixion was a well-known punishment for slaves. The Cross with a snake on it, instead of the Crucified, is often found in medieval times [*Psychology and Alchemy*, fig. 217], and also in the dreams and fantasy-images of modern people who know nothing of this tradition. A characteristic dream of this sort is the following: *The dreamer was watching a Passion play in the theatre. On the way to Golgotha, the actor taking the part of the Saviour suddenly changed into a snake or crocodile*.

41 Erman, *Die Religion der Ägypter*, p. 137.

42 *Pistis Sophia*, Mead trans., pp. 118f., slightly modified.

43 Cf. the fish that Augustine says was “drawn from the deep.”

44 In this connection mention should be made of the “Saviour of the twins” (σωτῆρες) in *Pistis Sophia* (Mead trans., pp. 2, 17, and elsewhere).

45 Also mentioned in the *Chronique* of Tabari (I, ch. 23, p. 67). There Antichrist is the king of the Jews, who appears with Gog and Magog. This may be an allusion to Rev. 20: 7f.: “And when the thousand years are expired, Satan shall be loosed out of his prison, and shall go out to deceive the nations which are in the four corners of the earth, Gog and Magog, to gather them together to battle” (AV).

Graf von Wackerbarth (*Merkwürdige Geschichte der weltberühmten Gog und Magog*, p. 19) relates from an English “History of the World,” which came out in German in 1760, that the Arab writers say the “Yajui” were “of more than ordinary size,” whereas the “Majui” were “not more than three spans high.” This story, despite the obscurity of its origins, points to the antithetical nature of

Gog and Magog, who thus form a parallel to the Fishes. Augustine interprets “the nations which are in the four corners of the earth, Gog and Magog” as, respectively (Gog), *tectum*, ‘roof’ or ‘house,’ and (Magog) *de tecto*, ‘he that comes out of the house’: “Ut illae sint tectum, ipse de tecto.” That is to say the nations are the house, but the devil dwells in the house and comes out of it. (*City of God*, Healey trans., II, p. 286.) On Augustine is based the *Compendium theologicae veritatis* (Venice, 1492), which was attributed in turn to Albertus Magnus, Hugh of Strasbourg, and John of Paris. It is our main source for the Antichrist legend. With reference to Augustine it says (Libell. 7, cap. 11) that Gog means “occultatio” (concealment), Magog “detectio” (revelation). This corroborates the antithetical nature of Gog and Magog at least for the Middle Ages. It is another instance of the motif of the hostile brothers, or of duplication. Albumasar (tract. 4, diff. 12, f. 8^r) calls the sixth “clima” (inclination towards the Pole) that of Gog and Magog, and correlates it with Gemini and Virgo.

46 *Nezikin* VI, Sanhedrin II (*BT*, p. 658). R. Hanan ben Tahlifa, into whose mouth this prophecy is put, is mentioned in the list of Amoraim (teachers of the Talmud) and lived in the 2nd cent. A.D.

46a Cf. infra, pars. 225ff.

47 Epiphanius, *Panarium*, XXX (Oehler edn., I, pp. 240ff.).

48 Hipparchus is supposed to have discovered the precession. Cf. Boll, *Sphaera*, p. 199, n. 1.

49 Origen, *Commentaria in Genesim*, tom. III, i, 14, 11 (Migne, *P.G.*, vol. 12, col. 79): “There is indeed a theory that the zodiacal circle, just like the planets, is carried back from setting to rising [or: from west to east], within a century by one degree; … since the twelfth part [1 zodion] is one thing when conceived in the mind, another when perceived by the senses; ye, from that which is conceived only in the mind, and can scarcely, or not even scarcely, be held for certain, the truth of the matter appears.” The Platonic year was then reckoned as 36,000 years. Tycho Brahe reckoned it at 24,120 years. The constant for the precession is 50.3708 seconds and the total cycle (360°) takes 25,725.6 years.

50 Bouché-Leclercq, p. 591, n. 2; Knapp, *Antiskia*; Boll, *Sphaera*.

51 The theory of the conjunctions was set down in writing by the Arabs about the middle of the 9th cent., more particularly by Messahala. Cf. Strauss, *Die Astrologie des Johannes Kepler*.

52 With his estimate of 960 years between two *coniunctiones maximae*, Pierre d’Ailly would also arrive at A.D. 3613.

53 This period around the year 1240 would, from the astrological standpoint, be characterized by the great conjunction of Jupiter and Saturn in Libra, in 1246. Libra is another double sign with a pneumatic nature (air trigon), like Gemini, and for this reason it was taken by Pierre d’Ailly as Christ’s ascendent.

54 At the Lateran Council, 1215. Cf. Denzinger and Bannwart, *Enchiridion symbolorum*, pp. 190ff.

55 “His teaching is to be held not so much heretical as insane,” says the decree.

56 Hahn, *Geschichte der Ketzer im Mittelalter*, II, p. 779: “ … some who under the name of a false and pretended religious order, whom the common folk call Beghards and Schwestrones or ‘Brod durch Gott’; but they call themselves Little Brethren and Sisters of the fellowship of the Free Spirit and of Voluntary Poverty.”

57 “Item credunt se esse Deum per naturam sine distinctione … se esse aeternos …

“Item quod nullo indigent nec Deo nec Deitate.

“Item quod sunt ipsum regnum coelorum.

“Item quod sunt etiam immutabiles in nova rupe, quod de nullo gaudent, et de nullo turbantur.

“Item quod homo magis tenetur sequi instinctum interiorem quam veritatem Evangelii quod cottidie praedicatur … dicunt, se credere ibi (in Evangelio) esse poëtica quae non sunt vera.” (Hahn, II, pp. 779f.)

58 Cf. “The Phenomenology of the Spirit in Fairytales,” pars. 396ff.

59 “The Spirit Mercurius,” pars. 284ff., and “A Psychological Approach to the Dogma of the Trinity,” pars. 257ff.

60 [Although Mary’s Immaculate Conception was declared *de fide* by Pope Pius IX in 1854, by the bull *Ineffabilis Deus*, her Assumption was not defined as part of divine revelation until 1950.—EDITORS.]

61 [Cf. “Psychology and Religion,” par. 122, and “Answer to Job,” pars. 748ff.]

62 *Opera*, ed. G. Schepps, p. 24.

63 Cf. *Aurora Consurgens* (ed. von Franz), p. 127: “this great and wide sea smote the rock and the metallic waters flowed forth.”

64 *Musaeum hermeticum* (1678), p. 212: “Our stone is called the sacred rock, and is understood or signified in four ways.” Cf. Ephesians 3 : 18. The Pyramid Text of Pepi I mentions a god of resurrection with four faces: “Homage to thee, O thou who hast four faces. … Thou art endowed with a soul, and thou dost rise (like the sun) in thy boat … carry thou this Pepi with thee in the cabin of thy boat, for this Pepi is the son of the Scarab.” (Budge, *Gods of the Egyptians*, I, p. 85.)

65 *Explanationes in Psalmos*, XXXVIII: “In the shadow there was water from the rock, as it were the blood of Christ.”

66 Mylius, *Philosophia reformata* (1622), p. 112: “Whence the philosopher brought forth water from the rock and oil out of the flinty stone.”

67 *Von hylealischen Chaos* (1597), p. 272.

68 Hippolytus, *Elenchos*, V, 7, 34f. (Legge trans., I, p. 129). Reference is also made here to the “stone cut from the mountain without hands” (Daniel 2 : 45), a metaphor used by the alchemists.

69 *De errore profanarum religionum*, 20, 1.

70 Cf. the building of the seamless tower (church) with “living stones” in the “Shepherd” of Hermas.

71 Doelger, ΙΧΘΥΣ: *Das Fischsymbol*, I, p. 18. Though the Abercius inscription, which dates from the beginning of the 3rd cent., (after A.D. 216), is of importance in this connection, it is of doubtful Christian origin. Dieterich (*Die Grabschrift des Aberkios*), in the course of a brilliant argument, demonstrates that the “holy shepherd” mentioned in the inscription is Attis, the Lord of the sacred Ram and the thousand-eyed shepherd of glittering stars. One of his special forms was Elogabal of Emera, the god of the emperor Heliogabalus, who caused the *hieros gamos* of his god to be celebrated with Urania of Carthage, also called *Virgo coelestis*. Heliogabalus was a *gallus* (priest) of the Great Mother, whose fish only the priests might eat. The fish had to be caught by a virgin. It is conjectured that Abercius had this inscription written in commemoration of his journey to Rome to the great *hieros gamos*, sometime after A.D. 216. For the same reasons there are doubts about the Christianity of the Pectorios inscription at Autun, in which the fish figures too: Ἔσθιε πν …, ἰχθὺν ἔχων παλάμαις Ἰχθύϊ χόρταξ ἄρα λιλαίω δέσποτα σῶτερ: “Eat … (reading uncertain), holding the fish in the hands. Nourish now with the fish, I yearn, Lord Saviour.” Probable reading: πινάων instead of πεινάων. Cf. Cabrol and Leclercq, *Dictionnaire d’archéologie chrétienne*, XIII, cols. 2884ff., “Pectorios.” The first three distichs of the inscription make the acrostic Ichthys. Dating is uncertain (3rd–5th cent.). Cf. Doelger, I, pp. 12ff.

72 I refer particularly to Boll, *Aus der Offenbarung Johannis*. The writings of Arthur Drews have treated the astrological parallels with—one can well say—monomaniacal thoroughness, not

altogether to the advantage of this idea. See *Der Sternenhimmel in der Dichtung und Religion der alten Völker und des Christentums*.

73 Religious meal. According to Tertullian (*Adversus Marcionem*, I, cap. XIV; Migne, *P.L.*, vol. 2, col. 262) the fish signifies "the holier food." Cf. also Goodenough, *Jewish Symbols*, V, pp. 41ff.

74 Origen, *In Genesim hom*. VIII, 9 (Migne, *P.G.*, vol. 12, col. 208): "We said … that Isaac bore the form of Christ, but that the *ram* also seems no less to bear the form of Christ." Augustine (*City of God*, XVI, 32, 1) asks: "Who was that ram by the offering whereof was made a complete sacrifice in typical blood … who was prefigured thereby but Jesus … ?" For the Lamb as Aries in the Apocalypse see Boll, *Aus der Offenbarung Johannis*.

75 Eisler, *Orpheus—The Fisher*, pp. 51ff. There is also a wealth of material in Eisler's paper "Der Fisch als Sexualsymbol," though it contains little that would help to interpret the fish-symbol, since the question puts the cart before the horse. It has long been known that *all the instinctual forces of the psyche* are involved in the formation of symbolic images, hence sexuality as well. Sex is not "symbolized" in these images, but leaps to the eye, as Eisler's material clearly shows. In whatsoever a man is involved, there his sexuality will appear too. The indubitably correct statement that St. Peter's is made of stone, wood, and metal hardly helps us to interpret its meaning, and the same is true of the fish symbol if one continues to be astonished that this image, like all others, has its manifest sexual components. With regard to the terminology, it should be noted that something known is never "symbolized," but can only be expressed *allegorically* or *semiotically*.

76 Thiele, *Antike Himmelsbilder*, p. 29.

77 Boll, *Sphaera*, Pl. I, and Eisler, *The Royal Art of Astrology*, Pl. 5, following p. 164.

78 Gaedechens, *Der Marmorne Himmelsglobus*.

79 Cumont, *Textes et monuments*, II.

80 See the two fishes in Lambspringk's symbols (*Mus. herm.*, p. 343), representing at the same time the opposites to be united. Aratus (*Phaenomena*, Mair trans., p. 401) mentions only the higher position of the northern fish as compared with the southern one, without emphasizing their duality or opposition. Their double character is, however, stressed in modern astrological speculation. (E. M. Smith, *The Zodia*, p. 279.) Senard (*Le Zodiaque*, p. 446) says: "The fish … swimming from above downwards symbolizes the movement of involution of Spirit in Matter; that … which swims from below upwards, the movement of evolution of the Spirit-Matter composite returning to its Unique Principle."

81 Capricorn ♑ or ℨ.

82 A clear reference to astrology can be found in *Pistis Sophia*, where Jesus converses with the "ordainers of the nativity": "But Jesus answered and said to Mary: If the ordainers of the nativity find Heimarmene and the Sphere turned to the left in accordance with their first circulation, then their words will be true, and they will say what must come to pass. But if they find Heimarmene or the Sphere turned to the right, then they will not say anything true, because I have changed their influences and their squares and their triangles and their octants." (Cf. Mead trans., p. 29.)

83 The meridian of the star "O" in the commissure passed through the spring-point in A.D. 11, and that of the star "a 113" in 146 B.C. Calculated on the basis of Peters and Knobel, *Ptolemy's Catalogue of Stars*.

84 Since the delimitation of the constellations is known to be somewhat arbitrary, this date is very indefinite. It refers to the actual constellation of fixed stars, not to the *zodion noeton*, i.e., the zodiac divided into sectors of 30° each. Astrologically the beginning of the next aeon, according to the starting-point you select, falls between A.D. 2000 and 2200. Starting from star "O" and assuming a Platonic month of 2,143 years, one would arrive at A.D. 2154 for the beginning of the Aquarian Age,

and at A.D. 1997 if you start from star “a 113.” The latter date agrees with the longitude of the stars in Ptolemy’s Almagest.

85 Modern astrological speculation likewise associates the Fishes with Christ: “The fishes … the inhabitants of the waters, are fitly an emblem of those whose life being hid with Christ in God, come out of the waters of judgment without being destroyed [an allusion to the fishes which were *not* drowned in the Deluge!—C.G.J.] and shall find their true sphere where life abounds and death is not: where, for ever surrounded with the living water and drinking from its fountain, they ‘shall not perish, but have everlasting life.’ … Those who shall dwell for ever in the living water are one with Jesus Christ the Son of God, the Living One.” (Smith, *The Zodia*, pp. 280f.)

1 Printed in the Amsterdam edition of the *Vrayes Centuries et Prophéties de Maistre Michel Nostredame* (1667), pp. 96ff.

2 According to the old tradition the conjunction of Jupiter and Mercury, as mentioned above, is characteristic of Christianity. The quartile aspect between Mercury and Mars "injures" Mercury by "martial" violence. According to Cardan, ☿ ☌ ♂ signifies "the law of Mahomet" (*Comment. in Ptol*., p. 188). This aspect could therefore indicate an attack by Islam. Albumasar regards ♃ ☌ ♂ in the same way: "And if Mars shall be in conjunction with him (Jupiter), it signifies the fiery civilization and the pagan faith" (*De magn. coniunct*., tract. I, diff. 4, p. a8^{r}). On the analogy of history the evil events to come are ascribed to the crescent moon, but one never reflects that the opponent of Christianity dwells in the European unconscious. History repeats itself.

3 Where Roman Christendom succumbed to Islam.

4 *The Complete Prophecies of Nostradamus*, trans. and ed. by H. C. Roberts, pp. 231ff.

5 D 7^{v} to 8^{r}, div. 2, cap. 60 and 61. Cf. also Thorndike, *A History of Magic and Experimental Science*, IV, p. 102.

6 "Et post illam erit complementum 10 revolutionum saturnalium anno Christi 1789 et hoc erit post dictam coniunctionem per annos 97 vel prope. … His itaque praesuppositis dicimus quod si mundus usque ad illa tempora duraverit, quod solus deus novit, multae tunc et magnae et mirabiles alterationes mundi et mutationes futurae sunt, et *maxime circa leges et sectas,* nam cum praedicta coniunctione et illis revolutionibus Saturni ad hoc concurret revolutio seu reversio superioris orbis, id est, octavae sphaerae per quam et per alia praemissa cognoscitur sectarum mutatio … Unde ex his probabiliter concluditur quod forte circa illa tempora veniet *Antichristus* cum lege sua vel secta damnabili, quae maxime adversa erit et contraria legi Christi; nam licet de adventu sui determinato tempore vel momento haberi non possit humanitus certitudo. … Tamen indeterminate loquendo quod circa illa tempora venturus sit potest haberi probabilis coniectura et verisimilis suspicio per astronomica iudicia. Cum enim dictum sit secundum astronomos circa illa tempora fieri mutationem sectarum et secundum eos post *machometum* erit aliquis potens, qui legem foedam et magicam constituet. Ideo verisimili probabilitate credi potest, quod post sectam machometi nulla secta veniet, nisi lex antichristi."

7 *Concordantia*, etc., fol. b 5.

8 Cf. Thorndike, IV, p. 103.

9 In classical usage *renovatio* can have the meaning of the modern word "revolution," whereas even in late Latin *revolutio* still retains its original meaning of "revolving." As the text shows, Nostradamus thought of this moment (1791) as the climax of a long-standing persecution of the Church. One is reminded of Voltaire's "écrasez l'infâme!"

10 There is nothing to suggest that a conscious attempt was made to prophesy on the basis of the precession.

11 Conjunctions in Aries were regarded as such, at least as a rule. O° Aries is the spring-point.

12 I cannot claim to have understood Pierre d'Ailly's argument. Here is the text (Second treatise, ch. 60, "De octava coniunctione maxima"): "Et post illam erit complementum 10 revolutionum saturnalium anno Christi 1789 et hoc erit post dictam coniunctionem per annos 97 vel prope et inter dictam coniunctionem et illud complementum dictarum 10 revolutionum erit status octavae sphaerae circiter per annos 25 quod sic patet: quia status octavae sphaerae erit anno 444 post situm augmentationum [reading uncertain], quae secundum tabulas astronomicas sunt adaequatae ad annum Christi 1320 perfectum, et ideo anno Christi 1764, quibus annis si addas 25, sunt anni 1789 quos praediximus. Unde iterum patet quod ab hoc anno Christi 1414 usque ad statum octavae sphaerae

erunt anni 253 perfecti." (And after that shall be the fulfilment of 10 revolutions of Saturn to the year 1789, and this shall be after the said conjunction for 97 years or thereabouts, and between the said conjunction and that fulfilment of the 10 revolutions there shall be a standstill of the eighth sphere for about 25 years, which is evident from this: that the standstill of the eighth sphere shall be in the 444th year after the position of the augmentations, which according to the astronomical tables are assigned to the end of the year of Christ 1320, that is the year of Christ 1764, and if you add 25 years to this, you arrive at the year 1789 aforesaid. Hence it is again evident that from this year of Christ 1414 to the standstill of the eighth sphere there will be 253 complete years.)

13 Fol. d 6.

14 It is not clear from the text whether the same "persecution" is meant, or a new one. The latter would be possible.

15 Cf. "The Phenomenology of the Spirit in Fairytales," pars. 425f., 436ff.

16 Migne, *P.L.*, vol. 50, col. 740.

17 "Ab Aquilone pendetur malum super omnes habitatores terrae" (DV).

18 "Quomodo cecidisti de coelo, Lucifer, qui mane oriebaris? corruisti in terram qui vulnerabas gentes? Qui dicebas in corde tuo: in caelum conscendam, super astra Dei exaltabo solium meum, sedebo in monte testamenti, in lateribus Aquilonis" (trans. is AV; last line RSV).

19 Migne, *P.L.*, vol. 112, col. 860.

20 This is an obvious analogy of the pneuma brooding on the face of the deep.

21 " … quod illorum mentibus, qui gratia sua vacui, diabolum Deus dominari permittit."

22 *Enar. in Ps.* XLVII, 3; Migne, *P.L.*, vol. 36, col. 534.

23 *Sancti Victoris Parisiensis Gregorianum;* Migne, *P.L.*, vol. 193, cols. 59f.

24 Allusion to the lower triad.

25 De *tripartito tabernaculo*, III, c. 9; Migne, *P.L.*, vol. 198, col. 761. Adam Scotus speaks of the "darkness of the smoke from the north." Pseudo-Clement (*Homilies*, XIX, 22) stresses "the sins of unconsciousness" (*agnoia*). Honorius of Autun (*Speculum* de *mysteriis ecclesiae;* Migne, *P.L.*, vol. 172, col. 833) says: "By the north, where the sun lies hidden under the earth, Matthew is meant, who describes the divinity of Christ hidden under the flesh." This confirms the chthonic nature of the triad.

26 Ezek. 1 : 4: "And I saw, and behold a whirlwind came out of the north, and a great cloud … "

27 Isaiah 14 : 31: "Howl, O gate, cry, O city, all Philistia is thrown down, for a smoke shall come from the north, and there is none that shall escape his troop."

28 Ezek. 1 : 4.

29 "A burning wind shall take him up and carry him away: and as a whirlwind shall snatch him from his place" (*In Expositionem beati Job Moralia;* Migne, *P.L.*, vol. 76, cols. 54, 55).

30 Jer. 1 : 13f.

31 Cf. *Symbols of Transformation*, par. 565.

32 The text of the various mss. is supposed to go back to the *Compendium theologicae veritatis* of Hugh of Strasbourg (13th cent.). Cf. Kelchner, *Der Enndkrist*, p. 7.

33 So in Giovanni Nanni (1432–1502). See Thorndike, IV, pp. 263ff.

4 Eisler, *The Royal Art of Astrology*, p. 107.

5 Bouché-Leclercq, *L’Astrologie grecque*, p. 147. For the relation of the *gyne* (woman) to the zodiacal sign Virgo see Boll, *Aus der Offenbarung Johannis*, p. 122.

6 *Panarium*, LI, 22, Oehler edn., Part 3, pp. 632f. This passage is not in the older editions of the *Panarium*, since it was discovered only recently in a ms. at Venice.

7 Boll, pp. 121ff.

8 “Before she travailed, she brought forth; before her pain came, she was delivered of a man child.”

9 “Thou shalt break them with a rod of iron; thou shalt dash them in pieces like a potter’s vessel.”

10 Boll, p. 44.

11 His eyes signify the “seven Spirits of God” (Rev. 5 : 6) or the “seven eyes of the Lord” (Zech. 4 : 10). The Lamb stands with the seven angels before God’s throne, as Satan did with the sons of God (Job 1 : 6), so that God is described under the aspect of Ezekiel’s vision and is thought of in Yahwistic terms—an “umbra in lege”!

12 That is, if we disregard passages like Matt. 21 : 19 and 22 : 7 and Luke 19 : 27.

13 [Cf. Num. 16.—EDITORS.]

14 Wünsche, *Die Leiden des Messias*, p. 91.

15 Targum on Canticles 4 : 5 in *The Targum to The Song of Songs*, p. 50. Wünsche, p. 111. In the *Zohar* the Messiah is called “Mother.” Schoettgen, *Horae Hebraicae et Talmudicae*, II, p. 10. Cf. also the “Saviour of the twins” in *Pistis Sophia* (above, par. 133, n. 44).

16 *Zohar*, trans. by H. Sperling and M. Simon, II, p. 358: “Hence it is written of him [the Messiah] that he will be ‘poor and riding on an ass … ’ (Zech. 12 : 9).” Also Wünsche, p. 100.

17 Ibid., p. 114.

18 Ibid., p. 115.

19 Armilus or Armillus = ’Ρωμύλος, the Antichrist. Methodius: “Romulus, who is also Armaeleus.”

23 *Pahlavi Texts*, trans. by E. W. West, p. 193.

24 Cf. the opposition between mercy and justice in God’s nature, supra, pars. 108ff.

25 Psalm 89 : 33ff. (RSV).

26 He was, it seems, a cleric, who is said to have been a candidate for the episcopal see in Rome.

27 Irenaeus, *Adv. haer*., I, 11, 1 (Roberts/Rambaut trans., I, p. 46).

28 Doctrine of the Valentinian Secundus (ibid., I, p. 46).

29 *De oratione*, 27: “… so that that supreme sinner and blasphemer against the Holy Ghost may be kept from sin through all this present age, and hereafter in the age to come from its beginning to its end be treated I know not how” (… ita ut summus ille peccator et in Spiritum sanctum blasphemus per totum hoc praesens saeculum a peccato detineatur, et post haec in futuro ab initio ad finem sit nescio quomodo tractandus), thus giving rise to the view that “even the devil will some day be saved.” [Cf. alternative trans. by J. E. L. Oulton and H. Chadwick, p. 304.]

30 Namely *Piscis Austrinus*, the “Southern Fish,” which merges with Pisces and whose principal star is Fomalhaut.

31 Matt. 12 : 39, 16 : 4; Luke 11 : 29f.

32 Cf. Frobenius, *Das Zeitalter des Sonnengottes*, and my *Symbols of Transformation*, pars. 308ff.

33 “Yahweh is salvation.”

34 Koran, Sura 18. Cf. “Concerning Rebirth,” pars. 244f., and Vollers, “Chidher,” p. 241.

35 Jeremias, *The Old Testament in the Light of the Ancient East*, p. 76. This lamp has never been traced.

36 Picinellus, *Mundus symbolicus* (1680–81), Lib. VI, cap. I.

37 Bouché-Leclercq, p. 147.

38 How closely the negative and the positive meanings are related can be seen from the fish-hook motif, attributed to St. Cyprian: “Like a fish which darts at a baited hook, and not only does not lay hold of the bait along with the hook, but is itself hauled up out of the sea; so he who had the power of death did indeed snatch away the body of Jesus unto death, but did not observe that the hook of the Godhead was concealed therein, until he had devoured it; and thereupon remained fixed thereto.”

Stephen of Canterbury (*Liber allegoricus in Habacuc*, unavailable to me) says: “It is the bait of longed-for enjoyment that is displayed in the hook, but the tenacious hidden hook is consumed along with the bait. So in fleshly concupiscence the devil displays the bait of pleasure, but the sting of sin lies hid therein.” In this regard see Picinellus, Lib. VI, cap. 1.

39 Scheftelowitz, “Das Fisch-Symbol im Judentum und Christentum,” p. 365.

40 Cf. Goodenough, *Jewish Symbols*, V, pp. 41ff.

41 Lib. XIII, cap. XXI. (Cf. trans. by F. J. Sheed, p. 275, modified.)

42 “The cloister of a monastery is indeed a fishpond of souls, and fish live therein” (Picinellus, *Mundus*).

An Alexandrian hymn from the 2nd cent. runs:

“Fisher of men, whom Thou to life dost bring!
From the evil sea of sin
And from the billowy strife
Gathering pure fishes in,
Caught with sweet bait of life.”

(*Writings of Clement of Alexandria*, trans. by W. Wilson, I, p. 344.) Cf. Doelger, ’ΙΧΘΥΣ, I, p. 4. Tertullian (*De baptismo*, cap. I) says: “But we little fishes, after the example of our ’ΙΧΘΥΣ Jesus Christ, are born in water, nor have we safety in any other way than by permanently abiding in (that) water.” (Trans. by S. Thelwall, I, pp. 231–32.) The disciples of Gamaliel the Elder (beginning of 1st cent.) were named after various kinds of fishes. (*Abot de Rabbi Nathan*, cap. 40 [cf. trans. by J. Goldin, p. 166], cited in Scheftelowitz, p. 5.)

43 Pohl, *Das Ichthysmonument von Autun*, and Doelger, I, pp. 12ff.

44 “I will save thee.” Shatapatha Brahmana (trans. by J. Eggeling, I [i.e., XII], p. 216).

45 De Gubernatis, *Zoological Mythology*, II, pp. 334f.

46 Shatapatha Brahmana (Eggeling trans., pp. 216ff.).

47 Doelger, I, p. 23. Keshava means ‘having much or fine hair,’ a cognomen of Vishnu.

48 Ibid., pp. 21ff.

49 Origen (*De oratione*, cap. 27): "… as the last month is the end of the year, after which the beginning of another month ensues, so it may be that, since several ages complete as it were a year of ages, the present age is 'the end,' after which certain 'ages to come' will ensue, of which the age to come is the beginning, and in those coming ages God will 'shew the riches of his grace in kindness' [Eph. 2 : 7]" (Oulton/Chadwick trans., p. 304).

50 Especially noteworthy is the cult of the dove and the fish in the Syrian area. There too the fish was eaten as "Eucharistic" food. (Cumont, *Les Religions orientales dans le paganisme romain*, pp. 108–9, 255–57.) The chief deity of the Philistines was called Dagon, derived from *dag,* 'fish.'

51 τὸ ποτήριον τῆς εὐλογίας: *calix benedictionis* (I Cor. 10 : 16, DV).

52 Scheftelowitz, p. 375.

53 Ibid., p. 3.

54 Cf. Goodenough, V, pp. 35ff.

55 At the same time "Behemoth shall be revealed from his place … and then they shall be food for all that are left." (Charles, *Apocrypha and Pseudepigrapha*, II, p. 497.) The idea of Leviathan rising from the sea also links up with the vision in II Esdras 13 : 25, of the "man coming up from the midst of the sea." Cf. Charles, II, p. 579, and Wischnitzer-Bernstein, *Symbole und Gestalten der jüdischen Kunst*, pp. 122f. and 134f.

56 Wirth, *Aus orientalischen Chroniken*, p. 199.

57 Ibid., pp. 161, 19f.

58 [Cf. Neumann, *The Great Mother*, ch. 14 and pl. 134.—EDITORS.]

59 Eisler, *Orpheus—The Fisher*, Pl. LXIV.

60 See *Psychology and Alchemy*, fig. 28.

61 Scheftelowitz, p. 9; from the Talmud *Nezikin* VI, Sanhedrin II (*BT*, p. 662). Cf. the ἐσθίε πινάων in the Pectorios inscription, supra, p. 89n.

62 A passage in Moses Maimonides (*Guide for the Perplexed*, trans. by M. Friedlander, p. 303) has bearing on the interpretation of Leviathan. Kirchmaier (*Disputationes Zoologicae*, 1736, p. 73) cites it as follows: "Speaking of these same things Rabbi Moses Maimon says that Leviathan possesses a [universal] combination (*complexum generalem*) of bodily peculiarities found separate in different animals." Although this rationalistic author dismisses the idea as "nugatory," it nevertheless seems to me to hint at an archetype ("complexum generalem") of the "spirit of gravity."

63 *Psychological Types*, pars. 456ff.

64 Scheftelowitz, p. 10. Cf. Matt. 12 : 39 and 16 : 4, where Christ takes the sign of the prophet Jonah as a sign of the Messianic age and a prefiguration of his own fate. Cf. also Goodenough, *Jewish Symbols*, V, pp. 47ff.

65 Παμμεγέθης.

66 Pp. 7f.

67 Τὰ ἐν Περσίδι πραχθέντα (Wirth, p. 151).

1 Charles, II, p. 497, modified.

2 *Midrash Tanchuma*, Lev. 11 : 2 and Deut. 29 : 9; cited in Scheftelowitz, pp. 39f.

3 Talmud, *Nezikin* III, Baba Bathra (*BT*, I, p. 296). The *female* Leviathan has already been killed by Yahweh, salted, and preserved for the end of time. The male he castrated, for otherwise they would have multiplied and swamped the earth.

4 A typical pair of opposites. Cf. the struggle between the two dragons in hexagram 2, line 6, in the *I Ching* (Wilhelm/Baynes trans., 1967, p. 15).

5 Cf. the *Midrash Tanchuma*.

6 “Note complémentaire sur le poème de Mot et Aleïn,” p. 357.

7 Virolleaud, “La légende de Baal, dieu des Phéniciens,” p. ix.

8 Perhaps an echo of this psychological development may be found in the views of Moses Maimonides, who writes that in the Book of Job (ch. 41) Yahweh “dwells longest on the nature of the Leviathan, which possesses a combination of bodily peculiarities found separate in different animals, in those that walk, those that swim, and those that fly” (*Guide for the Perplexed*, p. 303). Accordingly Leviathan is a kind of super-animal, just as Yahweh is a kind of superman.

9 *Confessions*, Sheed trans., p. 275.

10 Cf. Goodenough, V, pp. 51ff.

11 The motif of splitting is closely related to that of penetration and perforation in alchemy. Cf. also Job 26: 13: “His hand pierced the fleeing serpent” (RSV).

12 For this information I am indebted to Dr. Riwkah Schărf.

13 II Esdras is a Jewish text written at the end of the 1st cent. A.D.

14 Cumont, *Les Religions orientales*, p. 255.

15 Ibid., pp. 108–9, 256.

16 Eisler, *Orpheus—The Fisher*, p. 20.

17 *De Iside et Osiride*, cap. VII (Babbitt trans., V, p. 19).

18 ’ΙΧΘΥΣ, I, p. 126. The risen Christ ate of a broiled fish (Luke 24 : 42).

19 Spiegelberg, “Der Fisch als Symbol der Seele,” p. 574. Cf. Goodenough, V, fig. 9, where the mummy appears in the form of a fish.

20 The oxyrhynchus fish was regarded as sacred all over Egypt. Cf. Budge, *The Gods of the Egyptians*, II, p. 382; Plutarch, *De Iside*, cap. XLIX (Babbitt trans., V, p. 19).

21 Ibid. (pp. 120f.).

22 Picinellus, *Mundus symbolicus*, Lib. VI, cap. I.

23 Budge, II, pp. 241f. Cf. Christ’s transfiguration in the presence of Moses and Elias (Matt. 17 : 4), and the “Saviour of the twins” in *Pistis Sophia*.

24 Budge, II, p. 243.

25 Daniel 3 : 25 may be of relevance in this connection: the three men in the burning fiery furnace, who were joined by a fourth, a “son of God.”

26 Lit., ‘daughters of the bier’, presumably mourning women who walk ahead of the coffin. Cf. Ideler, *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen*, p. 11.

27 Ibid., p. 15.

28 Jeremias, p. 22.

29 Ibid., p. 33.

30 Dieterich, *Eine Mithrasliturgie*, pp. 8ff.

[31] Cf. *Psychology and Alchemy*, par. 446.

[32] Garnerius, in Migne, *P.L.*, vol. 193, col. 49.

[33] *Tractatus de gradibus superbiae*, in Migne, *P.L.*, vol. 182, col. 961.

[34] One of the bad qualities of the north wind ("The north wind numbs with cold" = the numbness of the evil spirit, who "hardens the hearts of the wicked"), was responsible for an alchemical hypothesis concerning the formation of coral: "The coral is a kind of vegetable which comes into being in the sea, and has roots and branches, and in its original state is moist. But when the wind blows north, it hardens, and turns into a red substance, which the seafarer sees under the water and cuts off; then, when it comes out of the water, it turns into a stone, of a red colour." ("Allegoriae super librum Turbae," *Art. aurif.*, 1593, I, p. 143.)

1 This treatise was not printed together with the *Turba*, like the others, but it appears to belong to the same category. The 28th Distinctio contains the "Dicta Belini" (Belinus = Apollonius of Tyana).

2 Cf. Ruska, *Turba Philosophorum*.

3 Cf. the edn. of Preisendanz.

4 Printed in *Artis auriferae* (1593), I, pp. 139ff.; *Theatrum chemicum*, V, pp. 64ff.; and Manget, *Bibliotheca chemica curiosa* (1702), I, pp. 494ff.

5 I am not counting the fish as technical alchemical material, in which capacity it was of course known even to the Greek alchemists. I would mention, for instance, the "procedure of Salmanas" (Berthelot, *Alch. grecs*, V, viii, 5) for producing the "round pearl." Fish-glue was often used as an agglutinant.

6 "Allegoriae," in *Art. aurif.*, I, p. 141: "Est in mari piscis rotundus, ossibus et corticibus carens, et habet in se pinguedinem, mirificam virtutem, quae si lento igne coquatur, donec eius pinguedo et humor prorsus recedit … et quousque lucescat, aqua maris imbuatur."

7 "Aenigmata," in *Art. aurif.*, I, p. 149.

8 See du Cange, *Glossarium ad scriptores mediae et infimae latinitatis*, s.v. "cortex." [In the Swiss *Gesammelte Werke*, 11, p. 59, n. 27, "corticibus" in this same passage is translated as "scales."—EDITORS.]

9 From κνίδη, *urtica*, 'nettle.' Hence Pliny's "sea-nettle" (*Hist. nat.*, XXXII, xi, 53).

10 From νῆμα, 'thread, tentacle.'

11 Caussin (*Polyhistor symbolicus*, 1618, s.v. "stella") cites Aristotle as a source.

12 *Hist. nat.*, IX, 60. Cf. trans. by Rackham and Jones, III, pp. 346–48.

13 This could be conceived as a starfish, since, as Pliny says, it has a hard exterior.

14 *Hist. nat.*, XVIII, 35.

15 IX, 47 (Rackham/Jones trans., III, p. 220).

16 XXXII, 10.

17 *Polyhistor symbolicus*, p. 414.

18 "And Elias the prophet stood up, as a fire; and his word burnt like a torch" (DV).

19 *Homilia in Ps*. 33, in Migne, *P.G.*, vol. 29, col. 371.

20 This recalls the Vision of Arisleus, where the philosophers in the glass-house at the bottom of the sea suffer great torment on account of the extraordinary heat. (*Art. aurif.*, I, pp. 146ff., and Ruska, "Die Vision des Arisleus," pp. 22ff.)

21 *Mus. herm*. (1678), pp. 246f. The "Gloria mundi" is an anonymous treatise, and it remains uncertain whether it was originally written in Latin or not. So far as is known, it was printed for the first time in 1620, in German. To the best of my knowledge it was first mentioned in the treatises of the 17th cent. It was highly esteemed and was considered especially dangerous. In the *Theatr. chem*. (1661), VI, pp. 513ff., there is a long extract from it, conjuring the reader to be discreet: "I will that all those who possess this book be admonished and besought for the love of Jesus Christ, that they conceal this art from all such as are puffed up, vainglorious, unjust oppressors of the poor, proud, worldly, scoffers, contemners, false accusers, and such unworthy folk, nor permit this writing to come into the hands of such, if they would escape the wrath of God and the punishments which he is wont to bring down upon those that are presumptuous and profane."

22 "Recipito ignem, vel calcem vivam, de qua Philosophi loquuntur, quod in arboribus crescat, in quo (igne) Deus ipse ardet amore divino. … Item. Naturalis Magister ait ad artem hanc de igne, Mercurium putrcfaciendum … et fixandum in igne indelebili, vel vivo, quo in Deus ipse ardeat, sed

cum sole in amore divino, ad solatium omnium hominum; et absque isto igne ars numquam perfici poterit. Item, ignis Philosophorum quem occultatum occlusumque illi habent. … Item, ignis nobilissimus ignis est, quem Deus in terra creavit, millenas enim virtutes habet. Ad haec respondet didascalus quod Deus tantam virtutem efficaciamque tribuerit … ut divinitas ipsa cum hoc igne commixta siet. Et iste ignis purificat, tamquam purgatorium in inferno … ”

23 “Philosophi hunc ignem Spiritus Sancti ignem appellant.”

24 “ … adeo ut omneis tres, una res fiant, quas nemo separaturus siet.”

25 “Pari modo quo in hisce tribus sese uniunt, Deus pater, Deus filius et Deus spiritus sanctus, S. S. Trinitas in tres personas et tamen unicus verus Deus remanet; ita quoque ignis unit hasce tres res: utpote corpus, spiritum et animam, hoc est, Solem, Mercurium et Animam” (p. 247).

26 “In igni hoc invisibili artis mysterium inclusum est, quemadmodum tribus in personis Deus Pater, Filius et Spiritus S. in una essentia vere conclusus est” (p. 248).

27 “ … qui seipsum sese in vivam aquam miscet” (p. 247). Presumably taken over from the “troubled” water of the pool of Bethesda (John 5 : 2).

28 “Occultatio et domicilium omnis thesauri.”

29 “Continens hanc machinam mundi in suo esse.”

30 Sendivogius, “Novi luminis chemici,” *Mus. herm.*, p. 607.

31 Ripley, “Duodecim portarum,” *Theatr. chem.*, II, p. 128.

32 *Uraltes Chymisches Werk* (1760), pp. 79 and 81.

33 “De igne et sale,” *Theatr. chem.*, VI, p. 39.

34 They are also the sons of Set, in so far as Heru-ur and Set have one body with two heads. [For the association of fire and north, see pp. 99 and 124.]

35 The quaternary symbols that appear spontaneously in dreams always point, so far as I can see, to totality or the self. Fire means passion, affects, desires, and the emotional driving-forces of human nature in general, that is, everything which is understood by the term “libido.” (Cf. *Symbols of Transformation*, Part II, chs. 2 and 3.) When the alchemists attribute a quaternary nature to the fire, this amounts to saying that the self is the source of energy.

36 Hell-fire is identical with the devil, who, on the authority of Artefius (“Clavis maioris sapientiae,” *Theatr. chem.*, IV, p. 237), has an outer body made of air and an inner one of fire.

37 Philalethes, “Introitus apertus,” *Mus. herm.*, pp. 654f.: “ … ignis infernalis, secretus … mundi miraculum, virtutum superiorum in inferioribus systema, quare signo illum notabili notavit Omnipotens cuius nativitas per Orientem in Horizonte Hemisphaerii sui philosophicum annunciatur. Viderunt Sapientes in Evo Magi, et obstupuerunt statimque agnoverunt Regem serenissimum in mundo natum. Tu cum ejus Astra conspexeris, sequere ad usque cunabula, ibi videbis infantem pulcrum, sordes semovendo, regium puellum honora, gazam aperi, auri donum offeras, sic tandem post mortem tibi carnem sanguinemque dabit, summam in tribus Terrae Monarchiis medicinam.”

(Cf. Waite, trans., *The Hermetic Museum Restored and Enlarged*, II, pp. 166f.) Philalethes (“lover of truth”) is a pseudonym. Waite (*The Works of Thomas Vaughan: Eugenius Philaletha*) conjectures the Hermetic philosopher Vaughan (1621–65), an hypothesis that is doubtful for several reasons. See also Waite, *Lives of Alchemystical Philosophers*, p. 187, and Ferguson, *Bibliotheca Chemica*, II, pp. 194 and 197.

38 From the Paracelsan concept of the “Archeus.” See my “Paracelsus the Physician,” par. 39 n. 56. Ruland (*Lexicon of Alchemy*, p. 36) defines: “Archeus is a most high, exalted, and invisible spirit, which is separated from bodies, is exalted, and ascends; it is the occult virtue of Nature, universal in all things, the artificer, the healer … the dispenser and composer of all things.”

39 Probably magnetism is meant.

40 Cf. *Psychology and Alchemy*, par. 457.

40a [Cf. *Memories, Dreams, Reflections*, p. 85 (Brit. edn., p. 91).]

41 "The Psychology of Eastern Meditation," pars. 942ff.

42 Ecclesiasticus 9 : 18 (Vulg. 25): "A man full of tongue is terrible in his city (DV), Conversely, the fiery tongue is an allegory (or symbol?) of the Holy Ghost: "cloven tongues, as of fire" (Acts 2 : 3).

43 James 3 : 5 (RSV).

44 *Psychology and Alchemy*, par. 109.

45 "The Spirit Mercurius," par. 263. Cf. *Psychology and Alchemy*, fig. 208.

67 *Elenchos*, V, 16, 2 (Legge trans., I, p. 154).

68 *Psychology and Alchemy*, “The Lapis-Christ Parallel.”

69 We could conceive these as hereditary influences, vestiges of ancestral life, although this idea does not suggest as much as *karma* does to the Indian.

70 *Hymni et sermones*, ed. Lamy, II, col. 770.

71 “Fidelissima et Jucunda Instructio ex manuscripto Gallico Philosophi Anonymi desumpta, per quam Pater filio suo omnia declarat, quae ad compositionem et praeparationem Lapidis Sapientum sunt necessaria, decem capitibus comprehensa.” The abbreviated title of this treatise as printed in Vol. VI of *Theatr. chem*. is “Instructio de arbore solari.”

72 “Quia illud quod accipimus ut opus Philosophicum ex eo praeparemus, nihil aliud est quam pisciculus Echen[e]is sanguine et ossibus spinosis carens, et in profunda parte centri magni maris mundi est inclusus. Hic pisc[ic]ulus valde est exiguus, solus et in sua forma unicus, mare autem magnum et vastum, unde ilium capere impossibile est illis, qui qua in parte mundi moretur ignorant. Certam mihi fidem habe, illum qui ut Theophrastus loquitur, artem illam non callet, qua Lunam de firmamento trahat, et de coelo super terram adducat, et in aquam convertat, et postea in terram mutet, nunquam maleriam lapidis sapientum inventurum, unum tamen non est difficilius facere, quam alterum invenire. Nihilominus tamen, cum fido amico aliquid in au[re]m fideliter dicimus, tunc ipsum occultum secretum sapientum docemus, quomodo pisc[ic]ulum Remora dictum naturaliter cito et facile capere possit, qui navigia magni maris Oceani (hoc est spiritus mundi), superba retinere potest, qui cum filii artis non sint, prorsus ignari sunt et preciosos thesauros, per naturam in preciosa et coelesti aqua vitae nostri maris delitescentes, non noverunt. Sed ut clarum lumen unicae nostrae materiae, seu terrae virgineae nostrae tibi tradam summam artem filiorum sapientiae, quomodo videlicet illam acquirere possis, te doceam, necesse est ut prius de magnete sapientum te instruam, qui potestatem habet, pisc[ic]ulum Echen[e]is vel Remora dictum ex centro et profunditate nostri maris attrahendi. Qui si secundum naturam capitur, naturaliter primo in aquam deinde in terram convertitur: Quae per artificiosum secretum sapientum debito modo praeparata potestatem habet, omnia fixa corpora dissolvendi, et volatilia faciendi et omnia corpora venenata purgandi etc.”

73 “Liber de alchemia,” *Theatr. chem*., I, p. 795.

74 Arisleus is legendary. He was regarded as the author of the *Turba*.

75 “Natura non emendatur nisi in sua natura.”

76 “Natura” and “naturae,” in the language of the *Turba*, correspond to the φῦσεις of the alchemist Democritus (1st cent.). See Berthelot, *Alch. grecs*. They are substances or states of substances.

77 “Omne quo indiget.”

78 “Who among us shall dwell with the devouring fire? who among us shall dwell with everlasting burnings?” Isaiah 33 : 14.

79 [Cf. “Transformation Symbolism in the Mass,” pars. 339ff.—EDITORS.]

80 *Opera*, p. 10.

81 Grenfell and Hunt, *New Sayings of Jesus*, p. 16.

82 *Mus. herm*., p. 343.

83 Regarding the combination of fish and bird in ancient mythology, cf. Goodenough, V, pp. 58ff. and figs. 63, 66, 69.

84 Cited by Hahn, *Geschichte der Ketzer im Mittelalter*, II, pp. 815ff.

85 In contradiction to Luke 16 : 8, where “the lord commended the unjust steward, because he had done wisely.”

86 Despite the fact that the sect of this John condemned the Concorricci, with whom our Johannine revelation originated. In the *Summa Fratris Reineri* (“De propriis opinionibus Joh. de Lugio”) we read: “He says this world is of the devil.” Hahn, I, p. 580.

87 Rupescissa, *La Vertu et la propriété de la quinte essence* (1581), p. 31: “Since it is our intention to comfort and strengthen the poor preachers of the gospel [*hommes evangelisans*] by means of our book, to the end that their prayers and supplications be not in vain and lost in this work, and that they be not greatly hindered in this pursuit, I will declare and give to them a secret drawn from the bosom of the secrets of the treasures of Nature, which is a thing truly worthy of wonderment, and is to be honoured.”

In Rupescissa’s treatise “De confectione veri lapidis” (in Gratarolus, *Verae alchemiae artisque metallicae*, 1561, II, p. 299) there is the following exhortation, very unusual in alchemical literature: “Credas, vir Evangelice.” Presumably, this was originally an “homme evangelisant.”

88 *Altkirchenslavisch-griechisches Wörterbuch des Codex Suprašliensis*.

89 Dragomanov (“Zabelezhki vrkhy slavyanskite religioznoeticheski Legendi,” p. 7) merely remarks about “suum Osob” that, in a Gipsy legend, the devil was hampered by burning sand when creating the world.

90 Cf. supra, n. 36, on Artefius.

91 “But the two fishes … seem to signify those two persons by whom that people was governed … that is, the kingly and the priestly” (*De diversis quaestionibus*, LXI, 2; Migne, *P.L.*, vol. 40, col. 48). The derivation of the two fishes from II Esdras 6 : 49ff. (Soederberg, *La Religion de Cathares*, p. 97) seems to me questionable. The passage runs (Charles, *Apocryphal and Pseudepigrapha*, II, p. 579): “Then didst thou preserve two living creatures; the name of the one thou didst call Behemoth and the name of the other thou didst call Leviathan. And thou didst separate the one from the other. … ” This image does not fit in at all with the two fishes mentioned in the Cathar text.

92 “So is our Lord Jesus Christ shown to be our king. He is also our priest for ever after the order of Melchisedek” (Augustine, *De diversis quaestionibus*, LXI, 1).

93 Cap. XVI (Oehler edn., I, p. 266).

94 Psellus, “De daemonibus,” in Ficinus, *Auctores Platonici* (1497), fol. N. V^{r}.

95 Migne, *P.G.*, vol. 130, cols. 1290ff.

96 This interpretation accords with modern astrological speculations.

97 Concerning such symbols, *see* Neumann, *The Origins and History of Consciousness*.

98 Ripley, *Chymische Schrifften* (1624), p. 25.

99 Ibid., p. 33f.

100 Cf. Laiblin, “Vom mythischen Gehalt unserer Märchen.”

101 According to Irenaeus, the Gnostics held that the demiurge was the younger brother of Christ.

102 *Mus. herm*., p. 343.

103 The transparency of the water means that attention (value, gold) is given to the unconscious. It is an offering to the genius of the fountain. Cf. the vision of the Amitābha Land in my “Psychology of Eastern Meditation.”

104 Cf. infra, pars. 395ff.

105 Cf. *Psychology and Alchemy*, s.v. “coniunctio.”

106 The Ichthys (= Christ or Attis) is the food that bestows (immortal) life.

107 Deussen, *Allgemeine Geschichte der Philosophie*, I, pt. iii, pp. 336ff. and “The Spirit Mercurius,” pars. 282ff.

[108] *Psychology and Alchemy*, pars. 26 and 209, and “A Psychological Approach to the Dogma of the Trinity,” pars. 184ff.

[109] [For the source of this saying, see “A Psychological Approach to the Dogma of the Trinity,” par. 229, n. 6.—EDITORS.]

[1] “The Echenaïs is a small fish, half a foot in length [*semipedalis*], and takes its name from the fact that it holds back a ship by cleaving to it, so that though winds blow and storms rage, yet the ship seems to stand still as if rooted in the sea, and cannot be moved. … Hence the Latins call it *delay* (Remora).” (Du Cange, *Glossarium*, s.v. “Echenaïs.” Cited from the ms. of a bestiary.) This passage is taken verbatim from the *Liber etymologiarum* (Lib. XII, cap. VI) of Isidore of Seville. There the name of the fish is “echinus,” which strictly speaking is a sea-urchin. Because of its radial structure, this creature comes into the same class as the starfish and the jelly-fish. (For the “Instructio,” see supra, p. 140, n. 71.)

[2] That the power of the Echeneis was understood to be magnetic is clear from the legend that if a salted Echeneis is let down into a mine it will attract the gold and bring it to the surface. Cf. Masenius, *Speculum imaginum veritatis occultae* (1714), s.v. “Echeneis.” “Magnet” is also the name given to sal ammoniac, which, when added to metallic solutions, “instantly draws all that is good in them, be it gold or tincture, to the bottom of the glass.” (*Lexicon medico-chymicum*, 1711, p. 156.)

[3] *Dictionnaire mytho-hermétique* (1787), s.v. “Magnès.”

[4] Cf. *Psychology and Alchemy*, pars. 425ff.

[5] Berthelot says of the “Magnésie”. “Jusqu’au XVIIIe siècle, [le mot] n’a rien eu de commun avec la magnésie des chimistes d’aujourd’hui” (*Alch. grecs*, Introduction, p. 255). In Pliny and Dioscorides it meant the magnetic iron-stone.

[6] Mylius, *Phil. ref.*, p. 31.

[7] The *corpus Magnesiae* is the “root of the closed house,” the “belly” in which Sol and Luna are united. (“Aurora consurgens,” Part II, *Art. aurif.*, I, p. 191.)

[8] *Theatr. chem.*, III, pp. 88f.

[9] Mylius calls the tenth grade of the process “the exaltation, which is the ingenious ennobling of our whitened magnesia” (p. 129). Hence the *Rosarium philosophorum (Art. aurif.*, II, p. 231) says: “The magnesia is the full moon.”

[10] Sermo XXI.

[11] *Von hylealischen Chaos*, pp. 5f.

[12] “Magnesia—the Woman.” Ruland, *Lexicon*, p. 216.

[13] But in the region of Alexandria and in the Troad there was said to be a magnetic stone “of the feminine sex, and totally useless.” (Ruland, p. 215.)

[14] “Duodecim tractatus,” *Theatr. chem.*, IV, p. 499.

[15] Berthelot, Intro., p. 255.

[16] “Magnesia is further the mixed water congealed in air which offers resistance to the fire, the earth of the stone, our mercury, mixture of the substances. The whole therein is mercury.” Ruland, p. 216.

[17] “Rosinus ad Sarratantam” (*Art. aurif.*, I, p. 311): “Recipe ergo hunc lapidem animalem: id est animam in se habentem, scilicet Mercurialem sensibilem: id est, sentientem praesentiam et influentiam magnesiae et magnetis et calaminarem [et lapidem] per motum Iocalem, prosequendo et fugando vegetabilem … .” Instead of “et lapidem” the text of 1593 has “ac apicem,” which does not make sense. Rosinus is a corruption of Zosimos due to Arabic transcription.

[18] *De arte metallicae metamorphoseos ad Philoponum liber singularis* (1576). Reprinted in *Theatr. chem.*, I (1602), p. 44.

[19] “Philosophia chemica,” *Theatr. chem.*, I, p. 497. Here Dorn discusses his view of the *anima rerum:* “The body … of every thing is a prison, wherein the powers of the soul of things are detained and held in fetters, so that their natural spirits are not able freely to impress their powers and

activities upon them. The spirit of such insensate things in relation to its subject is similar to and of the same efficacy as undoubting faith is in man.” The divine powers imprisoned in bodies are nothing other than *Dionysus dispersed in matter*.

20 Cf. *City of God*, Healey trans., II, p. 322. Augustine finds quick-lime (*calx viva*) equally wonderful: “Quam mirum est quod cum extinguitur, tunc accenditur” (But the wonder is that when it is killed it is quickened).

21 *Emblemata* (1621), Embl. CLXXI, p. 715 a.

22 *Commentariorum alchymiae* (1606), Part II, p. 101.

23 *Theatr. chem*., IV, p. 499.

24 The extraordinary importance of the water in alchemy goes back, in my view, to Gnostic sources: “And water is honoured, and they believe in it as if it were a god, going almost so far as to allege that life arises therefrom” (Epiphanius, *Panarium*, LXIII, cap. I).

25 “Inquiunt enim, natura naturam sibi similem appetit, et congaudet suae naturae; si alienae iungatur, destruitur opus naturae” (“Ars chemistica,” *Theatr. chem*., I, p. 252).

26 *Δημοκρίτου φυσικὰ καὶ μυστικά*.—Berthelot, *Alch. grecs*, II, i, 3. According to the story of Democritus, this axiom was revealed to him by his deceased teacher. Synesius, in the treatise addressed to Dioscorus, priest of Serapis (Berthelot, II, iii), says that the teacher of Democritus was Ostanes, and that the axiom came from him.

27 *Vegetabilis* in our texts means ‘living’ when applied to Mercurius, ‘vivifying’ when applied to the Quinta Essentia.

28 Cf. “Psychology of the Transference,” pars. 433ff., and “Phenomenology of the Spirit in Fairytales,” in Part I of vol. 9, pars. 429ff.

29 *Psychological Types*, ch. V, 3.

30 “Idea perfecta philosophiae hermeticae,” *Theatr. chem*. (1661), VI, p. 152. The treatise was first published 1630. Of the author Collesson nothing appears to be known.

31 “Quantum autem ad substantiam, qua naturaliter et Philosophice aurum et argentum vulgare solvuntur, attinet, nemo sibi imaginari debet, ullam aliam, quam animam mundi generalem, quae per magnetes et media Philosophica trahitur et attrahitur de corporibus superioribus, maxime vero de radiis Solis et Lunae. Unde liquet illos Mercurii seu menstrui Philosophici nullam habere cognitionem, qui naturaliter et physice metalla perfecta dissolvere cogitant.”

32 “There is a certain truth in natural things which is not seen with the outward eye, but is perceived by the mind alone, and of this the Philosophers have had experience, and have ascertained that its virtue is such that it performs miracles” (“Speculativa philosophia,” *Theatr. chem*., I, p. 298).

33 Pernety, *Dictionnaire mytho-hermétique*, s.v. “Aimant.”

34 “ … medicina, corrigens et transmutans id, quod non est amplius, in id quod fuit ante corruptionem, ac in melius, et id, quod non est, in id quod esse debet” (p. 267).

35 “In corpore humano latet quaedam substantia methaphysica, paucissimis nota, quae nullo … indiget medicamento, sed ipsa medicamentum est incorruptum” (p. 265).

36 “ … Chemistarum studium, in sensualibus insensualem illam veritatem a suis compedibus liberare” (p. 271).

37 “Philosophi divino quodam afflatu cognoverunt hanc virtutem caelestemque vigorem a suis compedibus liberari posse: non contrario … sed suo simili. Cum igitur tale quid, sive in homine sive extra ipsum inveniatur, quod huic est conforme substantiae, concluserunt sapientes similia similibus esse corroboranda, pace potius quam bello.” (P. 265.)

[38] “Fac igitur ut talis evadas, quale tuum esse vis quod quaesieris opus” (p. 277).

[39] “ … non possumus de quovis dubio certiores fieri, quam experiendo, nec melius quam in nobis ipsis” (“Philosophia meditativa,” *Theatr. chem*., I, p. 467).

[40] “Cognoscat hominis in homine thesaurum existere maximum, et non extra ipsum. Ab ipso procedit interius … per quod operatur extrinsecus id, quod oculariter videt. Ergo nisi mente caecus fuerit, videbit (id est) intelliget, quis et qualis sit intrinsecus, luceque naturae seipsum cognoscet per exteriora.” (“Speculativae philosophiae,” p. 307.)

[41] The alchemist and mystic John Pordage (1607–81) called the inner “eternal” man an “extract and summary concept of the Macrocosm” (*Sophia*, 1699, p. 34).

[42] “Disce ex te ipso, quicquid est et in caelo et in terra, cognoscere, ut sapiens fias in omnibus. Ignoras caelum et elementa prius unum fuisse, divino quoque ab invicem artificio separata, ut et te et omnia generare possent?” (“Speculativae philosophiae,” p. 276.)

[43] An idea that reached its full development 200 years later in Leibniz’ monadology, and then fell into complete oblivion for another 200 years owing to the rise of the scientific trinity—space, time, causality. Herbert Silberer, who was also interested in alchemy, says: “I would almost prefer to surrender entirely to picture-language, and to call the deepest subconsciousness our *internal heaven of fixed stars*.” (*Der Zufall und die Koboldstreiche des Unbewussten*, p. 66.) Further material in “On the Nature of the Psyche,” pars. 389ff.

[44] “Nemo vero potest cognoscere se, nisi sciat quid, et non quis ipse sit, a quo dependeat, vel cuius sit … et in quem finem factus sit” (p. 272).

[45] *Exercitia spiritualia*, “Principio y Fundamento”: “Homo creatus est (ad hunc finem), ut laudet Deum Dominum nostrum, ei reverentiam exhibeat, eique serviat, et per haec salvet animam suam.” See trans. by Rickaby, p. 18.

[46] “De transmutatione metallica,” *Art. aurif*., II, p. 11.

[47] “Not, that is, that I should require of them riches or gifts, but that I should diligently furnish them with spiritual gifts” (p. 10).

[48] “Haec enim res a te extrahitur: cuius etiam minera tu existis, apud te namque illam inveniunt, et ut verius confitear, a te accipiunt; quod quum probaveris, amor eius (rei) et dilectio in te augebitur” (p. 37).

[49] Pp. 40f.

[50] “The whole perfection of the magistery consists in the taking of conjoined and concordant bodies” (p. 43). The “Interpretatio cuiusdam epistolae Alexandri Macedonum regis” (*Art. aurif*., I, p. 384) says: “And know that nothing is born without male and female.” And in the “Tractatulus Avicennae” it is said: “Marriage is the mingling of the subtle with the dense.” Cf. “Psychology of the Transference,” index, s.v. “coniunctio.”

[51] The text has “Malus” (*Art. aurif*., I, p. 310), probably a miswriting of Magus, who is a known author.

[52] “Hic lapis est subtus te, quantum ad obedientiam; supra te, quoad dominium; ergo a te, quantum ad scientiam; circa te, quantum ad aequales” (*Art. aurif*., I, p. 310).

[53] The dating of these texts is very uncertain. Allowing for error, it seems to me that Morienus is the older.

[54] The text has “ipsum.” But the object here is “res.”

[55] “Hic lapis talis est res, quae in te magis fixa est, a Deo creata, et tu eius minera es ac a te extrahitur et ubicunque fueris, tecum inseparabiliter manet. … Et ut homo ex 4 elementis est compositus, ita et lapis, et ita est ex homine, et tu es eius minera, scil. per operationem; et de te

extrahitur, scil. per divisionem; et in te inseparabiliter manet, scil. per scientiam. Aliter in te fixa, scil. in Mercurio sapientum; tu eius minera es; id est, in te est conclusa et ips[a]m occulte tenes, et ex te extrahitur, cum a te reducitur et solvitur; quia sine te compleri non potest, et tu sine ips[a] vivere non potes et sic finis respicit principium et contra." (*Art. aurif.*, I, pp. 311f.)

56 "The Spirit Mercurius," pars. 264ff.

57 "Nemo in se ipso, sed in sui simili, quod etiam ex ipso sit, generare potest" ("Speculativae philosophiae," p. 276).

58 "… ex aliis numquam unum facies quod quaeris, nisi prius ex te ipso fiat unum. … Nam talis est voluntas Dei, ut pii pium consequantur opus quod quaerunt, et perfecti perficiant aliud cui fuerint intenti. … Fac igitur ut talis evadas, quale tuum esse vis quod quaesieris opus" (p. 276f.).

59 "Transmutemini de lapidibus mortuis in vivos lapides philosophicosl" (p. 267). This is an allusion to I Peter 2 : 4f: "Come to him, to that living stone, rejected by men but in God's sight chosen and precious; and like living stones be yourselves built [up] … " (RSV).

60 "Non in nobis quaerenda [veritas], sed in imagine Dei, quae in nobis est" (p. 268).

61 "Ulterius, ut definitioni veri faciamus satis, dicimus esse, vero nihil adesse, nam uni quid adest, quaeso, quid etiam deest, aut quid contra niti potest? cum nihil vere praeter illud unum existit" (p. 268).

[1] Cf. "On the Nature of the Psyche," pars. 417ff., 438ff.

[2] I was able to convince myself on the spot of the existence of this fear.

[3] Kerygmatics = preaching, declaration of religious truth.

[4] Father Victor White, O.P., has kindly drawn my attention to the concept of the *veritas prima* in St. Thomas Aquinas (*Summa theol*., II, II, i, 1 and 2): This "first truth" is invisible and unknown. It is this, and not the dogma, that underlies belief.

[5] This is not to contest the legitimacy and importance of dogma. The Church is not concerned only with people who have a religious life of their own, but also with those from whom no more can be expected than that they should hold a tenet to be true and confess themselves satisfied with this formula. Probably the great majority of "believers" do not get beyond this level. For them dogma retains its role as a magnet and can therefore claim to be the "final" truth.

[6] "Sit, ut est, aut non sit."

[7] "On the Nature of the Psyche," par. 415.

[8] Like the Old Testament "Yahweh Zebaoth," Lord of Hosts. Cf. Maag, "Jahwäs Heerscharen."

[9] Also in "Psychology and Religion"; "Relations between the Ego and the Unconscious"; and my commentary on *The Secret of the Golden Flower*.

[10] For the significance of conscious development in relation to mythological symbolism, see Neumann, *The Origins and History of Consciousness*.

[1] Unfortunately it is not possible for me to elucidate or even to document this statement here. But, as Rhine's ESP (extrasensory perception) experiments show, any intense emotional interest or fascination is accompanied by phenomena which can only be explained by a psychic relativity of time, space, and causality. Since the archetypes usually have a certain numinosity, they can arouse just that fascination which is accompanied by synchronistic phenomena. These consist in the *meaningful* coincidence of two or more causally unrelated facts. For details I would refer the reader to my "Synchronicity: An Acausal Connecting Principle."

[2] Genesis 1 : 7.

[3] Non-verbatim quotation from John 4 : 10.

[4] *Elenchos*, V, 9, 18f. (Cf. Legge trans., I, pp. 143f.) "Heracleian stone" = magnet.

[5] John 10: 9: "I am the door. By me, if any man enter in, he shall be saved."

[6] I use the reading: καμμύουσιν ὀφθαλμοῦ βλέφαρον. Does this mean those who close their eyes to the world?

[7] The naphtha analogy reappears in the teachings of the Basilidians (*Elenchos*, VII, 24, 6f.). There it refers to the son of the highest archon, who comprehends the νοήματα ἀπὸ τῆς μακαρίας υἱότητος (idea of the blessed sonship). Hippolytus' exposition seems to be a trifle confused at this point.

[8] Several more metaphors now follow, and it should be noted that they are the same as in the passage previously quoted (V, 9, 19).

[9] *Elenchos*, V, 17, 8ff. (Cf. Legge trans., I, pp. 158f.)

[10] "And as Moses lifted up the serpent in the wilderness, even so must the Son of man be lifted up."

[11] Here, as in the previous passages about the magnet, mention is made of *electron* (amber) and the sea-hawk, emphasis being laid on the bird's *centre*.

[12] *Elenchos*, V, 21, 8 (Legge trans., I, p. 168). The ray of light (*radius*) plays an analogous role in alchemy. Dorn (*Theatr. chem*., I, p. 276) speaks of the "invisible rays of heaven meeting together at the centre of the earth," and there, as Michael Maier says, shining with a "heavenly light like a carbuncle" (*Symbola aureae mensae*, 1617, p. 377). The arcane substance is extracted from the ray, and constitutes its "shadow" (*umbra*), as the "Tractatus aureus" says (*Ars chemica*, 1566, p. 15). The *aqua permanens* is extracted from the rays of the sun and moon by the magnet (Mylius, *Philosophia reformata*, p. 314), or the rays of the sun are united in the "silver water" (Beatus, "Aurelia occulta," *Theatr. chem*., IV, p. 563).

[13] "And therefore the highest power, seeing her stability in God, communicates it to the lowest, that they may discern good and evil. In this union Adam dwelt, and while this union lasted he had all the power of creatures in his highest power. As when a lodestone exerts its power upon a needle and draws it to itself, the needle receives sufficient power to pass on to all the needles beneath, which it raises and attaches to the lodestone." (Meister Eckhart, trans. by Evans, I, p. 274, slightly modified.)

[14] [Cf. n. 11, supra.]

[15] Cf. *Psychology and Alchemy*, pars. 127ff., and "A Study in the Process of Individuation," in Part I of vol. 9.

[16] 'Εξ ἀρχῆς ὁ Αὐτοπάτωρ αὐτὸς ἐν ἑαυτῷ περιεῖχε τὰ πάντα ὄντα ἐν ἑαυτῷ ἐν ἀγνωσίᾳ κτλ. *Panarium*, XXXI, cap. V (Oehler edn., I, p. 314).

[17] *Elenchos*, VI, 42, 4; Quispel, "Note sur 'Basilide,'" p. 115.

[18] Acts 17 : 30.

19 Cf. Scott, *Hermetica* (I, pp. 150f.) where there is a description of the *krater* filled with Nous which God sent down to earth. Those whose hearts strive after consciousness (γνωρίζουσα ἐπὶ τὶ γέγονας) can "baptize" themselves in the *krater* and thereby obtain Nous. "God says that the man filled with Nous should know himself" (pp. 126f.).

20 Γένος οὖν ὑπάρχοντες τοῦ θεοῦ (Acts 17: 29).

21 Likewise the μετανοεῖτε of the Baptist (Matt. 3 : 2).

22 Cf. the τὸ τῆς ἀγνοίας ἁμάρτημα, 'sin of unconsciousness' in pseudo-Clement (*Homilies* XIX, cap. XXII), referring to the man who was born blind (John 9 : 1).

23 *Polyhistor symbolicus*, p. 348: "God, formerly the God of vengeance, who with thunders and lightnings brought the world to disorder, took his rest in the lap of a Virgin, nay, in her womb, and was made captive by love."

24 "Die Gestalt des Satans im Alten Testament."

25 *Rig-Veda*, X, 129. (Cf. MacNicol trans., *Hindu Scriptures*, p. 37.)

26 "Being" is controversial. The Master says: "God in the Godhead is a spiritual substance, so unfathomable that we can say nothing about it except that it is naught [*niht ensi*]. To say it is aught [*iht*] were more lying than true." (Cf. Evans trans., I, p. 354.)

27 "To this end there is no way, it is beyond all ways." (Cf. ibid., p. 211.)

28 " … von formen formelôs, von werdenne werdelôs, von wesenne weselôs und ist von sachen sachelôs." (Cf. ibid., p. 352.)

29 "[The will] is the nobler in that it plunges into unknowing, which is God." Cf. ibid., p. 351. Cf. also n. 16, supra: *ἀγνωσία*.

30 Evans, I, p. 219.

31 End of the sermon "Renovamini spiritu" (Eph. 4: 23). Ibid., pp. 247f.

32 There are people who, oddly enough, think it a weakness in me that I refrain from metaphysical judgments. A scientist's conscience does not permit him to assert things he cannot prove or at least show to be probable. No assertion has ever yet brought anything corresponding to it into existence. "What he says, is" is a prerogative exclusive to God.

33 *Adversus haereses*, I, 30, 3. In the system of Barbelo-Gnosis (ibid., 29, 4) the equivalent of Sophia is *Προύνικος*, who "sinks into the lower regions." The name Prunicus (προύνεικος) means both 'carrying a burden' and 'lewd.' The latter connotation is more probable, because this Gnostic sect believed that, through the sexual act, they could recharge Barbelo with the pneuma that was lost in the world. In Simon Magus it is Helen, the *μήτηρ* and *ἔννοια*, who "descended to the lower regions … and generated the inferior powers, angels, and firmaments." She was forcibly held captive by the lower powers (Irenaeus, I, 27, 1–4). She corresponds to the much later alchemical idea of the "soul in fetters" (cf. Dorn, *Theatr. chem.*, I, pp. 298, 497; Mylius, *Phil, ref.*, p. 262; *Rosarium philosophorum* in *Art. aurif.*, II, p. 284; "Platonis liber quartorum," *Theatr. chem.*, V, pp. 185f.; Vigenère, *Theatr. chem.*, VI, p. 19). The idea derives from Greek alchemy and can be found in Zosimos (Berthelot, *Alch. grecs*, III, xlix, 7; trans. in *Psychology and Alchemy*, pars. 456ff.). In the "Liber quartorum" it is of Sabaean origin. See Chwolsohn, *Die Ssabier und der Ssabismus* (II, p. 494): "The soul once turned towards matter, fell in love with it, and, burning with desire to experience bodily pleasures, was no longer willing to tear herself away from it. So was the world born." Among the Valentinians, Sophia Achamoth is the Ogdoad. In *Pistis Sophia* (trans. by Mead, p. 362) she is the daughter of Barbelo. Deluded by the false light of the demon Authades, she falls into imprisonment in chaos. Irenaeus (I, 5, 2) calls the demiurge the Heptad, but Achamoth the Ogdoad. In I, 7, 2 he says that the Saviour is compounded of four things in repetition of the first Tetrad. A copy of the Four is the

quaternity of elements (I, 17, 1), and so are the four lights that stand round the Autogenes of Barbelo-Gnosis (I, 29, 2).

34 *Adv. haer*., I, 24, 1.

35 Bousset, *Hauptprobleme der Gnosis*, p. 170.

36 *Panarium*, XXX, 3.

37 Theodor Bar-Kuni, *Inscriptiones mandaïtes des coupes de Khouabir*, Part 2. p. 185.

38 *The Apocryphal New Testament*, ed. James, p. 379.

39 Bousset, pp. 114ff.

40 *The Miraculous Birth of King Amon-Hotep III*, p. 81.

41 *Elenchos*, V, 9, 5f. (Legge trans., I, pp. 140f.).

42 *Psychology and Alchemy*, index, s.v. “Axiom of Maria.” Cf. infra, pars. 395ff.

43 εὐφραίνει, a play on the word εὐφραθής, ‘well-speaking.’

44 *Elenchos*, V, 9, 15ff. [Cf. Legge, I, p. 143.]

45 An allusion to John 4 : 10.

46 Legge, I, p. 144.

47 *Elenchos*, V, 9, 21.

48 V, 9, 19 (Legge trans., p. 144).

49 This means the integration of the self, which is also referred to in very similar words in the Bogomil document discussed above (pars. 225ff.), concerning the devil as world creator. He too finds what is “proper” (ἴδιον) to him.

50 Matt. 7 : 14: “Strait is the gate, and narrow is the way, which leadeth unto life.”

51 The passage discussed here is in *Elenchos*, V, 9, 4ff. (Legge trans., I, p. 140).

52 *Elenchos*, V, 6, 6: Θεοῦ δὲ γνῶσις ἀπηρτισμένη τελείωσις (“Knowledge of God is perfect wholeness”).

53 V, 6, 5 (Legge trans., I, p. 120).

54 V, 6, 6f. (p. 121).

55 Nicknamed *καλλίπαις*, ‘with beautiful children’ or ‘the beautiful child.’ (*Elenchos*, V, 7, 4.)

56 According to Hippocrates, a boy at seven years old is half a father. (*Elenchos*, V, 7, 21.)

57 τὴν ἀρχέγονον φύσιν τῶν ὅλων ἐν ἀρχεγόνῳ σπέρματι. *Archegonos* is the tribal father.

58 With express reference to Matt. 19: 17: “One is good, God.”

59 Cf. Legge trans., p. 128.

60 *Panarium*, XXVI, cap. VIII.

61 “ … partaking of his flowing semen, showed that this was to be done, that we might have life.”

62 On the other hand, I cannot rid myself of the impression that dreams do occasionally twist things in a scurrilous way. This may have led Freud to the singular assumption that they disguise and distort for so-called “moral” reasons. However, this view is contradicted by the fact that dreams just as often do the exact opposite. I therefore incline to the alchemical view that Mercurius—the unconscious Nous—is a “trickster.” [Cf. “The Spirit Mercurius” and “The Psychology of the Trickster Figure.”—EDITORS.]

63 But not the Freudian, “psychoanalytical” method, which dismisses the manifest dream-content as a mere “façade,” on the ground that the psychopathology of hysteria leads one to suspect

incompatible wishes as dream-motifs. The fact that the dream as well as consciousness rest on an instinctual foundation has nothing to do either with the meaning of the dream-figures or with that of the conscious contents, for the essential thing in both cases is *what the psyche has made of the instinctual impulse*. The remarkable thing about the Parthenon is not that it consists of stone and was built to gratify the ambitions of the Athenians, but that it is—the Parthenon.

64 Cf. “Phenomenology of the Spirit in Fairytales,” par. 403.

65 Cf. “The Psychology of Eastern Meditation,” pars. 942f.

66 Cf. “A Study in the Process of Individuation.”

67 This is consistent with his nature as the Logos and second Person of the Trinity.

68 Naturally this view is rejected by the Church.

69 Three different interpretations of Christ are combined here. Such contaminations are characteristic not only of Gnostic thinking but of all unconscious image-formation.

70 Gregory the Great, *Expositiones in librum I Regum*, Lib. I, cap. I (Migne, *P.L.*, vol. 79, col. 23): “For God and man is one Christ. Therefore in that he is called one, he is shown to be incomparable.” In accordance with the spirit of the age, his incomparability or uniqueness is explained by the “excellence of his virtue.” It is, however, significant in itself.

71 “He offered her his rosy [sic!] mouth to kiss” (*Liber gratiae spiritualis*, fol. J iv^{v}).

72 “Medulla vero arrimae est illud dulcissimum.” Ibid., fol. B.

73 Gregory the Great; Migne, *P.L.*, vol. 79, col. 23. Cf. Jerem. 31 : 22: “A woman shall compass a man” (AV).

74 *Liber gratiae spiritualis*, fol. A vii^{r}. The quaternity refers to the four gospels.

75 Ibid., fol. B ii^{v}.

76 Ibid., fol. B vii$^{v.}$

77 Cf. Flitch, *Angelus Silesius*, pp. 128ff.

78 For instance, the *hieros gamos* of Zeus and Hera on “the heights of Gargaros,” *Iliad*, XIV, 246ff. (Cf. Rieu trans., p. 266.)

79 Brugsch, *Religion und Mythologie der alten Ägypter*, p. 94.

80 In the ancient Egyptian view God is “Father and Mother,” and “begets and gives birth to himself” (Brugsch, p. 97). The Indian Prajapati has intercourse with his own split-off feminine half.

81 Budge, *Gods of the Egyptians*, I, pp. 310f.

82 I owe this idea to a lecture delivered by Professor W. Pauli, in Zurich, on the archetypal foundations of Kepler’s astronomy. Cf. his “The Influence of Archetypal Ideas” etc.

83 *Elenchos*, V, 7, 30f. (Cf. Legge trans., I, p. 128.)

84 Bousset, *Hauptprobleme der Gnosis*, pp. 352f.

85 Here Hippolytus cites the text of *Odyssey*, XXIV, 2.

86 *Elenchos*, V, 7, 36 (Legge trans., I, pp. 129f.).

87 Daniel 2 : 34: “Thus thou sawest, till a stone was cut out of a mountain without hands” (DV). This was the stone that broke in pieces the clay and iron feet of the statue.

88 Εἰς τὸ πλάσμα τῆς λήθης, i.e., *lethargia*, the state of forgetfulness and sleep resembling that of the dead. The “inner man” is as if buried in the somatic man. He is the “soul in fetters” or “in the prison of the body,” as the alchemists say. *Lēthē* corresponds to the modern concept of the unconscious.

89 *Ancoratus*, 40. Cf. Daniel 2 : 35: “But the stone that struck the statue became a great mountain and filled the whole earth” (DV).

90 *Elenchos*, V, 7, 37 (Legge trans., I, p. 130). Cf. Psalm 82 (Vulg. 81) : 6, to which reference is made in Luke 6 : 35 and John 10 : 34.

91 V, 8, 2 (ibid., p. 131).

92 ‘*Ιοθώρ* = Jethro, the priest-king of Midian and the father-in-law of Moses.

93 Zipporah, the wife of Moses.

94 This is probably an allusion to the pneumatic nature of the “generation” produced by Moses, for, according to *Elenchos*, V, 7, 41, “Egypt is the body” (Legge trans., I, p. 130).

95 The marriage *quaternio* is the archetype to which the cross-cousin marriage corresponds on a primitive level. I have given a detailed account of it in “The Psychology of the Transference,” pars. 425ff.

96 Cf. *Psychology and Alchemy*, par. 484.

97 See the study by Marie-Louise von Franz.

98 These words occur in the Hebrew of Isaiah 28 : 10, where they describe what “men with stammering lips and alien tongue” speak to the people. [The Hebrew runs: “tsaw latsaw, tsaw latsaw, kaw lakaw, kaw lakaw, zeer sham, zeer sham.”—EDITORS.] AV: “For precept must be upon precept, precept upon precept, line upon line, line upon line; here a little and there a little.”

99 Cf. *Psychology and Alchemy*, pars. 550f. [Cf. Legge trans., I, p. 131.]

100 Cf. Genesis 44 : 5.

101 *Elenchos*, V, 8, 12 (Legge trans., I, p. 133).

102 “Paracelsus as a Spiritual Phenomenon,” pars. 181ff.

103 Roscher, *Lexikon*, II, part 1, col. 1608, s.v. “Kuretes.”

104 Ibid., col. 1607. The descent from the brain may be an allusion to the ancient idea that the sperm was conducted down from the head to the genitals, through the spinal cord. [Cf. Onians, *The Origins of European Thought*, p. 234.—EDITORS.]

105 *Elenchos*, V, 8, 13 (Legge trans., I, p. 133).

106 “The Spirit Mercurius,” par. 278.

107 Roscher, col. 1392, s.v. “Korybos,” where the text is given in full.

108 The alchemists say very aptly: “Perfectum non perficitur” (that which is perfect is not perfected).

109 *Elenchos*, V, 8, 22, describes the *πνευματικο* as “perfect men endowed with reason,” from which it is clear that the possession of an *anima rationalis* is what makes the “spiritual” man.

110 *Elenchos*, V. 8, 21 (Legge trans., I, p. 134). Cramer (*Bibl.-theol. Worterbuch der Neutestamentlichen Gräzität*) gives as the meaning of *τέλειος* ‘complete, perfect, lacking nothing, having reached the destined goal.’ Bauer (*Griech.-deutsch. Worterbuch zu den Schriften des Neuen Testaments*, col. 1344) has, with reference to age, ‘mature, full-grown,’ and with reference to the mysteries, ‘initiated.’ Lightfoot (*Notes on the Epistles of St Paul*, p. 173) says: “T*έλειος* is properly that of which the parts are fully developed, as distinguished from *ὁλόκληρος*, that in which none of the parts are wanting, ‘full-grown,’ as opposed to *νήπιος*, ‘childish,’ or παιδία, ‘childhood.’” *Teleios* is the man who has received Nous: he has gnosis (knowledge). Cf. Guignebert, “Quelques remarques sur la perfection (*τελείωσις*) et ses voies dans le mystére paulinien,” p. 419. Weiss (*The History of Primitive Christianity*, II, p. 576) declares that it is just the “consciousness of imperfection and the will to progress that is the sign of perfection.” He bases this on Epictetus (*Enchiridion*, 51,

if.), where it says that he who has resolved to progress (*προκόπτειν*) is, by anticipation, already "perfect."

111 First mentioned at V. 8, 19. [Cf. Legge, I, p. 134.]

112 *Hermetis Trismegisti Tractatus vere Aureus cum scholiis* (1610), p. 44.

113 Published 1562 by Adam von Bodenstein. In *Paracelsus Sämtliche Werke*, ed. Sudhoff, III, p. 249. [Cf. "Paracelsus the Physician," par. 21.]

114 *De origine Morborum invisibilium*, beginning of Book IV, says of the Mumia: "All the power of herbs and of trees is found in the Mumia; not only the power of the plants grown of earth, but also of water, all the properties of metals, all the qualities of marcasites, all the essence of precious stones. How should I count all these things, and name them? They are all within man, no fewer and no less, as strong and as powerful, in the Mumia." (*Volumen Paramirum*, pp. 291ff.)

115 *Fragmentarische Ausarbeitungen zur Anatomie* (Sudhoff, III, p. 462).

116 The Mumia is, accordingly, an alexipharmic. (*De mumia libellus;* ibid., p. 375.)

117 *De vita longa*, Lib. IV, cap. VII (ibid., p. 284).

118 "Paracelsus as a Spiritual Phenomenon," par. 168.

119 *Zohar*, cited in Schoettgen, *Horae Hebraicae et Talmudicae*, II, p. 16.

120 Gen. 28 : 17 (DV).

121 *In Genesim hom*. XI, 3 (Migne, *P.G.*, vol. 12, col. 224): "And that ye may see the well of vision, and take from it the living water, which shall be in you a fountain of water springing up unto eternal life."

122 Ibid., I, 2 (col. 148).

123 *In Numeros hom*. XVII, 4 (Migne, *P.G.*, vol. 12, cols. 707f.): "For these paradises upon the waters are like and akin to that paradise in which is the tree of life. And the waters we may take to be either the writings of the apostles and evangelists, or the aid given by the angels and celestial powers to such souls; for by these they are watered and inundated, and nourished unto all knowledge and understanding of heavenly things; although our Saviour also is the river which maketh glad the city of God; and the Holy Spirit not only is himself that river, but out of those to whom he is given, rivers proceed from their belly."

124 See the valuable compilation of patristic allegories in Rahner, "Flumina de ventre Christi," pp. 269ff. The above reference is on p. 370 and comes from Hippolytus' *Commentary on Daniel*, I, 17 (*Werke*, I, pp. 28f),

125 *In Genesim hom*. I, 2 (Migne, *P.G.*, vol. 12, col. 147).

126 *Elenchos*, V. 8. 34 (Legge, I, p. 137). This is a play on the words *αἰπόλος* (from *αἰγοπόλος*), 'goat-herd,' and *ἀειπόλος* (from del πολεῖν, 'ever turning'). Hence *πόλος* = the earth's axis, the Pole.

127 *Odyssey*, trans. by Rouse, p. 65.

128 Ibid., trans. by Rieu, p. 74.

129 He has something of the character of the "trickster" (cf. n. 62, supra).

130 Proteus has much in common with Hermes: above all, the gift of second sight and the power of shape-shifting. In *Faust* (Part II, Act 5) he tells the Homunculus how and where to begin his labours.

131 When I visited the ancient pagoda at Turukalukundram, southern India, a local pundit explained to me that the old temples were purposely covered on the outside, from top to bottom, with obscene sculptures, in order to remind ordinary people of their sexuality. The spirit, he said, was a great danger, because Yama, the god of death, would instantly carry off these people (the "imperfecti") if

they trod the spiritual path directly, without preparation. The erotic sculptures were meant to remind them of their *dharma* (law), which bids them fulfil their ordinary lives. Only when they have fulfilled their *dharma* can they tread the spiritual path. The obscenities were intended to arouse the erotic curiosity of visitors to the temples, so that they should not forget their *dharma;* otherwise they would not fulfil it. Only the man who was qualified by his *karma* (the fate earned through works in previous existences), and who was destined for the life of the spirit, could ignore this injunction with impunity, for to him these obscenities mean nothing. That was also why the two seductresses stood at the entrance of the temple, luring the people to fulfil their *dharma*, because only in this way could the ordinary man attain to higher spiritual development. And since the temple represented the whole world, all human activities were portrayed in it; and because most people are always thinking of sex anyway, the great majority of the temple sculptures were of an erotic nature. For this reason too, he said, the *lingam* (phallus) stands in the sacred cavity of the adyton (Holy of Holies), in the *garbha griha* (house of the womb). This pundit was a Tantrist (scholastic; *tantra* = 'book').

132 Their prototypes are the emasculated Attis and the priests of Eleusis, who, before celebrating the *hieros gamos*, were made impotent with a draught of hemlock.

133 Cf. Matt. 5 : 8: "Blessed are the pure in heart, for they shall see God."

134 A condensation of *Iliad*, XIV, 200f. and 246: "I am going to the ends of the fruitful earth to visit Ocean, the forbear of the gods, and Mother Tethys … even Ocean Stream himself, who is the forbear of them all." (Rieu trans., pp. 262f.)

135 The iota (τὴν μίαν κεραίαν), the smallest Greek character, corresponding to our "dot" (which did not exist in Greek). Cf. Luke 16 : 17: "And it is easier for heaven and earth to pass than one tittle of the law to fall." Also Matt. 5: 18. This may well be the origin of the iota symbolism, as Irenaeus (*Adv. haer*., I, 3, 2) suggests.

136 *Elenchos*, VIII, 12, 5ff. (Legge, pp. 107ff.). All this is a Gnostic paraphrase of John 1 and at the same time a meaningful exposition of the psychological self. The relationship of the to the self is the same as that of the Hebrew letter Yod (י) to the *lapis* in the cabala. The Original Man, Adam, signifies the small hook at the top of the letter Yod. (*Shaare Kedusha*, III, 1.)

137 Ennead, VI, 9. 8 (Guthrie trans., p. 163. slightly mod.).

138 See "A Study in the Process of Individuation" and "Concerning Mandala Symbolism."

139 Bousset, *Hauptprobleme der Gnosis*, p. 321, says: "[The Gnostics believed] that human beings, or at any rate some human beings, carry within them from the beginning a higher element [the *spinther*] deriving from the world of light, which enables them to rise above the world of the Seven into the upper world of light, where dwell the unknown Father and the heavenly Mother."

140 Meerpohl, "Meister Eckharts Lehre vom Seelenfünklein."

141 Irenaeus, *Adv. haer*., I, 24. The *pneumatikoi* contain a small part of the Pleroma (II, 29). Cf. the doctrine of Satorneilos in Hippolytus, *Elenchos*, VII, 28, 3 (Legge trans., II, pp. 80f.).

142 Macrobius, *Commentarium in Somnium Scipionis*, XIV, 19.

143 *Elenchos*, V, 19, 7: Ἵνα ἔχῃ τὸν σπινθῆρα δουλεύοντα.

144 This idea reappears in alchemy in numerous variations. Cf. Michael Maier, *Symbola aureae mensae*, p. 380, and *Scrutinium chymicum*, Emblema XXXI: "The King swimming in the sea, and crying with a loud voice: Whosoever shall bring me out, shall have a great reward." Also *Aurora Consurgens* (ed. von Franz), p. 57: "For this cause have I laboured night by night with crying, my jaws become hoarse; who is the man that liveth, knowing and understanding, delivering my soul from the hand of hell?"

145 *Elenchos*, V, 21, 1: Τὸν σπινθῆρα τὸν ἐλάχιστον ἐν τοῖς σκοτεινοῖς ὕδασι κάτω καταμεμῖχθαι λεπτῶς.

146 *Elenchos*, VI, 17, 7. Cf. “Transformation Symbolism in the Mass,” par. 359.

147 Cf. the vision reported by Wickes, *The Inner World of Man*, p. 245. It is a typical piece of individuation symbolism: “Then I saw that on the shaft there hung a human figure that held within itself all the loneliness of the world and of the spaces. Alone, and hoping for nothing, the One hung and gazed down into the void. For long the One gazed, drawing all solitude unto itself. Then deep in the fathomless dark was born an infinitesimal spark. Slowly it rose from the bottomless depth, and as it rose it grew until it became a star. And the star hung in space just opposite the figure, and the white light streamed upon the Lonely One.” Conversely, it is related of Zoroaster that he drew down sparks from a star, which scorched him. (Bousset, p. 146.)

148 Maier, *De circulo physico quadrato* (1616), p. 27.

149 Or *punctus solis*. “In the egg therefore are four things: earth, water, air, and fire; but the ‘punctum solis’ is apart from these four, in the midst of the yolk (which) is the chick.” (*Turba*, Sermo IV.) Ruska (*Turba philosophorum*, p. 51) puts “saliens” instead of “solis” (“springing point” instead of “sun-point”), in the belief that all the copyists repeated the same error. I am not so sure of this.

150 *Von hylealischen Chaos*, p. 194.

151 *De circulo quadrato*, p. 27.

152 *Theatr. chem*., IV, p. 691.

153 “Physica genesis,” *Theatr. chem*., I, p. 382.

154 *Monas hieroglyphica* (first edn., 1564). Also in *Theatr. chem*. (1602), II, p. 218.

155 *Phil. ref*., p. 131.

156 *Mus. herm*., p. 559.

157 Here I would like to cite a theological opinion: “Jesus is a synthesis and a growth, and the resultant form is one which tells of a hundred forces which went to its making. But the interesting thing is that the process did not end with the closing of the canon. Jesus is still in the making.” Roberts, “Jesus or Christ?—A Reply,” p. 124.

[18] Cf. “The Psychology of the Transference,” pars. 410ff.

[19] Exodus 18 : 27.

[20] “Phenomenology of the Spirit in Fairytales,” pars. 400ff.

[21] Since the whole Shadow Quaternio is a symmetrical construction, the “good Wise Man” must here be contrasted with a correspondingly dark, chthonic figure.

[22] Cf. “Psychology of the Transference,” pars. 425ff.

[23] In the gnosis of Justin. See Hippolytus, *Elenchos*, V, 26, 32 (Legge trans., I, p. 178): ὁ δὲ ἀγαθός ἐστι Πρίαπος (But the Good One is Priapus).

[24] Rev. 12 : 9.

[25] Coloss. 2 : 14: “Blotting out the handwriting of the decree that was against us, which was contrary to us. And he hath taken the same out of the way, fastening it to the cross” (DV). The handwriting is imprinted on the *body*. This view is confirmed by Orosius (“Ad Aurelium Augustum commonitorium de errore Priscillianistarum et Origenistarum,” p. 153), who says that in the opinion of Priscillian the soul, on descending through the spheres into birth, was caught by the powers of evil, and at the behest of the victor (“victoris principis”) was cast into separate bodies, upon which a “handwriting” was written. The parts of the soul receive a divine *chirographum*, but the parts of the body are imprinted with the signs of the zodiac (*caeli signa*).

[26] “The Spirit Mercurius,” esp. pars. 271, 282, 289.

[27] See *Psychology and Alchemy*, fig. 131.

[28] In “Chrysopoeia” (in Gratarolus, *Verae alchemiae artisque metallicae*, 1561, pp. 269ff.), which Augurellus dedicated to Pope Leo X. It contains an invocation of the *alma soror* of Phoebus:

> “Tu quoque, nec coeptis *Cylleni* audacibus usquam
> Defueris, tibi nam puro de fonte perennis
> Rivulus argentum, vulgo quod vivere dicunt,

Sufficit, et tantis praestat primordia rebus.”
(You too, Cyllenian, this bold enterprise
Fail not, the stream from whose pure spring supplies
The silver men call “quick,” the primal state
And first beginning of a work so great. [Trans. by A. S. B. Glover.])

29 In the Western Roman Empire there is a gap in this development, extending from the 3rd to about the 11th cent., that is, to the time of the first translations from the Arabic.

30 Synonymous with the dragon, since *draco* also means snake.

31 ζῷον πνευματικωτατόν, ‘the most spiritual animal.’

32 In Valentinus the “appendages” are spirits indwelling in man. Clement of Alexandria, *Stromata*, II, 20, 112 and 114 (trans. Wilson, II, pp. 64f.).

33 Isidorus was the son of Basilides. See Clement of Alexandria, ibid., II, 20, 113 (Wilson, II, p. 65). The “outgrowths” are animal souls, as of wolves, monkeys, lions, etc.

34 *In Levit. hom*. V, 2 (Migne, *P.G*., vol. 12, col. 450): “So when thou seest that thou hast all the things the world has, doubt not that thou hast within thee even the animals which are offered in sacrifice.”

35 Euphrates.

36 “The Spirit Mercurius,” Part I.

37 See *Psychology and Alchemy*, fig. 257.

39 Ibid., fig. 122, and “The Philosophical Tree,” pars. 402ff.

40 Ripley, *Cantilena*, verse 28 [cf. *Mysterium Coniunctionis*, p. 317], and *Chymische Schrifften*, p. 51; also Mylius, *Phil, ref*., p. 124.

41 “A land to be watered with the clear water of paradise” (Hollandus, “Fragmentum de lapide,” *Theatr. chem*., II, p. 142). The “Tractatus Aristotelis ad Alexandrum Magnum (conscriptus et collectus a quodam Christiano Philosopho),” *Theatr. chem*., V, p. 885, compares the “practica Aristotelis” with the water of paradise, which makes man “whole” (*incolumem*) and immortal: “From this water all true Philosophers have had life and infinite riches.”

42 Didymus of Alexandria, *De trinitate* (Migne, *P.G*., vol. 39, col. 456).

43 St Ambrose, *Explanationes in Psalmos*, Ps. 45, 12 (*Corp. Script. Eccl. Lat*., LXIV, p. 337). Cf. Rahner, “Flumina de ventre Christi,” pp. 269ff.

44 *Sophia* (1699), p. 9.

45 The *lapis* is made of the four elements, like Adam. The centre of the squared circle is the “mediator, making peace between the enemies or elements, so that they may love one another in a meet embrace” (“Tractatus aureus,” *Theatr, chem*., IV, p. 691).

46 Cf. the evidence for this in *Psychology and Alchemy*, “The Lapis-Christ Parallel.”

47 Mylius (*Phil. ref*., p. 15) identifies the elements that constitute the *lapis* with *corpus*, *spiritus*, and *anima: corpus* is matter, earth, and *spiritus* is the *nodus* (bond) *animae et corporis*, and therefore corresponds to fire. Water and air, which would properly characterize the *anima*, are also “spirit.” Three of the elements are “moving,” one (earth) “unmoving.” Cf. n. 89, infra.

48 Quotation from Ostanes in Zosimos, “Sur l’art” (Berthelot, *Alch. grecs*, III, vi, 5).

49 “Aurora consurgens,” *Art. aurif*., I, p. 208.

50 Cf. my remarks on the significance of the head in “Transformation Symbolism in the Mass,” pars. 365ff. “Head” also means “beginning,” e.g., “head of the Nile,” etc.

51 *Theatr. chem.*, V, p. 151.

52 Berthelot, III, x, 1.

53 “There is one stone, one medicine, one vessel, one method, one disposition” (*Rosarium philosophorum, Art. aurif.*, II, 206). “In our water all modes of things are brought about. … In the said water they are made as in an artificial vessel, which is a mighty secret” (Mylius, *Phil. ref.*, p. 245). “The Philosophical vessel is their water” (ibld., p. 33). This saying comes from de Hoghelande’s treatise in *Theatr. chem.*, I, p. 199. There we find: “Sulphur also is called by Lully the vessel of Nature,” and Haly’s description of the vessel as “ovum.” The egg is content and container at once. The *vas naturale* is the *aqua permanens* and the “vinegar” of the Philosophers. (“Aurora consurgens,” Part II, *Art. aurif.*, I, p. 203.)

54 Caesarius of Heisterbach, *Dialogue on Miracles*, trans. Scott and Bland, Dist. I, chs. XXXII and XXXIV.

55 In Olympiodorus the transforming vessel is the “spherical phial” or ὄργανον κυκλικόν (circular apparatus). (Berthelot, II, iv, 44.) “The spagiric vessel is to be made after the likeness of the natural vessel. For we see that all heaven and the elements have the likeness of a spherical body” (Dorn, *Theatr. chem.*, I, p. 430). “The end of all this master-work is, that the Philosophic Mercury be placed in the heavenly sphere” (ibid, p. 499). Trevisanus calls the vessel the *rotundum cubile*, “round bridal bed” (“Liber de alchemia,” *Theatr. chem.*, I, p. 790).

56 “Congeries,” *Theatr. chem.*, I, pp. 574f.

57 Ibid., IV, p. 691.

58 “Nor is any other to be sought after in all the world.” The Pelican is a distilling vessel, but the distillate, instead of dripping into the receiver, runs back into the belly of the retort. We could take this as illustrating the process of conscious realization and the reapplication of conscious insights to the unconscious. “It restored their former security of life to those once near to death,” the author says of the Pelican, which, as we know, is an allegory of Christ.

59 Cf. *Psychology and Alchemy*, par. 167, n. 44. [Also “Paracelsus as a Spiritual Phenomenon,” fig. B7.]

60 That is, counting the letters *F* and *G* (not included in the diagram), which signify Above and Below.

61 *Art. aurif.*, I, p. 324; *Theatr, chem.*, I, p. 199; *Art. aurif.*, I, p. 323.

62 Cf. *Psychology and Alchemy*, par. 338.

63 *Mus. herm.*, p. 770.

64 *La Vertu et la propriété de la quinte essence* (1581), p. 26.

65 *Art. aurif.*, I, p. 203.

66 “Paracelsus as a Spiritual Phenomenon,” fig. B4.

67 Marriage classes and settlements.

68 “Psychology of the Transference,” pars. 433ff. [Cf. Layard, *Stone Men of Malekula*, chs. 5 and 6, and “The Incest Taboo and the Virgin Archetype,” pp. 266ff.—EDITORS.]

69 “Psychology of the Transference,” par. 438.

70 Case material in *Psychology and Alchemy*, part II. Triadic symbols also occur, but they are rarer.

71 The Gnostic quaternio is naturally later than the Horus quaternity in point of time, but psychologically it is older, because in it the feminine element reassumes its rightful place, as is not

the case with the patriarchal Horus quaternio.

72 Like, for instance, the Aesculapian and Agathodaimon serpent.

73 Schärf, “Die Gestalt des Satans im Alten Testament,” p. 151.

74 “O blessed greenness, which givest birth to all things, whence know that no vegetable and no fruit appears in the bud but that it hath a green colour. Likewise know that the generation of this thing is green, for which reason the Philosophers have called it a bud.” (*Ros. phil., Art. aurif*., II, p. 220.)

75 Cf. the Ostanes quotation in Zosimos, *Psychology and Alchemy*, par. 405.

76 A hint that rotation may be a principle of matter.

77 According to the report of the Damdad-Nashk (Reitzenstein and schäder, *Studien zum antiken Syncretismus aus Iran und Griechenland*, p. 18). Gayomart is the Original Man in the theosophical version of Zarathustra’s system. Yima, on the other hand, is the Original Man of ancient Aryan legend. His name is *Yimó kshaétó*, ‘the shining Yima.’ According to the Mainyo-i-Khard, the metals were created from his body. (Kohut, “Die talmudisch-midraschische Adamssage,” pp. 68, 70.) In the *Bundahish*, Gayomart’s body consisted of metals. (Christensen, “Le Premier Homme et le premier roi dans l’histoire légendaire des Iraniens,” p. 21.)

78 [Cf. “A Psychological Approach to the Dogma of the Trinity,” par. 185.—EDITORS.]

79 Most people do not have sufficient range of consciousness to become aware of the opposites inherent in human nature. The tensions they generate remain for the most part unconscious, but can appear in dreams. Traditionally, the snake stands for the vulnerable spot in man: it personifies his shadow, i.e., his weakness and unconsciousness. The greatest danger about unconsciousness is proneness to suggestion. The effect of suggestion is due to the release of an unconscious dynamic, and the more unconscious this is, the more effective it will be. Hence the ever-widening split between conscious and unconscious increases the danger of psychic infection and mass psychosis. With the loss of symbolic ideas the bridge to the unconscious has broken down. Instinct no longer affords protection against unsound ideas and empty slogans. Rationality without tradition and without a basis in instinct is proof against no absurdity.

80 Emblema XVII, p. 49.

81 Vigenère comments: “The intelligible fire of the world: is all light. The heavenly fire: partakes of heat and light. The elemental fire: less in light, heat, and glow. The infernal fire: opposed to the intelligible, of heat and burning without any light.” (“De igne et sale,” *Theatr. chem*., VI, p. 39.) [Cf. supra, par. 203.]

82 “Is present in everything.”

83 “The heat of ashes and baths.”

84 “Tortures bodies, is the dragon.”

85 The oldest source is Heraclitus.

86 *Turba*, ed. by Ruska, Sermo XLIII, p. 149.

87 G. E. Stahl (1660–1734) supposed that all combustible (i.e., oxidizable) substances contain an igneous principle. It was assumed to be weightless, or even to possess a negative weight. Cf. H. E. Fierz-David, *Die Entwicklungsgeschichte der Chemie*, pp. 148f.

88 Psychologically, of course, the primitive idea of mana is very much older, but here we are talking of *scientific* concepts. The *sulphur* = *anima* equation still contains a trace of the original mana theory. Earlier, mana was characteristically misunderstood as *animism*.

89 Fire as spiritual, the other elements material; earth unmoving, the others moving.

90 Böhme calls the "fire of Nature" the "fourth form." "Tabula principiorum," *De signatura rerum* (1682), p. 279.

91 The doctrine of Sabellius (beginning of the 2nd cent.) concerning the preworldly Monad, the "silent and unacting God" and its three *prosopa* (modes of manifesta tion), calls for further investigation, as it bequeathed to posterity the first beginnings of a quaternary view of the Deity. Thus Joachim of Flora makes the following accusation against Peter Lombard: "Quod in suis dixit Sententiis, quoniam quaedam summa res est Pater et Filius et Spiritus Sanctus et illa non est generans, neque genita, neque procedens: unde asserit quod ille non tam Trinitatem, quam *quaternitatem* astruebat in Deo, videlicet tres personas, et illam communem essentiam quasi quartam." (As he [Peter] says in his Book of Sentences, For a certain supreme Something is Father, Son, and Holy Ghost, and It neither begets, nor is begotten, nor proceeds. On this basis Joachim asserts that the Lombard ascribed not Trinity, but Quaternity to God, that is to say, three Persons, and that common Something as a fourth). (Fourth Lateran Council, 1215. Decrees, Cap. 2; Denzinger and Bannwart, *Enchiridion*, p. 190.) Cf. "A Psychological Approach to the Dogma of the Trinity," pars. 243ff.

92 Cf. "The Spirit Mercurius," pars. 267ff.

93 The three relatively differentiated functions and one undifferentiated, "inferior" function. Cf. *Psychological Types*, and the diagrams in Jacobi, *The Psychology of C. G. Jung*.

94 "A Study in the Process of Individuation," fig. 2, p. 309.

BOLLINGEN SERIES XX

PRINCETON UNIVERSITY PRESS

PUBLISHED BY BOLLINGEN FOUNDATION, NEW YORK, N. Y.
DISTRIBUTED BY PANTHEON BOOKS
A DIVISION OF RANDOM HOUSE, INC.

THIS EDITION IS BEING PUBLISHED IN THE UNITED STATES OF AMERICA BY BOLLINGEN FOUNDATION, AND IN ENGLAND BY ROUTLEDGE AND KEGAN PAUL, LTD. IN THE AMERICAN EDITION, ALL THE VOLUMES COMPRISING THE COLLECTED WORKS CONSTITUTE NUMBER XX IN BOLLINGEN SERIES. THE PRESENT VOLUME IS NUMBER 10 OF THE COLLECTED WORKS, AND IS THE THIRTEENTH TO APPEAR.

LIBRARY OF CONGRESS CATALOG CARD NUMBER: 52–8757
MANUFACTURED IN THE UNITED STATES OF AMERICA BY H. WOLFF
NEW YORK, N. Y.

EDITORIAL NOTE

In 1918 Jung published a paper, “The Role of the Unconscious,” which sounds the keynote of the present volume. There he put forward the arresting theory that the conflict in Europe, then almost exclusively interpreted in materialistic terms, was basically a psychological crisis originating in the collective unconscious of the individuals that form groups and nations. Subsequently he wrote a considerable number of essays bearing on the contemporary scene and, in particular, on the relation of the individual to society.

The first two sections of this volume, written during the years between the World Wars, develop the themes broached in the opening essay, and are largely concerned with modern man’s discovery of his unconscious premises and the importance of self-knowledge in enabling the individual to maintain himself against social pressures. Specific questions, such as the influence of social changes on the relations between the sexes and of ethnic factors on the development of psychological theories, are also discussed. The third section presents four papers previously published in *Essays on Contemporary Events* (1947). In these Jung shows that the dreams and fantasies of individual patients, no less than social and political upheavals, which he explains as psychic epidemics, can reflect tendencies in the unconscious life of nations. In an essay first published in 1936 Wotan is presented as an archetypal figure symbolizing the unconscious agencies active in Germany which found expression in the Nazi movement.

The psychodynamics which Jung inferred from the behaviour of individuals and groups, though easier to perceive in Germany, had, however, a much wider application, as he made clear in two major essays written in his last years. In “The Undiscovered Self” (1957) he reverts to the relation between the individual and a mass society, and in “Flying Saucers” (1958) he examines the birth of a myth which he regards as compensating the scientistic trends of our technological era. Since the crisis in civilization is maintained by Jung to be moral, his late views on good and evil and on the psychological function of conscience, in section six, are necessary and relevant amplifications of his theme.

The reviews and short articles in section seven present Jung's lively and emotional responses to the pronouncements of his contemporary, Count Hermann Keyserling, on national problems, and to his own visits to the United States and India. Finally, the appendix brings together the documents relating to the years when Jung was president of the International General Medical Society for Psychotherapy and editor of its organ, the *Zentralblatt für Psychotherapie.* His energetic nature and feelings of obligation both to society and to his colleagues compelled him to accept this position as a vantage point from which to combat, to the best of his ability, the threat to psychotherapy in Germany under the Nazis. Unjustly, he was subjected to a barrage of tendentious and largely uninformed criticism because of his action. The aims he consistently sought to achieve are now set forth fully for the first time, with the necessary documentation.

*

Grateful acknowledgment is made to the American-Scandinavian Foundation, New York, for permission to quote from the Bellows translation of *The Poetic Edda;* to the Viking Press, New York, for permission to quote from *The Portable Nietzsche*, translated by Walter Kaufmann and copyright 1954 by the Viking Press, Inc.; and to Otto Müller Verlag, Salzburg, for permission to reproduce an illustration from Maria Böckeler, *Hildegard von Bingen: Wissen die Wege.* For advice and assistance, the Editors are grateful to C. A. Meier, M.D., of Zurich; Walter Cimbal, M.D., of Hamburg; W. Morgenthaler, M.D., of Bern; Miss Liselotte Bendix, librarian of the New York Psychoanalytic Society and Institute; and the staff of the Warburg Institute, London.

The Role of the Unconscious

Translated from “Über das Unbewusste,” *Schweizerland* (Zurich), IV (1918).

Mind and Earth

Translated from “Seele und Erde,” *Seelenprobleme der Gegenwart* (Zurich: Rascher, 1931).

Archaic Man

Translated from “Der archaische Mensch,” *Seelenprobleme der Gegenwart* (Zurich: Rascher, 1931).

The Spiritual Problem of Modern Man

Translated from “Das Seelenproblem des modernen Menschen,” *Seelenprobleme der Gegenwart* (Zurich: Rascher, 1931).

II

The Love Problem of a Student

Translated from an unpublished ms. (1922?).

Woman in Europe

Translated from “Die Frau in Europa,” *Europäische Revue* (Berlin), III (1927).

The Meaning of Psychology for Modern Man

Translated from “Die Bedeutung der Psychologie für die Gegenwart,” *Wirklichkeit der Seele* (Zurich: Rascher, 1934).

The State of Psychotherapy Today

Translated from “Zur gegenwärtigen Lage der Psychothera pie,” *Zentralblatt für Psychotherapie und ihre Grenzgebiete* (Leipzig), VII (1934).

III

Preface to *Essays on Contemporary Events*

Translated from Vorwort to *Aufsätze zur Zeitgeschichte* (Zurich: Rascher, 1946).

Wotan

Translated from “Wotan,” *Neue Schweizer Rundschau* (Zurich), n.s., III (1936).

After the Catastrophe

Translated from “Nach der Katastrophe,” *Neue Schweizer Rundschau* (Zurich), n.s., XIII (1945).

The Fight with the Shadow

Originally published in English in *The Listener* (London), XXXVI (1946).

Epilogue to *Essays on Contemporary Events*

Translated from Nachwort to *Aufsätze zur Zeitgeschichte* (Zurich: Rascher, 1946).

IV

The Undiscovered Self (Present and Future)

Translated from *Gegenwart und Zukunft* (Zurich: Rascher, 1957).

1. The Plight of the Individual in Modern Society
2. Religion as the Counterbalance to Mass-Mindedness
3. The Position of the West on the Question of Religion
4. The Individual's Understanding of Himself
5. The Philosophical and the Psychological Approach to Life
6. Self-Knowledge
7. The Meaning of Self-Knowledge

V

Flying Saucers: A Modern Myth of Things Seen in the Skies

Translated from *Ein moderner Mythus: Von Dingen, die am Himmel gesehen werden* (Zurich and Stuttgart: Rascher, 1958).

Preface to the First English Edition
Introductory
1. Ufos as Rumours
2. Ufos in Dreams

THE ROLE OF THE UNCONSCIOUS

MIND AND EARTH

ARCHAIC MAN

THE SPIRITUAL PROBLEM OF MODERN MAN

THE ROLE OF THE UNCONSCIOUS[1]

[1] To the layman's ears, the word "unconscious" has an undertone of something metaphysical and rather mysterious. This peculiarity, attaching to the whole concept of the unconscious, is primarily due to the fact that the term found its way into ordinary speech as a designation for a metaphysical entity. Eduard von Hartmann, for instance, called the unconscious the "Universal Ground." Again, the word was taken up by occultism, because people with these leanings are extremely fond of borrowing scientific terms in order to dress their speculations in a "scientific" guise. In contradiction to this, the experimental psychologists, who for a long time regarded themselves—not unjustly—as the representatives of the only truly scientific psychology, adopted a negative attitude towards the concept of the unconscious, on the ground that everything psychic is conscious and that consciousness alone deserves the name "psyche." They admitted that conscious psychic contents showed varying degrees of clarity, some being "brighter" or "darker" than others, but the existence of unconscious contents was denied as being a contradiction in terms.

[2] This view stemmed very largely from the circumstance that work in the laboratory was confined exclusively to "normal" subjects, and also from the nature of the experiments themselves. These were concerned so far as possible with the most elementary psychic processes, while the investigation of the more complex psychic functions, which by their very nature do not lend themselves to experimental procedures based on exact measurement, was almost entirely absent. But a factor far transcending both these reasons in importance was the segregation of experimental psychology from psychopathology. In France, ever since the time of Ribot, psychologists had kept an alert eye on abnormal psychic phenomena, and one of their most eminent representatives, Binet, even made the pronouncement that the pathological psyche exaggerated certain deviations from the normal which were difficult to understand, and, by throwing them into relief, made them more comprehensible. Another

French psychologist, Pierre Janet, working at the Salpêtrière, devoted himself almost exclusively and with great success to the study of psychopathological processes. But it is just the abnormal psychic processes which demonstrate most clearly the existence of an unconscious. For this reason it was the medical men, and above all the specialists in the field of psychic illnesses, who supported the hypothesis of the unconscious and defended it most vigorously. But whereas in France psychology was considerably enriched by the findings of psychopathology and was led to accept the notion of "unconscious" processes, in Germany it was psychology that enriched psychopathology, supplying it with a number of valuable experimental methods—without, however, taking over from psychopathology its interest in pathological phenomena. This explains in large part why psychopathological research underwent a different development in German science from that followed in France. It became—except for the interest it aroused in academic circles—a task for the medical practitioner, who by his professional work was compelled to understand the complex psychic phenomena exhibited by his patients. In this way there came into being that complex of theoretical views and practical techniques which is known as "psychoanalysis." The concept of the unconscious underwent a broad development in the psychoanalytic movement, far more so than in the French school, which was more concerned with the various forms in which unconscious processes manifested themselves than with their causation and their specific content. Fifteen years ago, independently of the Freudian school and on the basis of my own experimental researches, I satisfied myself as to the existence and significance of unconscious processes, indicating at the same time the methods by which these processes might be demonstrated. Later, in collaboration with a number of my pupils, I also demonstrated the significance of unconscious processes in the mentally insane.

[3] As a result of this—at first—purely medical development the concept of the unconscious took on a coloration derived from the natural sciences. It has remained a purely medical concept in the Freudian school. According to the views of this school, man, as a civilized being, is unable to act out a large number of instinctive impulses and wishes, for the simple reason that they are incompatible with law and morality. In so far,

therefore, as he wants to adapt himself to society, he is obliged to suppress these wishes. The assumption that man has such wishes is altogether plausible, and the truth of it can be seen at any time by every individual with a little application of honesty. But this insight amounts as a rule only to the general statement that socially incompatible and inadmissible wishes exist. Experience shows, however, that the facts are quite different when we come down to individual cases. It then proves, remarkably enough, that very often, as a result of the suppression of an inadmissible wish, the thin wall between wishing and being conscious of the wish is broken, so that the wish becomes unconscious. It is forgotten, and its place is taken by a more or less rational justification—if, indeed, any motivation is sought at all. This process, whereby an inadmissible wish becomes unconscious, is called *repression*, as distinct from *suppression*, which presupposes that the wish remained conscious. Although repressed and forgotten, the incompatible content—whether it consist of wishes or of painful memories—nevertheless exists, and its unperceived presence influences the conscious processes. This influence expresses itself in the form of peculiar disturbances of the conscious, normal functions; we call these disturbances nervous or *psychogenic* disturbances. The remarkable thing is that they do not confine themselves to purely psychological processes but extend also to physiological ones. In the latter case, as Janet emphasizes, it is never the elementary components of the function that are disturbed, but only the voluntary application of the function under various complex conditions. For instance, an elementary component of the nutritive function consists in the act of swallowing. If choking were regularly to occur whenever food in solid or liquid form was taken, then it would be an anatomical or organic disturbance. But if the choking occurred only in the case of certain foods or at certain meals, or only in the presence of certain persons, or only in certain moods, then it would be a nervous or psychogenic disturbance. The psychogenic disturbance therefore affects merely the act of eating under certain psychological and not physical conditions.

[4] Such disturbances of physiological functions are particularly frequent in hysteria. In another, equally large group of illnesses which French doctors call psychasthenia, their place is taken by purely psychological disturbances. These can assume a great variety of forms, such as

obsessional ideas, anxiety states, depressions, moods, fantasies, pathological affects and impulses, and so on. At the root of all these disturbances we find repressed psychic contents, i.e., contents that have become unconscious. On the basis of these purely empirical findings, the concept of the unconscious as the sum-total of all incompatible and repressed wishes, including all painful and repressed memories, gradually took form.

[5] Now it is an easily demonstrated fact that the overwhelming majority of these incompatible contents have to do with the phenomenon of sexuality. Sexuality is a fundamental instinct which, as everyone knows, is the most hedged about with secrecy and with feelings of delicacy. In the form of love, it is the cause of the stormiest emotions, the wildest longings, the profoundest despairs, the most secret sorrows, and, altogether, of the most painful experiences. Sexuality is an important physical and widely ramified psychic function on which the whole future of humanity depends. It is thus at least as important as the function of nutrition, even though it is an instinct of another kind. But whereas we can allow the nutritive function, from the devouring of a simple piece of bread to a guild banquet, to be seen by all eyes in all its variations, and at most must hold it in check because of an attack of intestinal catarrh or a general food shortage, sexuality comes under a moral taboo and has to submit to a large number of legal regulations and restrictions. It is not, like the nutritive function, at the free disposal of the individual. It is therefore understandable that a great many pressing interests and powerful emotions congregate round this question, for as a rule affects are found at places where adaptation is least complete. Furthermore, sexuality, as I have said, is a fundamental instinct in every human being, and this is reason enough for the well-known Freudian theory which reduces everything to sexuality, and sketches a picture of the unconscious which makes it appear as a kind of lumber-room where all the repressed and inadmissible infantile wishes and all the later, inadmissible sexual wishes are stored. Distasteful as such a view is, we must give it its due if we want to discover all the things that Freud has smuggled into the concept of sexuality. We shall then see that he has widened its boundaries far beyond the permitted limits, so that a better word for what he actually means would be “Eros” in the old, philosophical sense of a Pan-Eros who permeates all nature as a creative

and procreative force. “Sexuality” is a most unhappy expression for this. But, such as it is, the concept of sexuality has now been coined and appears to have such definite limits that one even hesitates to use the word “love” as a synonym. And yet Freud, as can easily be shown from numerous passages in his writings, very often means “love” when he speaks merely of sexuality.

[6] The whole Freudian movement has settled firmly for the sexual theory. There is certainly no unprejudiced thinker or investigator who would not instantly acknowledge the extraordinary importance of sexual or erotic experiences and conflicts. But it will never be proved that sexuality is *the* fundamental instinct and *the* activating principle of the human psyche. Any unprejudiced scientist will, on the contrary, admit that the psyche is an extremely complex structure. Though we can approach it from the biological standpoint and seek to explain it in terms of biological factors, it presents us with a great many other puzzles whose solution makes demands which no isolated science, such as biology, is in a position to satisfy. No matter what instincts, drives or dynamisms biologists may postulate or assume both now and in the future, it will assuredly be quite impossible to set up a sharply defined instinct like sexuality as a fundamental principle of explanation. Biology, indeed science in general, has got beyond this stage: we no longer reduce everything to a single manifest force, as the earlier scientists did with phlogiston and electricity. We have learned to employ a modest abstraction, named energy, as an explanatory principle for all quantitative changes.

[7] I am convinced that a truly scientific attitude in psychology must likewise lead to the conclusion that the dynamic processes of the psyche cannot be reduced to this or that concrete instinct—we should merely find ourselves back at the stage of the phlogiston theory. We shall be obliged to take the instincts as constituent parts of the psyche, and then abstract our principle of explanation from their mutual relationship. I have therefore pointed out that we would do well to posit a hypothetical quantity, an “energy,” as a psychological explanatory principle, and to call it “libido” in the classical sense of the word, without harbouring any prejudice with regard to its substantiality. With the help of such a quantity, the psychodynamic processes could be explained in an unobjectionable

manner, without that unavoidable distortion which a concrete ground of explanation necessarily entails. Thus, when the Freudian school explains that religious feelings or any other sentiments that pertain to the spiritual sphere are “nothing but” inadmissible sexual wishes which have been repressed and subsequently “sublimated,” this procedure would be equivalent to a physicist’s explanation that electricity is “nothing but” a waterfall which someone had bought up and piped into a turbine. In other words, electricity is nothing but a “culturally deformed” waterfall—an argument which might conceivably be raised by the Society for the Preservation of Wild Nature but is hardly a piece of scientific ratiocination. In psychology such an explanation would be appropriate only if it could be proved that the dynamic ground of our being is nothing but sexuality, which amounts to saying, in physics, that falling water alone can produce electricity. In that case it could rightly be maintained that electricity is nothing but a waterfall conducted along wires.

[8] So if we reject the exclusively sexual theory of the unconscious and put in its place an energic view of the psyche, we must say that the unconscious contains everything psychic that has not reached the threshold of consciousness, or whose energy-charge is not sufficient to maintain it in consciousness, or that will reach consciousness only in the future. We can then picture to ourselves how the unconscious must be constituted. We have already taken cognizance of repressions as contents of the unconscious, and to these we must add *everything that we have forgotten.* When a thing is forgotten, it does not mean that it is extinguished; it simply means that the memory has become subliminal. Its energy-charge has sunk so low that it can no longer appear in consciousness; but, though lost to consciousness, it is not lost to the unconscious. It will naturally be objected that this is no more than a *façon de parler.* I would like to make what I mean clear by a hypothetical example. Suppose there are two people, one of whom has never read a book and the other has read a thousand. From the minds of both of them we expunge all memory of the ten years in which the first was merely living and the second was reading his thousand books. Each now knows as little as the other, and yet anyone will be able to find out which of them has read the books and, be it noted, understood them. The experience of reading, though long forgotten, leaves traces behind it, and from these

traces the previous experience can be recognized. This long-lasting, indirect influence is due to a fixing of impressions, which are still preserved even when they are no longer capable of reaching consciousness.

[9] Besides things that have been forgotten, subliminal perceptions form part of the contents of the unconscious. These may be sense perceptions occurring below the stimulus-threshold of conscious hearing, or in the peripheral field of vision; or they may be apperceptions, by which are meant perceptions of endopsychic or external processes.

[10] All this material constitutes the *personal unconscious.* We call it personal because it consists entirely of acquisitions deriving from personal life. Therefore, when anything falls into the unconscious it is taken up in the network of associations formed by this unconscious material. Associative connections of high intensity may then be produced, which cross over or rise up into consciousness in the form of inspirations, intuitions, “lucky ideas,” and so on.

[11] The concept of a personal unconscious does not, however, enable us fully to grasp the nature of the unconscious. If the unconscious were only personal, it would in theory be possible to trace all the fantasies of an insane person back to individual experiences and impressions. No doubt a large proportion of the fantasy-material could be reduced to his personal history, but there are certain fantasies whose roots in the individual’s previous history one would seek for in vain. What sort of fantasies are these? They are, in a word, *mythological fantasies.* They are elements which do not correspond to any events or experiences of personal life, but only to myths.

[12] Where do these mythological fantasies come from, if they do not spring from the personal unconscious and hence from the experiences of personal life? Indubitably they come from the brain—indeed, precisely from the brain and not from personal memory-traces, but from the inherited brain-structure itself. Such fantasies always have a highly original and “creative” character. They are like new creations; obviously they derive from the creative activity of the brain and not simply from its mnemonic activity. We receive along with our body a highly differentiated

brain which brings with it its entire history, and when it becomes creative it creates out of this history—out of the history of mankind. By “history” we usually mean the history which we “make,” and we call this “objective history.” The truly creative fantasy activity of the brain has nothing to do with this kind of history, but solely with that age-old natural history which has been transmitted in living form since the remotest times, namely, the history of the brain-structure. And this structure tells its own story, which is the story of mankind: the unending myth of death and rebirth, and of the multitudinous figures who weave in and out of this mystery.

[13] This unconscious, buried in the structure of the brain and disclosing its living presence only through the medium of creative fantasy, is the *suprapersonal unconscious.* It comes alive in the creative man, it reveals itself in the vision of the artist, in the inspiration of the thinker, in the inner experience of the mystic. The suprapersonal unconscious, being distributed throughout the brain-structure, is like an all-pervading, omnipresent, omniscient spirit. It knows man as he always was, and not as he is at this moment; it knows him as myth. For this reason, also, the connection with the suprapersonal or *collective* unconscious means an extension of man beyond himself; it means death for his personal being and a rebirth in a new dimension, as was literally enacted in certain of the ancient mysteries. It is certainly true that without the sacrifice of man as he is, man as he was—and always will be—cannot be attained. And it is the artist who can tell us most about this sacrifice of the personal man, if we are not satisfied with the message of the Gospels.

[14] It should on no account be imagined that there are such things as *inherited ideas.* Of that there can be no question. There are, however, innate possibilities of ideas, *a priori* conditions for fantasy-production, which are somewhat similar to the Kantian categories. Though these innate conditions do not produce any contents of themselves, they give definite form to contents that have already been acquired. Being a part of the inherited structure of the brain, they are the reason for the identity of symbols and myth-motifs in all parts of the earth. The collective unconscious forms the dark background against which the adaptive function of consciousness stands out in sharp relief. One is almost tempted to say that everything of value in the psyche is taken up into the adaptive

function, and that everything useless goes to form that inchoate background from which, to the terror of primitive man, menacing shadows and nocturnal spectres detach themselves, demanding sacrifices and ceremonies which to our biologically oriented minds seem futile and meaningless. We laugh at primitive superstitions, thinking ourselves superior, but we completely forget that we are influenced in just as uncanny a fashion as the primitive by this background, which we are wont to scoff at as a museum of stupidities. Primitive man simply has a different theory—the theory of witchcraft and spirits. I find this theory very interesting and very sensible—actually more sensible than the academic views of modern science. Whereas the highly educated modern man tries to figure out what diet best suits his nervous intestinal catarrh and to what dietetic mistakes the new attack may be due, the primitive, quite correctly, looks for psychological reasons and seeks a psychically effective method of cure. The processes in the unconscious influence us just as much as they do primitives; we are possessed by the demons of sickness no less than they, our psyche is just as much in danger of being struck by some hostile influence, we are just as much the prey of malevolent spirits of the dead, or the victims of a magic spell cast by a strange personality. Only, we call all these things by different names, and that is the only advantage we have over primitive man. It is, as we know, a little thing, yet it makes all the difference. For mankind it was always like a deliverance from a nightmare when the new name was found.

[15] This mysterious background, which from time immemorial peopled the nocturnal shadows of the primeval forest with the same yet ever-changing figures, seems like a distorted reflection of life during the day, repeating itself in the dreams and terrors of the night. Shadowily they crowd round, the revenants, the spirits of the dead, fleeting memory-images risen from the prison of the past whence no living thing returns, or feelings left behind by some impressive experience and now personified in spectral form. All this seems but the bitter aftertaste from the emptied beaker of the day, the unwelcome lees, the useless sediment of experience. But if we look closer, we discover that this apparently hostile background sends out powerful emissaries which influence the behaviour of primitives in the highest degree. Sometimes these agencies take on a magical, sometimes a religious form, and sometimes the two forms appear

inextricably mixed. Both of them are the most important factors in the primitive mentality after the struggle for existence. In them the spiritual element manifests itself autonomously to the primitive psyche—whose reflexes are purely animal—in projected, sensuous form, and we Europeans must sometimes be struck with wonder at the tremendous influence the experience of the spirit can have on primitive man. For him, the sensuous immediacy of the object attaches to spiritual phenomena as well. A thought *appears to him*, he does not think it; it appears to him in the form of a projected sensuous perception, almost like an hallucination, or at least like an extremely vivid dream. For this reason a thought, for the primitive, can superimpose itself on sensuous reality to such an extent that if a European were to behave in the same way we should say he was mad.

[16] These peculiarities of primitive psychology, which I can only touch lightly on here, are of great importance for an understanding of the collective unconscious. A simple reflection will bear this out. As civilized human beings, we in Western Europe have a history reaching back perhaps 2,500 years. Before that there is a prehistoric period of considerably greater duration, during which man reached the cultural level of, say, the Sioux Indians. Then come the hundreds of thousands of years of neolithic culture, and before that an unimaginably vast stretch of time during which man evolved from the animal. A mere fifty generations ago many of us in Europe were no better than primitives. The layer of culture, this pleasing patina, must therefore be quite extraordinarily thin in comparison with the powerfully developed layers of the primitive psyche. But it is these layers that form the collective unconscious, together with the vestiges of animality that lose themselves in the nebulous abyss of time.

[17] Christianity split the Germanic barbarian into an upper and a lower half, and enabled him, by repressing the dark side, to domesticate the brighter half and fit it for civilization. But the lower, darker half still awaits redemption and a second spell of domestication. Until then, it will remain associated with the vestiges of the prehistoric age, with the collective unconscious, which is subject to a peculiar and ever-increasing activation. As the Christian view of the world loses its authority, the more menacingly will the “blond beast” be heard prowling about in its

underground prison, ready at any moment to burst out with devastating consequences. When this happens in the individual it brings about a psychological revolution, but it can also take a social form.

[18] In my opinion this problem does not exist for the Jews. The Jew already had the culture of the ancient world and on top of that has taken over the culture of the nations amongst whom he dwells. He has two cultures, paradoxical as that may sound. He is domesticated to a higher degree than we are, but he is badly at a loss for that quality in man which roots him to the earth and draws new strength from below. This chthonic quality is found in dangerous concentration in the Germanic peoples. Naturally the Aryan European has not noticed any signs of this for a very long time, but perhaps he is beginning to notice it in the present war; and again, perhaps not. The Jew has too little of this quality—where has he his own earth underfoot? The mystery of earth is no joke and no paradox. One only needs to see how, in America, the skull and pelvis measurements of all the European races begin to indianize themselves in the second generation of immigrants. That is the mystery of the American earth.

[19] The soil of every country holds some such mystery. We have an unconscious reflection of this in the psyche: just as there is a relationship of mind to body, so there is a relationship of body to earth. I hope the reader will pardon my figurative way of speaking, and will try to grasp what I mean. It is not easy to describe, definite though it is. There are people—quite a number of them—who live outside and above their bodies, who float like bodiless shadows above their earth, their earthy component, which is their body. Others live wholly in their bodies. As a rule, the Jew lives in amicable relationship with the earth, but without feeling the power of the chthonic. His receptivity to this seems to have weakened with time. This may explain the specific need of the Jew to reduce everything to its material beginnings; he needs these beginnings in order to counterbalance the dangerous ascendency of his two cultures. A little bit of primitivity does not hurt him; on the contrary, I can understand very well that Freud’s and Adler’s reduction of everything psychic to primitive sexual wishes and power-drives has something about it that is beneficial and satisfying to the Jew, because it is a form of simplification. For this reason, Freud is perhaps right to close his eyes to my objections.

But these specifically Jewish doctrines are thoroughly unsatisfying to the Germanic mentality; we still have a genuine barbarian in us who is not to be trifled with, and whose manifestation is no comfort for us and not a pleasant way of passing the time. Would that people could learn the lesson of this war! The fact is, our unconscious is not to be got at with over-ingenious and grotesque interpretations. The psychotherapist with a Jewish background awakens in the Germanic psyche not those wistful and whimsical residues from the time of David, but the barbarian of yesterday, a being for whom matters suddenly become *serious* in the most unpleasant way. This annoying peculiarity of the barbarian was apparent also to Nietzsche—no doubt from personal experience—which is why he thought highly of the Jewish mentality and preached about dancing and flying and not taking things seriously. But he overlooked the fact that it is not the barbarian in us who takes things seriously—they become serious for him. He is gripped by the daemon. And who took things more seriously than Nietzsche himself?

[20] It seems to me that we should take the problem of the unconscious very seriously indeed. The tremendous compulsion towards goodness and the immense moral force of Christianity are not merely an argument in the latter's favour, they are also a proof of the strength of its suppressed and repressed counterpart—the antichristian, barbarian element. The existence within us of something that can turn against us, that can become a serious matter for us, I regard not merely as a dangerous peculiarity, but as a valuable and congenial asset as well. It is a still untouched fortune, an uncorrupted treasure, a sign of youthfulness, an earnest of rebirth. Nevertheless, to value the unconscious exclusively for the sake of its positive qualities and to regard it as a source of revelation would be fundamentally wrong. The unconscious is, first and foremost, the world of the past, which is activated by the one-sidedness of the conscious attitude. Whenever life proceeds one-sidedly in any given direction, the self-regulation of the organism produces in the unconscious an accumulation of all those factors which play too small a part in the individual's conscious existence. For this reason I have put forward the compensation theory of the unconscious as a complement to the repression theory.

[21] The role of the unconscious is to act compensatorily to the conscious contents of the moment. By this I do not mean that it sets up an opposition, for there are times when the tendency of the unconscious coincides with that of consciousness, namely, when the conscious attitude is approaching the optimum. The nearer it approaches the optimum, the more the autonomous activity of the unconscious is diminished, and the more its value sinks until, at the moment when the optimum is reached, it falls to zero. We can say, then, that so long as all goes well, so long as a person travels the road that is, for him, the individual as well as the social optimum, there is no talk of the unconscious. The very fact that we in our age come to speak of the unconscious at all is proof that everything is not in order. This talk of the unconscious cannot be laid entirely at the door of analytical psychology; its beginnings can be traced back to the time of the French Revolution, and the first signs of it can be found in Mesmer. It is true that in those days they did not speak of the unconscious but of "animal magnetism." This is nothing but a rediscovery of the primitive concept of soul-force or soul-stuff, awakened out of the unconscious by a reactivation of archaic forms of thought. At the time when animal magnetism was spreading throughout the Western world as a regular epidemic of table-turning, amounting in the end to a recrudescence of the belief in fetishes (animation of an inanimate object), Robert Mayer elevated the primitive dynamic idea of energy, which rose up from the unconscious and forced itself on him like an inspiration—as he himself describes—to the level of a scientific concept. Meanwhile, the table-turning epidemic burst its bounds altogether and proliferated into spiritualism, which is a modern belief in spirits and a rebirth of the shamanistic form of religion practised by our remote forefathers. This development of reactivated contents from the unconscious is still going on today, and during the last few decades has led to a popularizing of the next higher stage of differentiation—the eclectic or Gnostic systems of Theosophy and Anthroposophy. At the same time, it laid the foundations of French psychopathology, and in particular of the French school of hypnotism. These, in turn, became the main sources of analytical psychology, which now seeks to investigate scientifically the phenomena of the unconscious—the same phenomena which the theosophical and

Gnostic sects made accessible to the simple-minded in the form of portentous mysteries.

[22] It is evident from this development that analytical psychology does not stand in isolation but finds itself in a definite historical setting. The fact that this whole disturbance or reactivation of the unconscious took place around the year 1800 is, in my view, connected with the French Revolution. This was less a political revolution than a revolution of minds. It was a colossal explosion of all the inflammable matter that had been piling up ever since the Age of Enlightenment. The official deposition of Christianity by the Revolution must have made a tremendous impression on the unconscious pagan in us, for from then on he found no rest. In the greatest German of the age, Goethe, he could really live and breathe, and in Hölderlin he could at least cry loudly for the glory that was Greece. After that, the dechristianization of man's view of the world made rapid progress despite occasional reactionaries. Hand in hand with this went the importation of strange gods. Besides the fetishism and shamanism already mentioned, the prime import was Buddhism, retailed by Schopenhauer. Mystery religions spread apace, including that higher form of shamanism, Christian Science. This picture reminds us vividly of the first centuries of our era, when Rome began to find the old gods ridiculous and felt the need to import new ones on a large scale. As today, they imported pretty well everything that existed, from the lowest, most squalid superstition to the noblest flowerings of the human spirit. Our time is fatally reminiscent of that epoch, when again everything was not in order, and again the unconscious burst forth and brought back things immemorially buried. If anything, the chaos of minds was perhaps less pronounced then than it is today.

[23] As the reader will have remarked, I have omitted to speak here of the medical aspect of the unconscious, for instance the question of how the unconscious produces nervous symptoms. But I have touched on this question in the earlier pages and can now leave it alone. At all events, I am not getting away from my subject, because psychotherapy is concerned not only with family quarrels, unhappy love-affairs, and the like, but with the question of psychological adaptation in general, and the attitude we are to take towards people and things, and also towards

ourselves. A doctor who treats the body must know the body, and a doctor who treats the psyche must know the psyche. If he knows the psyche only under the aspect of sexuality or of the personal lust for power, he knows it only in part. This part has to be known, of course, but the other parts are equally important, and particularly the question I have touched on here concerning the relation between conscious and unconscious. A biologically trained eye is not sufficient to grasp this problem, for in practice it is more than a matter of eugenics, and the observation of human life in the light of self-preservation and propagation is too one-sided. Certainly the unconscious presents us with very different aspects; but so far we have fixed our attention too much on certain outward peculiarities, for instance the archaic language of the unconscious, and have taken it all quite literally. The language of the unconscious is particularly rich in images, as our dreams prove. But it is a primitive language, a faithful reflection of the colourful, ever-changing world. The unconscious is of like nature: it is a compensatory image of the world. In my view it cannot be maintained either that the unconscious has a merely sexual nature or that it is a metaphysical reality, nor can it be exalted into a "universal ground." It is to be understood as a psychic phenomenon, like consciousness. We no more know what the psyche is than we know what life is. They are interpenetrating mysteries, giving us every reason for uncertainty as to how much "I" am the world, and how much "world" is "I". The unconscious at any rate is real, because it *works.* I like to visualize the unconscious as a world seen in a mirror: our consciousness presents to us a picture of the outer world, but also of the world within, this being a compensatory mirror-image of the outer world. We could also say that the outer world is a compensatory mirror-image of the inner world. At all events we stand between two worlds, or between two totally different psychological systems of perception; between perception of external sensory stimuli and perception of the unconscious. The picture we have of the outer world makes us understand everything as the effect of physical and physiological forces; the picture of the inner world shows everything as the effect of spiritual agencies. Then, it is no longer the force of gravity that welds the stars together, but the creative hand of a demiurge; love is no longer the effect of a sexual stimulus, but of psychic predestination, and so forth.

[24] The right way may perhaps be found in the approximation of the two worlds. Schiller thought he had found this way in art, in what he called the “symbol” of art. The artist, therefore, should know the secret of the middle path. My own experiences led me to doubt this. I am of the opinion that the union of rational and irrational truth is to be found not so much in art as in the symbol *per se;* for it is the essence of the symbol to contain both the rational and the irrational. It always expresses the one through the other; it comprises both without being either.

[25] How does a symbol originate? This question brings us to the most important function of the unconscious: the *symbol-creating function.* There is something very remarkable about this function, because it has only a relative existence. The compensatory function, on the other hand, is the natural, automatic function of the unconscious and is constantly present. It owes its existence to the simple fact that all the impulses, thoughts, wishes, and tendencies which run counter to the rational orientation of daily life are denied expression, thrust into the background, and finally fall into the unconscious. There all the things which we have repressed and suppressed, which we have deliberately ignored and devalued, gradually accumulate and, in time, acquire such force that they begin to influence consciousness. This influence would be in direct opposition to our conscious orientation if the unconscious consisted only of repressed and suppressed material. But this, as we have seen, is not the case. The unconscious also contains the dark springs of instinct and intuition, it contains all those forces which mere reasonableness, propriety, and the orderly course of bourgeois existence could never call awake, all those creative forces which lead man onwards to new developments, new forms, and new goals. I therefore call the influence of the unconscious not merely complementary but compensatory, because it adds to consciousness everything that has been excluded by the drying up of the springs of intuition and by the fixed pursuit of a single goal.

[26] This function, as I say, works automatically, but, owing to the notorious atrophy of instinct in civilized man, it is often too weak to swing his one-sided orientation of consciousness in a new direction against the pressures of society. Therefore, artificial aids have always been needed to bring the healing forces of the unconscious into play. It was chiefly the

religions that performed this task. By taking the manifestations of the unconscious as divine or daemonic signs, revelations, or warnings, they offered it some idea or view that served as a favourable gradient. In this way they directed particular attention to all phenomena of unconscious origin, whether they were dreams, visions, feelings, fantasies, or projections of the same in strange or unusual personalities, or in any striking processes of organic and inorganic nature. This concentration of attention enabled the unconscious contents and forces to overflow into conscious life, thereby influencing it and altering it. From this standpoint, religious ideas are an artificial aid that benefits the unconscious by endowing its compensatory function—which, if disregarded, would remain ineffective—with a higher value for consciousness. Faith, superstition, or any strongly feeling-toned idea gives the unconscious content a value which ordinarily it does not possess, but which it might in time attain, though in a very unpleasant form. When, therefore, unconscious contents accumulate as a result of being consistently ignored, they are bound to exert an influence that is pathological. There are just as many neurotics among primitives as among civilized Europeans. Hysterical Africans are by no means rare in Africa. These disagreeable manifestations of the unconscious account in large measure for the primitive fear of demons and the resultant rites of propitiation.

[27] The compensatory function of the unconscious naturally does not contain in itself the conscious valuation, although it is wholly dependent on the conscious way of thinking. The unconscious can supply, at most, the germs of conscious convictions or of symbol-formation. We can say, therefore, that the symbol-creating function of the unconscious exists and does not exist, depending on the conditions. It shares this paradoxical quality with symbols in general. One is reminded of the story of the young rabbi who was a pupil of Kant’s. One day an old rabbi came to guide him back to the faith of his fathers, but all arguments were in vain. At last the old rabbi drew forth the ominous *shofar*, the horn that is blown at the cursing of heretics (as happened to Spinoza), and asked the young man if he knew what it was. “Of course I know,” answered the young man coolly, “it is the horn of a ram.” At that the old rabbi reeled back and fell to the ground in horror.

[28] What is the *shofar*? It is *also* only the horn of a ram. Sometimes a symbol can be no more than that, but only when it is dead. The symbol is killed when we succeed in reducing the *shofar* to a ram's horn. But again, through symbolization a ram's horn can become the *shofar.*

[29] The compensatory function expresses itself in quite definite arrangements of psychic material, for instance in dreams, in which nothing "symbolic" is to be found any more than in a ram's horn. In order to discover their symbolic quality a quite definite conscious attitude is needed, namely, the willingness to understand the dream-content symbolically, first of all as a mere hypothesis, and then leave experience to decide whether it is necessary or desirable to understand the dream in this way. I will give a brief example which may help to elucidate this difficult question. An elderly woman-patient, who, like many others, was upset by the problem of the war, once told me the following dream which she had shortly before she visited me:

[30] *She was singing hymns that put particular emphasis on her belief in Christ, among others the hymn that goes:*

Christ's blood and righteousness shall be
My festal dress and jewellery;
So shall I stand before the Lord
When heaven shall grant me my reward.
They shall be saved at Judgment Day
Who put their trust in Christ alway.

While she was singing it, she saw a bull tearing around madly in front of the window. Suddenly it gave a jump and broke one of its legs. She saw that the bull was in agony, and thought, turning her eyes away, that somebody ought to kill it. Then she awoke.

[31] The bull's agony reminded her of the torturings of animals whose unwilling witness she had been. She abominated such things and was extraordinarily upset by them because of her unconscious identification with the tortured animal. There was something in her that could be expressed by the image of an animal being tortured. This image was evidently evoked by the special emphasis on the belief in Christ in the hymns she was singing, for it was while she was singing that the bull got excited and broke its leg. This odd combination of ideas immediately led to an association concerning the profound religious disquiet she had felt

during the war, which shook her belief in the goodness of God and in the adequacy of the Christian view of the world. This shock should have been assuaged by the emphasis on Christian faith in the hymn, but instead it aroused that animal element in the unconscious which was personified by the bull. This is just the element that is represented by the Christian symbol as having been conquered and offered up in sacrifice. In the Christian mystery it is the sacrificed Lamb, or more correctly, the "little ram." In its sister-religion, Mithraism, which was also Christianity's most successful rival, the central symbol of the cult was the sacrifice not of a ram but of a bull. The usual altarpiece showed the overcoming of the bull by the divine saviour Mithras. We have, therefore, a very close historical connection between Christianity and the bull sacrifice. Christianity suppressed this animal element, but the moment the absolute validity of the Christian faith is shaken, that element is thrust into the foreground again. The animal instinct seeks to break out, but in so doing breaks a leg—in other words, instinct cripples itself. From the purely animal drives there also come all those factors which limit the sway of instinct. From the same root that produces wild, untamed, blind instinct there grow up the natural laws and cultural forms that tame and break its pristine power. But when the animal in us is split off from consciousness by being repressed, it may easily burst out in full force, quite unregulated and uncontrolled. An outburst of this sort always ends in catastrophe—the animal destroys itself. What was originally something dangerous now becomes something to be pitied, something that really needs our compassion. The tremendous forces unleashed by the war bring about their own destruction because there is no human hand to preserve and guide them. Our view of the world has proved too narrow to channel these forces into a cultural form.

[32] Had I tried to explain to my elderly woman-patient that the bull was a sexual symbol, she would have got nothing out of it; on the contrary, she would merely have lost her religious point of view and been none the better off. In such cases it is not a question of an either/or explanation. If we are willing to adopt a symbolical standpoint, even if only as an hypothesis, we shall see that the dream is an attempt on the part of the unconscious to bring the Christian principle into harmony with its apparently irreconcilable opposite—animal instinct—by means of understanding and compassion. It is no accident that official Christianity

has no relation to the animal. This omission, particularly striking in comparison with Buddhism, is often felt by sensitive people and has moved one modern poet to sing of a Christ who sacrifices his life for the sufferings of dumb animals. The Christian love of your neighbour can extend to the animal too, the *animal in us*, and can surround with love all that a rigidly anthropomorphic view of the world has cruelly repressed. By being repressed into the unconscious, the source from which it originated, the animal in us only becomes more beastlike, and that is no doubt the reason why no religion is so defiled with the spilling of innocent blood as Christianity, and why the world has never seen a bloodier war than the war of the Christian nations. The repressed animal bursts forth in its most savage form when it comes to the surface, and in the process of destroying itself leads to international suicide. If every individual had a better relation to the animal within him, he would also set a higher value on life. Life would be the absolute, the supreme moral principle, and he would react instinctively against any institution or organization that had the power to destroy life on a large scale.

[33] This dream, then, simply shows the dreamer the value of Christianity and contrasts it with an untamed force of nature, which, left to its raging, hurts itself and demands pity. A purely analytical reduction that traced the religious emotion back to the repression of animal instinct would, in this particular case, be sterile and uselessly destructive. If, on the other hand, we assert that the dream is to be understood symbolically and is trying to give the dreamer an opportunity to become reconciled with herself, we have taken the first step in an interpretation which will bring the contradictory values into harmony and open up a new path of inner development. Subsequent dreams would then, in keeping with this hypothesis, provide the means for understanding the wider implications of the union of the animal component with the highest moral and intellectual achievements of the human spirit. In my experience this is what actually happens, for the unconscious is continuously compensatory in its action upon the conscious situation of the moment. It is therefore not a matter of indifference *what* our conscious attitude is towards the unconscious. The more negative, critical, hostile, or disparaging we are, the more it will assume these aspects, and the more the true value of the unconscious will escape us.

[34] Thus the unconscious has a symbol-creating function only when we are willing to recognize in it a symbolic element. The products of the unconscious are pure nature. *Naturam si sequemur ducem, nunquam aberrabimus*,[2] said the ancients. But nature is not, in herself, a guide, for she is not there for man's sake. Ships are not guided by the phenomenon of magnetism. We have to make the compass a guide and, in addition, allow for a specific correction, for the needle does not even point exactly to the north. So it is with the guiding function of the unconscious. It can be used as a source of symbols, but with the necessary conscious correction that has to be applied to every natural phenomenon in order to make it serve our purpose.

[35] Many people will find this view extremely unscientific, for nowhere do they see any reduction to fundamental causes, so that they could declare with certainty that such-and-such a thing is "nothing but" this or that. For all those who seek to explain things in this way, sexuality as a causative factor is very convenient. Indeed, in the case I have described a sexual explanation could be offered without much difficulty. But—what would the patient get out of it? What use is it to a woman on the threshold of old age if her problem is answered in this way? Or should psychotherapy be reserved for patients under forty?

[36] Naturally we can ask in return: What does the patient get out of an answer that takes religious problems seriously? What is a religious problem anyway? And what has a scientific method to do with religion?

[37] It seems to me that the patient is the proper authority to deal with questions of this sort. What does he get out of them however they are answered? Why should he bother his head about science? If he is a religious person, his relationship to God will mean infinitely more to him than any scientifically satisfactory explanation, just as it is a matter of indifference to a sick man *how* he gets well so long as he does get well. Our patient, indeed any patient, is treated correctly only when he is treated as an individual. This means entering into his particular problem and not giving him an explanation based on "scientific" principles that goes clean over his head although it may be quite correct biologically.

[38] In my view the first duty of a scientific psychologist is to keep close to the living facts of the psyche, to observe these facts carefully, and thus open himself to those deeper experiences of which at present he has absolutely no knowledge. When, therefore, this or that individual psyche has a sexual conflict, and another one has a religious problem, the true scientist will first of all acknowledge the patent difference between them. He will devote himself as much to the religious problem as to the sexual problem, regardless of whether the biologist's credo allows room for the gods or not. The really unprejudiced investigator will not let his subjective credo influence or in any way distort the material lying before him, and pathological material is no exception to this. Nowadays it is a piece of unwarranted naïveté to regard a neurotic conflict as exclusively a sexual or as exclusively a power problem. This procedure is just as arbitrary as the assertion that there is no such thing as the unconscious and no neurotic conflicts. When we see all round us how powerful ideas can be, we must admit that they must be equally powerful in the psyche of the individual, whether or not he is aware of it. No one doubts that sexuality is a psychologically effective factor, and it cannot be doubted that ideas are psychologically effective factors too. Between the world of ideas and the world of instinct there is, however, a polar difference, so that as a rule only one pole is conscious. The other pole then dominates the unconscious. Thus, when anyone in his conscious life is wholly under the sway of instinct, his unconscious will place just as one-sided an emphasis on the value of ideas. And since the influence of the unconscious does in the end reach consciousness indirectly, and secretly determines its attitude, it gives rise to a compromise formation: instinct surreptitiously becomes a fixed idea, it loses its reality and is blown up by the unconscious into a one-sided, universal principle. We see the contrary often happening too, when a person consciously takes his stand on the world of ideas and is gradually forced to experience how his instinct secretly makes his ideas the instrument of unconscious wishes.

[39] As the contemporary world and its newspapers present the spectacle of a gigantic psychiatric clinic, every attentive observer has ample opportunity to see these formulations being enacted before his eyes. A principle of cardinal importance in studying these phenomena is the one already stressed by analytical psychology: that the unconscious of one

person is projected upon another person, so that the first accuses the second of what he overlooks in himself. This principle is of such alarming general validity that everyone would do well, before railing at others, to sit down and consider very carefully whether the brick should not be thrown at his own head.

[40] This seemingly irrelevant aside brings us to one of the most remarkable features of the unconscious: it is, as it were, present before our eyes in all its parts, and is accessible to observation at any time.

[41] The reason for this paradoxical quality is that the unconscious, in so far as it is activated in any way by small amounts of energy, is projected upon certain more or less suitable objects. The reader will ask how anyone can know this. The existence of projections was gradually recognized when it was found that the process of psychological adaptation was marked by disturbances and defects whose cause appeared to lie in the object. Closer investigation revealed that the "cause" was an unconscious content of the subject, which, because not recognized by him, apparently transferred itself to the object, and there magnified one of its peculiarities to such proportions that it seemed a sufficient cause of the disturbance.

[42] The fact of projection was first recognized from disturbances of psychological adaptation. Later, it was recognized also from what *promoted* adaptation, that is to say from the apparently positive qualities of the object. Here it was the valuable qualities of the subject's own personality which he had overlooked that appeared in the object and made it especially desirable.

[43] But the full extent of these projections from the unconscious became known through analysis of those obscure and inexplicable feelings and emotions which give some intangible, magical quality to certain places, certain moods of nature, certain works of art, and also to certain ideas and certain people. This magic likewise comes from projection, but a projection of the collective unconscious. If it is inanimate objects that have the "magical" quality, often their mere statistical incidence is sufficient to prove that their significance is due to the projection of a mythological content from the collective unconscious. Mostly these contents are motifs already known to us from myths and fairytales. I

would mention as an example the mysterious house where a witch or magician dwells, where some monstrous crime is being committed or has been committed, where there is a ghost, where a hidden treasure lies buried, and so on. The projection of this primordial image can be recognized when, one day, a person somehow comes upon this mysterious house—when, in other words, a real but quite ordinary house makes a magical impression upon him. Generally, too, the whole atmosphere of the place seems symbolic and is, therefore, the projection of a coherent unconscious system.

[44] We find this phenomenon beautifully developed in primitive man. The country he inhabits is at the same time the topography of his unconscious. In that stately tree dwells the thundergod; this spring is haunted by the Old Woman; in that wood the legendary king is buried; near that rock no one may light a fire because it is the abode of a demon; in yonder pile of stones dwell the ancestral spirits, and when any woman passes it she must quickly utter an apotropaic formula lest she become pregnant, for one of the spirits could easily enter her body. All kinds of objects and signs mark these places, and pious awe surrounds the marked spot. Thus does primitive man dwell in his land and at the same time in the land of his unconscious. Everywhere his unconscious jumps out at him, alive and real. How different is our relationship to the land we dwell in! Feelings totally strange to us accompany the primitive at every step. Who knows what the cry of a bird means to him, or the sight of that old tree! A whole world of feeling is closed to us and is replaced by a pale aestheticism. Nevertheless, the world of primitive feeling is not entirely lost to us; it lives on in the unconscious. The further we remove ourselves from it with our enlightenment and our rational superiority, the more it fades into the distance, but is made all the more potent by everything that falls into it, thrust out by our one-sided rationalism. This lost bit of nature seeks revenge and returns in faked, distorted form, for instance as a tango epidemic, as Futurism, Dadaism, and all the other crazes and crudities in which our age abounds.

[45] Even the primitive’s distrust of the neighbouring tribe, which we thought we had long ago outgrown thanks to our global organizations, has come back again in this war, swollen to gigantic proportions. It is no

longer a matter of burning down the neighbouring village, or of making a few heads roll: whole countries are devastated, millions are slaughtered. The enemy nation is stripped of every shred of decency, and our own faults appear in others, fantastically magnified. Where are the superior minds, capable of reflection, today? If they exist at all, nobody heeds them: instead there is a general running amok, a universal fatality against whose compelling sway the individual is powerless to defend himself. And yet this collective phenomenon is the fault of the individual as well, for nations are made up of individuals. Therefore the individual must consider by what means he can counteract the evil. Our rationalistic attitude leads us to believe that we can work wonders with international organizations, legislation, and other well-meant devices. But in reality only a change in the attitude of the individual can bring about a renewal in the spirit of the nations. Everything begins with the individual.

[46] There are well-meaning theologians and humanitarians who want to break the power principle—in others. We must begin by breaking it in ourselves. Then the thing becomes credible. We should listen to the voice of nature that speaks to us from the unconscious. Then everyone will be so preoccupied with himself that he will give up trying to put the world to rights.

[47] The layman may feel somewhat astonished that I have included these general problems in my discussion of a psychological concept. They are not a digression from my theme, as might appear, but are an essential part of it. The question of the relations between conscious and unconscious is not a special question, but one which is bound up in the most intimate way with our history, with the present time, and with our view of the world. Very many things are unconscious for us only because our view of the world allows them no room; because by education and training we have never come to grips with them, and, whenever they came to consciousness as occasional fantasies, have instantly suppressed them. The borderline between conscious and unconscious is in large measure determined by our view of the world. That is why we must talk about general problems if we wish to deal adequately with the concept of the unconscious. And if we are to grasp its nature, we must concern ourselves not only with contemporary problems, but also with the history of the human mind.

[48] This preoccupation with the unconscious is a problem of practical as well as theoretical importance. For just as our view of the world up till now has been a decisive factor in the shaping of the unconscious and its contents, so the remoulding of our views in accordance with the active forces of the unconscious is laid upon us as a practical necessity. It is impossible to cure a neurosis permanently with individual nostrums, for man cannot exist merely as an isolated individual outside the human community. The principle on which he builds his life must be one that is generally acceptable, otherwise it will lack that natural morality which is indispensable to man as a member of the herd. But such a principle, if it is not left in the darkness of the unconscious, becomes a formulated view of the world which is felt as a necessity by all who are in the habit of consciously scrutinizing their thoughts and actions. This may explain why I have touched on questions each one of which would need for its full presentation more than one head and more than one lifetime.

MIND AND EARTH[1]

[49] The phrase “mind and earth” has a slightly poetic ring. Involuntarily we think, by contrast, of the mind[2] as subject to the influences of heaven, in much the same way as the Chinese distinguish between a *shen*-soul and a *kwei*-soul, the one relating to heaven, the other to earth. But since we Westerners know nothing about the substance of the mind, and therefore cannot venture to say whether it has in it something of a heavenly nature and something of an earthly nature, we must be content to speak of two different ways of viewing, or two different aspects of, the complicated phenomenon we call mind. Instead of postulating a heavenly *shen*-soul, we could regard mind as a causeless and creative principle; and instead of a *kwei*-soul, mind could be conceived as a product of cause and effect. The latter point of view would be the more appropriate in regard to our theme, for mind would then be understood as a *system of adaptation determined by the conditions of an earthly environment.* I need hardly emphasize that this causal view must necessarily be one-sided, because only one aspect of the mind is properly grasped by it. The other side of the problem must be left out of account as not belonging to my theme.

[50] In approaching the subject of our discussion, it would be as well to define accurately what is to be understood by “mind.” Certain views would limit “mental” or “psychic” strictly to consciousness. But such a limitation would no longer satisfy us today. Modern psychopathology has in its possession a wealth of observations regarding psychic activities that are entirely analogous to conscious functions and yet are unconscious. One can perceive, think, feel, remember, decide, and act, unconsciously. Everything that happens in consciousness can under certain conditions also occur unconsciously. How this is possible can best be seen if one pictures the psychic functions and contents as a night landscape over which the beam of a searchlight is playing. Whatever appears in this light of perception is conscious; what lies in the darkness beyond is

unconscious, though none the less real and effective. If the beam of light shifts, the contents that till now were conscious sink into the unconscious, and new contents come into the lighted area of consciousness. The contents that have vanished in the darkness continue to be active and make themselves felt indirectly, most commonly as symptoms. Freud has described these symptomatic disturbances in *The Psychopathology of Everyday Life.* The unconscious aptitudes and inhibitions can also be demonstrated experimentally, by means of association tests.

[51] If, then, we take the investigations of psychopathology into account, the mind appears as an extended area of psychic phenomena which are partly conscious and partly unconscious. The unconscious portion of the mind is not directly accessible—otherwise it would not be unconscious—but can only be inferred from the effects which unconscious processes have on consciousness. Our inferences can never go beyond an “as if.”

[52] Here I must go rather more closely into the nature and structure of the unconscious if I am to deal adequately with the conditioning of the mind by the earth. It is a question that concerns the very beginnings and foundations of the mind—things that from time immemorial have lain buried in the darkness, and not merely the banal facts of sense-perception and conscious adaptation to the environment. These belong to the psychology of consciousness, and, as I have said, I do not equate consciousness with the psyche. The latter is a much more comprehensive and darker field of experience than the narrow, brightly lit area of consciousness, for the psyche also includes the unconscious.

[53] In another essay[3] I tried to give a general view of the structure of the unconscious. Its contents, the archetypes, are as it were the hidden foundations of the conscious mind, or, to use another comparison, the roots which the psyche has sunk not only in the earth in the narrower sense but in the world in general. Archetypes are systems of readiness for action, and at the same time images and emotions. They are inherited with the brain-structure—indeed, they are its psychic aspect. They represent, on the one hand, a very strong instinctive conservatism, while on the other hand they are the most effective means conceivable of

instinctive adaptation. They are thus, essentially, the chthonic portion of the psyche, if we may use such an expression—that portion through which the psyche is attached to nature, or in which its link with the earth and the world appears at its most tangible. The psychic influence of the earth and its laws is seen most clearly in these primordial images.

[54] This problem is not only very complicated but also a very subtle one. We shall have to reckon with quite unusual difficulties in dealing with it, and the first of these is that the archetype and its function must be understood far more as a part of man's prehistoric, irrational psychology than as a rationally conceivable system. Perhaps I may be allowed a comparison: it is as though we had to describe and explain a building whose upper storey was erected in the nineteenth century, the ground floor dates back to the sixteenth century, and careful examination of the masonry reveals that it was reconstructed from a tower built in the eleventh century. In the cellar we come upon Roman foundations, and under the cellar a choked-up cave with neolithic tools in the upper layer and remnants of fauna from the same period in the lower layers. That would be the picture of our psychic structure. We live on the upper storey and are only aware that the lower storey is slightly old-fashioned. As to what lies beneath the earth's surface, of that we remain totally unconscious.

[55] This is a lame analogy, like all analogies, for in the psyche there is nothing that is just a dead relic. Everything is alive, and our upper storey, consciousness, is continually influenced by its living and active foundations. Like the building, it is sustained and supported by them. And just as the building rises freely above the earth, so our consciousness stands as if above the earth in space, with a wide prospect before it. But the deeper we descend into the house the narrower the horizon becomes, and the more we find ourselves in the darkness, till finally we reach the naked bed-rock, and with it that prehistoric time when reindeer hunters fought for a bare and wretched existence against the elemental forces of wild nature. The men of that age were still in full possession of their animal instincts, without which life would have been impossible. The free sway of instinct is not compatible with a strongly developed consciousness. The consciousness of primitive man, like that of the child,

is sporadic, and his world, like the child's, is very limited. Indeed, in accordance with phylogenetic law, we still recapitulate in childhood reminiscences of the prehistory of the race and of mankind in general. Phylogenetically as well as ontogenetically we have grown up out of the dark confines of the earth; hence the factors that affected us most closely became archetypes, and it is these primordial images which influence us most directly, and therefore seem to be the most powerful. I say "seem" because what seems to us the most important thing psychically is not necessarily the most important, or at least need not remain so.

[56] What, then, are the most immediate archetypes? This question leads us straight to the problem of archetypal functioning, and so to the heart of the difficulty. From what standpoint should we answer the question? From that of the child, or of the primitive, or of our adult modern consciousness? How can we recognize an archetype? And when is it necessary to have recourse to this hypothesis at all?

[57] I *would like to suggest that every psychic reaction which is out of proportion to its precipitating cause should be investigated as to whether it may be conditioned at the same time by an archetype.*[4]

[58] What I mean by this can best be illustrated by an example. Suppose a child is afraid of its mother. We have first to assure ourselves that there is no rational cause for this, a bad conscience, for instance, on the child's part, or violence on the mother's, or something else that may have happened to the child. If there is nothing of this kind to explain the fear, then I would suggest that the situation be regarded as an archetypal one. Usually such fears occur at night, and are wont to show themselves in dreams. The child now dreams of the mother as a witch who pursues children. The conscious material behind these dreams is in some cases the story of Hänsel and Gretel. It is then said that the child should not have been told such a fairytale, because the tale is thought to be the cause of the fear. That is an erroneous rationalization, but it nevertheless contains a core of truth in so far as the witch-motif is the most suitable expression for childish fears, and always has been. That is why such fairytales exist. Children's night-terrors are a typical event that is

constantly repeating itself and has always been expressed in typical fairytale motifs.

[59] But fairytales are only infantile forms of legends, myths, and superstitions taken from the “night religion” of primitives. What I call “night religion” is the magical form of religion, the meaning and purpose of which is intercourse with the dark powers, devils, witches, magicians, and spirits. Just as the childish fairytale is a phylogenetic repetition of the ancient night religion, so the childish fear is a re-enactment of primitive psychology, a phylogenetic relic.

[60] The fact that this relic displays a certain vitality is in no sense abnormal, for nocturnal fears, even in adults living under civilized conditions, are not necessarily an abnormal phenomenon. Only an intensified degree of night-fear can be regarded as abnormal. The question then is, under what circumstances is this night-fear increased? Can the increase be explained solely by the archetype of the witch expressed in the fairytale, or must some other explanatory cause be adduced?

[61] We should make the archetype responsible only for a definite, minimal, normal degree of fear; any pronounced increase, felt to be abnormal, must have special causes. Freud, as we know, explains this fear as due to the collision of the child’s incestuous tendency with the incest prohibition. He thus explains it from the standpoint of the child. I have no doubt that children can have “incestuous” tendencies in the extended sense used by Freud, but I doubt very much whether these tendencies can be attributed without more ado to the child’s psychology *sui generis*. There are very good reasons for the view that the child-psyche is still under the spell of the parents’ psyche, especially the mother’s, and to such a degree that the psyche of the child must be regarded as a functional appendage of that of the parents. The psychic individuality of the child develops only later, after a reliable continuity of consciousness has been established. The fact that the child begins by speaking of himself in the third person is in my view a clear proof of the impersonality of his psychology.

[62] I am therefore inclined to explain the possible incestuous tendencies of the child rather from the standpoint of the psychology of the parents, just as every childish neurosis should be considered first and foremost in the light of the parental psychology. Thus, a frequent cause of increased infantile terrors is an especial “complex-proneness” on the part of the parents, that is, their repression and disregard of certain vital problems. Anything that falls into the unconscious takes on a more or less archaic form. If, for example, the mother represses a painful and terrifying complex, she will feel it as an evil spirit pursuing her—a “skeleton in the cupboard,” as the English say. This formulation shows that the complex has already acquired archetypal force. It sits on her like an incubus, she is tormented by nightmares. Whether she tells “nightmare-stories” to the child or not, she none the less infects the child and awakens in its mind archetypal terror images from her own psychology. Perhaps she has erotic fantasies about a man other than her husband. The child is the visible sign of their marriage tie, and her resistance to the tie is unconsciously directed against the child, who has to be repudiated. On the archaic level this corresponds to child-murder. In this way the mother becomes a wicked witch who devours children.

[63] As in the mother, so in the child the possibilities of archaic representation lie dormant, and the same cause which first produced and laid down the archetype during the course of human history reactivates it again and again today.

[64] This example of the manifestation of an archetype in a child has not been chosen at random. We began with the question of what are the most immediate archetypes. The most immediate is the primordial image of the mother; she is in every way the nearest and most powerful experience, and the one which occurs during the most impressionable period of man’s life. Since consciousness is as yet only poorly developed in childhood, one cannot speak of an “individual” experience at all. On the contrary, the mother is an archetypal experience; she is experienced by the more or less unconscious child not as a definite, individual feminine personality but as *the* mother, an archetype charged with an immensity of possible meanings. As life proceeds the primordial image fades and is replaced by a conscious, relatively individual image, which

is assumed to be the only mother-image we have. But in the unconscious the mother always remains a powerful primordial image, colouring and even determining throughout life our relations to woman, to society, to the world of feeling and fact, yet in so subtle a way that, as a rule, there is no conscious perception of the process. We think all this is only a metaphor. But it becomes a very concrete fact when a man marries a wife only because in some way she resembles his mother, or else because she very definitely does not. Mother Germania is for the Germans, like *la douce France* for the French, a figure of the utmost importance behind the political scene, who could be overlooked only by blinkered intellectuals. The all-embracing womb of Mother Church is anything but a metaphor, and the same is true of Mother Earth, Mother Nature, and “matter” in general.

[65] The archetype of the mother is the most immediate one for the child. But with the development of consciousness the father also enters his field of vision, and activates an archetype whose nature is in many respects opposed to that of the mother. Just as the mother archetype corresponds to the Chinese *yin*, so the father archetype corresponds to the *yang.* It determines our relations to man, to the law and the state, to reason and the spirit and the dynamism of nature. “Fatherland” implies boundaries, a definite localization in space, whereas the land itself is Mother Earth, quiescent and fruitful. The Rhine is a father, as is the Nile, the wind and storm, thunder and lightning. The father is the “auctor” and represents authority, hence also law and the state. He is that which moves in the world, like the wind; the guide and creator of invisible thoughts and airy images. He is the creative wind-breath—the spirit, pneuma, *atman.*

[66] Thus the father, too, is a powerful archetype dwelling in the psyche of the child. At first he is *the* father, an all-encompassing God-image, a dynamic principle. In the course of life this authoritarian imago recedes into the background: the father turns into a limited and often all-too-human personality. The father-imago, on the other hand, develops to the full its potential significance. Just as man was late in discovering nature, so he only gradually discovered law, duty, responsibility, the state, the spirit. As the nascent consciousness becomes more capable of understanding, the importance of the parental personality dwindles. The

place of the father is taken by the society of men, and the place of the mother by the family.

[67] It would be wrong, in my view, to say that all those things which take the place of the parents are nothing but a substitute for the unavoidable loss of the primordial parental imagos. What appears in their stead is not just a substitute, but a reality that is interwoven with the parents and has impressed itself on the mind of the child through the parental imago. The mother who gives warmth, protection, and nourishment is also the hearth, the sheltering cave or hut, and the surrounding vegetation. She is the provident field, and her son is the godlike grain, the brother and friend of man. She is the milk-giving cow and the herd. The father goes about, talks with other men, hunts, travels, makes war, lets his bad moods loose like thunderstorms, and at the behest of invisible thoughts he suddenly changes the whole situation like a tempest. He is the war and the weapon, the cause of all changes; he is the bull provoked to violence or prone to apathetic laziness. He is the image of all the helpful or harmful elemental powers.

[68] All these things are the early immediacies of the child's life, impinging on him, directly or indirectly, through the parents. And as the parental imago shrinks and becomes humanized, all those things, which at first seemed only like a background or like marginal effects, begin to stand out more clearly. The earth he plays with, the fire he warms himself at, the rain and wind that chill him, were always realities, but because of his twilight consciousness they were seen and understood only as qualities of the parents. Then, as out of a mist, there emerge the material and dynamic aspects of the earth, revealing themselves as powers in their own right, and no longer wearing the masks of the parents. They are thus not a substitute but a reality that corresponds to a higher level of consciousness.

[69] Nevertheless something is lost in this development, and that is the irreplaceable feeling of immediate oneness with the parents. This feeling is not just a sentiment, but an important psychological fact which Lévy-Bruhl, in an altogether different context, has called *participation mystique*. The fact denoted by this not immediately understandable

expression plays a great role in the psychology of primitives as well as in analytical psychology. To put it briefly, it means *a state of identity in mutual unconsciousness.* Perhaps I should explain this further. If the same unconscious complex is constellated in two people at the same time, it produces a remarkable emotional effect, a projection, which causes either a mutual attraction or a mutual repulsion. When I and another person have an unconscious relation to the same important fact, I become in part identical with him, and because of this I orient myself to him as I would to the complex in question were I conscious of it.

[70] This state of *participation mystique* obtains between parents and children. A well-known example is the stepmother who identifies herself with the daughter and, through her, marries the son-in-law; or the father who thinks he is considering his son's welfare when he naïvely forces him to fulfil his—the father's—wishes, for instance in marriage or in the choice of a profession. The son who identifies himself with the father is an equally well-known figure. But there is an especially close bond between mother and daughter, which in certain cases can actually be demonstrated by the association method.[5] Although the *participation mystique* is an unconscious fact to the person concerned, he nevertheless feels the change when it no longer exists. There is always a certain difference between the psychology of a man whose father is still living and one whose father is dead. So long as a *participation mystique* with the parents persists, a relatively infantile style of life can be maintained. Through the *participation mystique* life is pumped into us from outside in the form of unconscious motivations, for which, since they are unconscious, no responsibility is felt. Because of this infantile unconsciousness the burden of life is lightened, or at least seems so. One is not alone, but exists unconsciously in twos or threes. In imagination the son is in his mother's lap, protected by the father. The father is reborn in the son—at least as a link in the chain of eternal life. The mother has rejuvenated her father in her youthful husband and so has not lost her youth. I need not cite examples from primitive psychology. A reference to them must suffice.

[71] All this drops away with the broadening and intensification of consciousness. The resultant extension of the parental imagos over the

face of the world, or rather, the world's breaking through the mists of childhood, severs the unconscious union with the parents. This process is even performed consciously in the primitive rites of initiation into manhood. The archetype of the parents is thereby driven into the background; it is, as we say, no longer "constellated." Instead, a new kind of *participation mystique* begins with the tribe, society, Church, or nation. This participation is general and impersonal, and above all it gives unconsciousness very little scope. If anyone should incline to be too unconscious and too guilelessly trusting, law and society will quickly shake him into consciousness. But sexual maturity also brings with it the possibility of a new personal *participation mystique*, and hence of replacing that part of the personality which was lost in identification with the parents. A new archetype is constellated: in a man it is the archetype of woman, and in a woman the archetype of man. These two figures were likewise hidden behind the mask of the parental imagos, but now they step forth undisguised, even though strongly influenced by the parental imagos, often overwhelmingly so. I have given the feminine archetype in man the name "anima," and the masculine archetype in woman the name "animus," for specific reasons which I shall discuss later.[6]

[72] The more a man or woman is unconsciously influenced by the parental imago, the more surely will the figure of the loved one be chosen as either a positive or a negative substitute for the parents. The far-reaching influence of the parental imago should not be considered abnormal; on the contrary, it is a very normal and therefore very common phenomenon. It is, indeed, very important that this should be so, for otherwise the parents are not reborn in the children, and the parental imago becomes so completely lost that all continuity in the life of the individual ceases. He cannot connect his childhood with his adult life, and therefore remains unconsciously a child—a situation that is the best possible foundation for a neurosis. He will then suffer from all those ills that beset parvenus without a history, be they individuals or social groups.

[73] It is normal that children should in a certain sense marry their parents. This is just as important, psychologically, as the biological necessity to infuse new blood if the ancestral tree is to produce a good breed. It

guarantees continuity, a reasonable prolongation of the past into the present. Only too much or too little in this direction is harmful.

[74] So long as a positive or negative resemblance to the parents is the deciding factor in a love choice, the release from the parental imago, and hence from childhood, is not complete. Although childhood has to be brought along for the sake of historical continuity, this should not be at the expense of further development. When, towards middle life, the last gleam of childhood illusion fades—this it must be owned is true only of an almost ideal life, for many go as children to their graves—then the archetype of the mature man or woman emerges from the parental imago: an image of man as woman has known him from the beginning of time, and an image of woman that man carries within him eternally.

[75] There are indeed many men who can describe exactly, even to individual details, the image of woman that they carry in their minds. (I have met few women who could give as exact a picture of the masculine archetype.) Just as the primordial image of the mother is a composite image of all previous mothers, so the image of the anima is a supra-individual image. So true is this that the image reveals closely corresponding features in men who are individually very different, and one can almost reconstruct from it a definite type of woman. The most striking feature about the anima-type is that the maternal element is entirely lacking. She is the companion and friend in her favourable aspect, in her unfavourable aspect she is the courtesan. Often these types are described very accurately, with all their human and daemonic qualities, in fantastic romances, such as Rider Haggard's *She* and *Wisdom's Daughter*, Benoît's *L'Atlantide*, and, fragmentarily, in the second part of *Faust*, in the figure of Helen. But the anima-type is presented in the most succinct and pregnant form in the Gnostic legend of Simon Magus, a caricature of whom appears in the Acts of the Apostles.[7] Simon Magus was always accompanied on his travels by a girl, whose name was Helen. He had found her in a brothel in Tyre; she was a reincarnation of Helen of Troy. I do not know whether Goethe's Faust-Helen motif was consciously derived from the Simon legend. A similar relationship occurs in Rider Haggard's *Wisdom's Daughter*, where we can be certain that there was no conscious continuity.

[76] The absence of the maternal element demonstrates, on the one hand, the complete release from the mother-imago, and, on the other, the idea of a purely human relationship lacking the natural incentive of procreation. The overwhelming majority of men on the present cultural level never advance beyond the maternal significance of woman, and this is the reason why the anima seldom develops beyond the infantile, primitive level of the prostitute. Consequently, prostitution is one of the main by-products of civilized marriage. In the legend of Simon, however, and in the second part of *Faust* anima symbols of complete maturity are found. This growth of adulthood is synonymous with growth away from nature. Christian and Buddhist monastic ideals grappled with the same problem, but always the flesh was sacrificed. Goddesses and demigoddesses took the place of the personal, human woman who should carry the projection of the anima.

[77] Here we touch on highly controversial territory into which I do not wish to venture further at this point. We shall do better to return to the simpler problem of how we can recognize the existence of such a feminine archetype.

[78] As long as an archetype is not projected and not loved or hated in an object, it is still wholly identical with the individual, who is thus compelled to act it out himself. A man will then act out his own anima. We have a word that aptly characterizes this attitude: it is “animosity.” This expression can best be interpreted as “anima possession,” denoting a condition of uncontrolled emotion. The word “animosity” is used only for unpleasant emotions, but actually the anima can induce pleasant ones as well.[8]

[79] Self-control is a typically masculine ideal, to be achieved by the repression of feeling. Feeling is a specifically feminine virtue, and because a man in trying to attain his ideal of manhood represses all feminine traits—which are really part of him, just as masculine traits are part of a woman’s psychology—he also represses certain emotions as womanish weakness. In so doing he piles up effeminacy or sentimentality in the unconscious, and this, when it breaks out, betrays in him the existence of a feminine being. As we know, it is just the “he-men” who

are most at the mercy of their feminine feelings. This might explain the very much greater number of suicides among men, and, conversely, the extraordinary strength and toughness often developed by very feminine women. If we carefully examine the uncontrolled emotions of a man and try to reconstruct the probable personality underlying them, we soon arrive at a feminine figure which I call, as I said, the anima. On the same ground the ancients conceived of a feminine soul, a "psyche" or "anima," and not without good psychological reasons did the ecclesiastics of the Middle Ages propound the question, *Habet mulier animam?*

[80] With women the case is reversed. When the animus breaks out in a woman, it is not feelings that appear, as in a man, but she begins to argue and to rationalize. And just as his anima-feelings are arbitrary and capricious, so these feminine arguments are illogical and irrational. One can speak of an animus-thinking that is always right and must have the last word, and always end up with "That's just the reason!" If the anima is irrational feeling, the animus is irrational thinking.

[81] So far as my experience goes, a man always understands fairly easily what is meant by the anima; indeed, as I said, he frequently has a quite definite picture of her, so that from a varied collection of women of all periods he can single out the one who comes closest to the anima-type. But I have, as a rule, found it very difficult to make a woman understand what the animus is, and I have never met any woman who could tell me anything definite about his personality. From this I conclude that the animus does not have a definite personality at all; in other words, he is not so much a unity as a plurality. This fact must somehow be connected with the specific psychology of men and women. On the biological level a woman's chief interest is to hold a man, while a man's chief interest is to conquer a woman, and because of his nature he seldom stops at one conquest. Thus one masculine personality plays a decisive role for a woman, but a man's relation to a woman is much less definite, as he can look on his wife as one among many women. This makes him lay stress on the legal and social character of marriage, whereas a woman sees it as an exclusively personal relationship. Hence, as a rule, a woman's consciousness is restricted to one man, whereas a man's consciousness has a tendency to go beyond the one personal relationship—a tendency

that is sometimes opposed to any personal limitations. In the unconscious, therefore, we may expect a compensation by contraries. The man’s sharply defined anima figure fulfils this expectation perfectly, as also does the indefinite polymorphism of the woman’s animus.

[82] The description of anima and animus that I have given here is necessarily a brief one. But I should be carrying brevity too far if I described the anima merely as a primordial image of woman consisting of irrational feelings, and the animus merely as a primordial image of man consisting of irrational views. Both figures present far-reaching problems, since they are elementary forms of that psychic phenomenon which from primitive times has been called the “soul.” They are also the cause of that deep human need to speak of souls or daemons at all.

[83] Nothing that is autonomous in the psyche is impersonal or neutral. Impersonality is a category pertaining to consciousness. All autonomous psychic factors have the character of personality, from the “voices” of the insane to the control-spirits of mediums and the visions of the mystics. Anima and animus, likewise, have a personality character, and this cannot be better expressed than by the word “soul.”

[84] Here I would like to guard against a misunderstanding. The concept of “soul” which I am now using can be compared more with the primitive idea of the soul, for instance the *ba*-soul and *ka*-soul of the Egyptians, than with the Christian idea of it, which is an attempt to make a philosophical construct out of a metaphysical individual substance. My conception of the soul has absolutely nothing to do with this, since it is purely phenomenological. I am not indulging in any psychological mysticism, but am simply trying to grasp scientifically the elementary psychic phenomena which underlie the belief in souls.

[85] Since the complex of facts represented by anima and animus best corresponds to what has been described as soul at all times and by all peoples, it is hardly surprising that they bring an uncommonly mystical atmosphere along with them as soon as one tries to examine their contents more closely. Whenever the anima is projected, she immediately surrounds herself with a peculiar historical feeling which Goethe expressed in the words: “In times gone by you were my wife or sister.”[9]

Rider Haggard and Benoît had to go back to Greece and Egypt in order to give expression to this insistent historical feeling.

[86] Curiously enough, the animus seems to be lacking in this mystical sense of history. I would almost say that he is more concerned with the present and the future. He has nomothetical proclivities, preferring to speak grandiosely of things as they should be, or to give an apodictic judgment on the most obscure and controversial matters, and in such positive terms that the woman is relieved of all further (and possibly all too painful) reflection.

[87] Once again, I can only explain this difference as a compensation by contraries. A man, in his conscious activity, plans ahead and seeks to create the future, while it is a specifically feminine trait to rack one's brains over such questions as who was somebody's great-great-aunt. But it is just this feminine passion for genealogies that comes out very clearly in Rider Haggard, garnished with Anglo-Saxon sentiment, and in Benoît the same thing is served up with the spicy admixture of a *chronique scandaleuse.* Intimations of reincarnation in the form of irrational feelings hang very strongly about a man's anima, while a woman will sometimes consciously admit such feelings if she is not too much under the domination of the man's rationalism.

[88] This historical feeling always has the quality of momentousness and fatefulness, and therefore leads directly to the problems of immortality and divinity. Even the rationalistic, sceptical Benoît describes those who have died of love as being preserved for all eternity by a peculiarly effective method of mummification, not to mention the full-blown mysticism of Rider Haggard in *Ayesha: The Return of She*— altogether a psychological document of the first rank.

[89] The animus, not having these emotional qualities, seems to lack entirely the aspect I have been describing, yet in his deepest essence he is just as historically-minded as the anima. Unfortunately there are no good literary examples of the animus. Women writers seem to be deficient in a certain naïve introspection, or at least they prefer to keep the results of their introspection in another compartment, possibly because no feeling is connected with it. I know of only one unprejudiced document of this

sort, a novel by Marie Hay, *The Evil Vineyard.* In this very unpretentious story the historical element in the animus comes out in a clever disguise that was surely not intended by the author.

[90] The animus consists of *a priori* assumptions based on unconsidered judgments. The existence of such judgments can only be inferred from the woman's conscious attitude to certain things. I must give you an example. A woman I knew surrounded her son with the most solemn care and lent him an importance he in no way deserved, with the result that soon after puberty he became neurotic. The reason for her senseless attitude was not at first discernible. Closer investigation, however, revealed the existence of an unconscious dogma that said: My son is the coming Messiah. This is a very ordinary instance of the widespread hero-archetype in women, which is projected on the father or the husband or the son, in the form of an opinion which then unconsciously regulates the woman's behaviour. A well-known example is Annie Besant, who also discovered a saviour.

[91] In Marie Hay's novel the heroine drives her husband insane by her attitude which is based on the unconscious and unspoken assumption that he is a horrible tyrant who holds her captive in much the same way as … The uncompleted simile she left to the interpretation of her husband, who finally discovered the appropriate figure for it in a *cinquecento* tyrant with whom he identified himself, and lost his reason in consequence. The historical factor, therefore, is by no means lacking to the animus. But it expresses itself in a way fundamentally different from that of the anima. Similarly, in the religious problems connected with the animus the judging faculties predominate, just as the feeling faculties do in the case of a man.

[92] Finally, I would like to remark that the anima and animus are not the only autonomous figures or "souls" in the unconscious, though in practice they are the most immediate and most important. But, since I would like to touch on still another aspect of the problem of mind and earth, perhaps I may leave this difficult field of extremely subtle inward experience and turn to that other side where we shall no longer grope

laboriously in the dark background of the mind, but pass into the wide world of everyday things.

[93] Just as, in the process of evolution, the mind has been moulded by earthly conditions, so the same process repeats itself under our eyes today. Imagine a large section of some European nation transplanted to a strange soil and another climate. We can confidently expect this human group to undergo certain psychic and perhaps also physical changes in the course of a few generations, even without the admixture of foreign blood. We can observe in the Jews of the various European countries marked differences which can only be explained by the peculiarities of the people they live amongst. It is not difficult to tell a Spanish Jew from a North African Jew, a German Jew from a Russian Jew. One can even distinguish the various types of Russian Jew, the Polish from the North Russian and Cossack type. In spite of the similarity of race, there are pronounced differences whose cause is obscure. It is extremely hard to define these differences exactly, though a student of human nature feels them at once.

[94] The greatest experiment in the transplantation of a race in modern times was the colonization of the North American continent by a predominantly Germanic population. As the climatic conditions vary very widely, we would expect all sorts of variations of the original racial type. The admixture of Indian blood is increasingly small, so it plays no role. Boas has shown that anatomical changes begin already in the second generation of immigrants, chiefly in the measurements of the skull. At all events the “Yankee” type is formed, and this is so similar to the Indian type that on my first visit to the Middle West,[10] while watching a stream of workers coming out of a factory, I remarked to my companion that I should never have thought there was such a high percentage of Indian blood. He answered, laughing, that he was willing to bet that in all these hundreds of men there would not be found a drop of Indian blood. That was many years ago when I had no notion of the mysterious Indianization of the American people. I got to know of this mystery only when I had to treat many American patients analytically. Remarkable differences were revealed in comparison with Europeans.

[95] Another thing that struck me was the great influence of the Negro, a psychological influence naturally, not due to the mixing of blood. The emotional way an American expresses himself, especially the way he laughs, can best be studied in the illustrated supplements of the American papers; the inimitable Teddy Roosevelt laugh is found in its primordial form in the American Negro. The peculiar walk with loose joints, or the swinging of the hips so frequently observed in Americans, also comes from the Negro. American music draws its main inspiration from the Negro, and so does the dance. The expression of religious feeling, the revival meetings, the Holy Rollers and other abnormalities are strongly influenced by the Negro, and the famous American naïveté, in its charming as well as its more unpleasant form, invites comparison with the childlikeness of the Negro. The vivacity of the average American, which shows itself not only at baseball games but quite particularly in his extraordinary love of talking—the ceaseless gabble of American papers is an eloquent example of this—is scarcely to be derived from his Germanic forefathers, but is far more like the chattering of a Negro village. The almost total lack of privacy and the all-devouring mass sociability remind one of primitive life in open huts, where there is complete identity with all members of the tribe. It seemed to me that American houses had their doors open all the time, just as there are no hedges round the gardens in American towns and villages. Everything seems to be street.

[96] It is naturally very difficult to decide how much of all this is due to symbiosis with the Negro, and how much to the fact that America is still a pioneering nation on virgin soil. But taken all in all, the wide influence of the Negro on the general character of the people is unmistakable.

[97] This infection by the primitive can, of course, be observed just as well in other countries, though not to the same degree and in this form. In Africa, for example, the white man is a diminishing minority and must therefore protect himself from the Negro by observing the most rigorous social forms, otherwise he risks “going black.” If he succumbs to the primitive influence he is lost. But in America the Negro, just because he is in a minority, is not a degenerative influence, but rather one which,

peculiar though it is, cannot be termed unfavourable—unless one happens to have a jazz phobia.

[98] The remarkable thing is that one notices little or nothing of the Indian influence. The above-mentioned physiognomical similarities do not point to Africa but are specifically American. Does the body react to America, and the psyche to Africa? I must answer this question by saying that only the outward behaviour is influenced by the Negro, but what goes on in the psyche must be the subject of further investigation.

[99] It is natural that in the dreams of my American patients the Negro should play no small role as an expression of the inferior side of their personality. A European might similarly dream of tramps or other representatives of the lower classes. But as the great majority of dreams, especially those in the early stages of analysis, are superficial, it was only in the course of very thorough and deep analyses that I came upon symbols relating to the Indian. The progressive tendency of the unconscious, as expressed for instance in the hero-motif, chooses the Indian as its symbol, just as certain coins of the Union bear an Indian head. This is a tribute to the once-hated Indian, but it also testifies to the fact that the American hero-motif chooses the Indian as an ideal figure. It would certainly never occur to any American administration to place the head of Cetewayo or any other Negro hero on their coins. Monarchies prefer the head of the sovereign, democratic states honour other symbols of their ideals. I have given a detailed example of a similar American hero-fantasy in my book *Symbols of Transformation*, and I could add dozens of others.

[100] The hero is always the embodiment of man's highest and most powerful aspiration, or of what this aspiration ought ideally to be and what he would most gladly realize. It is therefore of importance what kind of fantasy constitutes the hero-motif. In the American hero-fantasy the Indian's character plays a leading role. The American conception of sport goes far beyond the notions of the easy-going European; only the Indian rites of initiation can compare with the ruthlessness and savagery of a rigorous American training. The performance of American athletes is therefore admirable. In everything on which the American has really set

his heart we catch a glimpse of the Indian. His extraordinary concentration on a particular goal, his tenacity of purpose, his unflinching endurance of the greatest hardships—in all this the legendary virtues of the Indian find full expression.[11]

[101] The hero-motif affects not only the general attitude to life but also the problems of religion. Any absolutist attitude is always a religious attitude, and in whatever respect a man becomes absolute, there you see his religion. I have found in my American patients that their hero-figure possesses traits derived from the religion of the Indians. The most important figure in their religion is the shaman, the medicine-man or conjurer of spirits. The first American discovery in this field—since taken up in Europe—was spiritualism, and the second was Christian Science and other forms of mental healing. Christian Science is an exorcistic ritual. The demons of sickness are denied, suitable incantations are sung over the refractory body, and Christianity, the product of a high level of culture, is used as healing-magic. Though the poverty of its spiritual content is appalling, Christian Science is a living force; it possesses a strength derived from the soil, and can therefore work those miracles that are sought for in vain in the official churches.

[102] There is no country on earth where the “power-word,” the magic formula, the slogan or advertisement is more effective than in America. We Europeans laugh about this, but we forget that faith in the magical power of the word can move more than mountains. Christ himself was a word, the Word. We have become estranged from this psychology, but in the American it is still alive. It has yet to be seen what America will do with it.

[103] Thus the American presents a strange picture: a European with Negro behaviour and an Indian soul. He shares the fate of all usurpers of foreign soil. Certain Australian primitives assert that one cannot conquer foreign soil, because in it there dwell strange ancestor-spirits who reincarnate themselves in the newborn. There is a great psychological truth in this. The foreign land assimilates its conqueror. But unlike the Latin conquerors of Central and South America, the North Americans preserved their European standards with the most rigid puritanism,

though they could not prevent the souls of their Indian foes from becoming theirs. Everywhere the virgin earth causes at least the unconscious of the conqueror to sink to the level of its indigenous inhabitants. Thus, in the American, there is a discrepancy between conscious and unconscious that is not found in the European, a tension between an extremely high conscious level of culture and an unconscious primitivity. This tension forms a psychic potential which endows the American with an indomitable spirit of enterprise and an enviable enthusiasm which we in Europe do not know. The very fact that we still have our ancestral spirits, and that for us everything is steeped in history, keeps us in contact with our unconscious, but we are so caught in this contact and held so fast in the historical vice that the greatest catastrophes are needed in order to wrench us loose and to change our political behaviour from what it was five hundred years ago. Our contact with the unconscious chains us to the earth and makes it hard for us to move, and this is certainly no advantage when it comes to progressiveness and all the other desirable motions of the mind. Nevertheless I would not speak ill of our relation to good Mother Earth. *Plurimi pertransibunt*—but he who is rooted in the soil endures. Alienation from the unconscious and from its historical conditions spells rootlessness. That is the danger that lies in wait for the conqueror of foreign lands, and for every individual who, through one-sided allegiance to any kind of -ism, loses touch with the dark, maternal, earthy ground of his being.

ARCHAIC MAN[1]

[104] The word “archaic” means primal, original. While it is one of the most difficult and thankless of tasks to say anything of importance about the civilized man of today, we are apparently in a more favourable position when it comes to archaic man. In the first case, the speaker finds himself caught in the same presuppositions and is blinded by the same prejudices as those whom he wishes to view from a superior standpoint. In the case of archaic man, however, we are far removed from his world in time, our mental equipment, being more differentiated, is superior to his, so that from this more elevated coign of vantage it is possible for us to survey his world and the meaning it held for him.

[105] With this sentence I have set limits to the subject to be covered in my lecture. Unless I restricted myself to the psychic life of archaic man, I could hardly paint a sufficiently comprehensive picture of him in so small a space. I should like to confine myself to this picture, and shall say nothing about the findings of anthropology. When we speak of man in general, we do not have his anatomy, the shape of his skull, or the colour of his skin in mind, but mean rather his psychic world, his state of consciousness, and his mode of life. Since all this belongs to the subject-matter of psychology, we shall be dealing here chiefly with the psychology of archaic man and with the primitive mentality. Despite this limitation we shall find we have actually widened our theme, because it is not only primitive man whose psychology is archaic. It is the psychology also of modern, civilized man, and not merely of individual “throw-backs” in modern society. On the contrary, every civilized human being, however high his conscious development, is still an archaic man at the deeper levels of his psyche. Just as the human body connects us with the mammals and displays numerous vestiges of earlier evolutionary stages going back even to the reptilian age, so the human psyche is a product of evolution which, when followed back to its origins, shows countless archaic traits.

[106] When we first come into contact with primitive peoples or read about primitive psychology in scientific works, we cannot fail to be deeply impressed with the strangeness of archaic man. Lévy-Bruhl himself, an authority in the field of primitive psychology, never wearies of emphasizing the striking difference between the “prelogical” state of mind and our own conscious outlook. It seems to him, as a civilized man, inexplicable that the primitive should disregard the obvious lessons of experience, should flatly deny the most evident causal connections, and instead of accounting for things as simply due to chance or on reasonable grounds of causality, should take his “collective representations” as being intrinsically valid. By “collective representations” Lévy-Bruhl means widely current ideas whose truth is held to be self-evident from the start, such as the primitive ideas concerning spirits, witchcraft, the power of medicines, and so forth. While it is perfectly understandable to us that people die of advanced age or as the result of diseases that are recognized to be fatal, this is not the case with primitive man. When old persons die, he does not believe it to be the result of age. He argues that there are persons who have lived to be much older. Likewise, no one dies as the result of disease, for there have been other people who recovered from the same disease, or never contracted it. To him, the real explanation is always magic. Either a spirit has killed the man, or it was sorcery. Many primitive tribes recognize death in battle as the only natural death. Still others regard even death in battle as unnatural, holding that the enemy who caused it must either have been a sorcerer or have used a charmed weapon. This grotesque idea can on occasion take an even more impressive form. For instance, two anklets were found in the stomach of a crocodile shot by a European. The natives recognized the anklets as the property of two women who, some time before, had been devoured by a crocodile. At once the charge of witchcraft was raised; for this quite natural occurrence, which would never have aroused the suspicions of a European, was given an unexpected interpretation in the light of one of those presuppositions which Lévy-Bruhl calls “collective representations.” The natives said that an unknown sorcerer had summoned the crocodile, and had bidden it catch the two women and bring them to him. The crocodile had carried out this command. But what about the anklets in the beast’s stomach? Crocodiles, they explained,

never ate people unless bidden to do so. The crocodile had merely received the anklets from the sorcerer as a reward.

[107] This story is a perfect example of that capricious way of explaining things which is characteristic of the "prelogical" state of mind. We call it prelogical, because to us such an explanation seems absurdly illogical. But it seems so to us only because we start from assumptions wholly different from those of primitive man. If we were as convinced as he is of the existence of sorcerers and other mysterious powers, instead of believing in so-called natural causes, his inferences would seem to us perfectly logical. As a matter of fact, primitive man is no more logical or illogical than we are. Only his presuppositions are different, and that is what distinguishes him from us. His thinking and his conduct are based on assumptions quite unlike our own. To all that is in any way out of the ordinary and that therefore disturbs, frightens or astonishes him, he ascribes what we would call a supernatural origin. For him, of course, these things are not supernatural, but belong to his world of experience. We feel we are stating a natural sequence of events when we say: This house was burned down because it was struck by lightning. Primitive man senses an equally natural sequence of events when he says: A sorcerer used the lightning to set fire to this house. There is absolutely nothing in the world of the primitive—provided that it is at all unusual or impressive—that will not be accounted for on essentially similar grounds. But in explaining things in this way he is acting just like ourselves: he does not examine his assumptions. To him it is an unquestionable truth that disease and other ills are caused by spirits or witchcraft, just as for us it is a foregone conclusion that an illness has a natural cause. We would no more put it down to sorcery than he to natural causes. His mental functioning does not differ in any fundamental way from ours. It is, as I have said, his assumptions alone that distinguish him from ourselves.

[108] It is also supposed that primitive man has other feelings than we, and another kind of morality—that he has, so to speak, a "prelogical" temperament. Undoubtedly he has a different code of morals. When asked about the difference between good and evil, a Negro chieftain declared: "When I steal my enemy's wives, it is good, when he steals

mine, it is bad.” In many regions it is a terrible insult to tread on a person’s shadow, and in others it is an unpardonable sin to scrape a sealskin with an iron knife instead of a flint one. But let us be honest. Do we not think it a sin to eat fish with a steel knife, for a man to keep his hat on in a room, or to greet a lady with a cigar in his mouth? With us, as well as with primitives, such things have nothing to do with ethics. There are good and loyal head-hunters, and there are others who piously and conscientiously perform cruel rites, or commit murder from sacred conviction. The primitive is no less prompt than we are to value an ethical attitude. His good is just as good as ours, and his evil is just as bad as ours. Only the forms under which they appear are different; the process of ethical judgment is the same.

[109] It is likewise thought that primitive man has keener senses than we, or that they are somehow different. But his highly refined sense of direction or of hearing and sight is entirely a matter of professional differentiation. If he is confronted with things that are outside his experience, he is amazingly slow and clumsy. I once showed some native hunters, who were as keen-sighted as hawks, magazine pictures in which any child of ours would instantly have recognized human figures. But my hunters turned the pictures round and round until one of them, tracing the outline with his finger, finally exclaimed: “These are white men!” It was hailed by all as a great discovery.

[110] The incredibly accurate sense of direction shown by many primitives is essentially occupational. It is absolutely necessary that they should be able to find their way in forests and in the bush. Even the European, after a short while in Africa, begins to notice things he would never have dreamed of noticing before—and from fear of going hopelessly astray in spite of his compass.

[111] There is nothing to show that primitive man thinks, feels, or perceives in a way fundamentally different from ours. It is relatively unimportant that he has, or seems to have, a smaller area of consciousness than we, and that he has little or no aptitude for concentrated mental activity. This last, it is true, strikes the European as strange. For instance, I could never hold a palaver for longer than two hours, since by that time the natives

declared themselves tired. They said it was too difficult, and yet I had asked only quite simple questions in the most desultory way. But these same people were capable of astonishing concentration and endurance when out hunting or on a journey. My letter-carrier, for instance, could run seventy-five miles at a stretch. I saw a woman in her sixth month of pregnancy, carrying a baby on her back and smoking a long pipe of tobacco, dance almost the whole night through round a blazing fire when the temperature was 95°, without collapsing. It cannot be denied that primitives are quite capable of concentrating on things that interest them. If we have to give our attention to uninteresting matters, we soon notice how feeble our powers of concentration are. We are just as dependent as they are on emotional impulses.

[112] It is true that primitives are simpler and more childlike than we, in good and evil alike. This in itself does not impress us as strange. And yet, when we approach the world of archaic man, we have the feeling of something prodigiously strange. As far as I have been able to analyse it, this feeling comes predominantly from the fact that the primary assumptions of archaic man are essentially different from ours, so that he lives in a different world. Until we come to know his presuppositions, he is a hard riddle to read; but when we know them, all is relatively simple. We might equally well say that primitive man ceases to be a riddle for us as soon as we get to know our *own* presuppositions.

[113] It is a rational presupposition of ours that everything has a natural and perceptible cause. We are convinced of this right from the start. Causality is one of our most sacred dogmas. There is no legitimate place in our world for invisible, arbitrary, and so-called supernatural powers—unless, indeed, we descend with the modern physicist into the obscure, microcosmic world inside the atom, where, it appears, some very curious things happen. But that lies far from the beaten track. We distinctly resent the idea of invisible and arbitrary forces, for it is not so long ago that we made our escape from that frightening world of dreams and superstitions, and constructed for ourselves a picture of the cosmos worthy of our rational consciousness—that latest and greatest achievement of man. We are now surrounded by a world that is obedient to rational laws. It is true that we do not know the causes of everything, but in time they will be

discovered, and these discoveries will accord with our reasoned expectations. There are, to be sure, also chance occurrences, but they are merely accidental, and we do not doubt that they have a causality of their own. Chance happenings are repellent to the mind that loves order. They disturb the regular, predictable course of events in the most absurd and irritating way. We resent them as much as we resent invisible, arbitrary forces, for they remind us too much of Satanic imps or of the caprice of a *deus ex machina.* They are the worst enemies of our careful calculations and a continual threat to all our undertakings. Being admittedly contrary to reason, they deserve all our abuse, and yet we should not fail to give them their due. The Arab shows them greater respect than we. He writes on every letter *Insha' allah,* "If God wills," for only then will the letter arrive. In spite of our resentment and in spite of the fact that events run true to general laws, it is undeniable that we are always and everywhere exposed to incalculable accidents. And what is more invisible and capricious than chance? What is more unavoidable and more annoying?

[114] If we consider the matter, we could as well say that the causal connection of events according to general laws is a theory which is borne out about half the time, while for the rest the demon of chance holds sway. Chance events certainly have their natural causes, and all too often we must discover to our sorrow how commonplace they are. It is not this causality that annoys us; the irritating thing about chance events is that they have to befall us here and now in an apparently arbitrary way. At least that is how it strikes us, and even the most obdurate rationalist may occasionally be moved to curse them. However we interpret chance makes no difference to its power. The more regulated the conditions of life become, the more chance is excluded and the less we need to protect ourselves against it. But despite this everyone in practice takes precautions against chance occurrences or hopes for them, even though there is nothing about chance in the official credo.

[115] It is our assumption, amounting to a positive conviction, that everything has a "natural" cause which, at least in theory, is perceptible. Primitive man, on the other hand, assumes that everything is brought about by invisible, arbitrary powers—in other words, that everything is chance. Only he does not call it chance, but intention. Natural causation

is to him a mere pretence and not worthy of mention. If three women go to the river to draw water, and a crocodile seizes the one in the middle and pulls her under, our view of things leads us to the verdict that it was pure chance that that particular woman was seized. The fact that the crocodile seized her at all seems to us quite natural, for these beasts do occasionally eat human beings.

[116] For primitive man such an explanation completely obliterates the facts and accounts for no aspect of the whole exciting story. He rightly finds our explanation superficial or even absurd, for according to this view the accident could just as well not have happened and the same explanation would fit that case too—that it was "pure chance" it did not. The prejudice of the European does not allow him to see how little he is saying when he explains things in that way.

[117] Primitive man expects far more of an explanation. What we call pure chance is for him wilful intention. It was therefore the intention of the crocodile—as everyone could observe—to seize the middle one of the three women. If it had not had this intention it would have taken one of the others. But why did the crocodile have this intention? Ordinarily these creatures do not eat human beings. That is quite correct—as correct as the statement that it does not ordinarily rain in the Sahara. Crocodiles are rather timid animals, easily frightened. Considering their numbers, they kill astonishingly few people, and it is an unexpected and unnatural event when they devour a man. Such an event calls for an explanation. Of his own accord the crocodile would not take a human life. By whom, then, was he ordered to do so?

[118] It is on the facts of the world around him that primitive man bases his verdicts. When the unexpected occurs he is justifiably astonished and wishes to know the specific causes. To this extent he behaves exactly as we do. But he goes further than we. He has one or more theories about the arbitrary power of chance. We say: Pure chance. He says: Calculating intention. He lays the chief stress on the confusing and confused breaks in the chain of causation, which we call chance—on those occurrences that fail to show the neat causal connections which science expects, and that constitute the other half of happenings in general. He has long ago

adapted himself to nature in so far as it conforms to general laws; what he fears is unpredictable chance whose power makes him see in it an arbitrary and incalculable agent. Here again he is right. It is quite understandable that everything out of the ordinary should frighten him. Anteaters are fairly numerous in the regions south of Mount Elgon where I stayed for some time. The anteater is a shy, nocturnal animal that is rarely seen. If one happens to be seen by day, it is an extraordinary and unnatural event which astonishes the natives as much as the discovery of a brook that occasionally flows uphill would astonish us. If we knew of actual cases in which water suddenly overcame the force of gravity, such a discovery would be exceedingly disquieting. We know that tremendous masses of water surround us, and can easily imagine what would happen if water no longer conformed to gravitational law. This is the situation in which primitive man finds himself with respect to the happenings in his world. He is thoroughly familiar with the habits of anteaters, but when one of them suddenly transgresses the natural order of things it acquires for him an unknown sphere of action. Primitive man is so strongly impressed by things as they are that a transgression of the laws of his world exposes him to incalculable possibilities. It is a portent, an omen, comparable to a comet or an eclipse. Since such an unnatural event as the appearance of an anteater by day can have no natural causes, some invisible power must be behind it. And the alarming manifestation of a power which can transgress the natural order obviously calls for extraordinary measures of placation or defence. The neighbouring villages must be aroused, and the anteater must be dug up with their concerted efforts and killed. The oldest maternal uncle of the man who saw the anteater must then sacrifice a bull. The man descends into the sacrificial pit and receives the first piece of the animal’s flesh, whereupon the uncle and the other participants in the ceremony also eat. In this way the dangerous caprice of nature is expiated.

[119] As for us, we should certainly be alarmed if water suddenly began to run uphill for unknown reasons, but are not when an anteater is seen by day, or an albino is born, or an eclipse takes place. We know the meaning and sphere of action of such happenings, while primitive man does not. Ordinary events constitute for him a coherent whole in which he and all

other creatures are embraced. He is therefore extremely conservative, and does what others have always done. If something happens, at any point, to break the coherence of this whole, he feels there is a rift in his well-ordered world. Then anything may happen—heaven knows what. All occurrences that are in any way striking are at once brought into connection with the unusual event. For instance, a missionary set up a flagstaff in front of his house so that he could fly the Union Jack on Sundays. But this innocent pleasure cost him dear, for when shortly after his revolutionary action a devastating storm broke out, the flagstaff was of course made responsible. This sufficed to start a general uprising against the missionary.

[120] It is the regularity of ordinary occurrences that gives primitive man a sense of security in his world. Every exception seems to him a threatening act of an arbitrary power that must somehow be propitiated. It is not only a momentary interruption of the ordinary course of things, but a portent of other untoward events. This seems absurd to us, inasmuch as we forget how our grandparents and great-grandparents still felt about the world. A calf is born with two heads and five legs. In the next village a cock has laid an egg. An old woman has had a dream, a comet appears in the sky, there is a great fire in the nearest town, and the following year a war breaks out. In this way history was always written from remote antiquity down to the eighteenth century. This concatenation of events, so meaningless to us, is significant and convincing to primitive man. And, contrary to all expectation, he is right to find it so. His powers of observation can be trusted. From age-old experience he knows that such concatenations actually exist. What seems to us a wholly senseless heaping-up of single, haphazard occurrences—because we pay attention only to single events and their particular causes—is for the primitive a completely logical sequence of omens and of happenings indicated by them. It is a fatal outbreak of demonic power showing itself in a thoroughly consistent way.

[121] The calf with two heads and the war are one and the same, for the calf was only an anticipation of the war. Primitive man finds this connection so unquestionable and convincing because the whims of chance seem to him a far more important factor in the happenings of the

world than regularity and conformity to law. Thanks to his close attention to the unusual, he discovered long before us that chance events arrange themselves in groups or series. The law of the duplication of cases is known to all doctors engaged in clinical work. An old professor of psychiatry at Würzburg always used to say of a particularly rare clinical case: “Gentlemen, this case is absolutely unique—tomorrow we shall have another just like it.” I myself often observed the same thing during my eight years’ practice in an insane asylum. On one occasion a person was committed for a very rare twilight state of consciousness—the first case of this kind I had ever seen. Within two days we had a similar case, and that was the last. “Duplication of cases” is a joke with us in the clinics, but it was also the first object of primitive science. A recent investigator has ventured the statement: “Magic is the science of the jungle.” Astrology and other methods of divination may certainly be called the science of antiquity.

[122] What happens regularly is easily observed because we are prepared for it. Knowledge and skill are needed only in situations where the course of events is interrupted in a way hard to fathom. Generally it is one of the shrewdest and wiliest men of the tribe who is entrusted with the observation of meteorological events. His knowledge must suffice to explain all unusual occurrences, and his art to combat them. He is the scholar, the specialist, the expert on chance, and at the same time the keeper of the archives of the tribe’s traditional lore. Surrounded by respect and fear, he enjoys great authority, yet not so great but that his tribe is secretly convinced that the neighbouring tribe has a sorcerer who is stronger than theirs. The best medicine is never to be found close at hand, but as far away as possible. I stayed for some time with a tribe who held their old medicine-man in the greatest awe. Nevertheless he was consulted only for the minor ailments of cattle and men. In all serious cases a foreign authority was called in—a *M’ganga* who was brought at a high fee from Uganda—just as with us.

[123] Chance events occur most often in larger or smaller series or groups. An old and well-tried rule for foretelling the weather is this, that when it has rained for several days it will also rain tomorrow. A proverb says, “Misfortunes never come singly.” Another has it that “It never rains but it

pours.” This proverbial wisdom is primitive science. The common people still believe it and fear it, but the educated man smiles at it—until something unusual happens to him. I will tell you a disagreeable story. A woman I know was awakened one morning by a peculiar tinkling on her night-table. After looking about her for a while she discovered the cause: the rim of her tumbler had snapped off in a ring about a quarter of an inch wide. This struck her as peculiar, and she rang for another glass. About five minutes later she heard the same tinkling, and again the rim of the glass had broken off. This time she was greatly disquieted, and had a third glass brought. Within twenty minutes the rim broke off again with the same tinkling noise. Three such accidents in immediate succession were too much for her. She gave up her belief in natural causes on the spot and brought out in its place a primitive “collective representation”—the conviction that an arbitrary power was at work. Something of this sort happens to many modern people—provided they are not too thick-skulled—when they are confronted with events which natural causation fails to explain. We naturally prefer to deny such occurrences. They are unpleasant because they disrupt the orderly course of our world and make anything seem possible, thus proving that the primitive mind in us is not yet dead.

[124] Primitive man’s belief in an arbitrary power does not arise out of thin air, as was always supposed, but is grounded in experience. The grouping of chance occurrences justifies what we call his superstition, for there is a real measure of probability that unusual events will coincide in time and place. We must not forget that our experience is apt to leave us in the lurch here. Our observation is inadequate because our point of view leads us to overlook these matters. For instance, it would never seriously occur to us to take the following events as a sequence: in the morning a bird flies into your room, an hour later you witness an accident in the street, in the afternoon a relative dies, in the evening the cook drops the soup tureen, and, on coming home at night, you find that you have lost your key. Primitive man would not have overlooked a single item in this chain of events. Every new link would have confirmed his expectations, and he would be right—much more nearly right than we are willing to admit. His anxious expectations are fully justified and serve a purpose. Such a

day is ill-omened, and on it nothing should be undertaken. In our world this would be reprehensible superstition, but in the world of the primitive it is highly appropriate shrewdness. In that world man is far more exposed to accidents than we are in our sheltered and well-regulated existence. When you are in the bush you dare not take too many chances. The European soon comes to appreciate this.

[125] When a Pueblo Indian does not feel in the right mood, he stays away from the men's council. When an ancient Roman stumbled on the threshold as he left his house, he gave up his plans for the day. This seems to us senseless, but under primitive conditions such an omen inclines one at least to be cautious. When I am not in full control of myself, I am hampered in my movements, my attention wanders, I get absent-minded. As a result I knock against something, stumble, drop something, forget something. Under civilized conditions all these are mere trifles, but in the primeval forest they mean mortal danger. I make a false step on a slippery tree-trunk that serves as a bridge over a river teeming with crocodiles. I lose my compass in the high grass. I forget to load my rifle and blunder into a rhinoceros trail in the jungle. I am preoccupied with my thoughts and step on a puff-adder. At nightfall I forget to put on my mosquito-boots in time and eleven days later I die from an onset of tropical malaria. To forget to keep one's mouth shut while bathing is enough to bring on a fatal attack of dysentery. For us accidents of this kind have their recognizable natural cause in a somewhat distracted psychological state, but for the primitive they are objectively conditioned omens, or sorcery.

[126] It may be rather more than a question of inattention, however. In the Kitoshi region south of Mount Elgon, in East Africa, I went on an expedition into the Kabras forest. There, in the thick grass, I nearly stepped on a puff-adder, and only managed to jump away just in time. That afternoon my companion returned from a hunt, deathly pale and trembling in every limb. He had narrowly escaped being bitten by a seven-foot mamba which darted at him from behind a termite hill. He would undoubtedly have been killed had he not been able to wound the brute with a shot at the last moment. At nine o'clock that night our camp was attacked by a pack of ravenous hyenas which had surprised a man in

his sleep the day before and torn him to pieces. In spite of the fire they swarmed into the hut of our cook, who fled screaming over the stockade. Thenceforth there were no accidents throughout the whole of our journey. Such a day gave our Negroes food for thought. For us it was a simple multiplication of chance events, but for them the inevitable fulfilment of an omen that had occurred on the first day of our journey into the wilds. It so happened that we had fallen, Ford car, bridge, and all, into a stream we were trying to cross. Our boys had exchanged glances as if to say: "Well, that's a fine start." To cap this calamity, a tropical thunderstorm blew up and soaked us so thoroughly that I was prostrated with fever for several days. On the evening of the day when my friend had had such a narrow escape out hunting, I could not help saying to him as we white men sat looking at one another: "You know, it seems to me as if the trouble had begun still further back. Do you remember the dream you told me in Zurich just before we left?" At that time he had had a very impressive nightmare. He dreamed he was hunting in Africa, and was suddenly attacked by a huge mamba, so that he woke up with a cry of terror. The dream had disturbed him greatly, and he now confessed to me that he had thought it portended the death of one of us. He had of course assumed that it was my death, because we always hope it is the other fellow. But it was he who later fell ill of a severe malarial fever that brought him to the brink of the grave.

[127] To read of such a conversation in a corner of the world where there are no mambas and no anopheles mosquitoes means very little. One must imagine the velvety blue of a tropical night, the overhanging black masses of gigantic trees standing in the primeval forest, the mysterious voices of the nocturnal spaces, a lonely fire with loaded rifles stacked beside it, mosquito-nets, boiled swamp-water to drink, and above all the conviction expressed by an old Afrikander who knew what he was talking about: "This isn't man's country—it's God's country." There man is not king; it is rather nature, the animals, plants, and the microbes. Given the mood that goes with the place, one understands how it is that we found a dawning significance in things that anywhere else would provoke a smile. That is the world of unrestrained capricious powers which primitive man has to deal with every day. The unusual event is no

joke to him. He draws his own conclusions. “This is not a good place,” “The day is unfavourable”—and who knows what dangers he avoids by following such warnings?

[128] “Magic is the science of the jungle.” The portent brings about an immediate alteration of a course of action, the abandonment of a planned undertaking, a change of psychic attitude. These are all highly expedient reactions in view of the fact that chance occurrences tend to fall into sequences and that primitive man is wholly unconscious of psychic causality. Thanks to our one-sided emphasis on so-called natural causes, we have learned to differentiate what is subjective and psychic from what is objective and “natural.” For primitive man, on the contrary, the psychic and the objective coalesce in the external world. In the face of something extraordinary it is not he who is astonished, but rather the thing which is astonishing. It is *mana*—endowed with magic power. What we would call the powers of imagination and suggestion seem to him invisible forces which act on him from without. His country is neither a geographical nor a political entity. It is that territory which contains his mythology, his religion, all his thinking and feeling in so far as he is unconscious of these functions. His fear is localized in certain places that are “not good.” The spirits of the departed inhabit such and such a wood. That cave harbours devils who strangle any man who enters. In yonder mountain lives the great serpent; that hill is the grave of the legendary king; near this spring or rock or tree every woman becomes pregnant; that ford is guarded by snake-demons; this towering tree has a voice that can call certain people. Primitive man is unpsychological. Psychic happenings take place outside him in an objective way. Even the things he dreams about are real to him; that is his only reason for paying attention to dreams. Our Elgonyi porters maintained in all seriousness that they never had dreams—only the medicine-man had them. When I questioned the medicine-man, he declared that he had stopped having dreams when the British entered the land. His father had still had “big” dreams, he told me, and had known where the herds strayed, where the cows took their calves, and when there was going to be a war or a pestilence. It was now the District Commissioner who knew everything, and they knew nothing. He was as resigned as certain Papuans who

believe that the crocodiles have for the most part gone over to the British Government. It happened that a native convict who had escaped from the authorities had been badly mangled by a crocodile while trying to cross a river. They therefore concluded that it must have been a police crocodile. God now speaks in dreams to the British, and not to the medicine-man of the Elgonyi, he told me, because it is the British who have the power. Dream activity has emigrated. Occasionally the souls of the natives wander off too, and the medicine-man catches them in cages as if they were birds, or strange souls come in as immigrants and cause peculiar diseases.

[129] This projection of psychic happenings naturally gives rise to relations between men and men, or between men and animals or things, that to us are inconceivable. A white man shoots a crocodile. At once a crowd of people come running from the nearest village and excitedly demand compensation. They explain that the crocodile was a certain old woman in their village who had died at the moment when the shot was fired. The crocodile was obviously her bush-soul. Another man shot a leopard that was lying in wait for his cattle. Just then a woman died in a neighbouring village. She and the leopard were identical.

[130] Lévy-Bruhl has coined the expression *participation mystique* for these remarkable relationships. It seems to me that the word "mystical" is not happily chosen. Primitive man does not see anything mystical in these matters, but considers them perfectly natural. It is only we who find them so strange, because we appear to know nothing about the phenomena of psychic dissociation. In reality, however, they occur in us too, not in this naïve but in a rather more civilized form. In daily life it happens all the time that we presume that the psychology of other people is the same as ours. We suppose that what is pleasing or desirable to us is the same to others, and that what seems bad to us must also seem bad to them. It is only recently that our courts of law have nerved themselves to admit the psychological relativity of guilt in pronouncing sentence. The tenet *quod licet Jovi non licet bovi* still rankles in the minds of all unsophisticated people; equality before the law is still a precious achievement. And we still attribute to the other fellow all the evil and inferior qualities that we do not like to recognize in ourselves, and

therefore have to criticize and attack him, when all that has happened is that an inferior “soul” has emigrated from one person to another. The world is still full of bîtes noires and scapegoats, just as it formerly teemed with witches and werewolves.

[131] Projection is one of the commonest psychic phenomena. It is the same as *participation mystique,* which Lévy-Bruhl, to his great credit, emphasized as being an especially characteristic feature of primitive man. We merely give it another name, and as a rule deny that we are guilty of it. Everything that is unconscious in ourselves we discover in our neighbour, and we treat him accordingly. We no longer subject him to the test of drinking poison; we do not burn him or put the screws on him; but we injure him by means of moral verdicts pronounced with the deepest conviction. What we combat in him is usually our own inferior side.

[132] The simple truth is that primitive man is somewhat more given to projection than we because of the undifferentiated state of his mind and his consequent inability to criticize himself. Everything to him is absolutely objective, and his speech reflects this in a drastic way. With a touch of humour we can picture to ourselves what a leopard-woman is like, just as we do when we call a person a goose, a cow, a hen, a snake, an ox, or an ass. These uncomplimentary epithets are familiar to us all. But when primitive man attributes a bush-soul to a person, the poison of moral judgment is absent. He is too naturalistic for that; he is too much impressed by things as they are and much less prone to pass judgment than we. The Pueblo Indians declared in a matter-of-fact way that I belonged to the Bear Totem—in other words, that I was a bear—because I did not come down a ladder standing up like a man, but bunched up on all fours like a bear. If anyone in Europe said I had a bearish nature this would amount to the same thing, but with a rather different shade of meaning. The theme of the bush-soul, which seems so strange to us when we meet with it among primitives, has become with us a mere figure of speech, like so much else. If we take our metaphors concretely we return to the primitive point of view. For instance, we have the expression “to handle a patient.” In concrete terms this means “to lay hands on” a

person, “to work at with the hands,” “to manipulate.” And this is precisely what the medicine-man does with his patients.

[133] We find the bush-soul hard to understand because we are baffled by such a concrete way of looking at things. We cannot conceive of a “soul” that splits off completely and takes up its abode in a wild animal. When we describe someone as an ass, we do not mean that he is in every aspect the quadruped called an ass. We mean that he resembles an ass in some particular respect. We split off a bit of his personality or psyche and personify it as an ass. So, too, for primitive man the leopard-woman is a human being, only her bush-soul is a leopard. Since all unconscious psychic life is concrete and objective for him, he supposes that a person describable as a leopard has the soul of a leopard. If the splitting and concretizing go still further, he assumes that the leopard-soul lives in the bush in the form of a real leopard.

[134] These identifications, brought about by projection, create a world in which man is completely contained psychically as well as physically. To a certain extent he coalesces with it. In no way is he master of this world, but only a fragment of it. Primitive man is still far from the glorification of human powers. He does not dream of regarding himself as the lord of creation. In Africa, for instance, his zoological classification does not culminate in *Homo sapiens*, but in the elephant. Next comes the lion, then the python or the crocodile, then man and the lesser creatures. Man is still dovetailed into nature. It never occurs to him that he might be able to rule her; all his efforts are devoted to protecting himself against her dangerous caprices. It is civilized man who strives to dominate nature and therefore devotes his greatest energies to the discovery of natural causes which will give him the key to her secret laboratory. That is why he strongly resents the idea of arbitrary powers and denies them. Their existence would amount to proof that his attempt to dominate nature is futile after all.

[135] Summing up, we may say that the outstanding trait of archaic man is his attitude towards the arbitrary power of chance, which he considers a far more important factor in the world-process than natural causes. It consists on the one hand in the observed tendency of chance occurrences

to take place in a series, and on the other in the projection of unconscious psychic contents through *participation mystique.* For archaic man this distinction does not exist, because psychic happenings are projected so completely that they cannot be distinguished from objective, physical events. For him the vagaries of chance are arbitrary and intentional acts, interventions by animate beings. He does not realize that unusual events stir him so deeply only because he invests them with the power of his own astonishment or fear. Here, it is true, we move on treacherous ground. Is a thing beautiful because I attribute beauty to it? Or is it the objective beauty of the thing that compels me to acknowledge it? As we know, great minds have wrestled with the problem whether it is the glorious sun that illuminates the world, or the sunlike human eye. Archaic man believes it to be the sun, and civilized man believes it to be the eye—so far, at any rate, as he reflects at all and does not suffer from the disease of the poets. He must de-psychize nature in order to dominate her; and in order to see his world objectively he must take back all his archaic projections.

[136] In the archaic world everything has soul—the soul of man, or let us say of mankind, the collective unconscious, for the individual has as yet no soul of his own. We must not forget that what the Christian sacrament of baptism purports to do is a landmark of the utmost significance in the psychic development of mankind. Baptism endows the individual with a living soul. I do not mean that the baptismal rite in itself does this, by a unique and magical act. I mean that the idea of baptism lifts man out of his archaic identification with the world and transforms him into a being who stands above it. The fact that mankind has risen to the level of this idea is baptism in the deepest sense, for it means the birth of the spiritual man who transcends nature.

[137] In the psychology of the unconscious it is an axiom that every relatively independent portion of the psyche has the character of personality, that it is personified as soon as it is given an opportunity for independent expression. We find the clearest instances of this in the hallucinations of the insane and in mediumistic communications. Whenever an autonomous component of the psyche is projected, an invisible person comes into being. In this way the spirits arise at an

ordinary spiritualistic séance. So too among primitives. If an important psychic component is projected on a human being, he becomes *mana,* extraordinarily effective—a sorcerer, witch, werewolf, or the like. The primitive idea that the medicine-man catches the souls that have wandered away by night and puts them in cages like birds is a striking illustration of this. These projections give the medicine-man his mana, they cause animals, trees, and stones to speak, and because they are his own psychic components they compel the projicient to obey them absolutely. For this reason an insane person is helplessly at the mercy of his voices; they are projections of his own psychic activity whose unconscious subject he is. He is the one who speaks through his voices, just as he is the one who hears, sees, and obeys.

[138] From a psychological point of view, therefore, the primitive theory that the arbitrary power of chance is the outcome of the intentions of spirits and sorcerers is perfectly natural, because it is an unavoidable inference from the facts as primitive man sees them. Let us not delude ourselves in this connection. If we explain our scientific views to an intelligent native he will accuse us of ludicrous superstitiousness and a disgraceful want of logic, for he believes that the world is lighted by the sun and not by the human eye. My friend Mountain Lake, a Pueblo chief, once called me sharply to account because I had made insinuating use of the Augustinian argument: “Not this sun is our Lord, but he who made this sun.” Pointing to the sun he cried indignantly: “He who goes there is our father. You can see him. From him comes all light, all life—there is nothing that he has not made.” He became greatly excited, struggled for words, and finally cried out: “Even a man in the mountains, who goes alone, cannot make his fire without him.” The archaic standpoint could hardly be more beautifully expressed than by these words. The power that rules us is outside, in the external world, and through it alone are we permitted to live. Religious thought keeps alive the archaic state of mind even today, in a time bereft of gods. Untold millions of people still think like this.

[139] Speaking earlier of primitive man’s attitude to the arbitrary power of chance, I expressed the view that this attitude serves a purpose and therefore has a meaning. Shall we, for the moment at least, venture the

hypothesis that the primitive belief in arbitrary powers is justified by the facts and not merely from a psychological point of view? This sounds alarming, but I have no intention of jumping from the frying-pan into the fire and trying to prove that witchcraft actually works. I merely wish to consider the conclusions to which we shall be led if we follow primitive man in assuming that all light comes from the sun, that things are beautiful in themselves, and that a bit of the human soul is a leopard—in other words, that the mana theory is correct. According to this theory, beauty moves *us*, it is not we who create beauty. A certain person *is* a devil, we have not projected our own evil on him and in this way made a devil out of him. There are people—mana personalities—who are impressive in their own right and in no way thanks to our imagination. The mana theory maintains that there is something like a widely distributed power in the external world that produces all those extraordinary effects. Everything that exists acts, otherwise it would not *be*. It can *be* only by virtue of its inherent energy. Being is a field of force. The primitive idea of mana, as you can see, has in it the beginnings of a crude theory of energy.

[140] So far we can easily follow this primitive idea. The difficulty arises when we try to carry its implications further, for they reverse the process of psychic projection of which I have spoken. It is then not my imagination or my awe that makes the medicine-man a sorcerer; on the contrary, he *is* a sorcerer and projects his magical powers on me. Spirits are not hallucinations of my mind, but appear to me of their own volition. Although such statements are logical derivatives of the mana idea, we hesitate to accept them and begin to look around for a comfortable theory of psychic projection. The question is nothing less than this: Does the psychic in general—the soul or spirit or the unconscious—originate in *us*, or is the psyche, in the early stages of conscious evolution, actually outside us in the form of arbitrary powers with intentions of their own, and does it gradually take its place within us in the course of psychic development? Were the split-off "souls"—or dissociated psychic contents, as we would call them—ever parts of the psyches of individuals, or were they from the beginning psychic entities existing in themselves according to the primitive view as ghosts, ancestral spirits,

and the like? Were they only by degrees embodied in man in the course of development, so that they gradually constituted in him that world which we now call the psyche?

[141] This whole idea strikes us as dangerously paradoxical, but, at bottom, it is not altogether inconceivable. Not only the religious instructor but the educator as well assumes that it is possible to implant something psychic in man that was not there before. The power of suggestion and influence is a fact; indeed, the modern behaviourists have extravagant expectations in this respect. The idea of a complex building-up of the psyche is expressed on a primitive level in a variety of forms, for instance in the widespread belief in possession, the incarnation of ancestral spirits, the immigration of souls, and so forth. When someone sneezes, we still say: “God bless you,” by which is meant: “I hope your new soul will do you no harm.” When in the course of our own development we feel ourselves achieving a unified personality out of a multitude of contradictory tendencies, we experience something like a complex growing-together of the psyche. Since the human body is built up by heredity out of a multitude of Mendelian units, it does not seem altogether out of the question that the human psyche is similarly put together.

[142] The materialistic views of our day have one tendency which they share with archaic thought: both lead to the conclusion that the individual is a mere resultant. In the first case he is the resultant of natural causes, and in the second of chance occurrences. According to both accounts, human individuality is nothing in its own right, but rather the accidental product of forces contained in the objective environment. This is thoroughly consistent with the archaic view of the world, in which the ordinary individual is never important, but always interchangeable with any other and easily dispensable. By the roundabout way of strict causalism, modern materialism has returned to the standpoint of archaic man. But the materialist is more radical, because he is more systematic. Archaic man has the advantage of being inconsistent: he makes an exception of the mana personality. In the course of history these mana personalities were exalted to the position of divine figures; they became heroes and kings who shared the immortality of the gods by eating the food of eternal youth. This idea of the immortality of the individual and

of his imperishable worth can be found on the earliest archaic levels, first of all in the belief in spirits, and then in myths of the age when death had not yet gained entry into the world through human carelessness or folly.

[143] Primitive man is not aware of this contradiction in his views. My Elgonyi porters assured me that they had no idea what would happen to them after death. According to them a man is simply dead, he does not breathe any more, and the corpse is carried into the bush where the hyenas eat it. That is what they think by day, but the night teems with spirits of the dead who bring diseases to cattle and men, who attack and strangle the nocturnal traveller and indulge in other forms of violence. The primitive mind is full of such contradictions. They could worry a European out of his skin, and it would never occur to him that something quite similar is to be found in our civilized midst. We have universities where the very thought of divine intervention is considered beneath dispute, but where theology is a part of the curriculum. A research worker in natural science who thinks it positively obscene to attribute the smallest variation of an animal species to an act of divine arbitrariness may have in another compartment of his mind a full-blown Christian faith which he likes to parade on Sundays. Why should we excite ourselves about primitive inconsistency?

[144] It is impossible to derive any philosophical system from the fundamental thoughts of primitive man. They provide only antinomies, but it is just these that are the inexhaustible source of all spiritual problems in all times and in all civilizations. We may ask whether the “collective representations” of archaic man are really profound, or do they only seem so? I cannot answer this most difficult of questions, but I would like, in conclusion, to tell you of an observation I made among the mountain tribe of the Elgonyi. I searched and inquired far and wide for traces of religious ideas and ceremonies, and for weeks on end I discovered nothing. The natives let me see everything and were willing to give me any information. I could talk with them without the hindrance of a native interpreter, for many of the old men spoke Swahili. At first they were rather reserved, but once the ice was broken I had the friendliest reception. They knew nothing of religious customs. But I did not give up, and finally, at the end of one of many fruitless palavers, an

old man suddenly exclaimed: “In the morning, when the sun comes up, we go out of the huts, spit in our hands, and hold them up to the sun.” I got them to perform the ceremony for me and describe it exactly. They hold their hands before their faces and spit or blow into them vigorously. Then they turn their hands round and hold the palms towards the sun. I asked them the meaning of what they did—why they blew or spat in their hands. My question was futile. “That is how it has always been done,” they said. It was impossible to get an explanation, and it became clear to me that they knew only what they did and not why they did it. They see no meaning in their action. They greet the new moon with the same gesture.

[145] Now let us suppose that I am a total stranger in Zurich and have come to this city to explore the customs of the place. First I settle down on the outskirts near some suburban homes, and come into neighbourly contact with their owners. I then say to Messrs. Müller and Meyer: “Please tell me something about your religious customs.” Both gentlemen are taken aback. They never go to church, know nothing about it, and emphatically deny that they practise any such customs. It is spring, and Easter is approaching. One morning I surprise Mr. Müller at a curious occupation. He is busily running about the garden, hiding coloured eggs and setting up peculiar rabbit idols. I have caught him *in flagrante.* “Why did you conceal this highly interesting ceremony from me?” I ask him. “What ceremony?” he retorts. “This is nothing. Everybody does it at Eastertime.” “But what is the meaning of these idols and eggs, and why do you hide them?” Mr. Müller is stunned. He does not know, any more than he knows the meaning of the Christmas-tree. And yet he does these things, just like a primitive. Did the distant ancestors of the Elgonyi know any better what they were doing? It is highly improbable. Archaic man everywhere does what he does, and only civilized man knows what he does.

[146] What is the meaning of the Elgonyi ceremony just cited? Clearly it is an offering to the sun, which for these natives is *mungu*—that is, *mana*, or divine—only at the moment of rising. If they have spittle on their hands, this is the substance which, according to primitive belief, contains the personal *mana*, the life-force, the power to heal and to make magic. If

they breathe into their hands, breath is wind and spirit—it is *roho*, in Arabic *ruch*, in Hebrew *ruach*, and in Greek *pneuma*. The action means: I offer my living soul to God. It is a wordless, acted prayer, which could equally well be spoken: "Lord, into thy hands I commend my spirit."

[147] Does this merely happen so, or was this thought brooded and willed even before man existed? I must leave this question unanswered.

THE SPIRITUAL PROBLEM OF MODERN MAN[1]

[148] The spiritual problem of modern man is one of those questions which are so much a part of the age we live in that we cannot see them in the proper perspective. Modern man is an entirely new phenomenon; a modern problem is one which has just arisen and whose answer still lies in the future. In speaking of the spiritual problem of modern man we can at most frame a question, and we should perhaps frame it quite differently if we had but the faintest inkling of the answer the future will give. The question, moreover, seems rather vague; but the truth is that it has to do with something so universal that it exceeds the grasp of any single individual. We have reason enough, therefore, to approach such a problem in all modesty and with the greatest caution. This open avowal of our limitations seems to me essential, because it is these problems more than any others which tempt us to the use of high-sounding and empty words, and because I shall myself be forced to say certain things which may sound immoderate and incautious, and could easily lead us astray. Too many of us already have fallen victim to our own grandiloquence.

[149] To begin at once with an example of such apparent lack of caution, I must say that the man we call modern, the man who is aware of the immediate present, is by no means the average man. He is rather the man who stands upon a peak, or at the very edge of the world, the abyss of the future before him, above him the heavens, and below him the whole of mankind with a history that disappears in primeval mists. The modern man—or, let us say again, the man of the immediate present—is rarely met with, for he must be conscious to a superlative degree. Since to be wholly of the present means to be fully conscious of one’s existence as a man, it requires the most intensive and extensive consciousness, with a minimum of unconsciousness. It must be clearly understood that the mere fact of living in the present does not make a man modern, for in that case everyone at present alive would be so. He alone is modern who is fully conscious of the present.

[150] The man who has attained consciousness of the present is solitary. The "modern" man has at all times been so, for every step towards fuller consciousness removes him further from his original, purely animal *participation mystique* with the herd, from submersion in a common unconsciousness. Every step forward means tearing oneself loose from the maternal womb of unconsciousness in which the mass of men dwells. Even in a civilized community the people who form, psychologically speaking, the lowest stratum live in a state of unconsciousness little different from that of primitives. Those of the succeeding strata live on a level of consciousness which corresponds to the beginnings of human culture, while those of the highest stratum have a consciousness that reflects the life of the last few centuries. Only the man who is modern in our meaning of the term really lives in the present; he alone has a present-day consciousness, and he alone finds that the ways of life on those earlier levels have begun to pall upon him. The values and strivings of those past worlds no longer interest him save from the historical standpoint. Thus he has become "unhistorical" in the deepest sense and has estranged himself from the mass of men who live entirely within the bounds of tradition. Indeed, he is completely modern only when he has come to the very edge of the world, leaving behind him all that has been discarded and outgrown, and acknowledging that he stands before the Nothing out of which All may grow.[2]

[151] This sounds so grand that it borders suspiciously on bathos, for nothing is easier than to affect a consciousness of the present. A great horde of worthless people do in fact give themselves a deceptive air of modernity by skipping the various stages of development and the tasks of life they represent. Suddenly they appear by the side of the truly modern man—uprooted wraiths, bloodsucking ghosts whose emptiness casts discredit upon him in his unenviable loneliness. Thus it is that the few present-day men are seen by the undiscerning eyes of the masses only through the dismal veil of those spectres, the pseudo-moderns, and are confused with them. It cannot be helped; the "modern" man is questionable and suspect, and has been so at all times, beginning with Socrates and Jesus.

[152] An honest admission of modernity means voluntarily declaring oneself bankrupt, taking the vows of poverty and chastity in a new sense, and—what is still more painful—renouncing the halo of sanctity which history bestows. To be "unhistorical" is the Promethean sin, and in this sense the modern man is sinful. A higher level of consciousness is like a burden of guilt. But, as I have said, only the man who has outgrown the stages of consciousness belonging to the past, and has amply fulfilled the duties appointed for him by his world, can achieve full consciousness of the present. To do this he must be sound and proficient in the best sense—a man who has achieved as much as other people, and even a little more. It is these qualities which enable him to gain the next highest level of consciousness.

[153] I know that the idea of proficiency is especially repugnant to the pseudo-moderns, for it reminds them unpleasantly of their trickery. This, however, should not prevent us from taking it as our criterion of the modern man. We are even forced to do so, for unless he is proficient, the man who claims to be modern is nothing but a trickster. He must be proficient in the highest degree, for unless he can atone by creative ability for his break with tradition, he is merely disloyal to the past. To deny the past for the sake of being conscious only of the present would be sheer futility. Today has meaning only if it stands between yesterday and tomorrow. It is a process of transition that forms the link between past and future. Only the man who is conscious of the present in this sense may call himself modern.

[154] Many people call themselves modern—especially the pseudo-moderns. Therefore the really modern man is often to be found among those who call themselves old-fashioned. They do this firstly in order to make amends for their guilty break with tradition by laying all the more emphasis on the past, and secondly in order to avoid the misfortune of being taken for pseudo-moderns. Every good quality has its bad side, and nothing good can come into the world without at once producing a corresponding evil. This painful fact renders illusory the feeling of elation that so often goes with consciousness of the present—the feeling that we are the culmination of the whole history of mankind, the fulfilment and end-product of countless generations. At best it should be a proud

admission of our poverty: we are also the disappointment of the hopes and expectations of the ages. Think of nearly two thousand years of Christian Idealism followed, not by the return of the Messiah and the heavenly millennium, but by the World War among Christian nations with its barbed wire and poison gas. What a catastrophe in heaven and on earth!

[155] In the face of such a picture we may well grow humble again. It is true that modern man is a culmination, but tomorrow he will be surpassed. He is indeed the product of an age-old development, but he is at the same time the worst conceivable disappointment of the hopes of mankind. The modern man is conscious of this. He has seen how beneficent are science, technology, and organization, but also how catastrophic they can be. He has likewise seen how all well-meaning governments have so thoroughly paved the way for peace on the principle “in time of peace prepare for war” that Europe has nearly gone to rack and ruin. And as for ideals, neither the Christian Church, nor the brotherhood of man, nor international social democracy, nor the solidarity of economic interests has stood up to the acid test of reality. Today, ten years after the war,[3] we observe once more the same optimism, the same organizations, the same political aspirations, the same phrases and catchwords at work. How can we but fear that they will inevitably lead to further catastrophes? Agreements to outlaw war leave us sceptical, even while we wish them every possible success. At bottom, behind every such palliative measure there is a gnawing doubt. I believe I am not exaggerating when I say that modern man has suffered an almost fatal shock, psychologically speaking, and as a result has fallen into profound uncertainty.

[156] These statements make it clear enough that my views are coloured by a professional bias. A doctor always spies out diseases, and I cannot cease to be a doctor. But it is essential to the physician’s art that he should not discover diseases where none exists. I will therefore not make the assertion that Western man, and the white man in particular, is sick, or that the Western world is on the verge of collapse. I am in no way competent to pass such a judgment.

[157] Whenever you hear anyone talking about a cultural or even about a human problem, you should never forget to inquire who the speaker really is. The more general the problem, the more he will smuggle his own, most

personal psychology into the account he gives of it. This can, without a doubt, lead to intolerable distortions and false conclusions which may have very serious consequences. On the other hand, the very fact that a general problem has gripped and assimilated the whole of a person is a guarantee that the speaker has really experienced it, and perhaps gained something from his sufferings. He will then reflect the problem for us in his personal life and thereby show us a truth. But if he projects his own psychology into the problem, he falsifies it by his personal bias, and on the pretence of presenting it objectively so distorts it that no truth emerges but merely a deceptive fiction.

[158] It is of course only from my own experience with other persons and with myself that I draw my knowledge of the spiritual problem of modern man. I know something of the intimate psychic life of many hundreds of educated persons, both sick and healthy, coming from every quarter of the civilized, white world; and upon this experience I base my statements. No doubt I can draw only a one-sided picture, for everything I have observed lies in the psyche—it is all *inside.* I must add at once that this is a remarkable fact in itself, for the psyche is not always and everywhere to be found on the inside. There are peoples and epochs where it is found *outside,* because they were wholly unpsychological. As examples we may choose any of the ancient civilizations, but especially that of Egypt with its monumental objectivity and its naïve confession of sins that have not been committed. We can no more feel psychic problems lurking behind the Apis tombs of Saqqara and the Pyramids than we can behind the music of Bach.

[159] Whenever there exists some external form, be it an ideal or a ritual, by which all the yearnings and hopes of the soul are adequately expressed—as for instance in a living religion—then we may say that the psyche is outside and that there is no psychic problem, just as there is then no unconscious in our sense of the word. In consonance with this truth, the discovery of psychology falls entirely within the last decades, although long before that man was introspective and intelligent enough to recognize the facts that are the subject-matter of psychology. It was the same with technical knowledge. The Romans were familiar with all the mechanical principles and physical facts which would have enabled them to construct

a steam engine, but all that came of it was the toy made by Hero of Alexandria. The reason for this is that there was no compelling necessity to go further. This need arose only with the enormous division of labour and the growth of specialization in the nineteenth century. So also a spiritual need has produced in our time the “discovery” of psychology. The psychic facts still existed earlier, of course, but they did not attract attention—no one noticed them. People got along without them. But today we can no longer get along unless we pay attention to the psyche.

[160] It was men of the medical profession who were the first to learn this truth. For the priest, the psyche can only be something that needs fitting into a recognized form or system of belief in order to ensure its undisturbed functioning. So long as this system gives true expression to life, psychology can be nothing but a technical adjuvant to healthy living, and the psyche cannot be regarded as a factor *sui generis.* While man still lives as a herd-animal he has no psyche of his own, nor does he need any, except the usual belief in the immortality of the soul. But as soon as he has outgrown whatever local form of religion he was born to—as soon as this religion can no longer embrace his life in all its fullness—then the psyche becomes a factor in its own right which cannot be dealt with by the customary measures. It is for this reason that we today have a psychology founded on experience, and not upon articles of faith or the postulates of any philosophical system. The very fact that we have such a psychology is to me symptomatic of a profound convulsion of the collective psyche. For the collective psyche shows the same pattern of change as the psyche of the individual. So long as all goes well and all our psychic energies find an outlet in adequate and well-regulated ways, we are disturbed by nothing from within. No uncertainty or doubt besets us, and we *cannot* be divided against ourselves. But no sooner are one or two channels of psychic activity blocked up than phenomena of obstruction appear. The stream tries to flow back against the current, the inner man wants something different from the outer man, and we are at war with ourselves. Only then, in this situation of distress, do we discover the psyche as something which thwarts our will, which is strange and even hostile to us, and which is incompatible with our conscious standpoint. Freud’s psychoanalytic endeavours show this process in the clearest way. The very first thing he discovered was the existence of sexually perverse and

criminal fantasies which at their face value are wholly incompatible with the conscious outlook of civilized man. A person who adopted the standpoint of these fantasies would be nothing less than a rebel, a criminal, or a madman.

[161] We cannot suppose that the unconscious or hinterland of man's mind has developed this aspect only in recent times. Probably it was always there, in every culture. And although every culture had its destructive opponent, a Herostratus who burned down its temples, no culture before ours was ever forced to take these psychic undercurrents in deadly earnest. The psyche was merely part of a metaphysical system of some sort. But the conscious, modern man can no longer refrain from acknowledging the might of the psyche, despite the most strenuous and dogged efforts at self-defence. This distinguishes our time from all others. We can no longer deny that the dark stirrings of the unconscious are active powers, that psychic forces exist which, for the present at least, cannot be fitted into our rational world order. We have even elevated them into a science—one more proof of how seriously we take them. Previous centuries could throw them aside unnoticed; for us they are a shirt of Nessus which we cannot strip off.

[162] The revolution in our conscious outlook, brought about by the catastrophic results of the World War, shows itself in our inner life by the shattering of our faith in ourselves and our own worth. We used to regard foreigners as political and moral reprobates, but the modern man is forced to recognize that he is politically and morally just like anyone else. Whereas formerly I believed it was my bounden duty to call others to order, I must now admit that I need calling to order myself, and that I would do better to set my own house to rights first. I admit this the more readily because I realize only too well that my faith in the rational organization of the world—that old dream of the millennium when peace and harmony reign—has grown pale. Modern man's scepticism in this respect has chilled his enthusiasm for politics and world-reform; more than that, it is the worst possible basis for a smooth flow of psychic energies into the outer world, just as doubt concerning the morality of a friend is bound to prejudice the relationship and hamper its development. Through his scepticism modern man is thrown back on himself; his

energies flow towards their source, and the collision washes to the surface those psychic contents which are at all times there, but lie hidden in the silt so long as the stream flows smoothly in its course. How totally different did the world appear to medieval man! For him the earth was eternally fixed and at rest in the centre of the universe, circled by a sun that solicitously bestowed its warmth. Men were all children of God under the loving care of the Most High, who prepared them for eternal blessedness; and all knew exactly what they should do and how they should conduct themselves in order to rise from a corruptible world to an incorruptible and joyous existence. Such a life no longer seems real to us, even in our dreams. Science has long ago torn this lovely veil to shreds. That age lies as far behind as childhood, when one’s own father was unquestionably the handsomest and strongest man on earth.

[163] Modern man has lost all the metaphysical certainties of his medieval brother, and set up in their place the ideals of material security, general welfare and humanitarianism. But anyone who has still managed to preserve these ideals unshaken must have been injected with a more than ordinary dose of optimism. Even security has gone by the board, for modern man has begun to see that every step forward in material “progress” steadily increases the threat of a still more stupendous catastrophe. The imagination shrinks in terror from such a picture. What are we to think when the great cities today are perfecting defence measures against gas attacks, and even practise them in dress rehearsals? It can only mean that these attacks have already been planned and provided for, again on the principle “in time of peace prepare for war.” Let man but accumulate sufficient engines of destruction and the devil within him will soon be unable to resist putting them to their fated use. It is well known that fire-arms go off of themselves if only enough of them are together.

[164] An intimation of the terrible law that governs blind contingency, which Heraclitus called the rule of *enantiodromia* (a running towards the opposite), now steals upon modern man through the by-ways of his mind, chilling him with fear and paralysing his faith in the lasting effectiveness of social and political measures in the face of these monstrous forces. If he turns away from the terrifying prospect of a blind world in which building

and destroying successively tip the scales, and then gazes into the recesses of his own mind, he will discover a chaos and a darkness there which everyone would gladly ignore. Science has destroyed even this last refuge; what was once a sheltering haven has become a cesspool.

[165] And yet it is almost a relief to come upon so much evil in the depths of our own psyche. Here at least, we think, is the root of all the evil in mankind. Even though we are shocked and disillusioned at first, we still feel, just because these things are part of our psyche, that we have them more or less in hand and can correct them or at any rate effectively suppress them. We like to assume that, if we succeeded in this, we should at least have rooted out some fraction of the evil in the world. Given a widespread knowledge of the unconscious, everyone could see when a statesman was being led astray by his own bad motives. The very newspapers would pull him up: “Please have yourself analysed; you are suffering from a repressed father-complex.”

[166] I have purposely chosen this grotesque example to show to what absurdities we are led by the illusion that because something is psychic it is under our control. It is, however, true that much of the evil in the world comes from the fact that man in general is hopelessly unconscious, as it is also true that with increasing insight we can combat this evil at its source in ourselves, in the same way that science enables us to deal effectively with injuries inflicted from without.

[167] The rapid and worldwide growth of a psychological interest over the last two decades shows unmistakably that modern man is turning his attention from outward material things to his own inner processes. Expressionism in art prophetically anticipated this subjective development, for all art intuitively apprehends coming changes in the collective unconsciousness.

[168] The psychological interest of the present time is an indication that modern man expects something from the psyche which the outer world has not given him: doubtless something which our religion ought to contain, but no longer does contain, at least for modern man. For him the various forms of religion no longer appear to come from within, from the psyche; they seem more like items from the inventory of the outside

world. No spirit not of this world vouchsafes him inner revelation; instead, he tries on a variety of religions and beliefs as if they were Sunday attire, only to lay them aside again like worn-out clothes.

[169] Yet he is somehow fascinated by the almost pathological manifestations from the hinterland of the psyche, difficult though it is to explain how something which all previous ages have rejected should suddenly become interesting. That there is a general interest in these matters cannot be denied, however much it offends against good taste. I am not thinking merely of the interest taken in psychology as a science, or of the still narrower interest in the psychoanalysis of Freud, but of the widespread and ever-growing interest in all sorts of psychic phenomena, including spiritualism, astrology, Theosophy, parapsychology, and so forth. The world has seen nothing like it since the end of the seventeenth century. We can compare it only to the flowering of Gnostic thought in the first and second centuries after Christ. The spiritual currents of our time have, in fact, a deep affinity with Gnosticism. There is even an "Église gnostique de la France," and I know of two schools in Germany which openly declare themselves Gnostic. The most impressive movement numerically is undoubtedly Theosophy, together with its continental sister, Anthroposophy; these are pure Gnosticism in Hindu dress. Compared with them the interest in scientific psychology is negligible. What is striking about these Gnostic systems is that they are based exclusively on the manifestations of the unconscious, and that their moral teachings penetrate into the dark side of life, as is clearly shown by the refurbished European version of *Kundalini-yoga.* The same is true of parapsychology, as everyone acquainted with this subject will agree.

[170] The passionate interest in these movements undoubtedly arises from psychic energy which can no longer be invested in obsolete religious forms. For this reason such movements have a genuinely religious character, even when they pretend to be scientific. It changes nothing when Rudolf Steiner calls his Anthroposophy "spiritual science," or when Mrs. Eddy invents a "Christian Science." These attempts at concealment merely show that religion has grown suspect—almost as suspect as politics and world-reform.

[171] I do not believe that I am going too far when I say that modern man, in contrast to his nineteenth-century brother, turns to the psyche with very great expectations, and does so without reference to any traditional creed but rather with a view to Gnostic experience. The fact that all the movements I have mentioned give themselves a scientific veneer is not just a grotesque caricature or a masquerade, but a positive sign that they are actually pursuing "science," i.e., *knowledge*, instead of *faith*, which is the essence of the Western forms of religion. Modern man abhors faith and the religions based upon it. He holds them valid only so far as their knowledge-content seems to accord with his own experience of the psychic background. He wants to *know—to* experience for himself.

[172] The age of discovery has only just come to an end in our day, when no part of the earth remains unexplored; it began when men would no longer *believe* that the Hyperboreans were one-footed monsters, or something of that kind, but wanted to find out and see with their own eyes what existed beyond the boundaries of the known world. Our age is apparently setting out to discover what exists in the psyche beyond consciousness. The question asked in every spiritualistic circle is: What happens after the medium has lost consciousness? Every Theosophist asks: What shall I experience at the higher levels of consciousness? The question which every astrologer asks is: What are the operative forces that determine my fate despite my conscious intention? And every psychoanalyst wants to know: What are the unconscious drives behind the neurosis?

[173] Our age wants to experience the psyche for itself. It wants original experience and not assumptions, though it is willing to make use of all the existing assumptions as a means to this end, including those of the recognized religions and the authentic sciences. The European of yesterday will feel a slight shudder run down his spine when he gazes more deeply into these delvings. Not only does he consider the subject of this so-called research obscure and shuddersome, but even the methods employed seem to him a shocking misuse of man's finest intellectual attainments. What is the professional astronomer to say when he is told that at least a thousand times more horoscopes are cast today than were cast three hundred years ago? What will the educator and advocate of philosophical enlightenment say about the fact that the world has not

grown poorer by a single superstition since the days of antiquity? Freud himself, the founder of psychoanalysis, has taken the greatest pains to throw as glaring a light as possible on the dirt and darkness and evil of the psychic background, and to interpret it in such a way as to make us lose all desire to look for anything behind it except refuse and smut. He did not succeed, and his attempt at deterrence has even brought about the exact opposite—an admiration for all this filth. Such a perverse phenomenon would normally be inexplicable were it not that even the scatologists are drawn by the secret fascination of the psyche.

[174] There can be no doubt that from the beginning of the nineteenth century—ever since the time of the French Revolution—the psyche has moved more and more into the foreground of man's interest, and with a steadily increasing power of attraction. The enthronement of the Goddess of Reason in Notre Dame seems to have been a symbolic gesture of great significance for the Western world—rather like the hewing down of Wotan's oak by Christian missionaries. On both occasions no avenging bolt from heaven struck the blasphemer down.

[175] It is certainly more than an amusing freak of history that just at the time of the Revolution a Frenchman, Anquetil du Perron, should be living in India and, at the beginning of the nineteenth century, brought back with him a translation of the *Oupnek'hat*, a collection of fifty Upanishads, which gave the West its first deep insight into the baffling mind of the East. To the historian this is a mere coincidence independent of the historical nexus of cause and effect. My medical bias prevents me from seeing it simply as an accident. Everything happened in accordance with a psychological law which is unfailingly valid in personal affairs. If anything of importance is devalued in our conscious life, and perishes—so runs the law—there arises a compensation in the unconscious. We may see in this an analogy to the conservation of energy in the physical world, for our psychic processes also have a quantitative, energic aspect. No psychic value can disappear without being replaced by another of equivalent intensity. This is a fundamental rule which is repeatedly verified in the daily practice of the psychotherapist and never fails. The doctor in me refuses point blank to consider the life of a people as something that does not conform to psychological law. For him the psyche of a people is only a

somewhat more complex structure than the psyche of an individual. Moreover, has not a poet spoken of the “nations of his soul”? And quite correctly, it seems to me, for in one of its aspects the psyche is not individual, but is derived from the nation, from the collectivity, from humanity even. In some way or other we are part of a single, all-embracing psyche, a single “greatest man,” the *homo maximus*, to quote Swedenborg.

[176] And so we can draw a parallel: just as in me, a single individual, the darkness calls forth a helpful light, so it does in the psychic life of a people. In the crowds that poured into Notre Dame, bent on destruction, dark and nameless forces were at work that swept the individual off his feet; these forces worked also upon Anquetil du Perron and provoked an answer which has come down in history and speaks to us through the mouths of Schopenhauer and Nietzsche. For he brought the Eastern mind to the West, and its influence upon us we cannot as yet measure. Let us beware of underestimating it! So far, indeed, there is little of it to be seen on the intellectual surface: a handful of orientalists, one or two Buddhist enthusiasts, a few sombre celebrities like Madame Blavatsky and Annie Besant with her Krishnamurti. These manifestations are like tiny scattered islands in the ocean of mankind; in reality they are the peaks of submarine mountain-ranges. The cultural Philistines believed until recently that astrology had been disposed of long since and was something that could safely be laughed at. But today, rising out of the social deeps, it knocks at the doors of the universities from which it was banished some three hundred years ago. The same is true of Eastern ideas; they take root in the lower levels and slowly grow to the surface. Where did the five or six million Swiss francs for the Anthroposophist temple at Dornach come from? Certainly not from one individual. Unfortunately there are no statistics to tell us the exact number of avowed Theosophists today, not to mention the unavowed. But we can be sure there are several millions of them. To this number we must add a few million Spiritualists of Christian or Theosophist leanings.

[177] Great innovations never come from above; they come invariably from below, just as trees never grow from the sky downward, but upward from the earth. The upheaval of our world and the upheaval of our

consciousness are one and the same. Everything has become relative and therefore doubtful. And while man, hesitant and questioning, contemplates a world that is distracted with treaties of peace and pacts of friendship, with democracy and dictatorship, capitalism and Bolshevism, his spirit yearns for an answer that will allay the turmoil of doubt and uncertainty. And it is just the people from the obscurer levels who follow the unconscious drive of the psyche; it is the much-derided, silent folk of the land, who are less infected with academic prejudices than the shining celebrities are wont to be. Looked at from above, they often present a dreary or laughable spectacle; yet they are as impressively simple as those Galileans who were once called blessed. Is it not touching to see the offscourings of man's psyche gathered together in compendia a foot thick? We find the merest babblings, the most absurd actions, the wildest fantasies recorded with scrupulous care in the volumes of *Anthropophyteia*,[4] while men like Havelock Ellis and Freud have dealt with like matters in serious treatises which have been accorded all scientific honours. Their reading public is scattered over the breadth of the civilized, white world. How are we to explain this zeal, this almost fanatical worship of everything unsavoury? It is because these things are psychological—they are of the substance of the psyche and therefore as precious as fragments of manuscript salvaged from ancient middens. Even the secret and noisome things of the psyche are valuable to modern man because they serve his purpose. But what purpose?

[178] Freud prefixed to his *Interpretation of Dreams* the motto: *Flectere si nequeo superos Acheronta movebo*—"If I cannot bend the gods on high, I will at least set Acheron in uproar." But to what purpose?

[179] The gods whom we are called upon to dethrone are the idolized values of our conscious world. Nothing, as we know, discredited the ancient gods so much as their love-scandals, and now history is repeating itself. People are laying bare the dubious foundations of our belauded virtues and incomparable ideals, and are calling out to us in triumph: "There are your man-made gods, mere snares and delusions tainted with human baseness—whited sepulchres full of dead men's bones and of all uncleanness." We recognize a familiar strain, and the Gospel words which we failed to digest at Confirmation come to life again.

[180] I am deeply convinced that these are not just vague analogies. There are too many persons to whom Freudian psychology is dearer than the Gospels, and to whom Bolshevism means more than civic virtue. And yet they are all our brothers, and in each of us there is at least one voice which seconds them, for in the end there is one psyche which embraces us all.

[181] The unexpected result of this development is that an uglier face is put upon the world. It becomes so ugly that no one can love it any longer; we cannot even love ourselves, and in the end there is nothing in the outer world to draw us away from the reality of the life within. Here, no doubt, we have the true significance of this whole development. After all, what does Theosophy, with its doctrines of *karma* and reincarnation, seek to teach except that this world of appearance is but a temporary health resort for the morally unperfected? It depreciates the intrinsic value of the present-day world no less radically than does the modern outlook, but with the help of a different technique; it does not vilify our world, but grants it only a relative meaning in that it promises other and higher worlds. The result in either case is the same.

[182] I admit that all these ideas are extremely unacademic, the truth being that they touch modern man on the side where he is least conscious. Is it again a mere coincidence that modern thought has had to come to terms with Einstein’s relativity theory and with nuclear theories which lead us away from determinism and border on the inconceivable? Even physics is volatilizing our material world. It is no wonder, then, in my opinion, if modern man falls back on the reality of psychic life and expects from it that certainty which the world denies him.

[183] Spiritually the Western world is in a precarious situation, and the danger is greater the more we blind ourselves to the merciless truth with illusions about our beauty of soul. Western man lives in a thick cloud of incense which he burns to himself so that his own countenance may be veiled from him in the smoke. But how do we strike men of another colour? What do China and India think of us? What feelings do we arouse in the black man? And what about all those whom we rob of their lands and exterminate with rum and venereal disease?

[184] I have an American Indian friend who is a Pueblo chieftain. Once when we were talking confidentially about the white man, he said to me: "We don't understand the whites. They are always wanting something, always restless, always looking for something. What is it? We don't know. We can't understand them. They have such sharp noses, such thin, cruel lips, such lines in their faces. We think they are all crazy."

[185] My friend had recognized, without being able to name it, the Aryan bird of prey with his insatiable lust to lord it in every land, even those that concern him not at all. And he had also noted that megalomania of ours which leads us to suppose, among other things, that Christianity is the only truth and the white Christ the only redeemer. After setting the whole East in turmoil with our science and technology, and exacting tribute from it, we send our missionaries even to China. The comedy of Christianity in Africa is really pitiful. There the stamping out of polygamy, no doubt highly pleasing to God, has given rise to prostitution on such a scale that in Uganda alone twenty thousand pounds are spent annually on preventives of venereal infection. And the good European pays his missionaries for these edifying achievements! Need we also mention the story of suffering in Polynesia and the blessings of the opium trade?

[186] That is how the European looks when he is extricated from the cloud of his own moral incense. No wonder that unearthing the psyche is like undertaking a full-scale drainage operation. Only a great idealist like Freud could devote a lifetime to such unclean work. It was not he who caused the bad smell, but all of us—we who think ourselves so clean and decent from sheer ignorance and the grossest self-deception. Thus our psychology, the acquaintance with our own souls, begins in every respect from the most repulsive end, that is to say with all those things which we do not wish to see.

[187] But if the psyche consisted only of evil and worthless things, no power on earth could induce the normal man to find it attractive. That is why people who see in Theosophy nothing but lamentable intellectual superficiality, and in Freudian psychology nothing but sensationalism, prophesy an early and inglorious end to these movements. They overlook the fact that such movements derive their force from the fascination of the psyche, and that it will express itself in these forms until they are replaced

by something better. They are transitional or embryonic stages from which new and riper forms will emerge.

[188] We have not yet realized that Western Theosophy is an amateurish, indeed barbarous imitation of the East. We are just beginning to take up astrology again, which to the Oriental is his daily bread. Our studies of sexual life, originating in Vienna and England, are matched or surpassed by Hindu teachings on this subject. Oriental texts ten centuries old introduce us to philosophical relativism, while the idea of indeterminacy, newly broached in the West, is the very basis of Chinese science. As to our discoveries in psychology, Richard Wilhelm has shown me that certain complicated psychic processes are recognizably described in ancient Chinese texts. Psychoanalysis itself and the lines of thought to which it gives rise—a development which we consider specifically Western—are only a beginner's attempt compared with what is an immemorial art in the East. It may not perhaps be known that parallels between psychoanalysis and yoga have already been drawn by Oscar Schmitz.[5]

[189] Another thing we have not realized is that while we are turning the material world of the East upside down with our technical proficiency, the East with its superior psychic proficiency is throwing our spiritual world into confusion. We have never yet hit upon the thought that while we are overpowering the Orient from without, it may be fastening its hold on us from within. Such an idea strikes us as almost insane, because we have eyes only for obvious causal connections and fail to see that we must lay the blame for the confusion of our intellectual middle class at the doors of Max Müller, Oldenberg, Deussen, Wilhelm, and others like them. What does the example of the Roman Empire teach us? After the conquest of Asia Minor, Rome became Asiatic; Europe was infected by Asia and remains so today. Out of Cilicia came the Mithraic cult, the religion of the Roman legions, and it spread from Egypt to fog-bound Britain. Need I point out the Asiatic origin of Christianity?

[190] The Theosophists have an amusing idea that certain Mahatmas, seated somewhere in the Himalayas or Tibet, inspire and direct every mind in the world. So strong, in fact, can be the influence of the Eastern belief in magic that Europeans of sound mind have assured me that every good thing I say is unwittingly inspired in me by the Mahatmas, my own

inspirations being of no account whatever. This myth of the Mahatmas, widely circulated in the West and firmly believed, far from being nonsense, is—like every myth—an important psychological truth. It seems to be quite true that the East is at the bottom of the spiritual change we are passing through today. Only, this East is not a Tibetan monastery full of Mahatmas, but lies essentially within us. It is our own psyche, constantly at work creating new spiritual forms and spiritual forces which may help us to subdue the boundless lust for prey of Aryan man. We shall perhaps come to know something of that narrowing of horizons which has grown in the East into a dubious quietism, and also something of that stability which human existence acquires when the claims of the spirit become as imperative as the necessities of social life. Yet in this age of Americanization we are still far from anything of the sort; it seems to me that we are only at the threshold of a new spiritual epoch. I do not wish to pass myself off as a prophet, but one can hardly attempt to sketch the spiritual problem of modern man without mentioning the longing for rest in a period of unrest, the longing for security in an age of insecurity. It is from need and distress that new forms of existence arise, and not from idealistic requirements or mere wishes.

[191] To me the crux of the spiritual problem today is to be found in the fascination which the psyche holds for modern man. If we are pessimists, we shall call it a sign of decadence; if we are optimistically inclined, we shall see in it the promise of a far-reaching spiritual change in the Western world. At all events, it is a significant phenomenon. It is the more noteworthy because it is rooted in the deeper social strata, and the more important because it touches those irrational and—as history shows—incalculable psychic forces which transform the life of peoples and civilizations in ways that are unforeseen and unforeseeable. These are the forces, still invisible to many persons today, which are at the bottom of the present “psychological” interest. The fascination of the psyche is not by any means a morbid perversity; it is an attraction so strong that it does not shrink even from what it finds repellent.

[192] Along the great highways of the world everything seems desolate and outworn. Instinctively modern man leaves the trodden paths to explore the by-ways and lanes, just as the man of the Greco-Roman world cast off his

defunct Olympian gods and turned to the mystery cults of Asia. Our instinct turns outward, and appropriates Eastern theosophy and magic; but it also turns inward, and leads us to contemplate the dark background of the psyche. It does this with the same scepticism and the same ruthlessness which impelled the Buddha to sweep aside his two million gods that he might attain the original experience which alone is convincing.

[193] And now we must ask a final question. Is what I have said of modern man really true, or is it perhaps an illusion? There can be no doubt whatever that to many millions of Westerners the facts I have adduced are wholly irrelevant and fortuitous, and regrettable aberrations to a large number of educated persons. But—did a cultivated Roman think any differently when he saw Christianity spreading among the lower classes? Today the God of the West is still a living person for vast numbers of people, just as Allah is beyond the Mediterranean, and the one believer holds the other an inferior heretic, to be pitied and tolerated failing all else. To make matters worse, the enlightened European is of the opinion that religion and such things are good enough for the masses and for women, but of little consequence compared with immediate economic and political questions.

[194] So I am refuted all along the line, like a man who predicts a thunderstorm when there is not a cloud in the sky. Perhaps it is a storm below the horizon, and perhaps it will never reach us. But what is significant in psychic life always lies below the horizon of consciousness, and when we speak of the spiritual problem of modern man we are speaking of things that are barely visible—of the most intimate and fragile things, of flowers that open only in the night. In daylight everything is clear and tangible, but the night lasts as long as the day, and we live in the night-time also. There are people who have bad dreams which even spoil their days for them. And for many people the day’s life is such a bad dream that they long for the night when the spirit awakes. I believe that there are nowadays a great many such people, and this is why I also maintain that the spiritual problem of modern man is much as I have presented it.

[195] I must plead guilty, however, to the charge of one-sidedness, for I have passed over in silence the spirit of the times, about which everyone has so much to say because it is so clearly apparent to us all. It shows itself in the ideal of internationalism and supernationalism, embodied in the League of Nations and the like; we see it also in sport and, significantly, in cinema and jazz. These are characteristic symptoms of our time, which has extended the humanistic ideal even to the body. Sport puts an exceptional valuation on the body, and this tendency is emphasized still further in modern dancing. The cinema, like the detective story, enables us to experience without danger to ourselves all the excitements, passions, and fantasies which have to be repressed in a humanistic age. It is not difficult to see how these symptoms link up with our psychological situation. The fascination of the psyche brings about a new self-appraisal, a reassessment of our fundamental human nature. We can hardly be surprised if this leads to a rediscovery of the body after its long subjection to the spirit—we are even tempted to say that the flesh is getting its own back. When Keyserling sarcastically singles out the chauffeur as the culture-hero of our time, he has struck, as he often does, close to the mark. The body lays claim to equal recognition; it exerts the same fascination as the psyche. If we are still caught in the old idea of an antithesis between mind and matter, this state of affairs must seem like an unbearable contradiction. But if we can reconcile ourselves to the mysterious truth that the spirit is the life of the body seen from within, and the body the outward manifestation of the life of the spirit—the two being really one—then we can understand why the striving to transcend the present level of consciousness through acceptance of the unconscious must give the body its due, and why recognition of the body cannot tolerate a philosophy that denies it in the name of the spirit. These claims of physical and psychic life, incomparably stronger than they were in the past, may seem a sign of decadence, but they may also signify a rejuvenation, for as Hölderlin says:

> Where danger is,
> Arises salvation also.

[196] And indeed we see, as the Western world strikes up a more rapid tempo—the American tempo—the exact opposite of quietism and world-negating resignation. An unprecedented tension arises between outside

and inside, between objective and subjective reality. Perhaps it is a final race between aging Europe and young America; perhaps it is a healthier or a last desperate effort to escape the dark sway of natural law, and to wrest a yet greater and more heroic victory of waking consciousness over the sleep of the nations. This is a question only history can answer.

II

THE LOVE PROBLEM OF A STUDENT

WOMAN IN EUROPE

THE MEANING OF PSYCHOLOGY FOR MODERN MAN

THE STATE OF PSYCHOTHERAPY TODAY

THE LOVE PROBLEM OF A STUDENT[1]

[197] It is, I assure you, with no light heart that I undertake the task of opening your discussion of the love problem of a student by reading a general paper on this subject. Such a discussion is an unusual one, and presents difficulties if taken in a spirit of seriousness and with a fitting sense of responsibility.

[198] Love is always a problem, whatever our age may be. In childhood, the love of one's parents is a problem, and for the old man the problem is what he has made of his love. Love is a force of destiny whose power reaches from heaven to hell. We must, I think, understand love in this way if we are to do any sort of justice to the problems it involves. They are of immense scope and complexity, not confined to any particular province but covering every aspect of human life. Love may be an ethical, a social, a psychological, a philosophical, an aesthetic, a religious, a medical, a legal, or a physiological problem, to name only a few aspects of this many-sided phenomenon. This invasion of love into all the collective spheres of life is, however, only a minor difficulty in comparison with the fact that love is also an intensely individual problem. For it means that every general criterion and rule loses its validity, in exactly the same way that religious beliefs, although constantly codified in the course of history, are always, in essence, an individual experience which bows to no traditional rule.

[199] The very word "love" is itself an obstacle to our discussion. What, indeed, has not been called "love"! Beginning with the highest mystery of the Christian religion, we encounter, on the next-lower stages, the *amor Dei* of Origen, the *amor intellectualis Dei* of Spinoza, Plato's love of the Idea, and the *Gottesminne* of the mystics. Goethe's words introduce us to the human sphere of love:

> Let now the savage instincts sleep
> And all the violence they do;
> When human love stirs in the deep

The love of God is stirring too.

[200] Here we find the love of one’s neighbour, in the Christian sense as well as in the Buddhist sense of compassion, and the love of mankind as expressed in social service. Next there is love of one’s country, and the love for ideal institutions such as the Church. Then comes parental love, above all mother-love, then filial love. When we come to conjugal love we leave the sphere of the spiritual and enter that intermediate realm between spirit and instinct. Here the pure flame of Eros sets fire to sexuality, and the ideal forms of love—love of parents, of country, of one’s neighbour, etc.—are mingled with the lust for personal power and the desire to possess and to rule. This does not mean that all contact with instinct debases love. On the contrary, its beauty and truth and strength become the more perfect the more instinct it can absorb into itself. Only if instinct predominates does the animal come to the surface. Conjugal love can be of the kind of which Goethe says at the end of *Faust:*

Spirit by attraction draws
Elemental matter,
Forges bonds no man can force
And no angel shatter.
Double natures single grown,
Inwardly united,
By Eternal Love alone
Can it be divided.

[201] But it need not necessarily be such a love. It may recall Nietzsche’s words: “Two animals have lighted on each other.” The love of the lover is again different. Even though the sacrament of marriage be lacking, and the pledge of a life together, this love may be transfigured by the power of fate or by its own tragic nature. But as a rule instinct predominates, with its dark glow or its flickering fires.

[202] Even this has not brought us to the limits of love. By “love” we also mean the sexual act on all levels, from officially sanctioned, wedded cohabitation to the physiological need which drives a man to prostitutes and to the mere business they make or are forced to make of love.

[203] We also speak of “the love of boys,” meaning homosexuality, which since classical times has lost its glamour as a social and educative

institution, and now ekes out a miserable, terror-stricken existence as a so-called perversion and punishable offence, at least where men are concerned. In Anglo-Saxon countries it seems on the other hand that female homosexuality means rather more than Sapphic lyricism, since it somehow acts as a stimulus to the social and political organization of women, just as male homosexuality was an important factor in the rise of the Greek *polis.*

[204] Finally, the word "love" must be stretched still further to cover all sexual perversions. There is incestuous love, and a masturbatory self-love that goes by the name of narcissism. The word "love" includes every kind of morbid sexual abomination as well as every kind of greed that has ever degraded man to the level of a beast or a machine.

[205] Thus we find ourselves in the awkward position of beginning a discussion about a matter or concept whose outlines are of the vaguest and whose extent is well-nigh illimitable. At least for the purposes of the present discussion, one would like to restrict the concept of love to the problem of how a young student should come to terms with sex. But this just cannot be done, because all the meanings of the word "love" which I have already mentioned enter actively into the love problem of a student.

[206] We can, however, agree to discuss the question of the way in which the average so-called normal person behaves under the conditions I have described. Disregarding the fact the "normal" person does not exist, we find, nevertheless, sufficient similarities even among individuals of the most varied types to warrant a discussion of the "average" problem. As always, the practical solution of the problem depends on two factors: the demands and capacities of the individual, and the environmental conditions.

[207] It is the duty of a speaker to present a general survey of the question under discussion. Naturally this can be done only if, as a doctor, I can give an objective account of things as they are, and abstain from that stale, moralizing talk which veils the subject with a mixture of bashfulness and hypocrisy. Moreover, I am not here to tell you what ought to be done. That must be left to those who always know what is better for other people.

[208] Our theme is “The Love Problem of a Student,” and I assume that “love problem” means the relation of the two sexes and is not to be construed as the “sexual problem” of a student. This provides a useful limitation of our theme, for the question of sex would need considering only so far as it is a love problem, or a problem of relationship. Hence we can exclude all those sexual phenomena that have nothing to do with relationship, such as sexual perversions (with the exception of homosexuality), masturbation, and intercourse with prostitutes. We cannot exclude homosexuality because very often it is a problem of relationship; but we can exclude prostitution because usually it does not involve a relationship, though there are exceptions which prove the rule.

[209] The average solution of the love problem is, as you know, marriage. But experience shows that this statistical truth does not apply to the student. The immediate reason for this is that a student is generally not in a position to set up house. A further reason is the youthful age of most students, which, partly because of their unfinished studies, and partly because of their need for freedom to move from place to place, does not yet permit the social fixation entailed by marriage. Other factors to be considered are psychological immaturity, childish clinging to home and family, relatively undeveloped capacity for love and responsibility, lack of experience of life and the world, the typical illusions of youth, and so on. A reason that should not be underestimated is the sagacious reserve of the girl students. Their first aim is to complete their studies and take up a profession. They therefore abstain from marriage, especially from marriage with a student, who so long as he remains a student is not a desirable marriage partner for the reasons already mentioned. Another, very important, reason for the infrequency of student marriages is the question of children. As a rule when a girl marries she wants a child, whereas a man can manage well enough for a time without children. A marriage without children has no special attraction for a woman; she prefers to wait.

[210] In recent years, it is true, student marriages have become more frequent. This is due partly to the psychological changes in our modern outlook, and partly to the spread of contraceptive measures. The psychological changes that have produced, among other things, the

phenomenon of the student marriage are probably the result of the spiritual upheavals of the last few decades, the total significance of which we are as yet unable to grasp. All we can say is that, as a consequence of the general dissemination of scientific knowledge and a more scientific way of thinking, a change in the very conception of the love problem has come about. Scientific objectivity has effected a rapprochement between the sacrosanct idea of man as a superior being and man as a natural being, and made it possible for *Homo sapiens* to take his place as part of the natural order. The change has an emotional as well as an intellectual aspect. Such a view works directly on the feelings of the individual. He feels released from the confines of a metaphysical system and from those moral categories which characterized the medieval outlook on the world. The taboos erected on man's exclusion from nature no longer prevail, and the moral judgments which in the last analysis always have their roots in the religious metaphysic of the age have lost their force. Within the traditional moral system everyone knows perfectly why marriage is "right" and why any other form of love is to be abhorred. But outside the system, on the playground and battlefield of nature, where man feels himself to be the most gifted member of the great family of animals, he must orient himself anew. The loss of the old standards and values amounts, at first, to moral chaos. All the hitherto accepted forms are doubted, people begin to discuss things that have long sheltered behind a moral prejudice. They boldly investigate the actual facts and feel an irresistible need to take stock of experience, to know and to understand. The eyes of science are fearless and clear; they do not flinch from gazing into moral darknesses and dirty corners. The man of today can no longer rest content with a traditional judgment; he must know why. This search leads to the creation of new standards of value.

[211] One of these is an evaluation of love in terms of hygiene. Through a franker and more objective discussion of sex a knowledge of the immense dangers of venereal disease has become much more widespread. The obligation to keep oneself healthy has superseded the guilty fears of the old morality. But this process of moral sanitation has not yet progressed to the point where public conscience would allow the same civic measures to be taken for dealing with venereal diseases as with other infectious diseases. Venereal diseases are still considered "indecent," unlike

smallpox and cholera, which are morally acceptable in the drawing room. No doubt these fine distinctions will raise a smile in a more enlightened age.

[212] The widespread discussion of the sexual question has brought the extraordinary importance of sexuality in all its psychic ramifications to the forefront of our social consciousness. A major contribution was made during the last twenty-five years by the much-decried psychoanalytic movement. Today it is no longer possible to brush aside the tremendous psychological importance of sex with a bad joke or a display of moral indignation. People are beginning to see the sexual question in the context of the great human problems and to discuss it with the seriousness it deserves. The natural result of this is that much that was formerly held to be beyond dispute is now open to doubt. There is, for instance, a doubt as to whether the officially sanctioned form of sexuality is the only one that is morally possible, and whether all other forms are to be condemned out of hand. The arguments for and against are gradually losing their moral acerbity, practical considerations force themselves into the discussion, and finally we are beginning to discover that legitimized sex is not *eo ipso* the equivalent of moral superiority.

[213] In addition to this, the marriage problem with its usually sombre background has become a theme for romantic literature. Whereas the romance of the old style concluded with a happy betrothal or a wedding, the modern novel often begins after the marriage. In these novels, which get into everybody’s hands, the most intimate problems are often treated with a lack of reticence that is positively painful. Of the veritable flood of more or less undisguised pornographic writings we need hardly speak. A popular scientific book, Forel’s *The Sexual Question,* not only had an enormous sale but found a good many imitators. In scientific literature, compilations have been produced which both in scope and in the dubious nature of their contents exceed anything found in Krafft-Ebing’s *Psychopathia Sexualis,* in a way that would have been inconceivable thirty or forty years ago.

[214] These widespread and widely known phenomena are a sign of the times. They make it possible for young people today to grasp the full importance of the problem of sex much earlier than they could have at any

time during the last two decades. There are some who maintain that this early preoccupation with sex is unhealthy, a sign of urban degeneration. I remember reading an article fifteen years ago in Ostwald's *Annalen der Naturphilosophie,* which said, quite literally: "Primitive people like the Eskimos, Swiss, etc., have no sexual problem." It scarcely needs much reflection to see why primitives have no sexual problem; beyond the concerns of the stomach they have no other problems to worry about. Problems are the prerogative of civilized man. Here in Switzerland we have no great cities and yet such problems exist. I do not think that discussion of the sexual question is unhealthy or in the least degenerate; I see it rather as a symptom of the great psychological revolution of our time and the changes it has brought about. It seems to me that the more seriously and thoroughly we discuss this question, which is of such vital importance for man's health and happiness, the better it will be for all of us.

[215] It is no doubt the serious interest shown in this question that has led to the hitherto unknown phenomenon of student marriages. Such a very recent phenomenon is difficult to judge for lack of sufficient data. In former times there were early marriages in abundance, also marriages that must have seemed socially very unstable. In itself, therefore, the student marriage is perfectly permissible. The question of children, however, is another matter. If both partners are studying, children must obviously be ruled out. But a marriage that remains artificially childless is always rather problematical. Children are the cement that holds it together as nothing else could. And it is the parents' concentration on the children which in innumerable instances keeps alive the feeling of companionship so essential for the stability of a marriage. When there are no children the interest of each partner is directed to the other, which in itself might be a good thing. In practice, unfortunately, this mutual preoccupation is not always of an amiable kind. Each blames the other for the dissatisfaction felt by both. In these circumstances it is probably better for the wife to be studying, otherwise she is left without an object; for there are many women who cannot endure marriage without children and become unendurable themselves. If she is studying, she at least has a life outside her marriage that is sufficiently satisfying. A woman who is very set on children, and for whom children are more important than a husband,

should certainly think twice before embarking on a student marriage. She should also realize that the urge to maternity often appears in imperative form only later, that is, after she is married.

[216] As to whether student marriages are premature, we must take note of a fact that applies to all early marriages, namely, that a girl of twenty is usually older than a man of twenty-five, as far as maturity of judgment is concerned. With many men of twenty-five the period of psychological puberty is not yet over. Puberty is a period of illusion and only partial responsibility. The psychological difference is due to the fact that a boy, up to the time of sexual maturity, is as a rule quite childish, whereas a girl develops much earlier than he does the psychological subtleties that go hand in hand with adolescence. Into this childishness sexuality often breaks with brutal force, while, despite the onset of puberty, it often goes on slumbering in a girl until the passion of love awakens it. There are a surprising number of women whose real sexuality, even though they are married, remains virginal for years; they become conscious of it only when they fall in love with another man. That is the reason why very many women have no understanding at all of masculine sexuality—they are completely unconscious of their own. With men it is different. Sexuality bursts on them like a tempest, filling them with brute desires and needs, and there is scarcely one of them who escapes the painful problem of masturbation. But a girl can masturbate for years without knowing what she is doing.

[217] The onrush of sexuality in a boy brings about a powerful change in his psychology. He now has the sexuality of a grown man with the soul of a child. Often the flood of obscene fantasies and smutty talk with schoolfellows pours like a torrent of dirty water over all his delicate and childish feelings, sometimes smothering them for ever. Unexpected moral conflicts arise, temptations of every description lie in wait for him and weave themselves into his fantasies. The psychic assimilation of the sexual complex causes him the greatest difficulties even though he may not be conscious of its existence. The onset of puberty also brings about considerable changes in his metabolism, as can be seen from the pimples and acne that so often afflict adolescents. The psyche is disturbed in a similar manner and thrown off its balance. At this age the young man is

full of illusions, which are always a sign of psychic disequilibrium. They make stability and maturity of judgment impossible. His tastes, his interests, his plans alter fitfully. He can suddenly fall head over heels in love with a girl, and a fortnight later he cannot conceive how anything of the sort could have happened to him. He is so riddled with illusions that he actually needs these mistakes to make him conscious of his own taste and individual judgment. He is still experimenting with life, and *must* experiment with it in order to learn how to judge things correctly. Hence there are very few men who have not had sexual experience of some kind before they are married. During puberty it is mostly homosexual experiences, and these are much more common than is generally admitted. Heterosexual experiences come later, not always of a very beautiful kind. For the less the sexual complex is assimilated to the whole of the personality, the more autonomous and instinctive it will be. Sexuality is then purely animal and recognizes no psychological distinctions. The most inferior woman will do; it is enough if she has the typical secondary sexual characteristics. A false step of this kind does not entitle us to draw conclusions about a man’s character, as the act can easily occur at a time when the sexual complex is still split off from the psyche’s influence. Nevertheless, too many experiences of this nature have a bad effect on the formation of the personality, as by force of habit they fix sexuality on too low a level and make it unacceptable to moral judgment. The result is that though the man in question is outwardly a respectable citizen, inwardly he is prey to sexual fantasies of the lowest kind, or else he represses them and on some festive occasion they come leaping to the surface in their primitive form, much to the astonishment of his unsuspecting wife—assuming, of course, that she notices what is going on. A frequent accompaniment is premature coldness towards the wife. Women are often frigid from the first day of marriage because their sensation function does not respond to this kind of sexuality in their husbands. The weakness of a man’s judgment at the time of psychological puberty should prompt him to reflect very deeply on the premature choice of a wife.

[218] Let us now turn to other forms of relationship between the sexes that are customary during the student period. There are, as you know, characteristic liaisons between students, chiefly in the great universities of other countries. These relationships are sometimes fairly stable and may

even have a psychological value, as they do not consist entirely of sexuality but also, in part, of love. Occasionally the liaison is continued into marriage. The relationship stands, therefore, considerably higher than prostitution. But as a rule it is limited to those students who were careful in the choice of their parents. It is usually a question of money, for most of the girls are dependent on their lovers for financial help, though they could not be said to sell their love for money. Very often the relationship is a beautiful episode in the girl's life, otherwise poor and empty, while for the man it may be his first intimate acquaintance with a woman, and in later life a memory on which he looks back with emotion. Often, again, there is nothing valuable in these affairs, partly owing to the man's crude sensuality, thoughtlessness, and lack of feeling, and partly owing to the frivolity and fickleness of the girl.

[219] Over all these relationships hangs the Damoclean sword of their transitoriness, which prevents the formation of real values. They are passing episodes, experiments of very limited validity. Their injurious effect on the personality is due to the fact that the man gets the girl too easily, so that the value of the love object is depreciated. It is convenient for him to dispose of his sexual problem in such a simple and irresponsible way. He becomes spoilt. But even more, the fact that he is sexually satisfied robs him of a driving-force which no young man can do without. He becomes blasé and can afford to wait. Meanwhile he can calmly review the massed femininity passing before him until the right party turns up. Then the wedding comes along and the latest date is thrown over. This procedure adds little of advantage to his character. The low level of relationship tends to keep sexuality on a correspondingly low level of development, and this can easily lead to difficulties in marriage. Or if his sexual fantasies are repressed, the result is only too likely to be a neurotic or, worse still, a moral zealot.

[220] Homosexual relations between students of either sex are by no means uncommon. So far as I can judge of this phenomenon, I would say that these relationships are less common with us, and on the continent generally, than in certain other countries where boy and girl college students live in strict segregation. I am speaking here not of pathological homosexuals who are incapable of real friendship and meet with little

sympathy among normal individuals, but of more or less normal youngsters who enjoy such a rapturous friendship that they also express their feelings in sexual form. With them it is not just a matter of mutual masturbation, which in all school and college life is the order of the day among the younger age groups, but of a higher and more spiritual form which deserves the name “friendship” in the classical sense of the word. When such a friendship exists between an older man and a younger its educative significance is undeniable. A slightly homosexual teacher, for example, often owes his brilliant educational gifts to his homosexual disposition. The homosexual relation between an older and a younger man can thus be of advantage to both sides and have a lasting value. An indispensable condition for the value of such a relation is the steadfastness of the friendship and their loyalty to it. But only too often this condition is lacking. The more homosexual a man is, the more prone he is to disloyalty and to the seduction of boys. Even when loyalty and true friendship prevail the results may be undesirable for the development of personality. A friendship of this kind naturally involves a special cult of feeling, of the feminine element in a man. He becomes gushing, soulful, aesthetic, over-sensitive, etc.—in a word, effeminate, and this womanish behaviour is detrimental to his character.

[221] Similar advantages and disadvantages can be pointed out in friendships between women, only here the difference in age and the educative factor are not so important. The main value lies in the exchange of tender feelings on the one hand and of intimate thoughts on the other. Generally they are high-spirited, intellectual, and rather masculine women who are seeking to maintain their superiority and to defend themselves against men. Their attitude to men is therefore one of disconcerting self-assurance, with a trace of defiance. Its effect on their character is to reinforce their masculine traits and to destroy their feminine charm. Often a man discovers their homosexuality only when he notices that these women leave him stone-cold.

[222] Normally, the practice of homosexuality is not prejudicial to later heterosexual activity. Indeed, the two can even exist side by side. I know a very intelligent woman who spent her whole life as a homosexual and then at fifty entered into a normal relationship with a man.

[223] Among the sexual relations of the student period we must mention yet another, which is quite normal even if rather peculiar. This is the attachment of a young man to an older woman, possibly married or at any rate widowed. You will perhaps remember Jean Jacques Rousseau and his connection with Mme de Warens; this is the kind of relationship I have in mind. The man is usually rather shy, unsure of himself, inwardly afraid, sometimes infantile. He naturally seeks a mother, perhaps because he has had too much or too little love in his own family. Many women like nothing better than a man who is rather helpless, especially when they are considerably older than he is; they do not love a man's strength, his virtues and his merits, but his weaknesses. They find his infantilisms charming. If he stammers a little, he is enchanting; or perhaps he has a limp, and this excites maternal compassion and a little more besides. As a rule the woman seduces him, and he willingly submits to her mothering.

[224] Not always, however, does a timid youth remain half a child. It may be that this surfeit of maternal solicitude was just what was needed to bring his undeveloped masculinity to the surface. In this way the woman educates his feeling and brings it to full consciousness. He learns to understand a woman who has experience of life and the world, is sure of herself, and thus he has a rare opportunity for a glimpse behind the scenes. But he can take advantage of it only if he quickly outgrows this relationship, for should he get stuck in it her mothering would ruin him. Maternal tenderness is the most pernicious poison for anyone who has to equip himself for the hard and pitiless struggle of life. If he cannot let go of her apron-strings he will become a spineless parasite—for most of these women have money—and sink to the level of a lap-dog or a pet cat.

[225] We must now discuss those forms of relationship which offer no solution of the sexual question for the reason that they are asexual or "platonic." If there were any reliable statistics on this subject, I believe they would show that in Switzerland the majority of students prefer a platonic relationship. Naturally, this raises the question of sexual abstinence. One often hears that abstaining from sexual intercouse is injurious to health. This view is incorrect, at least for people of the student age. Abstinence is injurious to health only when a man has reached the age when he could win a woman for himself, and should do so according

to his individual inclinations. The extraordinary intensification of the sexual need that is so often felt at this time has the biological aim of forcibly eliminating the man’s scruples, misgivings, doubts, and hesitations. This is very necessary, because the very idea of marriage, with all its doubtful possibilities, often makes a man panicky. It is only to be expected, therefore, that nature will push him over the obstacle. Abstention from sexual intercourse may certainly have injurious effects under these conditions, but not when there is no urgent physical or psychological need for it.

[226] This brings us to the very similar question concerning the injurious effects of masturbation. When for physical or psychological reasons normal intercouse is impossible, masturbation as a safety-valve has no ill effects. Young people who come to the doctor suffering from the harmful effects of masturbation are not by any means excessive masturbationists—these usually have no need of a doctor because they are not in any sense ill—rather, their masturbation has harmful effects because it shows psychic complications and is attended by pangs of conscience or by a riot of sexual fantasies. The latter are particularly common among women. Masturbation with psychic complications is harmful, but not the ordinary, uncomplicated kind. If, however, it is continued up to the age when normal intercourse becomes physically, psychologically, and socially possible, and is indulged in merely in order to avoid the necessary tasks of life, then it is harmful.

[227] Platonic relationships are very important during the student period. The form they most commonly take is flirting. Flirting is the expression of an experimental attitude which is altogether appropriate at this age. It is a voluntary activity which, by tacit agreement, puts neither side under an obligation. This is an advantage and at the same time a disadvantage. The experimental attitude enables both parties to get to know each other without any immediately undesirable results. Both exercise their judgment and their skill in self-expression, adaptation, and defence. An enormous variety of experiences which are uncommonly valuable in later life can be picked up from flirting. On the other hand, the absence of any obligation can easily lead to one’s becoming an habitual flirt, shallow, frivolous, and heartless. The man turns into a drawing-room hero and professional heart-

breaker, never dreaming what a boring figure he cuts; the girl a coquette, and a serious man instinctively feels that she is not to be taken seriously.

[228] A phenomenon that is as rare as flirting is common is the conscious cultivation of a serious love. We might call this simply the ideal, without, however, identifying it with traditional romanticism. For the development of personality, there can be no doubt that the timely awakening and conscious cultivation of deeply serious and responsible feelings are of the utmost value. A relationship of this kind can be the most effective shield against the temptations that beset a young man, as well as being a powerful incentive to hard work, loyalty, and reliability. However, there is no value so great that it does not have its unfavourable side. A relationship that is too ideal easily becomes exclusive. Through his love the young man is too much cut off from the acquaintance of other women, and the girl does not learn the art of erotic conquest because she has got her man already. Woman's instinct for possession is a dangerous thing, and it may easily happen that the man will regret all the experiences he never had with women before marriage and will make up for them afterwards.

[229] Hence it must not be concluded that every relationship of this kind is ideal. There are cases where the exact opposite is true—when, for instance, a man or girl trails round with a school sweetheart for no intelligible reason, from mere force of habit. Whether from inertia, or lack of spirit, or helplessness they simply cannot get rid of each other. Perhaps the parents on both sides find the match suitable, and the affair, begun in a moment of thoughtlessness and prolonged by habit, is passively accepted as a *fait accompli*. Here the disadvantages pile up without a single advantage. For the development of personality, acquiescence and passivity are harmful because they are an obstacle to valuable experience and to the exercise of one's specific gifts and virtues. Moral qualities are won only in freedom and prove their worth only in morally dangerous situations. The thief who refrains from stealing merely because he is in prison is not a moral personality. Though the parents may gaze benignly on this touching marriage and add their children's respectability to the tale of their own virtues, it is all a sham and a delusion, lacking real strength, and sapped by moral inertia.

[230] After this brief survey of the problems as we meet them in actual life, I will, in conclusion, turn to the land of heart’s desire and utopian possibilities.

[231] Nowadays we can hardly discuss the love problem without speaking of the utopia of free love, including trial marriage. I regard this idea as a wishful fantasy and an attempt to make light of a problem which in actual life is invariably very difficult. It is no more possible to make life easy than it is to grow a herb of immortality. The force of gravity can be overcome only by the requisite application of energy. Similarly, the solution of the love problem challenges all our resources. Anything else would be useless patchwork. Free love would be conceivable only if everyone were capable of the highest moral achievement. The idea of free love was not invented with this aim in view, but merely to make something difficult appear easy. Love requires depth and loyalty of feeling; without them it is not love but mere caprice. True love will always commit itself and engage in lasting ties; it needs freedom only to effect its choice, not for its accomplishment. Every true and deep love is a sacrifice. The lover sacrifices all other possibilities, or rather, the illusion that such possibilities exist. If this sacrifice is not made, his illusions prevent the growth of any deep and responsible feeling, so that the very possibility of experiencing real love is denied him.

[232] Love has more than one thing in common with religious faith. It demands unconditional trust and expects absolute surrender. Just as nobody but the believer who surrenders himself wholly to God can partake of divine grace, so love reveals its highest mysteries and its wonder only to those who are capable of unqualified devotion and loyalty of feeling. And because this is so difficult, few mortals can boast of such an achievement. But, precisely because the truest and most devoted love is also the most beautiful, let no man seek to make it easy. He is a sorry knight who shrinks from the difficulty of loving his lady. Love is like God: both give themselves only to their bravest knights.

[233] I would offer the same criticism of trial marriages. The very fact that a man enters into a marriage on trial means that he is making a reservation; he wants to be sure of not burning his fingers, to risk nothing. But that is the most effective way of forestalling any real experience. You do not

experience the terrors of the Polar ice by perusing a travel-book, or climb the Himalayas in a cinema.

[234] Love is not cheap—let us therefore beware of cheapening it! All our bad qualities, our egotism, our cowardice, our worldly wisdom, our cupidity—all these would persuade us not to take love seriously. But love will reward us only when we do. I must even regard it as a misfortune that nowadays the sexual question is spoken of as something distinct from love. The two questions should not be separated, for when there is a sexual problem it can be solved only by love. Any other solution would be a harmful substitute. Sexuality dished out as sexuality is brutish; but sexuality as an expression of love is hallowed. Therefore, never ask what a man does, but how he does it. If he does it from love or in the spirit of love, then he serves a god; and whatever he may do is not ours to judge, for it is ennobled.

[235] I trust that these remarks will have made it clear to you that I pass no sort of moral judgment on sexuality as a natural phenomenon, but prefer to make its moral evaluation dependent on the way it is expressed.

WOMAN IN EUROPE[1]

> You call yourself free? Your dominant thought I would hear, and not that you have escaped from a yoke. Are you one of those who had the right to escape from a yoke? There are some who threw away their last value when they threw away their servitude.
>
> *Thus Spake Zarathustra*

[236] To write about woman in Europe today is such a hazardous undertaking that I would scarcely have ventured to do so without a pressing invitation. Have we anything of fundamental importance to say about Europe? Is anyone sufficiently detached? Are we not all involved in some programme or experiment, or caught in some critical retrospect that clouds our judgment? And in regard to woman, cannot the same questions be asked? Moreover, what can a man say about woman, his own opposite? I mean of course something sensible, that is outside the sexual programme, free of resentment, illusion, and theory. Where is the man to be found capable of such superiority? Woman always stands just where the man's shadow falls, so that he is only too liable to confuse the two. Then, when he tries to repair this misunderstanding, he overvalues her and believes her the most desirable thing in the world. Thus it is with the greatest misgivings that I set out to treat of this theme.

[237] One thing, however, is beyond doubt: that woman today is in the same process of transition as man. Whether this transition is a historical turning-point or not remains to be seen. Sometimes, when we look back at history, it seems as though the present time had analogies with certain periods in the past, when great empires and civilizations had passed their zenith and were hastening irresistibly towards decay. But these analogies are deceptive, for there are always renaissances. What *does* move more clearly into the foreground is Europe's position midway between the

Asiatic East and the Anglo-Saxon—or shall we say American?—West. Europe now stands between two colossi, both uncouth in their form but implacably opposed to one another in their nature. They are profoundly different not only racially but in their ideals. In the West there is the maximum political freedom with the minimum personal freedom; in the East it is just the opposite. We see in the West a tremendous development of Europe's technological and scientific tendencies, and in the Far East an awakening of all those spiritual forces which, in Europe, these tendencies hold in check. The power of the West is material, that of the East ideal.[2] The struggle between these opposites, which in the world of the European man takes place in the realm of the scientifically applied intellect and finds expression on the battlefield and in the state of his bank balance, is, in woman, a psychic conflict.

[238] What makes it so uncommonly difficult to discuss the problem of the modern European woman is that we are necessarily writing about a minority. There is no "modern European woman" properly speaking. Or is the peasant's wife of today different from her forbears of a hundred years ago? There is, in fact, a large body of the population that only to a very limited extent lives in the present and participates in present-day problems. We speak of a "woman's problem," but how many women have problems? In proportion to the sum-total of European women only a dwindling minority really live in the Europe of today; and these are city dwellers and belong—to put it cautiously—to the more complicated of their kind. This must always be so, for it is only the few who clearly express the spirit of the present in any age. In the fourth and fifth centuries of our era there were only a very few Christians who in any way understood the spirit of Christianity, the rest were still practically pagan. The cultural process that is characteristic of an epoch operates most intensely in cities, for it needs large agglomerations of men to make civilization possible, and from these agglomerations culture gradually spreads to the smaller, backward groups. Thus we find the present only in the large centres, and there alone do we encounter the "European woman," the woman who expresses the social and spiritual aspect of contemporary Europe. The further we go from the influence of the great centres, the more we find ourselves receding into history. In the remote

Alpine valleys we can meet people who have never seen a railway, and in Spain, which is also a part of Europe, we plunge to a dark medieval age lacking even an alphabet. The people of those regions, or of the corresponding social strata, do not live in our Europe but in the Europe of 1400, and their problems are those of the bygone age in which they dwell. I have analysed such people, and have found myself carried back into an ambience that was not wanting in historical romance.

[239] The "present" is a thin surface stratum that is laid down in the great centres of civilization. If it is very thin, as in Tsarist Russia, it has no meaning, as events have shown. But once it has attained a certain strength, we can speak of civilization and progress, and then problems arise that are characteristic of an epoch. In this sense Europe has a present, and there are women who live in it and suffer its problems. About these, and these only, are we entitled to speak. Those who are satisfied with a medieval life have no need of the present and its experiments. But the man of the present cannot—no matter what the reason—turn back again to the past without suffering an essential loss. Often this turning back is altogether impossible, even if he were prepared to make the sacrifice. The man of the present must work for the future and leave others to conserve the past. He is therefore not only a builder but also a destroyer. He and his world have both become questionable and ambiguous. The ways that the past shows him and the answers it gives to his questions are insufficient for the needs of the present. All the old, comfortable ways are blocked, new paths have been opened up, and new dangers have arisen of which the past knew nothing. It is proverbial that one never learns anything from history, and in regard to present-day problems it usually teaches us nothing. The new path has to be made through untrodden regions, without presuppositions and often, unfortunately, without piety. The only thing that cannot be improved upon is morality, for every alteration of traditional morality is by definition an immorality. This *bon mot* has an edge to it, against which many an innovator has barked his shins.

[240] All the problems of the present form a tangled knot, and it is hardly possible to single out one particular problem and treat it independently of the others. Thus there is no problem of "woman in Europe" without man

and his world. If she is married, she usually has to depend economically on her husband; if she is unmarried and earning a living, she is working in some profession designed by a man. Unless she is prepared to sacrifice her whole erotic life, she again stands in some essential relationship to man. In numerous ways woman is indissolubly bound up with man's world and is therefore just as exposed as he is to all the shocks of his world. The war, for instance, has affected woman just as profoundly as it has man, and she has to adapt to its consequences as he must. What the upheavals of the last twenty or thirty years mean for man's world is apparent to everyone; we can read about it every day in the newspapers. But what it means for woman is not so evident. Neither politically, nor economically, nor spiritually is she a factor of visible importance. If she were, she would loom more largely in man's field of vision and would have to be considered a rival. Sometimes she is seen in this role, but only as a man, so to speak, who is accidentally a woman. But since as a rule her place is on man's intimate side, the side of him that merely feels and has no eyes and does not want to see, woman appears as an impenetrable mask behind which everything possible and impossible can be conjectured—and actually seen!—without his getting anywhere near the mark. The elementary fact that a person always thinks another's psychology is identical with his own effectively prevents a correct understanding of feminine psychology. This is abetted by woman's own unconsciousness and passivity, useful though these may be from the biological point of view: she allows herself to be convinced by the man's projected feelings. Of course this is a general human characteristic, but in woman it is given a particularly dangerous twist, because in this respect she is not naïve and it is only too often her *intention* to let herself be convinced by them. It fits in with her nature to keep her ego and her will in the background, so as not to hinder the man in any way, and to invite him to realize his intentions with regard to her person. This is a sexual pattern, but it has far-reaching ramifications in the feminine psyche. By maintaining a passive attitude with an ulterior purpose, she helps the man to realize his ends and in that way holds him. At the same time she is caught in her own toils, for whoever digs a pit for others falls into it himself.

[241] I admit that this is a rather unkind description of a process which might well be sung in more lyrical strains. But all natural things have two sides, and when something has to be made conscious we must see the shadow side as well as the light.

[242] When we observe the way in which women, since the second half of the nineteenth century, have begun to take up masculine professions, to become active in politics, to sit on committees, etc., we can see that woman is in the process of breaking with the purely feminine sexual pattern of unconsciousness and passivity, and has made a concession to masculine psychology by establishing herself as a visible member of society. She no longer hides behind the mask of Mrs. So-and-so, with the obliging intention of having all her wishes fulfilled by the man, or to make him pay for it if things do not go as she wishes.

[243] This step towards social independence is a necessary response to economic and other factors, but in itself it is only a symptom and not the thing about which we are most concerned. Certainly the courage and capacity for self-sacrifice of such women is admirable, and only the blind could fail to see the good that has come out of all these efforts. But no one can get round the fact that by taking up a masculine profession, studying and working like a man, woman is doing something not wholly in accord with, if not directly injurious to, her feminine nature. She is doing something that would scarcely be possible for a man to do, unless he were a Chinese. Could he, for instance, be a nursemaid or run a kindergarten? When I speak of injury, I do not mean merely physiological injury but above all psychic injury. It is a woman's outstanding characteristic that she can do anything for the love of a man. But those women who can achieve something important for the love of a *thing* are most exceptional, because this does not really agree with their nature. Love for a thing is a man's prerogative. But since masculine and feminine elements are united in our human nature, a man can live in the feminine part of himself, and a woman in her masculine part. None the less the feminine element in man is only something in the background, as is the masculine element in woman. If one lives out the opposite sex in oneself one is living in one's own background, and one's real individuality suffers. A man should live as a man and a woman as a

woman. The contrasexual element in either sex is always dangerously close to the unconscious. It is even typical that the effects of the unconscious upon the conscious mind have a contrasexual character. For instance the soul (anima, psyche) has a feminine character which compensates the masculine consciousness. (Mystical instruction among primitives is exclusively a masculine concern, corresponding to the function of the Catholic priest.)

[244] The immediate presence of the unconscious exerts a magnetic influence on the conscious processes. This explains the fear or even horror we have of the unconscious. It is a purposeful defence-reaction of the conscious mind. The contrasexual element has a mysterious charm tinged with fear, perhaps even with disgust. For this reason its charm is particularly attractive and fascinating, even when it comes to us not directly from outside, in the guise of a woman, but from within, as a psychic influence—for instance in the form of a temptation to abandon oneself to a mood or an affect. This example is not characteristic of women, for a woman’s moods and emotions do not come to her directly from the unconscious but are peculiar to her feminine nature. They are therefore never naïve, but are mixed with an unacknowledged purpose. What comes to a woman from the unconscious is a sort of *opinion*, which spoils her mood only secondarily. These opinions lay claim to being absolute truths, and they prove to be the more fixed and incorrigible the less they are subjected to conscious criticism. Like the moods and feelings of a man, they are somewhat hazy and often totally unconscious, and are seldom recognized for what they are. They are in fact collective, having the character of the opposite sex, as though a man—the father, for example—had thought of them.

[245] Thus it can happen—indeed it is almost the rule—that the mind of a woman who takes up a masculine profession is influenced by her unconscious masculinity in a way not noticeable to herself but quite obvious to everybody in her environment. She develops a kind of rigid intellectuality based on so-called principles, and backs them up with a whole host of arguments which always just miss the mark in the most irritating way, and always inject a little something into the problem that is not really there. Unconscious assumptions or opinions are the worst

enemy of woman; they can even grow into a positively demonic passion that exasperates and disgusts men, and does the woman herself the greatest injury by gradually smothering the charm and meaning of her femininity and driving it into the background. Such a development naturally ends in profound psychological disunion, in short, in a neurosis.

[246] Naturally, things need not go to this length, but long before this point is reached the mental masculinization of the woman has unwelcome results. She may perhaps be a good comrade to a man without having any access to his feelings. The reason is that her animus (that is, her masculine rationalism, assuredly not true reasonableness!) has stopped up the approaches to her own feeling. She may even become frigid, as a defence against the masculine type of sexuality that corresponds to her masculine type of mind. Or, if the defence-reaction is not successful, she develops, instead of the receptive sexuality of woman, an aggressive, urgent form of sexuality that is more characteristic of a man. This reaction is likewise a purposeful phenomenon, intended to throw a bridge across by main force to the slowly vanishing man. A third possibility, especially favoured in Anglo-Saxon countries, is optional homosexuality in the masculine role.

[247] It may therefore be said that, whenever the attraction of the animus becomes noticeable, there is a quite special need for the woman to have an intimate relationship with the other sex. Many women in this situation are fully aware of this necessity and proceed—*faute de mieux*— to stir up another of those present-day problems that is no less painful, namely, the marriage problem.

[248] Traditionally, man is regarded as the marriage breaker. This legend comes from times long past, when men still had leisure to pursue all sorts of pastimes. But today life makes so many demands on men that the noble hidalgo, Don Juan, is to be seen nowhere save in the theatre. More than ever man loves his comfort, for ours is an age of neurasthenia, impotence, and easy chairs. There is no energy left for window-climbing and duels. If anything is to happen in the way of adultery it must not be too difficult. In no respect must it cost too much, hence the adventure can only be of a transitory kind. The man of today is thoroughly scared of

jeopardizing marriage as an institution. He is a firm believer in doing things on the quiet, and therefore supports prostitution. I would wager that in the Middle Ages, with its notorious bagnios and unrestricted prostitution, adultery was relatively more frequent than it is today. In this respect marriage should be safer now than it ever was. But in reality it is beginning to be discussed. It is a bad sign when doctors begin writing books of advice on how to achieve the "perfect marriage." Healthy people need no doctors. Marriage today has indeed become rather precarious. In America about a quarter of the marriages end in divorce. And the remarkable thing is that this time the scapegoat is not the man but the woman. She is the one who doubts and feels uncertain. It is not surprising that this is so, for in post-war Europe there is such an alarming surplus of unmarried women that it would be inconceivable if there were no reaction from that quarter. Such a piling up of misery has inescapable consequences. It is no longer a question of a few dozen voluntary or involuntary old maids here and there, but of millions. Our legislation and our social morality give no answer to this question. Or can the Church provide a satisfactory answer? Should we build gigantic nunneries to accommodate all these women? Or should tolerated prostitution be increased? Obviously this is impossible, since we are dealing neither with saints nor sinners but with ordinary women who cannot register their spiritual requirements with the police. They are decent women who want to marry, and if this is not possible, well—the next best thing. When it comes to the question of love, laws and institutions and ideals mean less to woman than ever before. If things cannot go straight they will have to go crooked.

[249] At the beginning of our era, three-fifths of the population of Italy consisted of slaves—human chattels without rights. Every Roman was surrounded by slaves. The slave and his psychology flooded ancient Italy, and every Roman became inwardly a slave. Living constantly in the atmosphere of slaves, he became infected with their psychology. No one can shield himself from this unconscious influence. Even today the European, however highly developed, cannot live with impunity among the Negroes in Africa; their psychology gets into him unnoticed and unconsciously he becomes a Negro. There is no fighting against it. In

Africa there is a well-known technical expression for this: “going black.” It is no mere snobbery that the English should consider anyone born in the colonies, even though the best blood may run in his veins, “slightly inferior.” There are facts to support this view.

[250] A direct result of slave influence was the strange melancholy and longing for deliverance that pervaded imperial Rome and found striking expression in Virgil’s Fourth Eclogue. The explosive spread of Christianity, a religion which might be said to have risen from the sewers of Rome—Nietzsche called it a “slave insurrection in morals”—was a sudden reaction that set the soul of the lowest slave on a par with that of the divine Caesar. Similar though perhaps less momentous processes of psychological compensation have repeatedly occurred in the history of the world. Whenever some social or psychological monstrosity is created, a compensation comes along in defiance of all legislation and all expectation.

[251] Something similar is happening to women in present-day Europe. Too much that is inadmissible, that has not been lived, is accumulating in the unconscious, and this is bound to have an effect. Secretaries, typists, shop-girls, all are agents of this process, and through a million subterranean channels creeps the influence that is undermining marriage. For the desire of all these women is not to have sexual adventures—only the stupid could believe that—but to get married. The possessors of that bliss must be ousted, not as a rule by naked force, but by that silent, obstinate desire which, as we know, has magical effects, like the fixed stare of a snake. This was ever the way of women.

[252] What is the attitude of the married woman to all this? She clings to the old idea that man is the scapegoat, that he switches from one love-affair to another as he pleases, and so on. On the strength of these outworn conceptions she can wrap herself still more deeply in her jealousies. But all this is only on the surface. Neither the pride of the Roman patrician nor the thick walls of the imperial palace availed to keep out the slave infection. In the same way, no woman can escape the secret, compelling atmosphere with which her own sister, perhaps, is enveloping her, the stifling atmosphere of a life that has never been lived.

Unlived life is a destructive, irresistible force that works softly but inexorably. The result is that the married woman begins to have doubts about marriage. The unmarried believe in it because they want it. Equally, the man believes in marriage because of his love of comfort and a sentimental belief in institutions, which for him always tend to become objects of feeling.

[253] Since women have to be down to earth in matters of feeling, a certain fact should not escape our notice. This is the possibility of contraceptive measures. Children are one of the main reasons for maintaining a responsible attitude towards marriage. If this reason disappears, then the things that are “not done” happen easily enough. This applies primarily to unmarried women, who thus have an opportunity to contract an “approximate” marriage. But it is a consideration that counts also with all those married women who, as I have shown in my essay “Marriage as a Psychological Relationship,”[3] are the “containers.” By this I mean women whose demands as individuals are not satisfied, or not wholly satisfied, by their husbands. Finally, contraception is a fact of enormous importance to women in general, because it does away with the constant fear of pregnancy and the care of an ever-increasing number of children. This deliverance from bondage to nature brings a release of psychic energies that inevitably seek an outlet. Whenever a sum of energy finds no congenial goal it causes a disturbance of the psychic equilibrium. Lacking a conscious goal, it reinforces the unconscious and gives rise to uncertainty and doubt.

[254] Another factor of great importance is the more or less open discussion of the sexual problem. This territory, once so obscure, has now become a focus of scientific and other interests. Things can be heard and said in society that formerly would have been quite impossible. Large numbers of people have learned to think more freely and honestly, and have come to realize how important these matters are. The discussion of the sexual problem is, however, only a somewhat crude prelude to a far deeper question, and that is the question of the psychological relationship between the sexes. In comparison with this the other pales into insignificance, and with it we enter the real domain of woman.

[255] Woman's psychology is founded on the principle of Eros, the great binder and loosener, whereas from ancient times the ruling principle ascribed to man is Logos. The concept of Eros could be expressed in modern terms as psychic relatedness, and that of Logos as objective interest. In the eyes of the ordinary man, love in its true sense coincides with the institution of marriage, and outside marriage there is only adultery or "platonic" friendship. For woman, marriage is not an institution at all but a human love-relationship—at least that is what she would like to believe. (Since her Eros is not naïve but is mixed with other, unavowed motives—marriage as a ladder to social position, etc.—the principle cannot be applied in any absolute sense.) Marriage means to her an exclusive relationship. She can endure its exclusiveness all the more easily, without dying of ennui, inasmuch as she has children or near relatives with whom she has a no less intimate relationship than with her husband. The fact that she has no sexual relationship with these others means nothing, for the sexual relationship is of far less importance to her than the psychic relationship. It is enough that she and her husband both believe their relationship to be unique and exclusive. If he happens to be the "container" he feels suffocated by this exclusiveness, especially if he fails to notice that the exclusiveness of his wife is nothing but a pious fraud. In reality she is distributed among the children and among as many members of the family as possible, thus maintaining any number of intimate relationships. If her husband had anything like as many relationships with other people she would be mad with jealousy. Most men, though, are erotically blinded—they commit the unpardonable mistake of confusing Eros with sex. A man thinks he possesses a woman if he has her sexually. He never possesses her less, for to a woman the Eros-relationship is the real and decisive one. For her, marriage is a relationship with sex thrown in as an accompaniment. Since sex is a formidable thing on account of its consequences, it is useful to have it in a safe place. But when it is less of a danger it also becomes less relevant, and then the question of relationship moves into the foreground.

[256] It is just here that the woman runs into great difficulties with her husband, for the question of relationship borders on a region that for him is dark and painful. He can face this question only when the woman

carries the burden of suffering, that is, when he is the “contained”—in other words, when she can imagine herself having a relationship with another man, and as a consequence suffering disunion within herself. Then it is she who has the painful problem, and he is not obliged to see his own, which is a great relief to him. In this situation he is not unlike a thief who, quite undeservedly, finds himself in the enviable position of having been forestalled by another thief who has been caught by the police. Suddenly he becomes an honourable, impartial onlooker. In any other situation a man always finds the discussion of personal relations painful and boring, just as his wife would find it boring if he examined her on the *Critique of Pure Reason.* For him, Eros is a shadowland which entangles him in his feminine unconscious, in something “psychic,” while for woman Logos is a deadly boring kind of sophistry if she is not actually repelled and frightened by it.

[257] Just as woman began, towards the end of the nineteenth century, to make a concession to masculinity by taking her place as an independent factor in the social world, so man has made, somewhat hesitantly, a concession to femininity by creating a new psychology of complex phenomena, inaugurated by the sexual psychology of Freud. What this psychology owes to the direct influence of women—psychiatrists’ consulting-rooms are packed with women—is a theme that would fill a large volume. I am speaking here not only of analytical psychology but of the beginnings of psychopathology in general. By far the greatest number of “classic” cases, beginning with the “Seeress of Prevorst,” were women, who, perhaps unconsciously, took enormous trouble to put their own psychology on view in the most dramatic fashion, and thus demonstrated to the world the whole question of psychic relationship. Women like Frau Hauffe and Hélène Smith[4] and Miss Beauchamp have assured for themselves a kind of immortality, rather like those worthy folk whose miraculous cures brought fame and prosperity to the wonder-working spot.

[258] An astonishingly high percentage of this material comes from women. This is not as remarkable as it might seem, for women are far more “psychological” than men. A man is usually satisfied with “logic” alone. Everything “psychic,” “unconscious” etc., is repugnant to him; he

considers it vague, nebulous, and morbid. He is interested in things, in facts, and not in the feelings and fantasies that cluster round them or have nothing to do with them. To a woman it is generally more important to know how a man feels about a thing than to know the thing itself. All those things which are merely futile impedimenta to a man are important to her. So it is naturally woman who is the most direct exponent of psychology and gives it its richest content. Very many things can be perceived in her with the utmost distinctness which in a man are mere shadowy processes in the background, whose very existence he is unwilling to admit. But, unlike the objective discussion and verification of facts, a human relationship leads into the world of the psyche, into that intermediate realm between sense and spirit, which contains something of both and yet forfeits nothing of its own unique character.

[259] Into this territory a man must venture if he wishes to meet woman half way. Circumstances have forced her to acquire a number of masculine traits, so that she shall not remain caught in an antiquated, purely instinctual femininity, lost and alone in the world of men. So, too, man will be forced to develop his feminine side, to open his eyes to the psyche and to Eros. It is a task he cannot avoid, unless he prefers to go trailing after woman in a hopelessly boyish fashion, worshipping from afar but always in danger of being stowed away in her pocket.

[260] For those in love with masculinity or femininity *per se* the traditional medieval marriage is enough—and a thoroughly praiseworthy, well-tried, useful institution it is. But the man of today finds it extremely difficult to return to it, and for many the way back is simply impossible, because this sort of marriage can exist only by shutting out all contemporary problems. Doubtless there were many Romans who could shut their eyes to the slave problem and to Christianity, and spend their days in a more or less pleasant unconsciousness. They could do this because they had no relation to the present, only to the past. All those for whom marriage contains no problem are not living in the present, and who shall say they are not blessed! Modern man finds marriage only too problematical. I recently heard a German scholar exclaim before an audience of several hundred people: “Our marriages are sham marriages!” I admired his courage and sincerity. Usually we express ourselves less directly,

cautiously offering good advice as to what might be done—in order not to tarnish the ideal. But for the modern woman—let men take note of this—the medieval marriage is an ideal no longer. True, she keeps her doubts to herself, and hides her rebelliousness; one woman because she is married and finds it highly inconvenient if the door of the safe is not hermetically sealed, another because she is unmarried and too virtuous to look her own tendencies squarely in the face. Nevertheless, their newly-won masculinity makes it impossible for either of them to believe in marriage in its traditional form ("He shall be thy master"). Masculinity means knowing what one wants and doing what is necessary to achieve it. Once this lesson has been learned it is so obvious that it can never again be forgotten without tremendous psychic loss. The independence and critical judgment she acquires through this knowledge are positive values and are felt as such by the woman. She can never part with them again. The same is true of the man who, with great efforts, wins that needful feminine insight into his own psyche, often at the cost of much suffering. He will never let it go again, because he is thoroughly aware of the importance of what he has won.

[261] At first glance it might be thought that such a man and woman would be especially likely to make the "perfect marriage." In reality this is not so; on the contrary, a conflict begins immediately. What the woman, in her new-found self-assurance, wants to do is not at all pleasing to the man, while the feelings he has discovered in himself are far from agreeable to the woman. What both have discovered in themselves is not a virtue or anything of intrinsic value; it is something comparatively inferior, and it might justly be condemned if it were understood as the outcome of a personal choice or mood. And that, indeed, is what usually happens. The masculinity of the woman and the femininity of the man *are* inferior, and it is regrettable that the full value of their personalities should be contaminated by something that is less valuable. On the other hand, the shadow belongs to the wholeness of the personality: the strong man must somewhere be weak, somewhere the clever man must be stupid, otherwise he is too good to be true and falls back on pose and bluff. Is it not an old truth that woman loves the weaknesses of the strong man more than his strength, and the stupidity of the clever man more

than his cleverness? Her love wants the whole man—not mere masculinity as such but also its negation. The love of woman is not sentiment, as is a man's, but a will that is at times terrifyingly unsentimental and can even force her to self-sacrifice. A man who is loved in this way cannot escape his inferior side, for he can only respond to the reality of her love with his own reality. And this reality is no fair semblance, but a faithful reflection of that eternal human nature which links together all humanity, a reflection of the heights and depths of human life which are common to us all. In this reality we are no longer differentiated persons (*persona* means a mask), but are conscious of our common human bonds. Here I strip off the distinctiveness of my own personality, social or otherwise, and reach down to the problems of the present day, problems which do not arise out of myself—or so at least I like to imagine. Here I can no longer deny them; I feel and know myself to be one of many, and what moves the many moves me. In our strength we are independent and isolated, and are masters of our own fate; in our weakness we are dependent and bound, and become unwilling instruments of fate, for here it is not the individual will that counts but the will of the species.

[262] What the two sexes have won through mutual assimilation is an inferiority when viewed from the two-dimensional, personal world of appearances, and an immoral pretension if regarded as a personal claim. But in its truest meaning for life and society it is an overcoming of personal isolation and selfish reserve in order to take an active part in the solution of present-day problems. If, therefore, the woman of today consciously or unconsciously loosens the cohesion of the marriage bond by her spiritual or economic independence, this is not the expression of her personal will, but of the will of the species, which makes her, the individual woman, its tool.

[263] The institution of marriage is such a valuable thing, both socially and morally—religious people even regard it as a sacrament—that it is quite understandable that any weakening of it should be felt as undesirable, indeed scandalous. Human imperfection is always a discord in the harmony of our ideals. Unfortunately, no one lives in the world as we desire it, but in the world of actuality where good and evil clash and

destroy one another, where no creating or building can be done without dirtying one's hands. Whenever things get really bad, there is always some one to assure us amid great applause that nothing has happened and everything is in order. I repeat, anyone who lives and thinks like this is not living in the present. If we examine any marriage with a really critical eye, we shall find—unless acute pressure of circumstances has completely extinguished all signs of "psychological" trouble—symptoms of its weakening and clandestine disruption, "marriage problems" ranging from unbearable moods to neurosis and adultery. Unfortunately, those who can still bear to remain unconscious cannot be imitated; their example is not infectious enough to induce more conscious people to descend again to the level of mere unconsciousness.

[264] As to all those—and they are many—who are not obliged to live in the present, it is extremely important that they should believe in the ideal of marriage and hold fast to it. Nothing is gained if a valuable ideal is merely destroyed and not replaced by something better. Therefore even the women hesitate, whether they are married or not, to go over openly to the side of rebellion. But at least they do not follow the lead of that well-known authoress who, after trying out all sorts of experiments, ended up in the secure haven of matrimony, whereupon marriage became the best solution, and all those who did not achieve it could brood on their mistakes and end their days in pious renunciation. For the modern woman marriage is not as easy as that. Her husband would have something to say on this score.

[265] So long as there are legalistic clauses that lay down exactly what adultery is, women will have to remain with their doubts. But do our legislators really know what "adultery" is? Is their definition of it the final embodiment of the truth? From the psychological standpoint, the only one that counts for a woman, it is a wretched piece of bungling, like everything else contrived by men for the purpose of codifying love. For a woman, love has nothing to do with "marital misconduct," "extramarital intercourse," "deception of the husband," or any of the less savoury formulas invented by the erotically blind masculine intellect and echoed by the self-opinionated demon in woman. Nobody but the absolute believer in the inviolability of traditional marriage could perpetrate such

breaches of good taste, just as only the believer in God can really blaspheme. Whoever doubts marriage in the first place cannot infringe against it; for him the legal definition is invalid because, like St. Paul, he feels himself beyond the law, on the higher plane of love. But because the believers in the law so frequently trespass against their own laws, whether from stupidity, temptation, or mere viciousness, the modern woman begins to wonder whether she too may not belong to the same category. From the traditional standpoint she does, and she has to realize this in order to smash the idol of her own respectability. To be “respectable” means, as the word tells us, to allow oneself to be seen; a respectable person is one who comes up to public expectations, who wears an ideal mask—in short, is a fraud. “Good form” is not a fraud, but when respectability represses the psyche, the God-given essence of man, then one becomes what Christ called a whited sepulchre.

[266] The modern woman has become conscious of the undeniable fact that only in the state of love can she attain the highest and best of which she is capable, and this knowledge drives her to the other realization that love is beyond the law. Her respectability revolts against this, and one is inclined to identify this reaction with public opinion. That would be the lesser evil; what is worse is that public opinion is in her blood. It comes to her like a voice from within, a sort of conscience, and this is the power that holds her in check. She is unaware that love, her most personal, most prized possession, could bring her into conflict with history. Such a thing would seem to her most unexpected and absurd. But who, if it comes to that, has fully realized that history is not contained in thick books but lives in our very blood?

[267] So long as a woman lives the life of the past she can never come into conflict with history. But no sooner does she begin to deviate, however slightly, from a cultural trend that has dominated the past than she encounters the full weight of historical inertia, and this unexpected shock may injure her, perhaps fatally. Her hesitation and her doubt are understandable enough, for, if she submits to the law of love, she finds that she is not only in a highly disagreeable and dubious situation, where every kind of lewdness and depravity abounds, but actually caught

between two universal forces—historical inertia and the divine urge to create.

[268] Who, then, will blame her for hesitating? Do not most men prefer to rest on their laurels rather than get into a hopeless conflict as to whether they shall or shall not make history? In the end it boils down to this: is one prepared to break with tradition, to be “unhistorical” in order to make history, or not? No one can make history who is not willing to risk everything for it, to carry the experiment with his own life through to the bitter end, and to declare that his life is not a continuation of the past, but a new beginning. Mere continuation can be left to the animals, but inauguration is the prerogative of man, the one thing he can boast of that lifts him above the beasts.

[269] There is no doubt that the woman of today is deeply concerned with this problem. She gives expression to one of the cultural tendencies of our time: the urge to live a completer life, a longing for meaning and fulfilment, a growing disgust with senseless one-sidedness, with unconscious instinctuality and blind contingency. The psyche of the modern European has not forgotten the lesson of the last war, however much it has been banished from his consciousness. Women are increasingly aware that love alone can give them full stature, just as men are beginning to divine that only the spirit can give life its highest meaning. Both seek a psychic relationship, because love needs the spirit, and the spirit love, for its completion.

[270] Woman nowadays feels that there is no real security in marriage, for what does her husband’s faithfulness mean when she knows that his feelings and thoughts are running after others and that he is merely too calculating or too cowardly to follow them? What does her own faithfulness mean when she knows that she is simply using it to exploit her legal right of possession, and warping her own soul? She has intimations of a higher fidelity to the spirit and to a love beyond human weakness and imperfection. Perhaps she will yet discover that what seems like weakness and imperfection, a painful disturbance, or an alarming deviation, must be interpreted in accordance with its dual nature. These are steps that lead down to the lowest human level and

finally end in the morass of unconsciousness if the individual lets go of his personal distinctiveness. But if he can hold on to it, he will experience for the first time the meaning of selfhood, provided that he can simultaneously descend below himself into the undifferentiated mass of humanity. What else can free him from the inner isolation of his personal differentiation? And how else can he establish a psychic bridge to the rest of mankind? The man who stands on high and distributes his goods to the poor is separated from mankind by the height of his own virtue, and the more he forgets himself and sacrifices himself for others the more he is inwardly estranged from them.

[271] The word “human” sounds very beautiful, but properly understood it does not mean anything particularly beautiful, or virtuous, or intelligent, but just a low average. This is the step which Zarathustra could not take, the step to the “Ugliest Man,” who is real man. Our resistance to taking this step, and our fear of it, show how great is the attraction and seductive power of our own depths. To cut oneself off from them is no solution; it is a mere sham, an essential misunderstanding of their meaning and value. For where is a height without depth, and how can there be light that throws no shadow? There is no good that is not opposed by evil. “No man can be redeemed from a sin he has not committed,” says Carpocrates; a deep saying for all who wish to understand, and a golden opportunity for all those who prefer to draw false conclusions. What is down below is not just an excuse for more pleasure, but something we fear because it demands to play its part in the life of the more conscious and more complete man.

[272] What I am saying here is not for the young—it is precisely what they ought not to know—but for the more mature man whose consciousness has been widened by experience of life. No man can begin with the present; he must slowly grow into it, for there would be no present but for the past. A young person has not yet acquired a past, therefore he has no present either. He does not create culture, he merely exists. It is the privilege and the task of maturer people, who have passed the meridian of life, to create culture.

[273] The European psyche has been torn to shreds by the hellish barbarism of the war. While man turns his hand to repairing the outer damage, woman—unconsciously as ever—sets about healing the inner wounds, and for this she needs, as her most important instrument, a psychic relationship. But nothing hampers this more than the exclusiveness of the medieval marriage, for it makes relationship altogether superfluous. Relationship is possible only if there is a psychic distance between people, in the same way that morality presupposes freedom. For this reason the unconscious tendency of woman aims at loosening the marriage structure, but not at the destruction of marriage and the family. That would be not only immoral but a thoroughly pathological misuse of her powers.

[274] It would take volumes of case-material to describe the innumerable ways in which this goal is achieved. It is the way of woman, as of nature, to work indirectly, without naming her goal. To anything unsatisfactory she reacts purposively, with moods, outbursts of affects, opinions, and actions that all have the same end in view, and their apparent senselessness, virulence, and cold-blooded ruthlessness are infinitely distressing to the man who is blind to Eros.

[275] The indirect method of woman is dangerous, for it can hopelessly compromise her aim. That is why she longs for greater consciousness, which would enable her to name her goal and give it meaning, and thus escape the blind dynamism of nature. In any other age it would have been the prevailing religion that showed her where her ultimate goal lay; but today religion leads back to the Middle Ages, back to that soul-destroying unrelatedness from which came all the fearful barbarities of war. Too much soul is reserved for God, too little for man. But God himself cannot flourish if man’s soul is starved. The feminine psyche responds to this hunger, for it is the function of Eros to unite what Logos has sundered. The woman of today is faced with a tremendous cultural task—perhaps it will be the dawn of a new era.

THE MEANING OF PSYCHOLOGY FOR MODERN MAN[1]

[276] I have always found it uncommonly difficult to make the meaning of psychology intelligible to a wider public. This difficulty dates back to the time when I was a doctor in a mental hospital. Like every psychiatrist, I made the astonishing discovery that it is not we who hold competent opinions on mental health and sickness, but the public, who always know much better than we do. They tell us that the patient does not really climb up the walls, that he knows where he is, that he recognizes his relatives, that he hasn't forgotten his name, that, consequently, he is not really ill but only a little depressed or a little excited, and that the psychiatrist's notion that the man is suffering from such and such an illness is entirely incorrect.

[277] This very common experience introduces us to the field of psychology proper, where things are even worse. Everyone thinks that psychology is what he himself knows best—psychology is always *his* psychology, which he alone knows, and at the time his psychology is everybody else's psychology. Instinctively he supposes that his own psychic constitution is the general one, and that everyone is essentially like everyone else, that is to say like himself. Husbands suppose this of their wives, wives suppose it of their husbands, parents of their children, and children of their parents. It is as though everyone had the most direct access to what is going on inside him, was intimately acquainted with it and competent to pass an opinion on it; as though his own psyche were a kind of master-psyche which suited all and sundry, and entitled him to suppose that his own situation was the general rule. People are profoundly astonished, or even horrified, when this rule quite obviously does not fit—when they discover that another person really is different from themselves. Generally speaking, they do not feel these psychic differences as in any way curious, let alone attractive, but as disagreeable failings that are hard to bear, or as unendurable faults that have to be condemned. The painfully obvious difference seems like a contravention of the natural order, like a shocking

mistake that must be remedied as speedily as possible, or a misdemeanour that calls for condign punishment.

[278] As you know, there actually are widely accepted psychological theories which start from the assumption that the human psyche is the same everywhere and can therefore be explained in the same way regardless of circumstances. The appalling monotony presupposed by these theories, however, is contradicted by the fact that individual psychic differences do exist and are capable of almost infinite variation. In addition to this, one of the theories explains the world of psychic phenomena mainly in terms of the sexual instinct, and the other in terms of the power drive. The result of this inconsistency is that both theories cling all the more rigidly to their principles and show clear tendencies to set themselves up as the one and only source of salvation. Each denies the other, and one asks oneself in vain which of them is right. But although the adherents of both views try their utmost to ignore each other's existence, these tactics do nothing to resolve the contradiction. And yet the answer to the riddle is absurdly simple. It amounts to this: both of them are right, in so far as each theory describes a psychology which resembles that of its adherents. We can well say with Goethe that it "matches the spirit that it comprehends."[2]

[279] Turning back to our theme, let us consider more closely the well-nigh ineradicable prejudice of simple-minded persons that everybody is exactly the same as them. Although it is true in general that psychic differences are admitted as a theoretical possibility, in practice one always forgets that the other person is different from oneself, that he thinks differently, feels differently, sees differently, and wants quite different things. Even scientific theories, as we have seen, start from the assumption that the shoe pinches everyone in the same place. Quite apart from this entertaining domestic quarrel among psychologists, there are other egalitarian assumptions of a social and political nature which are much more serious, because they forget the existence of the individual psyche altogether.

[280] Instead of vexing myself to no purpose over such narrow-minded and short-sighted views, I began to wonder why they should exist at all, and I tried to discover what the reasons might be. This inquiry led me to study

the psychology of primitive peoples. I had long been struck by the fact that there is a certain naïveté and childlikeness about those who are most prejudiced in favour of psychic uniformity. In primitive society one does in fact find that this assumption extends not only to human beings, but to all the objects of nature, the animals, plants, rivers, mountains, and so on. They all have something of man's psychology in them, even trees and stones can speak. And just as there are certain human beings who obviously do not conform to the general rule and are honoured as magicians, witches, chiefs, and medicine-men, so among the animals there are doctor-coyotes, doctor-birds, werewolves, and the like, whose honorific title is conferred whenever an animal behaves in any way out of the ordinary and upsets the tacit assumption of uniformity. This prejudice is evidently a vestige—but a very potent one—of a primitive frame of mind which is based essentially on an insufficiently differentiated consciousness. Individual consciousness or ego-consciousness is a late product of man's development. Its primitive form is a mere group-consciousness, and among the primitive societies that still exist today this is often so poorly developed that many tribes do not even give themselves a name that would distinguish them from other tribes. For instance, in East Africa I came across a tribe who simply called themselves "the people who are there." This primitive group-consciousness goes on living in our own family-consciousness, and we often find that members of a family can give no account of themselves other than that they are called by such and such a name—which seems entirely satisfactory to the person concerned.

[281] But a group-consciousness in which individuals are interchangeable is still not the lowest level of consciousness, for it already shows traces of differentiation. At the lowest and most primitive level we would find a sort of generalized or cosmic consciousness, with complete unconsciousness of the subject. On this level there are only events, but no acting persons.

[282] Our assumption that what pleases me must necessarily please everybody else is therefore an obvious relic from that primordial night of consciousness where there was no perceptible difference between I and You, and where everyone thought, felt, and acted in the same way. But if

anything happened which showed that somebody was not of like mind, there was an immediate disturbance. Nothing arouses so much panic among primitives as something out of the ordinary; it is at once suspected of being dangerous and hostile. This primitive reaction survives in us too: how prompt we are to take offence when somebody does not share our convictions! We are insulted when somebody finds our idea of beauty detestable. We still persecute anyone who thinks differently from ourselves, we still try to force our opinions on others, to convert poor heathens in order to save them from the hell that indubitably lies in wait for them, and we are all abysmally afraid of standing alone with our beliefs.

[283] The psychic equality of all men is an unspoken assumption deriving from the individual's original unconsciousness of himself. In that far-off world there was no individual consciousness, but only a collective psyche from which gradually an individual consciousness emerged on the higher levels of development. The indispensable condition for the existence of an individual consciousness is its difference from other consciousnesses. One could liken the process of conscious development to a rocket that rises up from the darkness and dissolves in a shower of multicoloured stars.

[284] Psychology as an empirical science is of very recent origin. It is not yet fifty years old, and is therefore still in its swaddling-clothes. The premise of equality prevented it from being born earlier. From this we can see how young any kind of differentiated consciousness is. It has just crept out of its long sleep, slowly and clumsily taking cognizance of its own existence. It would be a delusion to imagine that we have attained anything like a high level of consciousness. Our present-day consciousness is a mere child that is just beginning to say "I."

[285] It was one of the greatest experiences of my life to discover how enormously different people's psyches are. If the collective equality of the psyche were not a primordial fact, the origin and matrix of all individual psyches, it would be a gigantic illusion. But despite our individual consciousness it unquestionably continues to exist as the *collective unconscious*—the sea upon which the ego rides like a ship. For this reason also, nothing of the primordial world of the psyche has ever been lost. Just as the sea stretches its broad tongues between the continents and laps them

round like islands, so our original unconsciousness presses round our individual consciousness. In the catastrophe of mental disease the storm-tide of the sea surges over the island and swallows it back into the depths. In neurotic disturbances there is at least a bursting of dikes, and the fruitful lowlands are laid waste by flood. Neurotics are all shore-dwellers—they are the most exposed to the dangers of the sea. So-called normal people live inland, on higher, drier ground, near placid lakes and streams. No flood however high reaches them, and the circumambient sea is so far away that they even deny its existence. Indeed, a person can be so identified with his ego that he loses the common bond of humanity and cuts himself off from all others. As nobody wants to be entirely like everybody else, this is quite a common occurrence. For primitive egoism, however, the standing rule is that it is never "I" who must change, but always the other fellow.

[286] Individual consciousness is surrounded by the treacherous sea of the unconscious. This consciousness of ours has the appearance of being stable and reliable, but in reality it is a fragile thing and rests on very insecure foundations. Often no more than a strong emotion is needed to upset the sensitive balance of consciousness. Our turns of speech are an indication of this. We say that a person was "beside himself" with rage, he "forgot himself completely," one "couldn't recognize him," "the devil had got into him," etc. Something makes you "jump out of your skin," "drives you mad," so that you "no longer know what you are doing." All these familiar phrases show how easily our ego-consciousness is disrupted by affects. These disturbances do not show themselves only in acute form; often they are chronic and can bring about a lasting change of consciousness. As a result of some psychic upheaval whole tracts of our being can plunge back into the unconscious and vanish from the surface for years and decades. Permanent changes of character are not uncommon. We therefore say, quite correctly, that after some such experience a person was a "changed man." These things happen not only to people with a bad heredity or to neurotics, but to normal people as well. Disturbances caused by affects are known technically as *phenomena of dissociation,* and are indicative of a psychic split. In every psychic conflict we can discern a split of this kind, which may go so far as to threaten the shattered structure of consciousness with complete disintegration.

[287] But even the inland dwellers, the inhabitants of the normal world who forgot the sea, do not live on firm ground. The soil is so friable that at any moment the sea can rush in through continental fissures and maroon them. Primitive man knows this danger not only from the life of his tribe but from his own psychology. The most important of these “perils of the soul,” as they are technically called, are loss of soul and possession. Both are phenomena of dissociation. In the first case, he will say that a soul has wandered away from him, and in the second, that a strange soul has taken up its abode in him, generally in some unpleasant form. This way of putting it may sound odd, but it describes exactly the symptoms which today we call phenomena of dissociation or schizoid states. They are not by any means purely pathological symptoms, for they are found just as much in normal people. They may take the form of fluctuations in the general feeling of well-being, irrational changes of mood, unpredictable affects, a sudden distaste for everything, psychic inertia, and so on. Even the schizoid phenomena that correspond to primitive possession can be observed in normal people. They, too, are not immune to the demon of passion; they, too, are liable to possession by an infatuation, a vice, or a one-sided conviction; and these are all things that dig a deep grave between them and those they hold most dear, and create an aching split in their own psyche.

[288] Primitive man feels the splitting of the psyche as something unseemly and morbid, just as we do. Only, we call it a conflict, nervousness, or a mental breakdown. Not for nothing did the Bible story place the unbroken harmony of plant, animal, man, and God, symbolized as Paradise, at the very beginning of all psychic development, and declare that the first dawning of consciousness—“Ye shall be as gods, knowing good and evil”—was a fatal sin. To the naïve mind it must indeed seem a sin to shatter the divine unity of consciousness that ruled the primal night. It was the Luciferian revolt of the individual against the One. It was a hostile act of disharmony against harmony, a separation from the fusion of all with all. Therefore God cursed the serpent and said: “I will put enmity between thee and the woman, and between thy seed and her seed; it shall bruise thy head, and thou shalt bruise his heel.”

[289] And yet the attainment of consciousness was the most precious fruit of the tree of knowledge, the magical weapon which gave man victory over the earth, and which we hope will give him a still greater victory over himself.

[290] The fact that individual consciousness means separation and opposition is something that man has experienced countless times in his long history. And just as for the individual a time of dissociation is a time for sickness, so it is in the life of nations. We can hardly deny that ours is a time of dissociation and sickness. The political and social conditions, the fragmentation of religion and philosophy, the contending schools of modern art and modern psychology all have one meaning in this respect. And does anyone who is endowed with the slightest sense of responsibility feel any satisfaction at this turn of events? If we are honest, we must admit that no one feels quite comfortable in the present-day world; indeed, it becomes increasingly uncomfortable. The word “crisis,” so often heard, is a medical expression which always tells us that the sickness has reached a dangerous climax.

[291] When man became conscious, the germ of the sickness of dissociation was planted in his soul, for consciousness is at once the highest good and the greatest evil. It is difficult to estimate the sickness of the age in which we live. But if we glance back at the clinical history of mankind, we shall find earlier bouts of sickness which are easier to survey. One of the worst attacks was the malaise that spread through the Roman world in the first centuries after Christ. The dissociation showed itself in an unexampled breakdown of the political and social conditions, in religious and philosophical dissension, and in a deplorable decline of the arts and sciences. If we reduced humanity as it then was to a single individual, we would see before us a highly differentiated personality who, after mastering his environment with sublime self-assurance, split himself up in the pursuit of his separate occupations and interests, forgetting his own origins and traditions, and even losing all memory of his former self, so that he seemed to be now one thing and now another, and thus fell into a hopeless conflict with himself. In the end the conflict led to such a state of enfeeblement that the world he had conquered broke in like a devastating flood and completed the process of destruction.

[292] After long years spent in the investigation of the psyche, there gradually took shape in me, as it had in the minds of other investigators, the fundamental axiom that a psychic phenomenon should never be looked at from one side only, but from the other side as well. Experience has shown that everything has at least two sides, and sometimes several more. Disraeli's maxim that not too much importance should be attached to important things, and that unimportant things are not so unimportant as they seem, is another formulation of the same truth. A third version would be the hypothesis that every psychic phenomenon is compensated by its opposite, in agreement with the proverb, "Les extrêmes se touchent," or, "There is no misfortune so great that no good may come of it."

[293] Thus, the sickness of dissociation in our world is at the same time a process of recovery, or rather, the climax of a period of pregnancy which heralds the throes of birth. A time of dissociation such as prevailed during the Roman Empire is simultaneously an age of rebirth. Not without reason do we date our era from the age of Augustus, for that epoch saw the birth of the symbolical figure of Christ, who was invoked by the early Christians as the Fish, the Ruler of the aeon of Pisces which had just begun.[3] He became the ruling spirit of the next two thousand years. Like the teacher of wisdom in Babylonian legend, Oannes, he rose up from the sea, from the primeval darkness, and brought a world-period to an end. It is true that he said, "I am come not to bring peace but a sword." But that which brings division ultimately creates union. Therefore his teaching was one of all-uniting love.

[294] Our distance in time puts us in the favourable position of being able to see these historical events quite clearly. Had we lived in those days we would probably have been among the many who overlooked them. The Gospel, the joyful tidings, were known only to the humble few; on the surface everything was politics, economic questions, and sport. Religion and philosophy tried to assimilate the spiritual riches that poured into the Roman world from the newly conquered East. Few noticed the grain of mustard-seed that was destined to grow into a great tree.

[295] In classical Chinese philosophy there are two contrary principles, the bright *yang* and the dark *yin*. Of these it is said that always when one principle reaches the height of its power, the counter-principle is stirring

within it like a germ. This is another, particularly graphic formulation of the psychological law of compensation by an inner opposite. Whenever a civilization reaches its highest point, sooner or later a period of decay sets in. But the apparently meaningless and hopeless collapse into a disorder without aim or purpose, which fills the onlooker with disgust and despair, nevertheless contains within its darkness the germ of a new light.

[296] But let us go back for a moment to our earlier attempt to construct a single individual from the period of classical decay. I tried to show you how he disintegrated psychologically, how in a disastrous fit of weakness he lost control of his environment, and finally succumbed to the forces of destruction. Let us suppose that this man came to me for a consultation. I would make the following diagnosis: “You are suffering from overstrain as a result of your numerous activities and boundless extraversion. In the profusion and complexity of your business, personal, and human obligations you have lost your head. You are a kind of Ivar Kreuger,[4] who is a typical representative of the modern European spirit. You must realize, my dear Sir, that you are rapidly going to the dogs.”

[297] This latter realization would be particularly important for him, because patients have in any case a pernicious tendency to go on muddling through in the same old way, even though it has long since proved ineffective, and to make their situation only worse. Waiting is useless. Therefore the question immediately arises: “What is to be done?”

[298] Our patient is an intelligent man. He has tried all the patent medicines, both good and bad, every kind of diet, and all the bits of advice given him by all the clever people. We must therefore proceed with him as with Till Eulenspiegel, who always laughed when the way went uphill, and wept when it went down, in shocking defiance of sound commonsense. But hidden beneath his fool’s garment was a wise man, who when going uphill was rejoicing in the coming descent.

[299] We must direct our patient’s attention to the place where the germ of unity is growing within him, the place of creative birth, which is the deepest cause of all the rifts and schisms on the surface. A civilization does not decay, it regenerates. In the early centuries of our era a man of discernment could have cried out with unshakable certainty amid the

political intrigue and wild speculation of the Caesar-worshipping, circus-besotted Roman world: “The germ of the coming era has even now been born in the darkness, behind all this aimless confusion; the seed of the Tree that will overshadow the nations from Thule in the far West to Poland, from the mountains of the North to Sicily, and unite them in one belief, one culture, and one language.”

[300] That is the psychological law. My patient, in all probability, will not believe a word of it. At the very least he will want to have experienced these things for himself. And here our difficulties begin, for the compensation always makes its appearance just where one would least expect it, and where, objectively considered, it seems least plausible. Let us now suppose that our patient is not the pale abstraction of a long-dead civilization, but a flesh-and-blood man of our own day, who has the misfortune to be a typical representative of our modern European culture. We shall then find that our compensation theory means nothing to him. He suffers most of all from the disease of knowing everything better; there is nothing that he cannot classify and put in the correct pigeonhole. As to his psyche, it is essentially his *own* invention, his *own* will, and it obeys *his* reason exclusively; and if it should happen that it does not do so, if he should nevertheless have psychic symptoms, such as anxiety-states, obsessional ideas, and so on, then it is a clinically identifiable disease with a thoroughly plausible, scientific name. Of the psyche as an original experience which cannot be reduced to anything else he has no knowledge at all and does not know what I am talking about, but he thinks he has understood it perfectly and even writes articles and books in which he bemoans the evils of “psychologism.”

[301] This kind of mentality, barricading itself behind a thick wall of books, newspapers, opinions, social institutions, and professional prejudices, cannot be argued with. Nothing can break through its defences, least of all that little germ of the new which would make him at one with the world and himself. It is so small and ridiculous that for modesty’s sake it would rather give up the ghost at once. Where, then, must we lead our patient in order to give him at least a glimmer of an inkling of something different, something that would counterbalance the everyday world he knows only too well? We must guide him, by devious ways at first, to a dark,

ridiculously insignificant, quite unimportant corner of his psyche, following a long-disused path to the longest-known illusion, which as all the world knows is nothing but … That corner of the psyche is *the dream*, which is nothing but a fleeting, grotesque phantom of the night, and the path is the understanding of dreams.

[302] With Faustian indignation my patient will cry out:

> This witch's quackery disgusts my soul!
> Is this your promise then, that I be healed
> By crooked counsel in this crazy hole,
> In truth by some decrepit dame revealed?
> . . . .
> Cannot you brew an ichor of your own?[5]

[303] To which I shall reply: "Haven't you tried one remedy after another? Haven't you seen for yourself that all your efforts have only led you round in a circle, back to the confusion of your present life? So where will you get that other point of view from, if it cannot be found anywhere in your world?"

[304] Here Mephistopheles murmurs approvingly, "That's where the witch comes in," thus giving his own devilish twist to Nature's secret and perverting the truth that the dream is an inner vision, "mysterious still in open light of day." The dream is a little hidden door in the innermost and most secret recesses of the soul, opening into that cosmic night which was psyche long before there was any ego-consciousness, and which will remain psyche no matter how far our ego-consciousness extends. For all ego-consciousness is isolated; because it separates and discriminates, it knows only particulars, and it sees only those that can be related to the ego. Its essence is limitation, even though it reach to the farthest nebulae among the stars. All consciousness separates; but in dreams we put on the likeness of that more universal, truer, more eternal man dwelling in the darkness of primordial night. There he is still the whole, and the whole is in him, indistinguishable from nature and bare of all egohood.

[305] It is from these all-uniting depths that the dream arises, be it never so childish, grotesque, and immoral. So flowerlike is it in its candour and veracity that it makes us blush for the deceitfulness of our lives. No wonder that in all the ancient civilizations an impressive dream was

accounted a message from the gods! It remained for the rationalism of our age to explain the dream as the remnants left over from the day, as the crumbs that fell into the twilit world from the richly laden table of our consciousness. These dark depths are then nothing but an empty sack, containing no more than what falls into it from above. Why do we always forget that there is nothing majestic or beautiful in the wide domain of human culture that did not grow originally from a lucky idea? What would become of mankind if nobody had lucky ideas any more? It would be far truer to say that our consciousness is that sack, which has nothing in it except what chances to fall into it. We never appreciate how dependent we are on lucky ideas—until we find to our distress that they will not come. A dream is nothing but a lucky idea that comes to us from the dark, all-unifying world of the psyche. What would be more natural, when we have lost ourselves amid the endless particulars and isolated details of the world's surface, than to knock at the door of dreams and inquire of them the bearings which would bring us closer to the basic facts of human existence?

[306] Here we encounter the obstinate prejudice that dreams are so much froth, they are not real, they lie, they are mere wish-fulfilments. All this is but an excuse not to take dreams seriously, for that would be uncomfortable. Our intellectual hybris of consciousness loves isolation despite all its inconveniences, and for this reason people will do anything rather than admit that dreams are real and speak the truth. There are some saints who had very rude dreams. Where would their saintliness be, the very thing that exalts them above the vulgar rabble, if the obscenity of a dream were a real truth? But it is just the most squalid dreams that emphasize our blood-kinship with the rest of mankind, and most effectively damp down the arrogance born of an atrophy of the instincts. Even if the whole world were to fall to pieces, the unity of the psyche would never be shattered. And the wider and more numerous the fissures on the surface, the more this unity is strengthened in the depths.

[307] No one, of course, who has not experienced it himself will be convinced that there could be any independent psychic activity outside consciousness, and certainly not an activity that takes place not only in me but simultaneously in all men. But when we compare the psychology of

modern art with the findings of psychological research, and this again with the products of mythology and philosophy, we shall discover irrefutable proofs of the existence of this collective, unconscious factor.

[308] Our patient, however, is so accustomed to treat his psyche as something he has under his control that he will retort that he has never yet observed anything objective about his psychic processes. They are, on the contrary, the most subjective things one can possibly imagine. To this I rejoin: "Then you can make your anxiety-states and your obsessional ideas disappear at once. The bad moods you are riddled with will be no more. You have only to speak the magic word."

[309] Naturally, in his modern naïveté, he has entirely failed to notice that he is as much possessed by his pathological states as any witch or witch-hunter in the darkest Middle Ages. It is merely a difference of name. In those days they spoke of the devil, today we call it a neurosis. But it comes to the same thing, to the same age-old experience: something objectively psychic and strange to us, not under our control, is fixedly opposed to the sovereignty of our will. We are in no better case than the Prokto-phantasmist in *Faust*, when he exclaimed:

> Preposterous! You still intend to stay?
> Vanish at once, you've been explained away!
> By rules this devil's crew is nothing daunted:
> For all our wisdom, Tegel still is haunted.[6]

[310] If our patient can submit to the logic of this argument, much will have been gained. The way to experience of the psyche is open. But soon one comes to another prejudice that blocks further progress. "Granted," he will say, "that I am experiencing a psychic force that thwarts my will, an objective-psychic factor, if you like to call it that. But it still remains something purely psychological, vague, unreliable, and of no importance in the practical affairs of life."

[311] It is amazing how people get caught in words. They always imagine that the name postulates the thing—just as if we were doing the devil a serious wrong when we call him a neurosis! This touchingly childlike trait is another remnant left over from the year 1, when mankind still operated with magical words. But what is behind the devil or the neurosis does not

bother about the name we give it. Naturally we do not know what the psyche is. We speak of the "unconscious" merely because we are not conscious of what it is in reality. We know this as little as the physicist knows what matter is. He simply has theories about it, certain views, picturing it now in one way and now in another. For a time the picture fits, then a new discovery brings quite a different view. But that has no effect on matter. Or is the reality of matter in some way diminished?

[312] We simply do not know what we are dealing with when we encounter this strange and disturbing factor which we call the unconscious or the objective psyche. With some semblance of justification, it has been defined as the sexual instinct or the power drive. But this does nothing like justice to its real significance. What is behind these instincts, which are certainly not the be-all and end-all of existence, but merely represent the limits of our understanding? In this field every interpretation has free play. You can also take the unconscious as a manifestation of the life-instinct, and equate the force which creates and sustains life with Bergson's *élan vital*, or even with his *durée créatrice*. Another parallel would be Schopenhauer's Will. I know people who feel that the strange power in their own psyche is something divine, for the very simple reason that it has given them an understanding of what is meant by religious experience.

[313] I admit that I fully understand the disappointment of my patient and of my public when I point to dreams as a source of information in the spiritual confusion of our modern world. Nothing is more natural than that such a paradoxical gesture should strike one as completely absurd. What can a dream do, this utterly subjective and nugatory thing, in a world brimful of overpowering realities? Realities must be countered with other, equally palpable realities, and not with dreams, which merely disturb our sleep or put us in a bad mood the next day. You cannot build a house with dreams, or pay taxes, or win battles, or overcome the world crisis. Therefore my patient, like all other sensible people, will want me to tell him what can be done in this insufferable situation, and with appropriate, common-sense methods. The only snag is that all the methods that seem appropriate have already been tried out with no success whatever, or consist of wishful fantasies that are impossible in practice. These methods

were all chosen with a view to meeting the existing situation. For instance, when someone gets his business into a mess, he naturally considers how he can set it on its feet again, and he employs all the remedies that are designed to restore his languishing business to health. But what happens when all these remedies have been tried, when, contrary to all reasonable expectations, the situation only slithers from bad to worse? In that case he will be compelled to give up the use of these so-called reasonable methods as speedily as possible.

[314] My patient, and perhaps our whole age, is in this situation. Anxiously he asks me, “What can I do?” And I must answer, “I don’t know either.” “Then there’s nothing to be done?” I reply that mankind has got into these blind alleys countless times during the course of evolution, and no one knew what to do because everybody was busy hatching out clever plans to meet the situation. No one had the courage to admit that they had all taken the wrong turning. And then, suddenly, things somehow began to move again, so that the same old humanity still exists, though somewhat different from before.

[315] When we look at human history, we see only what happens on the surface, and even this is distorted in the faded mirror of tradition. But what has really been happening eludes the inquiring eye of the historian, for the true historical event lies deeply buried, experienced by all and observed by none. It is the most private and most subjective of psychic experiences. Wars, dynasties, social upheavals, conquests, and religions are but the superficial symptoms of a secret psychic attitude unknown even to the individual himself, and transmitted by no historian; perhaps the founders of religions give us the most information in this regard. The great events of world history are, at bottom, profoundly unimportant. In the last analysis, the essential thing is the life of the individual. This alone makes history, here alone do the great transformations first take place, and the whole future, the whole history of the world, ultimately spring as a gigantic summation from these hidden sources in individuals. In our most private and most subjective lives we are not only the passive witnesses of our age, and its sufferers, but also its makers. We make our own epoch.

[316] So when I counsel my patient to pay attention to his dreams, I mean: “Turn back to the most subjective part of yourself, to the source of your

being, to that point where you are making world history without being aware of it. Your apparently insoluble difficulty must, it is obvious, remain insoluble, for otherwise you would wear yourself out seeking for remedies of whose ineptitude you are convinced from the start. Your dreams are an expression of your inner life, and they can show you through what false attitude you have landed yourself in this blind alley."

[317] Dreams are impartial, spontaneous products of the unconscious psyche, outside the control of the will. They are pure nature; they show us the unvarnished, natural truth, and are therefore fitted, as nothing else is, to give us back an attitude that accords with our basic human nature when our consciousness has strayed too far from its foundations and run into an impasse.

[318] To concern ourselves with dreams is a way of reflecting on ourselves —a way of self-reflection. It is not our ego-consciousness reflecting on itself; rather, it turns its attention to the objective actuality of the dream as a communication or message from the unconscious, unitary soul of humanity. It reflects not on the ego but on the self; it recollects that strange self, alien to the ego, which was ours from the beginning, the trunk from which the ego grew. It is alien to us because, through the aberrations of consciousness, we have alienated ourselves from it.

[319] But even if we accept the proposition that dreams are not arbitrary inventions but are natural products of unconscious psychic activity, we shall still, when confronted with a real dream, lack the courage to see in it a message of any importance. Dream-interpretation was one of the accomplishments of witchcraft, and was therefore among the black arts persecuted by the Church. Even though we of the twentieth century are rather more broad-minded in this respect, so much historical prejudice still attaches to the whole idea of dream-interpretation that we do not take kindly to it. Is there, one may ask, any reliable method of dream-interpretation? Can we put faith in any of the various speculations? I admit that I share these misgivings to the full, and I am convinced that there is in fact no absolutely reliable method of interpretation. Absolute reliability in the interpretation of natural events is found only within the narrowest limits—that is to say, when no more comes out of the interpretation than we have put in. Every attempt to explain nature is a hazard. A reliable

method does not come into being until long after the pioneer work has been accomplished. We know that Freud has written a book on dream-interpretation, but his interpretation is an example of what we have just said: no more comes out of it than what his theory allows to be put into the dream. This view naturally does not do anything like justice to the boundless freedom of dream-life, with the consequence that the meaning of the dream is concealed rather than revealed. Also, when we consider the infinite variety of dreams, it is difficult to conceive that there could ever be a method or a technical procedure which would lead to an infallible result. It is, indeed, a good thing that no valid method exists, for otherwise the meaning of the dream would be limited in advance and would lose precisely that virtue which makes dreams so valuable for therapeutic purposes—their ability to offer new points of view.

[320] One would do well, therefore, to treat every dream as though it were a totally unknown object. Look at it from all sides, take it in your hand, carry it about with you, let your imagination play round it, and talk about it with other people. Primitives tell each other impressive dreams, in a public palaver if possible, and this custom is also attested in late antiquity, for all the ancient peoples attributed great significance to dreams. Treated in this way, the dream suggests all manner of ideas and associations which lead us closer to its meaning. The ascertainment of the meaning is, I need hardly point out, an entirely arbitrary affair, and this is where the hazards begin. Narrower or wider limits will be set to the meaning, according to one's experience, temperament, and taste. Some people will be satisfied with little, for others much is still not enough. Also the meaning of the dream, or our interpretation of it, is largely dependent on the intentions of the interpreter, on what he expects the meaning to be or requires it to do. In eliciting the meaning he will involuntarily be guided by certain presuppositions, and it depends very much on the scrupulousness and honesty of the investigator whether he gains something by his interpretation or perhaps only becomes still more deeply entangled in his mistakes. So far as presuppositions are concerned, we may take it as certain that the dream is not an idle invention of the conscious mind but an involuntary, natural phenomenon, even though it should prove true that dreams are in some way distorted by becoming conscious. Anyway this distortion occurs so quickly and automatically that it is barely perceptible.

It is therefore safe to assume that it is an integral part of the dream-function. And it is equally safe to assume that dreams arise from the unconscious part of our being and are, consequently, its symptoms, allowing us to make inferences as to the nature of this being. If we wish to investigate our own nature, dreams are the most suitable media for this purpose.

[321] During the work of interpretation one must abstain from all presuppositions that smack of superstition, such as, first and foremost, the notion that the protagonists in dreams are nothing other than these same persons in real life. One should never forget that one dreams in the first place, and almost to the exclusion of all else, of oneself. (Any exceptions are governed by quite definite rules, but I cannot go into this here.) If we acknowledge this truth we shall sometimes find ourselves faced with very interesting problems. I remember two instructive cases: one of my patients dreamed of a drunken tramp who lay in a ditch, and another of a drunken prostitute who rolled about in the gutter. The first patient was a theologian, the second a distinguished lady in high society. Both of them were outraged and horrified, and absolutely refused to admit that they had dreamed of themselves. I gave them both the well-meant advice that they should spend an hour in self-reflection, diligently and devoutly considering in what ways they were not much better than their drunken brother in the ditch and their drunken sister in the gutter. The subtle process of self-knowledge often begins with a bomb-shell like this. The “other” person we dream of is not our friend and neighbour, but the other in us, of whom we prefer to say: “I thank thee, Lord, that I am not as this publican and sinner.” Certainly the dream, being a child of nature, has no moralizing intention; it merely exemplifies the well-known law that no trees reach up to heaven.

[322] If, in addition to this, we bear in mind that the unconscious contains everything that is lacking to consciousness, that the unconscious therefore has a compensatory tendency, then we can begin to draw conclusions—provided, of course, that the dream does not come from too deep a psychic level. If it is a dream of this kind, it will as a rule contain mythological motifs, combinations of ideas or images which can be found in the myths

of one's own folk or in those of other races. The dream will then have a collective meaning, a meaning which is the common property of mankind.

[323] This does not contradict my earlier remark that we always dream of ourselves. As individuals we are not completely unique, but are like all other men. Hence a dream with a collective meaning is valid in the first place for the dreamer, but it expresses at the same time the fact that his momentary problem is also the problem of other people. This is often of great practical importance, for there are countless people who are inwardly cut off from humanity and oppressed by the thought that nobody else has their problems. Or else they are those all-too-modest souls who, feeling themselves nonentities, have kept their claim to social recognition on too low a level. Moreover, every individual problem is somehow connected with the problem of the age, so that practically every subjective difficulty has to be viewed from the standpoint of the human situation as a whole. But this is permissible only when the dream really is a mythological one and makes use of collective symbols.

[324] Such dreams are called by primitives "big" dreams. The primitives I observed in East Africa took it for granted that "big" dreams are dreamed only by "big" men—medicine-men, magicians, chiefs, etc. This may be true on a primitive level. But with us these dreams are dreamed also by simple people, more particularly when they have got themselves, mentally or spiritually, in a fix. It is obvious that in handling "big" dreams intuitive guesswork will lead nowhere. Wide knowledge is required, such as a specialist ought to possess. But no dream can be interpreted with knowledge alone. This knowledge, furthermore, should not be dead material that has been memorized; it must possess a living quality, and be infused with the experience of the person who uses it. Of what use is philosophical knowledge in the head, if one is not also a philosopher at heart? Anyone who wishes to interpret a dream must himself be on approximately the same level as the dream, for nowhere can he see anything more than what he is himself.

[325] The art of interpreting dreams cannot be learnt from books. Methods and rules are good only when we can get along without them. Only the man who can do it anyway has real skill, only the man of understanding really understands. No one who does not know himself can know others.

And in each of us there is another whom we do not know. He speaks to us in dreams and tells us how differently he sees us from the way we see ourselves. When, therefore, we find ourselves in a difficult situation to which there is no solution, he can sometimes kindle a light that radically alters our attitude—the very attitude that led us into the difficult situation.

[326] The more I engrossed myself in these problems over the years, the stronger became my impression that our modern education is morbidly one-sided. No doubt we are right to open the eyes and ears of our young people to the wide world, but it is the maddest of delusions to think that this really equips them for the task of living. It is the kind of training that enables a young person to adapt himself outwardly to the world and reality, but no one gives a thought to the necessity of adapting to the self, to the powers of the psyche, which are far mightier than all the Great Powers of the earth. A system of education does indeed exist, but it has its origins partly in antiquity and partly in the early Middle Ages. It styles itself the Christian Church. But it cannot be denied that in the course of the last two centuries Christianity, no less than Confucianism in China and Buddhism in India, has largely forfeited its educative activity. Human iniquity is not to blame for this, but rather a gradual and widespread spiritual change, the first symptom of which was the Reformation. It shattered the authority of the Church as a teacher, and thereafter the authoritarian principle itself began to crumble away. The inevitable consequence was an increase in the importance of the individual, which found expression in the modern ideals of humanity, social welfare, democracy, and equality. The decidedly individualistic trend of these latest developments is counterbalanced by a compensatory reversion to the collective man, whose authority at present is the sheer weight of the masses. No wonder that nowadays there is a feeling of catastrophe in the air, as though an avalanche had broken loose which nothing can stop. The collective man threatens to stifle the individual man, on whose sense of responsibility everything valuable in mankind ultimately depends. The mass as such is always anonymous and always irresponsible. So-called leaders are the inevitable symptoms of a mass movement. The true leaders of mankind are always those who are capable of self-reflection, and who relieve the dead weight of the masses at least of their own weight,

consciously holding aloof from the blind momentum of the mass in movement.

[327] But who can resist this all-engulfing force of attraction, when each man clings to the next and each drags the other with him? Only one who is firmly rooted not only in the outside world but also in the world within.

[328] Small and hidden is the door that leads inward, and the entrance is barred by countless prejudices, mistaken assumptions, and fears. Always one wishes to hear of grand political and economic schemes, the very things that have landed every nation in a morass. Therefore it sounds grotesque when anyone speaks of hidden doors, dreams, and a world within. What has this vapid idealism got to do with gigantic economic programmes, with the so-called problems of reality?

[329] But I speak not to nations, only to the individual few, for whom it goes without saying that cultural values do not drop down like manna from heaven, but are created by the hands of individuals. If things go wrong in the world, this is because something is wrong with the individual, because something is wrong with me. Therefore, if I am sensible, I shall put myself right first. For this I need—because outside authority no longer means anything to me—a knowledge of the innermost foundations of my being, in order that I may base myself firmly on the eternal facts of the human psyche.

[330] If I spoke before chiefly of dreams, I did so because I wished to draw attention to one of the most immediate approaches to the world of inner experience. But there are many things besides dreams which I cannot discuss here. The investigation of the deeper levels of the psyche brings to light much that we, on the surface, can at most dream about. No wonder, then, that sometimes the strongest and most original of all man's spiritual activities—the religious activity—is also discovered from our dreams. This is the activity which, more even than sexuality or social adaptation, is thwarted in modern man. I know people for whom the encounter with the strange power within themselves was such an overwhelming experience that they called it "God." So experienced, "God" too is a "theory" in the most literal sense, a way of looking at the world, an image which the limited human mind creates in order to express an unfathomable and

ineffable experience. The experience alone is real, not to be disputed; but the image can be soiled or broken to pieces.

[331] Names and words are sorry husks, yet they indicate the quality of what we have experienced. When we call the devil a neurosis, we are signifying that we feel this demonic experience as a sickness which is characteristic of our age. When we call it repressed sexuality or the will to power, this shows that it seriously disturbs even these fundamental instincts. When we call it God, we are trying to describe its profound and universal significance, because this is what we have glimpsed in the experience. Looking at it soberly, and bearing in mind the vast, unknowable background, we must admit that this latter designation is the most cautious and also the most modest, because it sets no limits to the experience and does not squeeze it into any conceptual schema. Unless, of course, someone should hit upon the singular idea that he knew exactly what God is.

[332] Whatever name we may put to the psychic background, the fact remains that our consciousness is influenced by it in the highest degree, and all the more so the less we are conscious of it. The layman can hardly conceive how much his inclinations, moods, and decisions are influenced by the dark forces of his psyche, and how dangerous or helpful they may be in shaping his destiny. Our cerebral consciousness is like an actor who has forgotten that he is playing a role. But when the play comes to an end, he must remember his own subjective reality, for he can no longer continue to live as Julius Caesar or as Othello, but only as himself, from whom he has become estranged by a momentary sleight of consciousness. He must know once again that he was merely a figure on the stage who was playing a piece by Shakespeare, and that there was a producer as well as a director in the background who, as always, will have something very important to say about his acting.

THE STATE OF PSYCHOTHERAPY TODAY[1]

[333] In earlier days, when people were less sophisticated in their ideas, psychotherapy was regarded as a technique which could be applied to practically anybody who had learnt it by heart. In medical treatises and text-books you would come across the wonderful remark: "… in addition, the following may be of use: massage, cold baths, mountain air, and psychotherapy." The nature of this "psychotherapy" was prudently never specified in detail. Certainly, so long as it consisted of hypnotism, suggestion, persuasion, "rééducation de la volonté," Couéism, and so forth, anybody could learn the art by rote and say his piece in season and out of season. The medical profession generally—and this includes psychiatrists and neurologists—is notoriously slow to learn and needs a long period of incubation. And so it happened that, long after psychotherapy had grown to a psychology, and therapeutics had ceased to be a mere technique, the illusion still continued to flourish that psychological treatment was some kind of technical procedure. It would be decidedly too optimistic to say that this illusion has ceased to exist even among the ranks of psychotherapists, nor would it accord with the facts. All that has happened is that now and again voices are heard which demur at the mechanization of psychotherapy and aspire to rescue it from the soullessness of a mere technical procedure. Their aim is to raise it to the higher plane of psychological and philosophical dialectic, where it becomes a discussion between two psychic systems, that is, two human beings confronting one another in their totality.

[334] These doubts and aims were not, as one might think, dragged down from the airless realm of eternal ideas by pernickety minds overloaded with philosophy. On the contrary, they sprang from the deep impression which the unedifying confusion of psychological and therapeutic views cannot fail to make today even on the distant observer. A glance at the chaotic profusion of psychotherapeutic literature is sufficient confirmation of this. Not only are there different schools which until very

recently have anxiously avoided any serious communication with one another, there are also groups—self-styled "Societies"—who barricade themselves like cenobites against unbelievers, not to mention the numerous solitaries who are not a little proud of being the only members of their church, to use the well-known *mot* of Coleridge. No doubt this state of affairs is a sure sign of vitality and of the many pressing problems still to be solved in the field of psychotherapy. But it is far from gratifying; and it ill accords with the dignity of science when bigoted dogmatism and personal touchiness hamper the free discussion so necessary to its growth.

[335] What, indeed, could shed a more glaring light on the fact that psychotherapy is anything but a technique than the very multiplicity of techniques, points of view, "psychologies," and philosophical premises (or lack of them)? Does not this welter of contradictions show in the most striking way that what we are concerned with is far more than a technique? A technique can be modified and improved by all sorts of recipes and dodges, and everybody would welcome a change for the better. But, far from that being the case, we find all too many people entrenching themselves behind precepts which they envelop with the sacrosanct halo of dogma. Ostensibly they are guarding the ultimate scientific truth; but has it ever—except in the most benighted periods of history—been observed that a scientific truth needed to be elevated to the rank of a dogma? Truth can stand on its own feet, only shaky opinions require the support of dogmatization. Fanaticism is ever the brother of doubt.

[336] What is the lesson of these characteristic and, for the history of any science, very noteworthy signs? Beyond a doubt they point to the incontrovertible fact that psychotherapy has outgrown the stage of technique and has already broken into the realm of *opinion.* We can easily agree about a technique, but hardly ever about opinions. Hence the heatedness of discussion—indeed if there be any—or the equally eloquent silence.

[337] It has long been imagined that psychotherapy can be practised "technically," as though it were a formula, a method of operation, or a

colour-test. The general practitioner can use a wide assortment of medical techniques without hesitation, whatever his personal opinions may be about his patients and irrespective of his psychological theories or even of his philosophical and religious assumptions. Psychotherapy cannot be used like that. Whether he likes it or not, the doctor and his assumptions are involved just as much as the patient. It is in fact largely immaterial what sort of technique he uses, for the point is not the technique but the person who uses the technique. The object to which the technique is applied is neither an anatomical specimen nor an abscess nor a chemical substance; it is the totality of the suffering individual. The object of therapy is not the neurosis but the man who has the neurosis. We have long known, for instance, that a cardiac neurosis comes not from the heart, as the old medical mythology would have it, but from the mind of the sufferer. Nor does it come from some obscure corner of the unconscious, as many psychotherapists still struggle to believe; it comes from the totality of a man's life and from all the experiences that have accumulated over the years and decades, and finally, not merely from his life as an individual but from his psychic experience within the family or even the social group.

[338] In dealing with a neurosis, the doctor is not confronted with a delimited field of illness; he is faced with a sick person who is sick not in one particular mechanism or focus of disease but in his whole personality. "Technique" cannot cope with that. The personality of the patient demands all the resources of the doctor's personality and not technical tricks.

[339] Very early on, therefore, I required that the doctor himself should be analysed. Freud seconded this requirement, obviously because he could not escape the conviction that the patient should be confronted by a doctor and not by a technique. It is certainly very laudable in a doctor to try to be as objective and impersonal as possible and to refrain from meddling with the psychology of his patient like an overzealous saviour. But if this attitude is carried to artificial lengths it has unfortunate consequences. The doctor will find that he cannot overstep the bounds of naturalness with impunity. Otherwise he would be setting a bad example to his patient, who certainly did not get ill from an excess of naturalness.

Besides, it would be dangerously to underestimate the patients if one imagined that they were all too stupid to notice the artifices of the doctor, his security measures and his little game of prestige. Nor can it conceivably be the doctor's intention to strengthen the patient everywhere in his natural functioning, and yet to keep him as much as possible in the dark when it comes to the one crucial spot—which concerns the doctor himself—and so in a state of helpless dependence or "transference." Such a mistake could only be made by an extremely unanalysed doctor whose personal prestige counted for more than the welfare of his patient.

[340] Because the personality and attitude of the doctor are of supreme importance in therapy—whether he appreciates this fact or not—his personal opinions stand out in a disproportionately strong light in the history of psychotherapy and are the cause of apparently irreconcilable schisms. Freud took his stand with fanatical one-sidedness on sexuality, concupiscence—in a word, on the "pleasure principle." Everything turns on the question of whether one can do what one wants. Repression, sublimation, regression, narcissism, wish-fulfilment and the rest are all concepts that relate to the grand drama of the pleasure principle. It almost looks as if man's desire and greed have been made the cardinal principle of psychology.

[341] Adler also drew on the wide field of human concupiscence and discovered the need for self-assertion. This tendency of human nature was likewise made a cardinal principle of psychology, and with the same one-sidedness so regrettable in Freud.

[342] Now, there is no doubt that the principle of concupiscence can explain a very large number of cases of neurosis. Indeed, the same case can be explained both in the manner of Freud and in the manner of Adler, nor is either explanation lacking in conviction. As a matter of fact, the one explanation complements the other, which in itself would be a very satisfactory state of affairs did it not also prove that neither explanation can lay claim to absolute validity. Both are relative, heuristic points of view, and as such unfitted to be universal concepts. But at least they have a bearing on essential partial aspects. The theory of repression is based

on certain psychic facts which are met with everywhere, and the same is true of the need for self-assertion or the will to power. Clearly everyone would like to enjoy all he can and at the same time be “on top,” and it is equally obvious that so long as he has this primitive, naïve, infantile attitude he will not be able to avoid a neurosis if ever he makes an attempt to adapt himself to his surroundings. This last condition is very much to the point, for without it there is no neurosis but simply moral insanity or the higher idiocy.

[343] If, then, at least two conditions are necessary to produce a neurosis, both must be of aetiological significance. It is out of the question for only the infantile attitude to be causal, but not the will to adapt. Not only *can* the latter be an aetiological factor, it always is so. Freud and Adler explain a neurosis exclusively from the infantile angle. A more comprehensive explanation would be forced to take account of the will to adapt as well. There need not always be simply an excess of infantilism; there can also be an excess of adaptation. Nor must this latter possibility necessarily be understood as a mere repression of infantilism or as a “substitute formation”; we could equally well explain infantilism as repression of adaptation and call it a “substitute formation.” Neither Freud nor Adler would welcome this reversal, although it is logically unavoidable once we take the aetiological significance of the will to adapt into account. And this we must do—even Freud needs a factor that represses, that does not fulfil wishes, that arouses anxiety, etc. Adler needs something that keeps a man down. If there is no aetiological opposite of equal strength, then all that infantile concupiscence is without object.

[344] Having discovered that every neurotic suffers from infantile concupiscence, we must still ask how it is with his will to adapt, for perhaps he has developed infantile concupiscence merely as a “substitute formation.” In this case it would be purely symptomatic and not genuine at all; and, if explained from the infantile angle, the explanation would be quite beside the point. More, an unforgiveable blunder would have been committed. Unfortunately such blunders are very frequent, because the doctor’s attention is turned too exclusively to the infantile traits. The patient is then automatically charged with inferiority.

[345] Infantilism, however, is something extremely ambiguous. First, it can be either genuine or purely symptomatic; and second, it can be either residuary or embryonic. There is an enormous difference between something that has *remained* infantile and something that is in the process of growth. Both can take an infantile or embryonic form, and more often than not it is impossible to tell at first glance whether we are dealing with a regrettably persistent fragment of infantile life or with a vitally important creative beginning. To deride these possibilities is to act like a dullard who does not know that the future is more important than the past. For this reason it would be more advisable to examine these "infantile-perverse" fantasies for their creative content than to trace them back to the cradle, and to understand all neurosis more as an attempt at adaptation than as an unsuccessful or otherwise distorted wish-fulfilment.

[346] Naturally, the theory of infantilism has the inestimable advantage of always putting the doctor "on top" as the representative of sound, healthy, superior insight, while the poor patient lies there helpless, the victim of unconscious infantile-perverse wish-fulfilments. This also gives the doctor the opportunity to know better, to avoid meeting the patient's personality face to face, and to hide behind a technique.

[347] It is not hard to see how much this attitude is aided and abetted by all manner of conscious and unconscious tendencies, and why a theory of infantilism is welcomed by the doctor from the start, even if, as a human being, he were quite ready to acknowledge the personality of his patient. The tremendous influence Freud's ideas have exerted rests not merely on their agreement with the real or supposed facts, but very largely on the easy opportunity they afford of touching the other fellow on his sore spot, of deflating him and hoisting oneself into a superior position. What a blessed relief it is when one can say in a tight corner, "That's nothing but resistance!" or when one need no longer take one's opponent's argument seriously because it can so easily be explained away as "symbolical"—without, be it noted, ever asking him whether this explanation is acceptable to his psychology.

[348] Besides which, there are numberless patients who, with a great show of coyness, are at bottom only too ready to subscribe to the infantilism

theory, because it gives them a broad hint of how to pass off the disturbing “infantilism” as a “nothing but.” And in many cases the theory offers a heaven-sent way out of the unpleasantly acute problems of real life into the blissful meadows of childhood, where, having invoked the aetiological bogy, the patient pretends to discover why he is no good in the present and how it is all the fault of his parents and his upbringing.

[349] Admittedly there is nothing that cannot be used to illegitimate advantage. But one ought to note where the misuse creeps in and how it is being exploited. These things depend very largely on the doctor, who must take his patient with great seriousness in order to detect abuses of this kind. A technique notices nothing, but a human being does—and he alone can develop the sensitiveness necessary to decide whether a neurosis should be treated from the infantile angle or from the adaptation angle.

[350] I need hardly say that technique is necessary up to a point—we are all sufficiently convinced of that. But behind every method there stands the man, who is so much more important because, irrespective of his technique, he has to arrive at decisions which are at least as vital to the patient as any technique however adroitly applied. It is therefore the duty of the psychotherapist to exercise self-knowledge and to criticize his personal assumptions, whether religious or philosophical, just as asepsis is obligatory for a surgeon. The doctor must know his “personal equation” in order not to do violence to his patient. To this end I have worked out a critical psychology which would enable the psychiatrist to recognize the various typical attitudes, even though the Freudian school asserts that this has nothing to do with psychoanalysis. Psychoanalysis is evidently a technique behind which the human being vanishes, and which always remains the same no matter who practises it. Consequently, the psychoanalyst needs no self-knowledge and no criticism of his assumptions. Apparently the purpose of his training analysis is to make him not a human being but a correct applier of technique.

[351] But even regarded as a technique psychoanalysis is far from simple. In actual fact it is a very complicated and fiendishly tricky affair compared even with the most elaborate chemical procedure, subject to

endless variation and well-nigh unpredictable in its results. Anyone who finds that hard to believe should peruse the "technique" of a Freudian dream-analysis in *The Interpretation of Dreams*—for instance, the dream of "Irma's injection." To call such a procedure a "technique" requires a strong dose of optimism. And yet dreams are supposed to be the "*via regia* to the unconscious" and to play a not uncertain role in psychoanalysis! Truly one must be smitten with blindness not to see that this kind of "technique" is first and foremost an expression of the man who applies it and of all his subjective assumptions.

[352] These reflections lead us back to the problem of the doctor's attitude and to the need for criticism of subjective premises. A subjective view of the world should not be imported uncritically into his conception of neurosis, as was the case, for instance, with Freud's view of the *unconscious* and with his materialistic bias in regard to the religious function of the psyche. The psychotherapist should no longer labour under the delusion that the treatment of neurosis demands nothing more than the knowledge of a technique; he should be absolutely clear in his own mind that psychological treatment of the sick is a *relationship* in which the doctor is involved quite as much as the patient. True psychological treatment can only be individual, and this is why even the best technique has only a relative value. All the more significance, therefore, falls to the general attitude of the doctor, who must know himself well enough not to destroy the peculiar values of the patient entrusted to his care, whatever these may be. If Alfred Adler were to request analytical treatment of his old teacher Freud, Freud would have to adjust himself to seeing Adler's peculiar psychology, even to the point of admitting its general right to exist; for there are innumerable people whose psychology is that of the son in need of prestige. If, on the other hand, I were to analyse Freud, I would be doing him a great and irreparable wrong if I failed to take elaborate account of the very real historical significance of the nursery, the importance of the entanglements of the family romance, the bitterness and gravity of early-acquired resentments, and their compensatory accompaniment by wish-fantasies which—unhappily—cannot be fulfilled, and to accept all this as a *fait accompli*. Freud would certainly take it amiss if I told him that

resentments are all nothing but a “substitute” for failure to love one’s neighbour, or something of that sort. True as such an assertion might be in other cases, it would be incorrect here, even if I should succeed in persuading Freud of the truth of my idea. Doubtless Freud means what he says, consequently we must take him as the type of person who says such things. Only then is his particular case accepted, and with it all those whose psychology is similarly constituted. But since we can hardly suppose that either Freud or Adler is a universally valid representative of European man, there is some hope that I too may possess my own peculiar psychology, and, with me, all those who cannot subscribe to the primacy of infantile-perverse wish-fantasies or to that of the urge to power.

[353] It goes without saying that this should not be a matter for naïve self-deception; on the contrary, no psychotherapist should let slip the opportunity to study himself critically in the light of these negative psychologies. Freud and Adler have beheld very clearly the shadow that accompanies us all. The Jews have this peculiarity in common with women; being physically weaker, they have to aim at the chinks in the armour of their adversary, and thanks to this technique which has been forced on them through the centuries, the Jews themselves are best protected where others are most vulnerable. Because, again, of their civilization, more than twice as ancient as ours, they are vastly more conscious than we of human weaknesses, of the shadow-side of things, and hence in this respect much less vulnerable than we are. Thanks to their experience of an old culture, they are able, while fully conscious of their frailties, to live on friendly and even tolerant terms with them, whereas we are still too young not to have “illusions” about ourselves. Moreover, we have been entrusted by fate with the task of creating a civilization—and indeed we have need of it—and for this “illusions” in the form of one-sided ideals, convictions, plans, etc. are indispensable. As a member of a race with a three-thousand-year-old civilization, the Jew, like the cultured Chinese, has a wider area of psychological consciousness than we. Consequently it is *in general* less dangerous for the Jew to put a negative value on his unconscious. The “Aryan” unconscious, on the other hand, contains explosive forces and seeds of a

future yet to be born, and these may not be devalued as nursery romanticism without psychic danger. The still youthful Germanic peoples are fully capable of creating new cultural forms that still lie dormant in the darkness of the unconscious of every individual—seeds bursting with energy and capable of mighty expansion. The Jew, who is something of a nomad, has never yet created a cultural form of his own and as far as we can see never will, since all his instincts and talents require a more or less civilized nation to act as host for their development.

[354] The Jewish race as a whole—at least this is my experience—possesses an unconscious which can be compared with the "Aryan" only with reserve. Creative individuals apart, the average Jew is far too conscious and differentiated to go about pregnant with the tensions of unborn futures. The "Aryan" unconscious has a higher potential than the Jewish; that is both the advantage and the disadvantage of a youthfulness not yet fully weaned from barbarism. In my opinion it has been a grave error in medical psychology up till now to apply Jewish categories—which are not even binding on all Jews—indiscriminately to Germanic and Slavic Christendom. Because of this the most precious secret of the Germanic peoples—their creative and intuitive depth of soul—has been explained as a morass of banal infantilism, while my own warning voice has for decades been suspected of anti-Semitism. This suspicion emanated from Freud. He did not understand the Germanic psyche any more than did his Germanic followers. Has the formidable phenomenon of National Socialism, on which the whole world gazes with astonished eyes, taught them better? Where was that unparalleled tension and energy while as yet no National Socialism existed? Deep in the Germanic psyche, in a pit that is anything but a garbage-bin of unrealizable infantile wishes and unresolved family resentments. A movement that grips a whole nation must have matured in every individual as well. That is why I say that the Germanic unconscious contains tensions and potentialities which medical psychology must consider in its evaluation of the unconscious. Its business is not with neuroses but with human beings—that, in fact, is the grand privilege of medical psychology: to treat the whole man and not an artificially segregated function.[2] And that is why its scope must be widened to reveal to the physician's gaze not just the

pathological aberrations of a disturbed psychic development, but the creative powers of the psyche labouring at the future; not just a dreary fragment but the meaningful whole.

[355] A neurosis is by no means merely a negative thing, it is also something positive. Only a soulless rationalism reinforced by a narrow materialistic outlook could possibly have overlooked this fact. In reality the neurosis contains the patient's psyche, or at least an essential part of it; and if, as the rationalist pretends, the neurosis could be plucked from him like a bad tooth, he would have gained nothing but would have lost something very essential to him. That is to say, he would have lost as much as the thinker deprived of his doubt, or the moralist deprived of his temptation, or the brave man deprived of his fear. To lose a neurosis is to find oneself without an object; life loses its point and hence its meaning. This would not be a cure, it would be a regular amputation; and it would be cold comfort indeed if the psychoanalyst then assured the patient that he had lost nothing but his infantile paradise with its wishful chimeras, most of them perverse. Very much more would have been lost, for hidden in the neurosis is a bit of still undeveloped personality, a precious fragment of the psyche lacking which a man is condemned to resignation, bitterness, and everything else that is hostile to life. A psychology of neurosis that sees only the negative elements empties out the baby with the bath-water, since it neglects the positive meaning and value of these "infantile"— i.e., creative—fantasies. So often its main endeavour seems to lie in trying to explain everything backwards and downwards, and there is of course nothing that is not capable of some obscene caricature. But this will never prove that the symbol or symptom so explained really has that meaning; it merely demonstrates the adolescent smutty-mindedness of the explainer.

[356] And here I cannot refrain from remarking how often it happens that otherwise serious-minded physicians, in complete disregard of all the fundamental tenets of scientific caution, will interpret psychological material in the light of subjective conjectures, of which one can make absolutely nothing except that they are all attempts to discover by what obscene joke the material can be related to some oral, anal, urethral, or other sexual abnormality. The poison of the "low-down" interpretation

has bitten so deeply into the marrow of these people's bones that they can no longer think at all except in the infantile-perverse jargon of certain neurotics who display all the peculiarities of a Freudian psychology. It is positively grotesque that the doctor should himself fall into a way of thinking which in others he rightly censures as infantile and wants to cure for that reason. Certainly it is much easier to make conjectures over the head of the patient than to see what the empirical material really means. Nevertheless, one must assume that the patient came to the analyst in order to rid himself of his morbid way of thinking and looking at things, and we may therefore infer—as everywhere else in modern medicine—that the symptom is really the effort of the diseased system to cure itself. But if the analyst's thoughts, spoken or unspoken, are as negative and disparaging as the patient's, and if he degrades everything to the level of a "dirty joke" psychology, then we must not be surprised if the patient becomes spiritually blighted and compensates for this blight by incurable intellectualism.

[357] Unfortunately it is true that there are far too many people who justify our mistrust. Too many of them use ideals and meretricious values to pull wool over their own eyes. Often the analyst has to reduce them to a very unpleasant formula indeed in order to bring home to them the truth about themselves. But not all people are like that. At least as many patients need anything rather than distrust and disparagement. They are fundamentally decent folk who play fair and do not prostitute ideals for the adornment of their inferiorities. To treat such people reductively, to impute ulterior motives to them, and to suspect their natural wholesomeness of unnatural obscenities is not only sinfully stupid but positively criminal. A technique is always a soulless mechanism, and whoever takes psychotherapy for a technique and vaunts it as such runs the risk, at the very least, of committing an unpardonable blunder. A conscientious doctor must be able to doubt all his skills and all his theories, otherwise he is befooled by a system. But all systems mean bigotry and inhumanity. Neurosis—let there be no doubt about this—may be any number of things, but never a "nothing but." It is the agony of a human soul in all its vast complexity—so vast, indeed, that any and every theory of neurosis is little better than a worthless sketch, unless it be a

gigantic picture of the psyche which not even a hundred Fausts could conceive.

[358] The fundamental rule for the psychotherapist should be to consider each case new and unique. That, probably, is the nearest we can get to the truth.

[359] The proper handling of psychic material requires supreme tact and an almost artistic sensitiveness. Without these, it is hardly possible to distinguish what is valuable from what is not. A neurosis, as I have said, consists of two things: infantile unwillingness and the will to adapt. Hence one has first to feel one's way until one is sure on which side the accent lies, for the road goes on from there. If the accent is on the will to adapt, there is no sense in decrying the attempt at adaptation as an infantile wish-fantasy. The analyst is very liable to make this mistake with his patient, and the patient—to his own great injury—is ever so delighted because he is then protected on medical authority against the feared or hated demands of his neurosis, that is, against the demands of that part of his personality which is concealed in it. But this "other" personality is the very thing he ought never to lose sight of, for it is his own inner antithesis, the conflict that must be fought out again and again if life is to go on. Without this initial opposition there is no flow of energy, no vitality. Lack of opposition brings life to a standstill wherever that lack reaches. But beyond that reach life flows on unconsciously in ever-renewed and ever-changing forms of neurosis. Only if we understand and accept the neurosis as our truest and most precious possession can we be sure of avoiding stagnation and of not succumbing to rigidity and neurotic subterfuge. In the neurosis is hidden one's worst enemy and best friend. One cannot rate him too highly, unless of course fate has made one hostile to life. There are always deserters, but they have nothing to say to us, nor we to them.

[360] Neurotic symbolism is ambiguous, pointing at once forward and back, downward and up. In general the forward movement is the more important, because the future is coming and the past retreating. Only those who are preparing a retreat will do better to look back. The neurotic has no need to feel himself beaten; he has merely misjudged his

necessary adversary, thinking that he could give him the slip. The whole task of his personality lies in the very thing he sought to avoid. Any doctor who deludes him on that score is doing him a disservice. *The patient has not to learn how to get rid of his neurosis, but how to bear it.* His illness is not a gratuitous and therefore meaningless burden; it is *his own self*, the "other" whom, from childish laziness or fear, or for some other reason, he was always seeking to exclude from his life. In this way, as Freud rightly says, we turn the ego into a "seat of anxiety," which it would never be if we did not defend ourselves against ourselves so neurotically. As soon as the ego becomes a "seat of anxiety," we all run away from ourselves and refuse to admit our fear. That dreaded "other self" is the main target of psychoanalysis with its depreciating, undermining technique which is always seeking to wear down the enemy and cripple him for good.

[361] "We should not try to "get rid" of a neurosis, but rather to experience what it means, what it has to teach, what its purpose is. We should even learn to be thankful for it, otherwise we pass it by and miss the opportunity of getting to know ourselves as we really are. A neurosis is truly removed only when it has removed the false attitude of the ego. We do not cure it—it cures us. A man is ill, but the illness is nature's attempt to heal him. From the illness itself we can learn so much for our recovery, and what the neurotic flings away as absolutely worthless contains the true gold we should never have found elsewhere. The psychoanalyst's every second word is "nothing but"—just what a dealer would say of an article he wanted to buy on the cheap. In this case it is man's soul, his hope, his boldest flight, his finest adventure.

[362] No, it will not do, this attempt to buy off the sick man's neurosis and with it his soul. Moreover it is, at bottom, an impossible undertaking, a fraud: in the long run nobody can dodge his shadow unless he lives in eternal darkness. What the patient encounters in a neurotic dissociation is a strange, unrecognized part of his personality, which seeks to compel his recognition in exactly the same way that any other part of the body, if obstinately denied, would insist on its presence. If anyone set out to deny the existence of his left hand, he would inevitably get entangled in a fantastic web of "nothing but" explanations, just as happens to the

neurotic—except that the psychoanalyst dignifies them with the name of a "theory." The infantile-perverse "nothing but" fantasies are the patient's efforts to deny his left hand. These efforts are themselves his morbid deviation, and they are interesting only inasmuch as all fantasies contain a secret allusion to the left hand. Everything else about them is unreal, because it is merely contrived for the purpose of concealment. Freud, of course, thinks that the thing concealed is the thing these fantasies more or less openly allude to, i.e., sexuality and all the rest of it. But this is just what that kind of patient is aiming at all the time. He rides the same hobby-horse as his analyst, who may even have handed him a helpful idea or two—the famous infantile sexual trauma, for instance, which we can spend so much time chasing, only to find that we are as far from the truth as ever.

[363] The true reason for a neurosis always lies in the present, since the neurosis exists in the present. It is definitely not a hangover from the past, a *caput mortuum;* it is fed and as it were new-made every day. And it is only in the today, not in our yesterdays, that the neurosis can be "cured." Because the neurotic conflict has to be fought today, any historical deviation is a detour, if not actually a wrong turning. And because the neurosis contains a part of one's own personality, an excursus into the thousand and one possibilities of obscene fantasy and unfulfillable infantile wishes is just a pretext for avoiding the essential question.

[364] The essential question is: what will pierce through this fog of verbiage to the conscious personality of the patient, and what must be the nature of his attitude if he is to integrate that split-off fragment, supposing it were ever part of him? But how could it trouble him so much unless it were like his left hand, like the other half of himself? Something, therefore, that belongs to him in the deepest sense, completes him, creates organic balance, and yet for some reason is feared, perhaps because it makes life complicated and sets apparently impossible tasks?

[365] Obviously, the best way to evade these tasks is to replace them by something that can rightly be called impossible—for instance, that world of obscenities whose speediest sublimation is recommended by Freud

himself. Freud, it seems, took these neurotic conjectures quite seriously and thus fell into the same trap as the neurotic: on the one hand he seeks a wrong turning at any price, and on the other hand he cannot find the right way out of the maze. He was obviously taken in by the neurotic trick of *euphemistic disparagement.* He undervalued the neurosis and thereby won the applause of patients and doctors alike, who want nothing better than to hear that neurosis is "nothing but …"

[366] The very word "psychogenic," however, tells us that certain disturbances come from the psyche. Unfortunately the psyche is not a hormone but a world of almost cosmic proportions. Scientific rationalism completely overlooked this fact. Have psychotherapists ever seriously reflected that they have quite other forbears than Mesmer, Faria, Liébeault, Charcot, Bernheim, Janet, Forel, and the rest?

[367] For thousands of years the mind of man has worried about the sick soul, perhaps even earlier than it did about the sick body. The propitiation of gods, the perils of the soul and its salvation, these are not yesterday's problems. Religions are psychotherapeutic systems in the truest sense of the word, and on the grandest scale. They express the whole range of the psychic problem in mighty images; they are the avowal and recognition of the soul, and at the same time the revelation of the soul's nature. From this universal foundation no human soul is cut off; only the individual consciousness that has lost its connection with the psychic totality remains caught in the illusion that the soul is a small circumscribed area, a fit subject for "scientific" theorizing. The loss of this great relationship is the prime evil of neurosis, and that is why the neurotic loses his way among ever more tortuous back-streets of dubious repute, because he who denies the great must blame the petty. In his book *The Future of an Illusion* Freud has unwittingly shown his hand. He wants to put an end once and for all to the larger aspect of the psychic phenomenon, and in the attempt he continues the baleful work that is going on in every neurotic: destruction of the bond between men and the gods, severance from the universally felt and known bases of the psyche, and hence "denial of the left hand," of the counterpart man needs for his psychic existence.

[368] Let us not ask who has *not* preached to deaf ears! But did Goethe really write his *Faust* in vain? Hasn't Faust a neurosis as big as your fist? For surely the devil has been proved nonexistent. Consequently his psychic counterpart doesn't exist either—a mystery still to be unriddled, born of Faust's dubious internal secretions! That at least is the opinion of Mephistopheles, who is himself not altogether above reproach sexually—inclined to be bisexual, if anything. This devil who, according to *The Future of an Illusion*, does not exist is yet the scientific object of psychoanalysis, which gleefully busies itself with his non-existent ways of thought. Faust's fate in heaven and on earth may well be "left to the poets," but meanwhile the topsy-turvy view[3] of the human soul is turned into a theory of psychic suffering.

[369] Psychotherapy today, it seems to me, still has a vast amount to unlearn and relearn if it is to do even rough justice to its subject, the full range of the human psyche. But first it must cease thinking neurotically and see the psychic processes in true perspective. Not only the whole conception of neurosis, but our ideas about the psychic functions themselves—for instance the function of dreams—stand in need of radical revision. Very notable blunders have occurred here, as when the perfectly normal function of dreams was viewed from the same angle as disease. It will then become clear that psychotherapy made approximately the same mistake as did the old school of medicine when it attacked the fever in the belief that this was the noxious agent.

[370] It is the fate and misfortune of psychotherapy to have been born in an age of enlightenment, when self-distrust had made the old cultural values inaccessible and there was no psychology anywhere that went much beyond the level of Herbart or Condillac—none at any rate that would have done anything like justice to the complexities and perplexities with which the innocent and wholly unprepared physician was suddenly faced. In this respect we must be grateful to Freud, for at least he created a certain sense of direction in this chaos, and gave the physician sufficient courage to take a case of hysteria seriously, as a scientific proposition. Criticism after the event is easy enough, but all the same there is no sense in an entire generation of doctors going to sleep on Freud's laurels. Much has still to be learnt about the psyche, and our especial need today is

liberation from outworn ideas which have seriously restricted our view of the psyche as a whole.

PREFACE TO “ESSAYS ON CONTEMPORARY EVENTS”

WOTAN

AFTER THE CATASTROPHE

THE FIGHT WITH THE SHADOW

EPILOGUE TO “ESSAYS ON CONTEMPORARY EVENTS”

PREFACE TO “ESSAYS ON CONTEMPORARY EVENTS”[1]

Medical psychotherapy, for practical reasons, has to deal with the whole of the psyche. Therefore it is bound to come to terms with all those factors, biological as well as social and mental, which have a vital influence on psychic life.

We are living in times of great disruption: political passions are aflame, internal upheavals have brought nations to the brink of chaos, and the very foundations of our *Weltanschauung* are shattered. This critical state of things has such a tremendous influence on the psychic life of the individual that the doctor must follow its effects with more than usual attention. The storm of events does not sweep down upon him only from the great world outside; he feels the violence of its impact even in the quiet of his consulting-room and in the privacy of the medical consultation. As he has a responsibility towards his patients, he cannot afford to withdraw to the peaceful island of undisturbed scientific work, but must constantly descend into the arena of world events, in order to join in the battle of conflicting passions and opinions. Were he to remain aloof from the tumult, the calamity of his time would reach him only from afar, and his patient’s suffering would find neither ear nor understanding. He would be at a loss to know how to talk to him, and to help him out of his isolation. For this reason the psychologist cannot avoid coming to grips with contemporary history, even if his very soul shrinks from the political uproar, the lying propaganda, and the jarring speeches of the demagogues. We need not mention his duties as a citizen, which confront him with a similar task. As a physician, he has a higher obligation to humanity in this respect.

From time to time, therefore, I have felt obliged to step beyond the usual bounds of my profession. The experience of the psychologist is of a rather special kind, and it seemed to me that the general public might find it useful to hear his point of view. This was hardly a far-fetched conclusion, for surely the most naïve of laymen could not fail to see that many contemporary figures and events were positively asking for psychological elucidation. Were psychopathic symptoms ever more conspicuous than in the contemporary political scene?

It has never been my wish to meddle in the political questions of the day. But in the course of the years I have written a few papers which give my reactions to current events. The present book contains a collection of these occasional essays, all written between 1936 and 1946. It is natural enough that my thoughts should have been especially concerned with Germany, which has been a problem to me ever since the first World War. My statements have evidently led to all manner of misunderstandings, which are chiefly due, no doubt, to the fact that my psychological point of view strikes many people as new and therefore strange. Instead of embarking upon lengthy arguments in an attempt to clear up these misunderstandings, I have found it simpler to collect all the passages in my other writings which deal with the same theme and to put them in an epilogue.[2] The reader will thus be in a position to get a clear picture of the facts for himself.

WOTAN[1]

En Germanie naistront diverses sectes,
S'approchans fort de l'heureux paganisme:
Le cœur captif et petites receptes
Feront retour à payer la vraye disme.

—*Prophéties de Maistre Michel Nostradamus*, 1555

[371] When we look back to the time before 1914, we find ourselves living in a world of events which would have been inconceivable before the war. We were even beginning to regard war between civilized nations as a fable, thinking that such an absurdity would become less and less possible in our rational, internationally organized world. And what came after the war was a veritable witches' sabbath. Everywhere fantastic revolutions, violent alterations of the map, reversions in politics to medieval or even antique prototypes, totalitarian states that engulf their neighbours and outdo all previous theocracies in their absolutist claims, persecutions of Christians and Jews, wholesale political murder, and finally we have witnessed a light-hearted piratical raid on a peaceful, half-civilized people.[2]

[372] With such goings on in the wide world it is not in the least surprising that there should be equally curious manifestations on a smaller scale in other spheres. In the realm of philosophy we shall have to wait some time before anyone is able to assess the kind of age we are living in. But in the sphere of religion we can see at once that some very significant things have been happening. We need feel no surprise that in Russia the colourful splendours of the Eastern Orthodox Church have been superseded by the Movement of the Godless—indeed, one breathed a sigh of relief oneself when one emerged from the haze of an Orthodox church with its multitude of lamps and entered an honest mosque, where the sublime and invisible omnipresence of God was not crowded out by a superfluity of sacred paraphernalia. Tasteless and pitiably unintelligent as it is, and however deplorable the low spiritual level of the "scientific" reaction, it was

inevitable that nineteenth-century “scientific” enlightenment should one day dawn in Russia.

[373] But what is more than curious—indeed, piquant to a degree—is that an ancient god of storm and frenzy, the long quiescent Wotan, should awake, like an extinct volcano, to new activity, in a civilized country that had long been supposed to have outgrown the Middle Ages. We have seen him come to life in the German Youth Movement, and right at the beginning the blood of several sheep was shed in honour of his resurrection. Armed with rucksack and lute, blond youths, and sometimes girls as well, were to be seen as restless wanderers on every road from the North Cape to Sicily, faithful votaries of the roving god. Later, towards the end of the Weimar Republic, the wandering role was taken over by the thousands of unemployed, who were to be met with everywhere on their aimless journeys. By 1933 they wandered no longer, but marched in their hundreds of thousands. The Hitler movement literally brought the whole of Germany to its feet, from five-year-olds to veterans, and produced the spectacle of a nation migrating from one place to another. Wotan the wanderer was on the move. He could be seen, looking rather shamefaced, in the meeting-house of a sect of simple folk in North Germany, disguised as Christ sitting on a white horse. I do not know if these people were aware of Wotan’s ancient connection with the figures of Christ and Dionysus, but it is not very probable.

[374] Wotan is a restless wanderer who creates unrest and stirs up strife, now here, now there, and works magic. He was soon changed by Christianity into the devil, and only lived on in fading local traditions as a ghostly hunter who was seen with his retinue, flickering like a will o’ the wisp through the stormy night. In the Middle Ages the role of the restless wanderer was taken over by Ahasuerus, the Wandering Jew, which is not a Jewish but a Christian legend. The motif of the wanderer who has not accepted Christ was projected on the Jews, in the same way as we always rediscover our unconscious psychic contents in other people. At any rate the coincidence of anti-Semitism with the reawakening of Wotan is a psychological subtlety that may perhaps be worth mentioning.

[375] The German youths who celebrated the solstice with sheep-sacrifices were not the first to hear a rustling in the primeval forest of the

unconscious. They were anticipated by Nietzsche, Schuler, Stefan George, and Ludwig Klages.[3] The literary tradition of the Rhineland and the country south of the Main has a classical stamp that cannot easily be got rid of; every interpretation of intoxication and exuberance is apt to be taken back to classical models, to Dionysus, to the *puer aeternus* and the cosmogonic Eros.[4] No doubt it sounds better to academic ears to interpret these things as Dionysus, but Wotan might be a more correct interpretation. He is the god of storm and frenzy, the unleasher of passions and the lust of battle; moreover he is a superlative magician and artist in illusion who is versed in all secrets of an occult nature.

[376] Nietzsche's case is certainly a peculiar one. He had no knowledge of Germanic literature; he discovered the "cultural Philistine"; and the announcement that "God is dead" led to Zarathustra's meeting with an unknown god in unexpected form, who approached him sometimes as an enemy and sometimes disguised as Zarathustra himself. Zarathustra, too, was a soothsayer, a magician, and the storm-wind:

> And like a wind shall I come to blow among them, and with my spirit shall take away the breath of their spirit; thus my future wills it.
>
> Truly, a strong wind is Zarathustra to all that are low; and this counsel gives he to his enemies and to all that spit and spew:
>
> "Beware of spitting against the wind." [5]

[377] And when Zarathustra dreamed that he was guardian of the graves in the "lone mountain fortress of death," and was making a mighty effort to open the gates, suddenly

> A roaring wind tore the gates asunder; whistling, shrieking, and keening, it cast a black coffin before me.
>
> And amid the roaring and whistling and shrieking the coffin burst open and spouted a thousand peals of laughter.

[378] The disciple who interpreted the dream said to Zarathustra:

> Are you not yourself the wind with shrill whistling, which bursts open the gates of the fortress of death?
>
> Are you not yourself the coffin filled with life's gay malice and angel-grimaces? [6]

[379] In 1863 or 1864, in his poem "To the Unknown God," Nietzsche had written:

> I shall and will know thee, Unknown One,

Who searchest out the depths of my soul,
And blowest through my life like a storm,
Ungraspable, and yet my kinsman!
I shall and will know thee, and serve thee.

[380] Twenty years later, in his “Mistral Song,” he wrote:

Mistral wind, chaser of clouds,
Killer of gloom, sweeper of the skies,
Raging storm-wind, how I love thee!
Are we not both the first-fruits
Of the same womb, forever predestined
To the same fate?[7]

[381] In the dithyramb known as “Ariadne’s Lament,” Nietzsche is completely the victim of the hunter-god:

Stretched out, shuddering,
Like a half-dead thing whose feet are warmed,
Shaken by unknown fevers,
Shivering with piercing icy frost arrows,
Hunted by thee, O thought,
Unutterable! Veiled! horrible one!
Thou huntsman behind the clouds.
Struck down by thy lightning bolt,
Thou mocking eye that stares at me from the dark!
Thus I lie,
Writhing, twisting, tormented
With all eternal tortures, Smitten
By thee, cruel huntsman,
Thou unknown—God![8]

[382] This remarkable image of the hunter-god is not a mere dithyrambic figure of speech but is based on an experience which Nietzsche had when he was fifteen years old, at Pforta. It is described in a book by Nietzsche’s sister, Elizabeth Foerster-Nietzsche.[9] As he was wandering about in a gloomy wood at night, he was terrified by a “blood-curdling shriek from a neighbouring lunatic asylum,” and soon afterwards he came face to face with a huntsman whose “features were wild and uncanny.” Setting his whistle to his lips “in a valley surrounded by wild scrub,” the huntsman “blew such a shrill blast” that Nietzsche lost consciousness—but woke up again in Pforta. It was a nightmare. It is significant that in his dream Nietzsche, who in reality intended to go to Eisleben, Luther’s town,

discussed with the huntsman the question of going instead to “Teutschenthal” (Valley of the Germans). No one with ears to hear can misunderstand the shrill whistling of the storm-god in the nocturnal wood.

[383] Was it really only the classical philologist in Nietzsche that led to the god being called Dionysus instead of Wotan—or was it perhaps due to his fateful meeting with Wagner?

[384] In his *Reich ohne Raum*, which was first published in 1919, Bruno Goetz saw the secret of coming events in Germany in the form of a very strange vision. I have never forgotten this little book, for it struck me at the time as a forecast of the German weather. It anticipates the conflict between the realm of ideas and life, between Wotan’s dual nature as a god of storm and a god of secret musings. Wotan disappeared when his oaks fell and appeared again when the Christian God proved too weak to save Christendom from fratricidal slaughter. When the Holy Father at Rome could only impotently lament before God the fate of the *grex segregatus*, the one-eyed old hunter, on the edge of the German forest, laughed and saddled Sleipnir.

[385] We are always convinced that the modern world is a reasonable world, basing our opinion on economic, political, and psychological factors. But if we may forget for a moment that we are living in the year of Our Lord 1936, and, laying aside our well-meaning, all-too-human reasonableness, may burden God or the gods with the responsibility for contemporary events instead of man, we would find Wotan quite suitable as a causal hypothesis. In fact I venture the heretical suggestion that the unfathomable depths of Wotan’s character explain more of National Socialism than all three reasonable factors put together. There is no doubt that each of these factors explains an important aspect of what is going on in Germany, but Wotan explains yet more. He is particularly enlightening in regard to a general phenomenon which is so strange to anybody not a German that it remains incomprehensible even after the deepest reflection.

[386] Perhaps we may sum up this general phenomenon as *Ergriffenheit*—a state of being seized or possessed. The term postulates not only an *Ergriffener* (one who is seized) but also an *Ergreifer* (one who seizes). Wotan is an *Ergreifer* of men, and, unless one wishes to deify Hitler—

which has indeed actually happened—he is really the only explanation. It is true that Wotan shares this quality with his cousin Dionysus, but Dionysus seems to have exercised his influence mainly on women. The maenads were a species of female storm-troopers, and, according to mythical reports, were dangerous enough. Wotan confined himself to the berserkers, who found their vocation as the Blackshirts of mythical kings.

[387] A mind that is still childish thinks of the gods as metaphysical entities existing in their own right, or else regards them as playful or superstitious inventions. From either point of view the parallel between Wotan *redivivus* and the social, political, and psychic storm that is shaking Germany might have at least the value of a parable. But since the gods are without doubt personifications of psychic forces, to assert their metaphysical existence is as much an intellectual presumption as the opinion that they could ever be invented. Not that "psychic forces" have anything to do with the conscious mind, fond as we are of playing with the idea that consciousness and psyche are identical. This is only another piece of intellectual presumption. "Psychic forces" have far more to do with the realm of the unconscious. Our mania for rational explanations obviously has its roots in our fear of metaphysics, for the two were always hostile brothers. Hence anything unexpected that approaches us from that dark realm is regarded either as coming from outside and therefore as real, or else as an hallucination and therefore not true. The idea that anything could be real or true which does *not* come from outside has hardly begun to dawn on contemporary man.

[388] For the sake of better understanding and to avoid prejudice, we could of course dispense with the name "Wotan" and speak instead of the *furor teutonicus*. But we should only be saying the same thing and not as well, for the *furor* in this case is a mere psychologizing of Wotan and tells us no more than that the Germans are in a state of "fury." We thus lose sight of the most peculiar feature of this whole phenomenon, namely, the dramatic aspect of the *Ergreifer* and the *Ergriffener.* The impressive thing about the German phenomenon is that one man, who is obviously "possessed," has infected a whole nation to such an extent that everything is set in motion and has started rolling on its course towards perdition.

[389] It seems to me that Wotan hits the mark as an hypothesis. Apparently he really was only asleep in the Kyffhäuser mountain until the ravens called him and announced the break of day. He is a fundamental attribute of the German psyche, an irrational psychic factor which acts on the high pressure of civilization like a cyclone and blows it away. Despite their crankiness, the Wotan-worshippers seem to have judged things more correctly than the worshippers of reason. Apparently everyone had forgotten that Wotan is a Germanic datum of first importance, the truest expression and unsurpassed personification of a fundamental quality that is particularly characteristic of the Germans. Houston Stewart Chamberlain is a symptom which arouses suspicion that other veiled gods may be sleeping elsewhere. The emphasis on the Germanic race (vulgarly called "Aryan"), the Germanic heritage, blood and soil, the Wagalaweia songs,[10] the ride of the Valkyries, Jesus as a blond and blue-eyed hero, the Greek mother of St. Paul, the devil as an international Alberich in Jewish or Masonic guise, the Nordic aurora borealis as the light of civilization, the inferior Mediterranean races—all this is the indispensable scenery for the drama that is taking place and at bottom they all mean the same thing: a god has taken possession of the Germans and their house is filled with a "mighty rushing wind." It was soon after Hitler seized power, if I am not mistaken, that a cartoon appeared in *Punch* of a raving berserker tearing himself free from his bonds. A hurricane has broken loose in Germany while we still believe it is fine weather.

[390] Things are comparatively quiet in Switzerland, though occasionally there is a puff of wind from the north or south. Sometimes it has a slightly ominous sound, sometimes it whispers so harmlessly or even idealistically that no one is alarmed. "Let sleeping dogs lie"—we manage to get along pretty well with this proverbial wisdom. It is sometimes said that the Swiss are singularly averse to making a problem of themselves. I must rebut this accusation: the Swiss do have their problems but they would not say so for anything in the world, even though they see which way the wind is blowing. We thus pay our tribute to the time of storm and stress in Germany, but we never mention it, and this enables us to feel vastly superior.

[391] It is above all the Germans who have an opportunity, perhaps unique in history, to look into their own hearts and to learn what those perils of the soul were from which Christianity tried to rescue mankind. Germany is a land of spiritual catastrophes, where nature never makes more than a pretence of peace with world-ruling reason. The disturber of the peace is a wind that blows into Europe from Asia's vastness, sweeping in on a wide front from Thrace to the Baltic, scattering the nations before it like dry leaves, or inspiring thoughts that shake the world to its foundations. It is an elemental Dionysus breaking into the Apollonian order. The rouser of this tempest is named Wotan, and we can learn a good deal about him from the political confusion and spiritual upheaval he has caused throughout history. For a more exact investigation of his character, however, we must go back to the age of myths, which did not explain everything in terms of man and his limited capacities but sought the deeper cause in the psyche and its autonomous powers. Man's earliest intuitions personified these powers as gods, and described them in the myths with great care and circumstantiality according to their various characters. This could be done the more readily on account of the firmly established primordial types or images which are innate in the unconscious of many races and exercise a direct influence upon them. Because the behaviour of a race takes on its specific character from its underlying images we can speak of an archetype "Wotan."[11] As an autonomous psychic factor, Wotan produces effects in the collective life of a people and thereby reveals his own nature. For Wotan has a peculiar biology of his own, quite apart from the nature of man. It is only from time to time that individuals fall under the irresistible influence of this unconscious factor. When it is quiescent, one is no more aware of the archetype Wotan than of a latent epilepsy. Could the Germans who were adults in 1914 have foreseen what they would be today? Such amazing transformations are the effect of the god of wind, that "bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, nor whither it goeth." It seizes everything in its path and overthrows everything that is not firmly rooted. When the wind blows it shakes everything that is insecure, whether without or within.

[392] Martin Ninck has recently published a monograph [12] which is a most welcome addition to our knowledge of Wotan's nature. The reader need not fear that this book is nothing but a scientific study written with academic aloofness from the subject. Certainly the right to scientific objectivity is fully preserved, and the material has been collected with extraordinary thoroughness and presented in unusually clear form. But over and above all this one feels that the author is vitally interested in it, that the chord of Wotan is vibrating in him too. This is no criticism—on the contrary it is one of the chief merits of the book, which without this enthusiasm might easily have degenerated into a tedious catalogue.

[393] Ninck sketches a really magnificent portrait of the German archetype Wotan. He describes him in ten chapters, using all the available sources, as the berserker, the god of storm, the wanderer, the warrior, the *Wunsch-* and *Minne-god*, the lord of the dead and of the *Einherier*,[13] the master of secret knowledge, the magician, and the god of the poets. Neither the Valkyries nor the *Fylgja*[14] are forgotten, for they form part of the mythological background and fateful significance of Wotan. Ninck's inquiry into the name and its origin is particularly instructive. He shows that Wotan is not only a god of rage and frenzy who embodies the instinctual and emotional aspect of the unconscious. Its intuitive and inspiring side also manifests itself in him, for he understands the runes and can interpret fate.

[394] The Romans identified Wotan with Mercury, but his character does not really correspond to any Roman or Greek god, although there are certain resemblances. He is a wanderer like Mercury, for instance, rules over the dead like Pluto and Kronos, and is connected with Dionysus by his emotional frenzy, particularly in its mantic aspect. It is surprising that Ninck does not mention Hermes, the god of revelation, who as *pneuma* and *nous* is associated with the wind. He would be the connecting-link with the Christian pneuma and the miracle of Pentecost. As Poimandres (the shepherd of men) Hermes is an *Ergreifer* like Wotan. Ninck rightly points out that Dionysus and the other Greek gods always remained under the supreme authority of Zeus, which indicates a fundamental difference between the Greek and the Germanic temperament. Ninck assumes an inner affinity between Wotan and Kronos, and the latter's defeat may

perhaps be a sign that the Wotan-archetype was once overcome and split up in prehistoric times. At all events, the Germanic god represents a totality on a very primitive level, a psychological condition in which man's will was almost identical with the god's and entirely at his mercy. But the Greeks had gods who helped man against other gods; indeed, All-Father Zeus himself is not far from the ideal of a benevolent, enlightened despot.

[395] It was not in Wotan's nature to linger on and show signs of old age. He simply disappeared when the times turned against him, and remained invisible for more than a thousand years, working anonymously and indirectly. Archetypes are like riverbeds which dry up when the water deserts them, but which it can find again at any time. An archetype is like an old watercourse along which the water of life has flowed for centuries, digging a deep channel for itself. The longer it has flowed in this channel the more likely it is that sooner or later the water will return to its old bed. The life of the individual as a member of society and particularly as part of the State may be regulated like a canal, but the life of nations is a great rushing river which is utterly beyond human control, in the hands of One who has always been stronger than men. The League of Nations, which was supposed to possess supranational authority, is regarded by some as a child in need of care and protection, by others as an abortion. Thus the life of nations rolls on unchecked, without guidance, unconscious of where it is going, like a rock crashing down the side of a hill, until it is stopped by an obstacle stronger than itself. Political events move from one impasse to the next, like a torrent caught in gullies, creeks, and marshes. All human control comes to an end when the individual is caught in a mass movement. Then the archetypes begin to function, as happens also in the lives of individuals when they are confronted with situations that cannot be dealt with in any of the familiar ways. But what a so-called Führer does with a mass movement can plainly be seen if we turn our eyes to the north or south of our country.

[396] The ruling archetype does not remain the same for ever, as is evident from the temporal limitations that have been set to the hoped-for reign of peace, the "thousand-year Reich." The Mediterranean father-archetype of the just, order-loving, benevolent ruler has been shattered over the whole

of northern Europe, as the present fate of the Christian Churches bears witness. Fascism in Italy and the civil war in Spain show that in the south as well the cataclysm has been far greater than one expected. Even the Catholic Church can no longer afford trials of strength.

[397] The nationalist God has attacked Christianity on a broad front. In Russia he is called technology and science, in Italy, Duce, and in Germany, "German Faith," "German Christianity," or the State. The "German Christians" [15] are a contradiction in terms and would do better to join Hauer's "German Faith Movement."[16] These are decent and well-meaning people who honestly admit their *Ergriffenheit* and try to come to terms with this new and undeniable fact. They go to an enormous amount of trouble to make it look less alarming by dressing it up in a conciliatory historical garb and giving us consoling glimpses of great figures such as Meister Eckhart, who was also a German and also *ergriffen.* In this way the awkward question of who the *Ergreifer* is is circumvented. He was always "God." But the more Hauer restricts the world-wide sphere of Indo-European culture to the "Nordic" in general and to the *Edda* in particular, and the more "German" this faith becomes as a manifestation of *Ergriffenheit*, the more painfully evident it is that the "German" god is the god of the Germans.

[398] One cannot read Hauer's book[17] without emotion, if one regards it as the tragic and really heroic effort of a conscientious scholar who, without knowing how it happened to him, was violently summoned by the inaudible voice of the *Ergreifer* and is now trying with all his might, and with all his knowledge and ability, to build a bridge between the dark forces of life and the shining world of historical ideas. But what do all the beauties of the past from totally different levels of culture mean to the man of today, when confronted with a living and unfathomable tribal god such as he has never experienced before? They are sucked like dry leaves into the roaring whirlwind, and the rhythmic alliterations of the *Edda* become inextricably mixed up with Christian mystical texts, German poetry, and the wisdom of the *Upanishads.* Hauer himself is *ergriffen* by the depths of meaning in the primal words lying at the root of the Germanic languages, to an extent that he certainly never knew before. Hauer the Indologist is not to blame for this, nor yet the *Edda;* it is rather

the fault of *kairos*— the present moment in time—whose name on closer investigation turns out to be Wotan. I would therefore advise the German Faith Movement to throw aside their scruples. Intelligent people will not confuse them with the crude Wotan-worshippers whose faith is a mere pretence. There are people in the German Faith Movement who are intelligent enough not only to *believe* but to *know* that the god of the *Germans* is Wotan and not the Christian God. This is a tragic experience and no disgrace. It has always been terrible to fall into the hands of a living god. Yahweh was no exception to this rule, and the Philistines, Edomites, Amorites, and the rest, who were outside the Yahweh experience, must certainly have found it exceedingly disagreeable. The Semitic[18] experience of Allah was for a long time an extremely painful affair for the whole of Christendom. We who stand outside judge the Germans far too much as if they were responsible agents, but perhaps it would be nearer the truth to regard them also as *victims.*

[399] If we apply our admittedly peculiar point of view consistently, we are driven to conclude that Wotan must, in time, reveal not only the restless, violent, stormy side of his character, but also his ecstatic and mantic qualities—a very different aspect of his nature. If this conclusion is correct, National Socialism would not be the last word. Things must be concealed in the background which we cannot imagine at present, but we may expect them to appear in the course of the next few years or decades. Wotan’s reawakening is a stepping back into the past; the stream was dammed up and has broken into its old channel. But the obstruction will not last for ever; it is rather a *reculer pour mieux sauter*, and the water will overleap the obstacle. Then at last we shall know what Wotan is saying when he “murmurs with Mimir’s head.”

Fast move the sons of Mim, and fate
Is heard in the note of the Gjallarhorn;
Loud blows Heimdall, the horn is aloft,
In fear quake all who on Hel-roads are.

Yggdrasil shakes and shivers on high
The ancient limbs, and the giant is loose;
Wotan murmurs with Mimir’s head
But the kinsman of Surt shall slay him soon.

How fare the gods? how fare the elves?
All Jotunheim groans, the gods are at council;
Loud roar the dwarfs by the doors of stone,
The masters of the rocks: would you know yet more?

Now Garm howls loud before Gnipahellir;
The fetters will burst, and the wolf run free;
Much do I know, and more can see
Of the fate of the gods, the mighty in fight.

From the east comes Hrym with shield held high;
In giant-wrath does the serpent writhe;
O’er the waves he twists, and the tawny eagle
Gnaws corpses screaming; Naglfar is loose.

O’er the sea from the north there sails a ship
With the people of Hel, at the helm stands Loki;
After the wolf do wild men follow,
And with them the brother of Byleist goes.[19]

AFTER THE CATASTROPHE[1]

[400] This is the first time since 1936 that the fate of Germany again drives me to take up my pen. The quotation from the *Voluspo* with which I ended the article [2] I wrote at that time, about Wotan "murmuring with Mimir's head," pointed prophetically to the nature of the coming apocalyptic events. The myth has been fulfilled, and the greater part of Europe lies in ruins.

[401] Before the work of reconstruction can begin, there is a good deal of clearing up to be done, and this calls above all for *reflection.* Questions are being asked on all sides about the meaning of the whole tragedy. People have even turned to me for an explanation, and I have had to answer them there and then to the best of my ability. But as the spoken word very quickly gives rise to legends, I have decided—not without considerable hesitations and misgivings—to set down my views once again in the form of an article. I am only too well aware that "Germany" presents an immense problem, and that the subjective views of a medical psychologist can touch on only a few aspects of this gigantic tangle of questions. I must be content with a modest contribution to the work of clearing up, without even attempting to look as far ahead as reconstruction.

[402] While I was working on this article I noticed how churned up one still is in one's own psyche, and how difficult it is to reach anything approaching a moderate and relatively calm point of view in the midst of one's emotions. No doubt we should be cold-blooded and superior; but we are, on the whole, much more deeply involved in the recent events in Germany than we like to admit. Nor can we feel compassion, for the heart harbours feelings of a very different nature, and these would like to have the first say. Neither the doctor nor the psychologist can afford to be *only* cold-blooded—quite apart from the fact that they would find it impossible. Their relationship to the world involves them and all their affects, otherwise their relationship would be incomplete. That being so, I

found myself faced with the task of steering my ship between Scylla and Charybdis, and—as is usual on such a voyage—stopping my ears to one side of my being and lashing the other to the mast. I must confess that no article has ever given me so much trouble, from a moral as well as a human point of view. I had not realized how much I myself was affected. There are others, I am sure, who will share this feeling with me. This inner identity or *participation mystique* with events in Germany has caused me to experience afresh how painfully wide is the scope of the psychological concept of *collective guilt.* So when I approach this problem it is certainly not with any feelings of cold-blooded superiority, but rather with an avowed sense of inferiority.

[403] The psychological use of the word "guilt" should not be confused with guilt in the legal or moral sense. Psychologically, it connotes the irrational presence of a subjective feeling (or conviction) of guilt, or an objective imputation of, or imputed share in, guilt. As an example of the latter, suppose a man belongs to a family which has the misfortune to be disgraced because one of its members has committed a crime. It is clear that he cannot be held responsible, either legally or morally. Yet the atmosphere of guilt makes itself felt in many ways. His family name appears to have been sullied, and it gives him a painful shock to hear it bandied about in the mouths of strangers. Guilt can be restricted to the lawbreaker only from the legal, moral, and intellectual point of view, but as a psychic phenomenon it spreads itself over the whole neighbourhood. A house, a family, even a village where a murder has been committed feels the psychological guilt and is made to feel it by the outside world. Would one take a room where one knows a man was murdered a few days before? Is it particularly pleasant to marry the sister or daughter of a criminal? What father is not deeply wounded if his son is sent to prison, and does he not feel injured in his family pride if a cousin of the same name brings dishonour on his house? Would not every decent Swiss feel ashamed—to put it mildly—if our Government had erected a human slaughterhouse like Maidenek in our country? Would we then be surprised if, travelling abroad with our Swiss passports, we heard such remarks at the frontier as "Ces cochons de Suisses!"? Indeed, are we not

all a little ashamed—precisely because we are patriots—that Switzerland should have bred so many traitors?

[404] Living as we do in the middle of Europe, we Swiss feel comfortably far removed from the foul vapours that arise from the morass of German guilt. But all this changes the moment we set foot, as Europeans, on another continent or come into contact with an Oriental people. What are we to say to an Indian who asks us: "You are anxious to bring us your Christian culture, are you not? May I ask if Auschwitz and Buchenwald are examples of European civilization?" Would it help matters if we hastened to assure him that these things did not take place where we live, but several hundred miles further east—not in our country at all but in a neighbouring one? How would we react if an Indian pointed out indignantly that India's black spot lay not in Travancore but in Hyderabad? Undoubtedly we'd say, "Oh well, India is India!" Similarly, the view all over the East is, "Oh well, Europe is Europe!" The moment we so-called innocent Europeans cross the frontiers of our own continent we are made to feel something of the collective guilt that weighs upon it, despite our good conscience. (One might also ask: Is Russia so primitive that she can still feel our "guilt-by-contagion"—as collective guilt might also be called—and for that reason accuses us of Fascism?) The world sees Europe as the continent on whose soil the shameful concentration camps grew, just as Europe singles out Germany as the land and the people that are enveloped in a cloud of guilt; for the horror happened in Germany and its perpetrators were Germans. No German can deny this, any more than a European or a Christian can deny that the most monstrous crime of all ages was committed in his house. The Christian Church should put ashes on her head and rend her garments on account of the guilt of her children. The shadow of their guilt has fallen on her as much as upon Europe, the mother of monsters. Europe must account for herself before the world, just as Germany must before Europe. The European can no more convince the Indian that Germany is no concern of his, or that he knows nothing at all about that country, than the German can rid himself of his collective guilt by protesting that he did not know. In that way he merely compounds his collective guilt by the sin of unconsciousness.

[405] Psychological collective guilt is a *tragic fate*. It hits everybody, just and unjust alike, everybody who was anywhere near the place where the terrible thing happened. Naturally no reasonable and conscientious person will lightly turn collective into individual guilt by holding the individual responsible without giving him a hearing. He will know enough to distinguish between the individually guilty and the merely collectively guilty. But how many people are either reasonable or conscientious, and how many take the trouble to become so? I am not very optimistic in this respect. Therefore, although collective guilt, viewed on the archaic and primitive level, is a state of *magical uncleanness*, yet precisely because of the general unreasonableness it is a very real fact, which no European outside Europe and no German outside Germany can leave out of account. If the German intends to live on good terms with Europe, he must be conscious that in the eyes of Europeans he is a guilty man. As a German, he has betrayed European civilization and all its values; he has brought shame and disgrace on his European family, so that one must blush to hear oneself called a European; he has fallen on his European brethren like a beast of prey, and tortured and murdered them. The German can hardly expect other Europeans to resort to such niceties as to inquire at every step whether the criminal's name was Müller or Meier. Neither will he be deemed worthy of being treated as a gentleman until the contrary has been proved. Unfortunately, for twelve long years it has been demonstrated with the utmost clarity that the official German was no gentleman.

[406] If a German is prepared to acknowledge his moral inferiority as collective guilt before the whole world, without attempting to minimize it or explain it away with flimsy arguments, then he will stand a reasonable chance, after a time, of being taken for a more or less decent man, and will thus be absolved of his collective guilt at any rate in the eyes of individuals.

[407] It may be objected that the whole concept of psychological collective guilt is a prejudice and a sweepingly unfair condemnation. Of course it is, but that is precisely what constitutes the irrational nature of collective guilt: it cares nothing for the just and the unjust, it is the dark cloud that rises up from the scene of an unexpiated crime. It is a psychic

phenomenon, and it is therefore no condemnation of the German people to say that they are collectively guilty, but simply a statement of fact. Yet if we penetrate more deeply into the psychology of this phenomenon, we shall soon discover that the problem of collective guilt has another and more questionable aspect than that merely of a collective judgment.

[408] Since no man lives within his own psychic sphere like a snail in its shell, separated from everybody else, but is connected with his fellow-men by his unconscious humanity, no crime can ever be what it appears to our consciousness to be: an isolated psychic happening. In reality, it always happens over a wide radius. The sensation aroused by a crime, the passionate interest in tracking down the criminal, the eagerness with which the court proceedings are followed, and so on, all go to prove the exciting effect which the crime has on everybody who is not abnormally dull or apathetic. Everybody joins in, feels the crime in his own being, tries to understand and explain it. Something is set aflame by that great fire of evil that flared up in the crime. Was not Plato aware that the sight of ugliness produces something ugly in the soul? Indignation leaps up, angry cries of “Justice!” pursue the murderer, and they are louder, more impassioned, and more charged with hate the more fiercely burns the fire of evil that has been lit in our souls. It is a fact that cannot be denied: the wickedness of others becomes our own wickedness because it kindles something evil in our own hearts. The murder has been suffered by everyone, and everyone has committed it; lured by the irresistible fascination of evil, we have all made this collective psychic murder possible; and the closer we were to it and the better we could see, the greater our guilt. In this way we are unavoidably drawn into the uncleanness of evil, no matter what our conscious attitude may be. No one can escape this, for we are all so much a part of the human community that every crime calls forth a secret satisfaction in some corner of the fickle human heart. It is true that, in persons with a strong moral disposition, this reaction may arouse contrary feelings in a neighbouring compartment of the mind. But a strong moral disposition is a comparative rarity, so that when the crimes mount up, indignation may easily get pitched too high, and evil then becomes the order of the day. Everyone harbours his “statistical criminal” in himself, just as he has his

own private madman or saint. Owing to this basic peculiarity in our human make-up, a corresponding suggestibility, or susceptibility to infection, exists everywhere. It is our age in particular—the last half century—that has prepared the way for crime. Has it never occurred to anybody, for instance, that the vogue for the thriller has a rather questionable side?

[409] Long before 1933 there was a smell of burning in the air, and people were passionately interested in discovering the locus of the fire and in tracking down the incendiary. And when denser clouds of smoke were seen to gather over Germany, and the burning of the Reichstag gave the signal, then at last there was no mistake where the incendiary, evil in person, dwelt. Terrifying as this discovery was, in time it brought a sense of relief: now we knew for certain where all unrighteousness was to be found, whereas we ourselves were securely entrenched in the opposite camp, among respectable people whose moral indignation could be trusted to rise higher and higher with every fresh sign of guilt on the other side. Even the call for mass executions no longer offended the ears of the righteous, and the saturation bombing of German cities was looked upon as the judgment of God. Hate had found respectable motives and had ceased to be a personal idiosyncrasy, indulged in secret. And all the time the esteemed public had not the faintest idea how closely they themselves were living to evil.

[410] One should not imagine for a moment that anybody could escape this play of opposites. Even a saint would have to pray unceasingly for the souls of Hitler and Himmler, the Gestapo and the S.S., in order to repair without delay the damage done to his own soul. The sight of evil kindles evil in the soul—there is no getting away from this fact. The victim is not the only sufferer; everybody in the vicinity of the crime, including the murderer, suffers with him. Something of the abysmal darkness of the world has broken in on us, poisoning the very air we breathe and befouling the pure water with the stale, nauseating taste of blood. True, we are innocent, we are the victims, robbed, betrayed, outraged; and yet for all that, or precisely because of it, the flame of evil glowers in our moral indignation. It must be so, for it is necessary that someone should feel indignant, that someone should let himself be the sword of judgment

wielded by fate. Evil calls for expiation, otherwise the wicked will destroy the world utterly, or the good suffocate in their rage which they cannot vent, and in either case no good will come of it.

[411] When evil breaks at any point into the order of things, our whole circle of psychic protection is disrupted. Action inevitably calls up reaction, and, in the matter of destructiveness, this turns out to be just as bad as the crime, and possibly even worse, because the evil must be exterminated root and branch. In order to escape the contaminating touch of evil we need a proper *rite de sortie*, a solemn admission of guilt by judge, hangman, and public, followed by an act of expiation.

[412] The terrible things that have happened in Germany, and the moral downfall of a “nation of eighty millions,” are a blow aimed at all Europeans. (We used to be able to relegate such things to “Asia!”) The fact that one member of the European family could sink to the level of the concentration camp throws a dubious light on all the others. Who are we to imagine that “it couldn’t happen here”? We have only to multiply the population of Switzerland by twenty to become a nation of eighty millions, and our public intelligence and morality would then automatically be divided by twenty in consequence of the devastating moral and psychic effects of living together in huge masses. Such a state of things provides the basis for collective crime, and it is then really a miracle if the crime is not committed. Do we seriously believe that *we* would have been immune? We, who have so many traitors and political psychopaths in our midst? It has filled us with horror to realize all that man is capable of, and of which, therefore, we too are capable. Since then a terrible doubt about humanity, and about ourselves, gnaws at our hearts.

[413] Nevertheless, it should be clear to everyone that such a state of degradation can come about only under certain conditions. The most important of these is the accumulation of urban, industrialized masses—of people torn from the soil, engaged in one-sided employment, and lacking every healthy instinct, even that of self-preservation. Loss of the instinct of self-preservation can be measured in terms of dependence on the State, which is a bad symptom. Dependence on the State means that everybody relies on everybody else (= State) instead of on himself. Every

man hangs on to the next and enjoys a false feeling of security, for one is still hanging in the air even when hanging in the company of ten thousand other people. The only difference is that one is no longer aware of one's own insecurity. The increasing dependence on the State is anything but a healthy symptom; it means that the whole nation is in a fair way to becoming a herd of sheep, constantly relying on a shepherd to drive them into good pastures. The shepherd's staff soon becomes a rod of iron, and the shepherds turn into wolves. What a distressing sight it was to see the whole of Germany heave a sigh of relief when a megalomaniac psychopath proclaimed, "I take over the responsibility!" Any man who still possesses the instinct of self-preservation knows perfectly well that only a swindler would offer to relieve him of responsibility, for surely no one in his senses would dream of taking responsibility for the existence of another. The man who promises everything is sure to fulfil nothing, and everyone who promises too much is in danger of using evil means in order to carry out his promises, and is already on the road to perdition. The steady growth of the Welfare State is no doubt a very fine thing from one point of view, but from another it is a doubtful blessing, as it robs people of their individual responsibility and turns them into infants and sheep. Besides this, there is the danger that the capable will simply be exploited by the irresponsible, as happened on a huge scale in Germany. The citizen's instinct of self-preservation should be safeguarded at all costs, for, once a man is cut off from the nourishing roots of instinct, he becomes the shuttlecock of every wind that blows. He is then no better than a sick animal, demoralized and degenerate, and nothing short of a catastrophe can bring him back to health.

[414] I own that in saying all this I feel rather like the prophet who, according to Josephus, lifted up his voice in lamentation over the city as the Romans laid siege to Jerusalem. It proved not the slightest use to the city, and a stone missile from a Roman ballista put an end to the prophet.

[415] With the best will in the world we cannot build a paradise on earth, and even if we could, in a very short time we would have degenerated in every way. We would take delight in destroying our paradise, and then, just as foolishly, marvel at what we had done. Moreover, if we happened

to be a “nation of eighty millions” we would be convinced that the “others” were to blame, and our self-confidence would be at such a low ebb that we would not even think of shouldering the responsibility or taking the blame for anything.

[416] This is a pathological, demoralized, and mentally abnormal condition: one side of us does things which the other (so-called decent) side prefers to ignore. This side is in a perpetual state of defence against real and supposed accusations. In reality the chief accuser is not outside, but the judge who dwells in our own hearts. Since this is nature’s attempt to bring about a cure, it would be wiser not to persist too long in rubbing the noses of the Germans in their own abominations, lest we drown the voice of the accuser in their hearts—and also in our own hearts and those of our Allies. If only people could realize what an enrichment it is to find one’s own guilt, what a sense of honour and spiritual dignity! But nowhere does there seem to be a glimmering of this insight. Instead, we hear only of attempts to shift the blame on to others—“no one will admit to having been a Nazi.” The Germans were never wholly indifferent to the impression they made on the outside world. They resented disapproval and hated even to be criticized. Inferiority feelings make people touchy and lead to compensatory efforts to impress. As a result, the German thrusts himself forward and seeks to curry favour, or “German efficiency” is demonstrated with such aplomb that it leads to a reign of terror and the shooting of hostages. The German no longer thinks of these things as murder, for he is lost in considerations of his own prestige. Inferiority feelings are usually a sign of inferior feeling—which is not just a play on words. All the intellectual and technological achievements in the world cannot make up for inferiority in the matter of feeling. The pseudo-scientific race-theories with which it was dolled up did not make the extermination of the Jews any more acceptable, and neither do falsifications of history make a wrong policy appear any more trustworthy.

[417] This spectacle recalls the figure of what Nietzsche so aptly calls the “pale criminal,” who in reality shows all the signs of hysteria. He simply will not and cannot admit that he is what he is; he cannot endure his own guilt, just as he could not help incurring it. He will stoop to every kind of

self-deception if only he can escape the sight of himself. It is true that this happens everywhere, but nowhere does it appear to be such a national characteristic as in Germany. I am by no means the first to have been struck by the inferiority feelings of the Germans. What did Goethe, Heine, and Nietzsche have to say about their countrymen? A feeling of inferiority does not in the least mean that it is unjustified. Only, the inferiority does not refer to that side of the personality, or to the function, in which it visibly appears, but to an inferiority which none the less really exists even though only dimly suspected. This condition can easily lead to an hysterical dissociation of the personality, which consists essentially in one hand not knowing what the other is doing, in wanting to jump over one's own shadow, and in looking for everything dark, inferior, and culpable *in others*. Hence the hysteric always complains of being surrounded by people who are incapable of appreciating him and who are activated only by bad motives; by inferior mischief-makers, a crowd of submen who should be exterminated neck and crop so that the Superman can live on his high level of perfection. The very fact that his thinking and feeling proceed along these lines is clear proof of inferiority in action. Therefore all hysterical people are compelled to torment others, because they are unwilling to hurt themselves by admitting their own inferiority. But since nobody can jump out of his skin and be rid of himself, they stand in their own way everywhere as their own evil spirit—and that is what we call an hysterical neurosis.

[418] All these pathological features—complete lack of insight into one's own character, auto-erotic self-admiration and self-extenuation, denigration and terrorization of one's fellow men (how contemptuously Hitler spoke of his own people!), projection of the shadow, lying, falsification of reality, determination to impress by fair means or foul, bluffing and double-crossing—all these were united in the man who was diagnosed clinically as an hysteric, and whom a strange fate chose to be the political, moral, and religious spokesman of Germany for twelve years. Is this pure chance?

[419] A more accurate diagnosis of Hitler's condition would be *pseudologia phantastica*, that form of hysteria which is characterized by a peculiar talent for believing one's own lies. For a short spell, such

people usually meet with astounding success, and for that reason are socially dangerous. Nothing has such a convincing effect as a lie one invents and believes oneself, or an evil deed or intention whose righteousness one regards as self-evident. At any rate they carry far more conviction than the good man and the good deed, or even than the wicked man and his purely wicked deed. Hitler's theatrical, obviously hysterical gestures struck all foreigners (with a few amazing exceptions) as purely ridiculous. When I saw him with my own eyes, he suggested a psychic scarecrow (with a broomstick for an outstretched arm) rather than a human being. It is also difficult to understand how his ranting speeches, delivered in shrill, grating, womanish tones, could have made such an impression. But the German people would never have been taken in and carried away so completely if this figure had not been a reflected image of the collective German hysteria. It is not without serious misgivings that one ventures to pin the label of "psychopathic inferiority" on to a whole nation, and yet, heaven knows, it is the only explanation which could in any way account for the effect this scarecrow had on the masses. A sorry lack of education, conceit that bordered on madness, a very mediocre intelligence combined with the hysteric's cunning and the power fantasies of an adolescent, were written all over this demagogue's face. His gesticulations were all put on, devised by an hysterical mind intent only on making an impression. He behaved in public like a man living in his own biography, in this case as the sombre, daemonic "man of iron" of popular fiction, the ideal of an infantile public whose knowledge of the world is derived from the deified heroes of trashy films. These personal observations led me to conclude at the time (1937) that, when the final catastrophe came, it would be far greater and bloodier than I had previously supposed. For this theatrical hysteric and transparent impostor was not strutting about on a small stage, but was riding the armoured divisions of the Wehrmacht, with all the weight of German heavy industry behind him. Encountering only slight and in any case ineffective opposition from within, the nation of eighty millions crowded into the circus to witness its own destruction.

[420] Among Hitler's closest associates, Goebbels and Göring stand out as equally striking figures. Göring is the good fellow and *bon vivant* type of

cheat, who takes in the simple-minded with his jovial air of respectability; Goebbels, a no-less-sinister and dangerous character, is the typical *Kaffeehausliterat* and card-sharper, handicapped and at the same time branded by nature. Any one partner in this unholy trinity should have been enough to make any man whose instincts were not warped cross himself three times. But what in fact happened? Hitler was exalted to the skies; there were even theologians who looked upon him as the Saviour. Goring was popular on account of his weaknesses; few people would believe his crimes. Goebbels was tolerated because many people think that lying is inseparable from success, and that success justifies everything. Three of these types at one time were really the limit, and one is at a loss to imagine how anything quite so monstrous ever came to power. But we must not forget that we are judging from today, from a knowledge of the events which led to the catastrophe. Our judgment would certainly be very different had our information stopped short at 1933 or 1934. At that time, in Germany as well as in Italy, there were not a few things that appeared plausible and seemed to speak in favour of the regime. An undeniable piece of evidence in this respect was the disappearance of the unemployed, who used to tramp the German highroads in their hundreds of thousands. And after the stagnation and decay of the post-war years, the refreshing wind that blew through the two countries was a tempting sign of hope. Meanwhile, the whole of Europe looked on at this spectacle like Mr. Chamberlain, who was prepared at most for a heavy shower. But it is just this extreme speciousness that is the peculiar genius of *pseudologia phantastica*, and Mussolini also had a touch of it (kept within bounds, however, while his brother Arnaldo was alive). It introduces its plans in the most innocent way in the world, finding the most appropriate words and the most plausible arguments, and there is nothing to show that its intentions are bad from the start. They may even be good, genuinely good. In the case of Mussolini, for instance, it might be difficult to draw a definite line between black and white. Where *pseudologia* is at work one can never be sure that the intention to deceive is the principal motive. Quite often the “great plan” plays the leading role, and it is only when it comes to the ticklish question of bringing this plan into reality that every opportunity is exploited and any means is good enough, on the principle that “the end justifies the means.” In other words, things only become dangerous when the pathological liar is taken seriously by a wider public. Like Faust, he is bound to make a pact with the devil and thus slips off the straight path. It is even possible that this is more or less what happened to Hitler—let us give him the benefit of the doubt! But the infamies of his book, once it is shorn of its *Schwabinger*[3] brand of bombast, make one suspicious, and one cannot help wondering if the evil spirit had not already taken possession of this man long before he seized power. Round about 1936, many people in Germany were asking themselves the same question; they expressed fears that the Führer might fall a victim to “evil influences,” he dabbled too much in “black magic,” etc. Clearly these misgivings came much too late; but even so, it is just conceivable that Hitler himself may have had good intentions at first, and only succumbed to the use of the wrong means, or the misuse of his means, in the course of his development.

[421] But I should like to emphasize above all that it is part and parcel of the pathological liar’s make-up to be plausible. Therefore it is no easy matter, even for experienced people, to form an opinion, particularly while the plan is still apparently in the idealistic stage. It is then quite impossible to foresee how things are likely to develop, and Mr. Chamberlain’s “give-it-a-chance” attitude seems to be the only policy. The overwhelming majority of the Germans were just as much in the dark as people abroad, and quite naturally fell an easy prey to Hitler’s speeches, so artfully attuned to German (and not only German) taste.

[422] Although we may be able to understand why the Germans were misled in the first place, the almost total absence of any reaction is quite incomprehensible. Were there not army commanders who could have ordered their troops to do anything they pleased? Why then was the reaction totally lacking? I can only explain this as the outcome of a peculiar state of mind, a passing or chronic disposition which, in an individual, we call hysteria.

[423] As I cannot take it for granted that the layman knows exactly what is meant by “hysteria,” I had better explain that the “hysterical” disposition forms a sub-division of what are known as “psychopathic inferiorities.”

This term by no means implies that the individual or the nation is “inferior” in every respect, but only that there is a place of least resistance, a peculiar instability, which exists independently of all the other qualities. An hysterical disposition means that the opposites inherent in every psyche, and especially those affecting character, are further apart than in normal people. This greater distance produces a higher energic tension, which accounts for the undeniable energy and drive of the Germans. On the other hand, the greater distance between the opposites produces inner contradictions, conflicts of conscience, disharmonies of character—in short, everything we see in Goethe’s Faust. Nobody but a German could ever have devised such a figure, it is so intrinsically, so infinitely German. In Faust we see the same “hungering for the infinite” born of inner contradiction and dichotomy, the same eschatological expectation of the Great Fulfilment. In him we experience the loftiest flight of the mind and the descent into the depths of guilt and darkness, and still worse, a fall so low that Faust sinks to the level of a mountebank and wholesale murderer as the outcome of his pact with the devil. Faust, too, is split and sets up “evil” outside himself in the shape of Mephistopheles, to serve as an alibi in case of need. He likewise “knows nothing of what has happened,” i.e., what the devil did to Philemon and Baucis. We never get the impression that he has real insight or suffers genuine remorse. His avowed and unavowed worship of success stands in the way of any moral reflection throughout, obscuring the ethical conflict, so that Faust’s moral personality remains misty. He never attains the character of reality: he is not a real human being and cannot become one (at least not in this world). He remains the German idea of a human being, and therefore an image—somewhat overdone and distorted—of the average German.

[424] The essence of hysteria is a systematic dissociation, a loosening of the opposites which normally are held firmly together. It may even go to the length of a splitting of the personality, a condition in which quite literally one hand no longer knows what the other is doing. As a rule there is amazing ignorance of the shadow; the hysteric is only aware of his good motives, and when the bad ones can no longer be denied he

becomes the unscrupulous Superman and *Herrenmensch* who fancies he is ennobled by the magnitude of his aim.

[425] Ignorance of one’s other side creates great inner insecurity. One does not really know who one is; one feels inferior somewhere and yet does not wish to know where the inferiority lies, with the result that a new inferiority is added to the original one. This sense of insecurity is the source of the hysteric’s prestige psychology, of his need to make an impression, to flaunt his merits and insist on them, of his insatiable thirst for recognition, admiration, adulation, and longing to be loved. It is the cause of that loud-mouthed arrogance, uppishness, insolence, and tactlessness by which so many Germans, who at home grovel like dogs, win a bad reputation for their countrymen abroad. Insecurity is also responsible for their tragic lack of civic courage, criticized by Bismarck (one need only recall the pitiable role of the German generals).

[426] The lack of reality, so striking in Faust, produces a corresponding lack of realism in the German. He merely talks of it, boasting of his “ice-cold” realism, which in itself is enough to expose his hysteria. His realism is nothing but a pose, a stage-realism. He merely acts the part of one who has a sense of reality, but what does he actually want to do? He wants to conquer the world in spite of the whole world. Of course, he has no idea how it can be done. But at least he might know that the enterprise had failed once before. Unfortunately a plausible reason, that explains away the failure by means of lies, is immediately invented and believed. How many Germans were taken in by the legend of the “stab in the back” in 1918? And how many “stab in the back” legends are floating around today? Believing one’s own lies when the wish is father to the lie is a well-known hysterical symptom and a distinct sign of inferiority. One would have thought that the bloodbath of the first World War would have been enough, but not a bit of it; glory, conquest, and bloodthirstiness acted like a smoke-screen on the German mind, so that reality, only dimly perceived at best, was completely blotted out. In an individual we call this sort of thing an hysterical twilight-state. When a whole nation finds itself in this condition it will follow a mediumistic Führer over the housetops with a sleep-walker’s assurance, only to land in the street with a broken back.

[427] Supposing we Swiss had started such a war and had thrown all our experience, all warnings and all our knowledge of the world to the winds as blindly as the Germans, and had finally gone to the length of establishing an original edition of Buchenwald in our country. We should no doubt feel very disagreeably surprised if a foreigner declared that the Swiss were one and all completely mad. No reasonable person would be surprised at such a verdict, but can we say it about Germany? I wonder what the Germans themselves think. All I know is that at the time of the censorship in Switzerland we were not permitted to say these things aloud, and now it seems we cannot say them out of consideration for Germany which is laid so low. When on earth, I should like to ask, may one venture to form an opinion of one's own? To my mind, the history of the last twelve years is the case-chart of an hysterical patient. The truth should not be withheld from him, for when the doctor makes a diagnosis he does so as part of his effort to find the remedy, and not in order to hurt, degrade, or insult the sufferer. A neurosis or a neurotic disposition is not a disgrace, it is a handicap, and sometimes merely a *façon de parler.* It is not a fatal disease, but it does grow worse to the degree that one is determined to ignore it. When I say that the Germans are psychically ill it is surely kinder than saying that they are criminals. I have no wish to irritate the notorious sensitiveness of the hysteric, but there comes a time when we can no longer afford to gloss over all the painful symptoms and to help the patient forget what has happened, merely in order that his pathological condition should remain undisturbed. I would not like to insult the healthy-minded and decent German by suspecting him of being a coward who runs away from his own image. We should do him the honour of treating him like a man and telling him the truth, and not conceal from him that our soul is cut to the quick by the terrible things that happened in his country and were perpetrated by the Germans in Europe. We are hurt and indignant and have no particular feelings of loving-kindness—nor can any amount of determination and will-power twist these sentiments into a Christian "love of your neighbour." For the sake of the healthy-minded and decent Germans one should not attempt to do so; they would surely prefer the truth to insulting forbearance.

[428] Hysteria is never cured by hushing up the truth, whether in an individual or in a nation. But can we say that a whole nation is hysterical? We can say it as much or as little of a nation as of an individual. Even the craziest person is not completely crazy; quite a number of his functions are still normal, and there may even be times when he himself is fairly normal too. This is even truer of hysteria, where there is really nothing wrong except exaggerations and excesses on the one hand, and weakness or temporary paralysis of normal functions on the other. In spite of his psychopathic condition the hysteric is very nearly normal. We may therefore expect many parts of the psychic body-politic to be entirely normal even though the over-all picture can only be described as hysterical.

[429] The Germans undoubtedly have their own peculiar psychology which distinguishes them from their neighbours, in spite of the many human qualities which they share with all mankind. Have they not demonstrated to the world that they consider themselves the *Herrenvolk*, with the right to disregard every human scruple? They have labelled other nations inferior and done their best to exterminate them.

[430] In view of these terrible facts, it is a mere bagatelle to turn the tables on the *Herrenvolk* and apply the diagnosis of inferiority to the murderer instead of the murdered, while remaining fully conscious that one is injuring all those Germans who suffered their nation’s tribulation with open eyes. It does indeed hurt one to hurt others. But, as Europeans—a brotherhood which includes the Germans—we are wounded, and if we wound in return it is not with the intention of torturing but, as I said earlier, of discovering the truth. As in the case of collective guilt, the diagnosis of its mental condition extends to the whole nation, and indeed to the whole of Europe, whose mental condition for some time past has hardly been normal. Whether we like it or not we are bound to ask: What is wrong with our art, that most delicate of all instruments for reflecting the national psyche? How are we to explain the blatantly pathological element in modern painting? Atonal music? The far-reaching influence of Joyce’s fathomless *Ulysses?* Here we already have the germ of what was to become a political reality in Germany.

[431] The European, or rather the white man in general, is scarcely in a position to judge of his own state of mind. He is too deeply involved. I had always wanted to see Europeans through other eyes, and eventually I was able, on my many journeys, to establish sufficiently close relationships with non-Europeans to see the European through their eyes. The white man is nervous, restless, hurried, unstable, and (in the eyes of non-Europeans) possessed by the craziest ideas, in spite of his energy and gifts which give him the feeling of being infinitely superior. The crimes he has committed against the coloured races are legion, though obviously this is no justification for any fresh crime, just as the individual is no better for being in a vast company of bad people. Primitives dread the sharply focussed stare in the eye of the European, which seems to them like the evil eye. A Pueblo chieftain once confided to me that he thought all Americans (the only white men he knew) were crazy, and the reasons he gave for this view sounded exactly like a description of people who were possessed. Well, perhaps we are. For the first time since the dawn of history we have succeeded in swallowing the whole of primitive animism into ourselves, and with it the spirit that animated nature. Not only were the gods dragged down from their planetary spheres and transformed into chthonic demons, but, under the influence of scientific enlightenment, even this band of demons, which at the time of Paracelsus still frolicked happily in mountains and woods, in rivers and human dwelling-places, was reduced to a miserable remnant and finally vanished altogether. From time immemorial, nature was always filled with spirit. Now, for the first time, we are living in a lifeless nature bereft of gods. No one will deny the important role which the powers of the human psyche, personified as “gods,” played in the past. The mere act of enlightenment may have destroyed the spirits of nature, but not the psychic factors that correspond to them, such as suggestibility, lack of criticism, fearfulness, propensity to superstition and prejudice—in short, all those qualities which make possession possible. Even though nature is depsychized, the psychic conditions which breed demons are as actively at work as ever. The demons have not really disappeared but have merely taken on another form: they have become unconscious psychic forces. This process of reabsorption went hand in hand with an increasing inflation of the ego, which became more and more evident after the sixteenth century.

Finally we even began to be aware of the psyche, and, as history shows, the discovery of the unconscious was a particularly painful episode. Just when people were congratulating themselves on having abolished all spooks, it turned out that instead of haunting the attic or old ruins the spooks were flitting about in the heads of apparently normal Europeans. Tyrannical, obsessive, intoxicating ideas and delusions were abroad everywhere, and people began to believe the most absurd things, just as the possessed do.

[432] The phenomenon we have witnessed in Germany was nothing less than the first outbreak of epidemic insanity, an irruption of the unconscious into what seemed to be a tolerably well-ordered world. A whole nation, as well as countless millions belonging to other nations, were swept into the blood-drenched madness of a war of extermination. No one knew what was happening to him, least of all the Germans, who allowed themselves to be driven to the slaughterhouse by their leading psychopaths like hypnotized sheep. Maybe the Germans were predestined to this fate, for they showed the least resistance to the mental contagion that threatened every European. But their peculiar gifts might also have enabled them to be the very people to draw helpful conclusions from the prophetic example of Nietzsche. Nietzsche was German to the marrow of his bones, even to the abstruse symbolism of his madness. It was the psychopath’s weakness that prompted him to play with the “blond beast” and the “Superman.” It was certainly not the healthy elements in the German nation that led to the triumph of these pathological fantasies on a scale never known before. The weakness of the German character, like Nietzsche’s, proved to be fertile soil for hysterical fantasies, though it must be remembered that Nietzsche himself not only criticized the German Philistine very freely but laid himself open to attack on a broad front. Here again the Germans had a priceless opportunity for self-knowledge—and let it slip. And what could they not have learned from the suet-and-syrup of Wagner!

[433] Nevertheless, with the calamitous founding of the Reich in 1871, the devil stole a march on the Germans, dangling before them the tempting bait of power, aggrandizement, national arrogance. Thus they were led to imitate their prophets and to take their words literally, but not to

understand them. And so it was that the Germans allowed themselves to be deluded by these disastrous fantasies and succumbed to the age-old temptations of Satan, instead of turning to their abundant spiritual potentialities, which, because of the greater tension between the inner opposites, would have stood them in good stead. But, their Christianity forgotten, they sold their souls to technology, exchanged morality for cynicism, and dedicated their highest aspirations to the forces of destruction. Certainly everybody else is doing much the same thing, but even so there really are chosen people who have no right to do such things because they should be striving for higher treasures. At any rate the Germans are not among those who may enjoy power and possessions with impunity. Just think for a moment what anti-Semitism means for the German: he is trying to use others as a scapegoat for his own greatest fault! This symptom alone should have told him that he had got on to a hopelessly wrong track.

[434] After the last World War the world should have begun to reflect, and above all Germany, which is the nerve-centre of Europe. But the spirit turned negative, neglected the decisive questions, and sought solutions in its own negation. How different it was at the time of the Reformation! Then the spirit of Germany rose manfully to the needs of Christendom, though the answer—as we might expect from the German tension of opposites—was somewhat too extreme. But at least this spirit did not shrink from its own problems. Goethe, too, was a prophet when he held up before his people the example of Faust's pact with the devil and the murder of Philemon and Baucis. If, as Burckhardt says, Faust strikes a chord in every German soul, this chord has certainly gone on ringing. We hear it echoing in Nietzsche's Superman, the amoral worshipper of instinct, whose God is dead, and who presumes to be God himself, or rather a demon "six thousand feet beyond good and evil." And where has the feminine side, the soul, disappeared to in Nietzsche? Helen has vanished in Hades, and Eurydice will never return. Already we behold the fateful travesty of the denied Christ: the sick prophet is himself the Crucified, and, going back still further, the dismembered Dionysus-Zagreus. The raving prophet carries us back to the long-forgotten past: he had heard the call of destiny in the shrill whistling of the hunter, the god

of the rustling forests, of drunken ecstasy, and of the berserkers who were possessed by the spirits of wild animals.

[435] While Nietzsche was prophetically responding to the schism of the Christian world with the art of thinking, his brother in spirit, Richard Wagner, was doing the same thing with the art of music. Germanic prehistory comes surging up, thunderous and stupefying, to fill the gaping breach in the Church. Wagner salved his conscience with *Parsifal*, for which Nietzsche could never forgive him, but the Castle of the Grail vanished into an unknown land. The message was not heard and the omen went unheeded. Only the orgiastic frenzy caught on and spread like an epidemic. Wotan the storm-god had conquered. Ernst Jünger sensed that very clearly: in his book *On the Marble Cliffs* a wild huntsman comes into the land, bringing with him a wave of possession greater than anything known even in the Middle Ages. Nowhere did the European spirit speak more plainly than it did in Germany, and nowhere was it more tragically misunderstood.

[436] Now Germany has suffered the consequences of the pact with the devil, she has experienced madness and is torn in pieces like Zagreus, she has been ravished by the berserkers of her god Wotan, been cheated of her soul for the sake of gold and worldmastery, and defiled by the scum rising from the lowest depths.

[437] The Germans must understand why the whole world is outraged, for our expectations had been so different. Everybody was unanimous in recognizing their gifts and their efficiency, and nobody doubted that they were capable of great things. The disappointment was all the more bitter. But the fate of Germany should not mislead Europeans into nursing the illusion that the whole world’s wickedness is localized in Germany. They should realize that the German catastrophe was only one crisis in the general European sickness. Long before the Hitler era, in fact before the first World War, there were symptoms of the mental change taking place in Europe. The medieval picture of the world was breaking up and the metaphysical authority that ruled it was fast disappearing, only to reappear in man. Did not Nietzsche announce that God was dead and that his heir was the Superman, that doomed rope-dancer and fool? It is an

immutable psychological law that when a projection has come to an end it always returns to its origin. So when somebody hits on the singular idea that God is dead, or does not exist at all, the psychic God-image, which is a dynamic part of the psyche's structure, finds its way back into the subject and produces a condition of "God-Almightiness," that is to say all those qualities which are peculiar to fools and madmen and therefore lead to catastrophe.

[438] This, then, is the great problem that faces the whole of Christianity: where now is the sanction for goodness and justice, which was once anchored in metaphysics? Is it really only brute force that decides everything? Is the ultimate authority only the will of whatever man happens to be in power? Had Germany been victorious, one might almost have believed that this was the last word. But as the "thousand-year Reich" of violence and infamy lasted only a few years before it collapsed in ruins, we might be disposed to learn the lesson that there are other, equally powerful forces at work which in the end destroy all that is violent and unjust, and that consequently it does not pay to build on false principles. But unfortunately, as history shows, things do not always turn out so reasonably in this world of ours.

[439] "God-Almightiness" does not make man divine, it merely fills him with arrogance and arouses everything evil in him. It produces a diabolical caricature of man, and this inhuman mask is so unendurable, such a torture to wear, that he tortures others. He is split in himself, a prey to inexplicable contradictions. Here we have the picture of the hysterical state of mind, of Nietzsche's "pale criminal." Fate has confronted every German with his inner counterpart: Faust is face to face with Mephistopheles and can no longer say, "So that was the essence of the brute!" He must confess instead: "That was my other side, my *alter ego*, my all too palpable shadow which can no longer be denied."

[440] This is not the fate of Germany alone, but of all Europe. We must all open our eyes to the shadow who looms behind contemporary man. We have no need to hold up the devil's mask before the Germans. The facts speak a plainer language, and anyone who does not understand it is simply beyond help. As to what should be done about this terrifying

apparition, everyone must work this out for himself. It is indeed no small matter to know of one's own guilt and one's own evil, and there is certainly nothing to be gained by losing sight of one's shadow. When we are conscious of our guilt we are in a more favourable position—we can at least hope to change and improve ourselves. As we know, anything that remains in the unconscious is incorrigible; psychological corrections can be made only in consciousness. Consciousness of guilt can therefore act as a powerful moral stimulus. In every treatment of neurosis the discovery of the shadow is indispensable, otherwise nothing changes. In this respect, I rely on those parts of the German body-politic which have remained sound to draw conclusions from the facts. Without guilt, unfortunately, there can be no psychic maturation and no widening of the spiritual horizon. Was it not Meister Eckhart who said: "For this reason God is willing to bear the brunt of sins and often winks at them, mostly sending them to people for whom he has prepared some high destiny. See! Who was dearer to our Lord or more intimate with him than his apostles? Not one of them but fell into mortal sin, and all were mortal sinners." [4]

[441] Where sin is great, "grace doth much more abound." Such an experience brings about an inner transformation, and this is infinitely more important than political and social reforms which are all valueless in the hands of people who are not at one with themselves. This is a truth which we are forever forgetting, because our eyes are fascinated by the conditions around us and riveted on them instead of examining our own heart and conscience. Every demagogue exploits this human weakness when he points with the greatest possible outcry to all the things that are wrong in the outside world. But the principal and indeed the only thing that is wrong with the world is man.

[442] If the Germans today are having a hard time of it outwardly, fate has at least given them a unique opportunity of turning their eyes inward to the inner man. In this way they might make amends for a sin of omission of which our whole civilization is guilty. Everything possible has been done for the outside world: science has been refined to an unimaginable extent, technical achievement has reached an almost uncanny degree of perfection. But what of man, who is expected to administer all these

blessings in a reasonable way? He has simply been taken for granted. No one has stopped to consider that neither morally nor psychologically is he in any way adapted to such changes. As blithely as any child of nature he sets about enjoying these dangerous playthings, completely oblivious of the shadow lurking behind him, ready to seize them in its greedy grasp and turn them against a still infantile and unconscious humanity. And who has had a more immediate experience of this feeling of helplessness and abandonment to the powers of darkness than the German who fell into the clutches of the Germans?

[443] If collective guilt could only be understood and accepted, a great step forward would have been taken. But this alone is no cure, just as no neurotic is cured by mere understanding. The question remains: How am I to live with this shadow? What attitude is required if I am to be able to live in spite of evil? In order to find valid answers to these questions a complete spiritual renewal is needed. And this cannot be given gratis, each man must strive to achieve it for himself. Neither can old formulas which once had a value be brought into force again. The eternal truths cannot be transmitted mechanically; in every epoch they must be born anew from the human psyche.

THE FIGHT WITH THE SHADOW[1]

[444] The indescribable events of the last decade lead one to suspect that a peculiar psychological disturbance was a possible cause. If you ask a psychiatrist what he thinks about these things, you must naturally expect to get an answer from his particular point of view. Even so, as a scientist, the psychiatrist makes no claim to omniscience, for he regards his opinion merely as one contribution to the enormously complicated task of finding a comprehensive explanation.

[445] When one adopts the standpoint of psychopathology, it is not easy to address an audience which may include people who know nothing of this specialized and difficult field. But there is one simple rule that you should bear in mind: the psychopathology of the masses is rooted in the psychology of the individual. Psychic phenomena of this class can be investigated in the individual. Only if one succeeds in establishing that certain phenomena or symptoms are common to a number of different individuals can one begin to examine the analogous mass phenomena.

[446] As you perhaps already know, I take account of the psychology both of the conscious and of the unconscious, and this includes the investigation of dreams. Dreams are the natural products of unconscious psychic activity. We have known for a long time that there is a biological relationship between the unconscious processes and the activity of the conscious mind. This relationship can best be described as a compensation, which means that any deficiency in consciousness—such as exaggeration, one-sidedness, or lack of a function—is suitably supplemented by an unconscious process.

[447] As early as 1918, I noticed peculiar disturbances in the unconscious of my German patients which could not be ascribed to their personal psychology. Such non-personal phenomena always manifest themselves in dreams as mythological motifs that are also to be found in legends and fairytales throughout the world. I have called these mythological motifs

archetypes: that is, typical modes or forms in which these collective phenomena are experienced. There was a disturbance of the collective unconscious in every single one of my German patients. One can explain these disorders causally, but such an explanation is apt to be unsatisfactory, as it is easier to understand archetypes by their aim rather than by their causality. The archetypes I had observed expressed primitivity, violence, and cruelty. When I had seen enough of such cases, I turned my attention to the peculiar state of mind then prevailing in Germany. I could only see signs of depression and a great restlessness, but this did not allay my suspicions. In a paper which I published at that time, I suggested that the "blond beast" was stirring in an uneasy slumber and that an outburst was not impossible.[2]

[448] This condition was not by any means a purely Teutonic phenomenon, as became evident in the following years. The onslaught of primitive forces was more or less universal. The only difference lay in the German mentality itself, which proved to be more susceptible because of the marked proneness of the Germans to mass psychology. Moreover, defeat and social disaster had increased the herd instinct in Germany, so that it became more and more probable that Germany would be the first victim among the Western nations—victim of a mass movement brought about by an upheaval of forces lying dormant in the unconscious, ready to break through all moral barriers. These forces, in accordance with the rule I have mentioned, were meant to be a compensation. If such a compensatory move of the unconscious is not integrated into consciousness in an individual, it leads to a neurosis or even to a psychosis, and the same would apply to a collectivity. Clearly there must be something wrong with the conscious attitude for a compensatory move of this kind to be possible; something must be amiss or exaggerated, because only a faulty consciousness can call forth a counter move on the part of the unconscious. Well, innumerable things were wrong, as you know, and opinions are thoroughly divided about them. Which is the correct opinion will be learned only *ex effectu;* that is, we can only discover what the defects in the consciousness of our epoch are by observing the kind of reaction they call forth from the unconscious.

[449] As I have already told you, the tide that rose in the unconscious after the first World War was reflected in individual dreams, in the form of collective, mythological symbols which expressed primitivity, violence, cruelty: in short, all the powers of darkness. When such symbols occur in a large number of individuals and are not understood, they begin to draw these individuals together as if by magnetic force, and thus a mob is formed. Its leader will soon be found in the individual who has the least resistance, the least sense of responsibility and, because of his inferiority, the greatest will to power. He will let loose everything that is ready to burst forth, and the mob will follow with the irresistible force of an avalanche.

[450] I had observed the German revolution in the test-tube of the individual, so to speak, and I was fully aware of the immense dangers involved when such people crowd together. But I did not know at the time whether there were enough of them in Germany to make a general explosion inevitable. However, I was able to follow up quite a number of cases and to observe how the uprush of the dark forces deployed itself in the individual test-tube. I could watch these forces as they broke through the individual's moral and intellectual self-control, and as they flooded his conscious world. There was often terrific suffering and destruction; but when the individual was able to cling to a shred of reason, or to preserve the bonds of a human relationship, a new compensation was brought about in the unconscious by the very chaos of the conscious mind, and this compensation could be integrated into consciousness. New symbols then appeared, of a collective nature, but this time reflecting the forces of *order.* There was measure, proportion, and symmetrical arrangement in these symbols, expressed in their peculiar mathematical and geometrical structure. They represent a kind of axial system and are known as *mandalas.* I am afraid I cannot go into an explanation of these highly technical matters here, but, however incomprehensible they may sound, I must mention them in passing because they represent a gleam of hope, and we need hope very badly in this time of dissolution and chaotic disorder.

[451] The world-wide confusion and disorder reflect a similar condition in the mind of the individual, but this lack of orientation is compensated in

the unconscious by the archetypes of order. Here again I must point out that if these symbols of order are not integrated into consciousness, the forces they express will accumulate to a dangerous degree, just as the forces of destruction and disorder did twenty-five years ago. The integration of unconscious contents is an individual act of realization, of understanding, and moral evaluation. It is a most difficult task, demanding a high degree of ethical responsibility. Only relatively few individuals can be expected to be capable of such an achievement, and they are not the political but the moral leaders of mankind. The maintenance and further development of civilization depend on such individuals, for it is obvious enough that the consciousness of the masses has not advanced since the first World War. Only certain reflective minds have been enriched, and their moral and intellectual horizon has been considerably enlarged by the realization of the immense and overwhelming power of evil, and of the fact that mankind is capable of becoming merely its instrument. But the average man is still where he was at the end of the first World War. Therefore it is only too obvious that the vast majority are incapable of integrating the forces of order. On the contrary, it is even probable that these forces will encroach upon consciousness and take it by surprise and violence, against our will. We see the first symptoms everywhere: totalitarianism and State slavery. The value and importance of the individual are rapidly decreasing and the chances of his being heard will vanish more and more.

[452] This process of deterioration will be long and painful, but I fear it is inevitable. Yet in the long run it will prove to be the only way by which man’s lamentable unconsciousness, his childishness and individual weakness, can be replaced by a future man, who knows that he himself is the maker of his fate and that the State is his servant and not his master. But man will reach this level only when he realizes that, through his unconsciousness, he has gambled away the fundamental *droits de l’homme.* Germany has given us a most instructive example of the psychological development in question. There the first World War released the hidden power of evil, just as the war itself was released by the accumulation of unconscious masses and their blind desires. The so-called “Friedenskaiser” was one of the first victims and, not unlike Hitler,

he voiced these lawless, chaotic desires and was thus led into war, and into the inevitable catastrophe. The second World War was a repetition of the same psychic process but on an infinitely greater scale.

[453] As I have said, the uprush of mass instincts was symptomatic of a compensatory move of the unconscious. Such a move was possible because the conscious state of the people had become estranged from the natural laws of human existence. Thanks to industrialization, large portions of the population were uprooted and were herded together in large centres. This new form of existence—with its mass psychology and social dependence on the fluctuation of markets and wages—produced an individual who was unstable, insecure, and suggestible. He was aware that his life depended on boards of directors and captains of industry, and he supposed, rightly or wrongly, that they were chiefly motivated by financial interests. He knew that, no matter how conscientiously he worked, he could still fall a victim at any moment to economic changes which were utterly beyond his control. And there was nothing else for him to rely on. Moreover, the system of moral and political education prevailing in Germany had already done its utmost to permeate everybody with a spirit of dull obedience, with the belief that every desirable thing must come from above, from those who by divine decree sat on top of the law-abiding citizen, whose feelings of personal responsibility were overruled by a rigid sense of duty. No wonder, therefore, that it was precisely Germany that fell a prey to mass psychology, though she is by no means the only nation threatened by this dangerous germ. The influence of mass psychology has spread far and wide.

[454] The individual’s feeling of weakness, indeed of non-existence, was thus compensated by the eruption of hitherto unknown desires for power. It was the revolt of the powerless, the insatiable greed of the “have-nots.” By such devious means the unconscious compels man to become conscious of himself. Unfortunately, there were no values in the conscious mind of the individual which would have enabled him to understand and integrate the reaction when it reached consciousness. Nothing but materialism was preached by the highest intellectual authorities. The Churches were evidently unable to cope with this new

situation; they could do nothing but protest and that did not help very much. Thus the avalanche rolled on in Germany and produced its leader, who was elected as a tool to complete the ruin of the nation. But what was his original intention? He dreamed of a “new order.” We should be badly mistaken if we assumed that he did not really intend to create an international order of some kind. On the contrary, deep down in his being he was motivated by the forces of order, which became operative in him the moment desirousness and greed had taken complete possession of his conscious mind. Hitler was the exponent of a “new order,” and that is the real reason why practically every German fell for him. The Germans wanted order, but they made the fatal mistake of choosing the principal victim of disorder and unchecked greed for their leader. Their individual attitude remained unchanged: just as they were greedy for power, so they were greedy for order. Like the rest of the world, they did not understand wherein Hitler’s significance lay, that he symbolized something in every individual. He was the most prodigious personification of all human inferiorities. He was an utterly incapable, unadapted, irresponsible, psychopathic personality, full of empty, infantile fantasies, but cursed with the keen intuition of a rat or a guttersnipe. He represented the shadow, the inferior part of everybody’s personality, in an overwhelming degree, and this was another reason why they fell for him.

[455] But what could they have done? In Hitler, every German should have seen his own shadow, his own worst danger. It is everybody’s allotted fate to become conscious of and learn to deal with this shadow. But how could the Germans be expected to understand this, when nobody in the world can understand such a simple truth? The world will never reach a state of order until this truth is generally recognized. In the meantime, we amuse ourselves by advancing all sorts of external and secondary reasons why it cannot be reached, though we know well enough that conditions depend very largely on the way we take them. If, for instance, the French Swiss should assume that the German Swiss were all devils, we in Switzerland could have the grandest civil war in no time, and we could also discover the most convincing economic reasons why such a war was inevitable. Well—we just don’t, for we learned our lesson more than four hundred years ago. We came to the conclusion that it is better to avoid

external wars, so we went home and took the strife with us. In Switzerland we have built up the "perfect democracy," where our warlike instincts expend themselves in the form of domestic quarrels called "political life." We fight each other within the limits of the law and the constitution, and we are inclined to think of democracy as a chronic state of mitigated civil war. We are far from being at peace with ourselves: on the contrary, we hate and fight each other because we have succeeded in introverting war. Our peaceful outward demeanour merely serves to safeguard our domestic quarrels from foreign intruders who might disturb us. Thus far we have succeeded, but we are still a long way from the ultimate goal. We still have enemies in the flesh, and we have not yet managed to introvert our political disharmonies. We still labour under the unwholesome delusion that we should be at peace within ourselves. Yet even our national, mitigated state of war would soon come to an end if everybody could see his own shadow and begin the only struggle that is really worth while: the fight against the overwhelming power-drive of the shadow. We have a tolerable social order in Switzerland because we fight among ourselves. Our order would be perfect if only everybody could direct his aggressiveness inwards, into his own psyche. Unfortunately, our religious education prevents us from doing this, with its false promises of an immediate peace within. Peace may come in the end, but only when victory and defeat have lost their meaning. What did our Lord mean when he said: "I came not to send peace, but a sword"?

[456] To the extent that we are able to found a true democracy—a conditional fight among ourselves, either collective or individual—we realize, we make real, the factors of order, because then it becomes absolutely necessary to live in orderly circumstances. In a democracy you simply cannot afford the disturbing complications of outside interference. How can you run a civil war properly when you are attacked from without? When, on the other hand, you are seriously at variance with yourself, you welcome your fellow human beings as possible sympathizers with your cause, and on this account you are disposed to be friendly and hospitable. But you politely avoid people who want to be helpful and relieve you of your troubles. We psychologists have learned, through long and painful experience, that you deprive a man of his best

resource when you help him to get rid of his complexes. You can only help him to become sufficiently aware of them and to start a conscious conflict within himself. In this way the complex becomes a focus of life. Anything that disappears from your psychological inventory is apt to turn up in the guise of a hostile neighbour, who will inevitably arouse your anger and make you aggressive. It is surely better to know that your worst enemy is right there in your own heart. Man’s warlike instincts are ineradicable—therefore a state of perfect peace is unthinkable. Moreover, peace is uncanny because it breeds war. True democracy is a highly psychological institution which takes account of human nature as it is and makes allowances for the necessity of conflict within its own national boundaries.

[457] If you now compare the present state of mind of the Germans with my argument you will appreciate the enormous task with which the world is confronted. We can hardly expect the demoralized German masses to realize the import of such psychological truths, no matter how simple. But the great Western democracies have a better chance, so long as they can keep out of those wars that always tempt them to believe in external enemies and in the desirability of internal peace. The marked tendency of the Western democracies to internal dissension is the very thing that could lead them into a more hopeful path. But I am afraid that this hope will be deferred by powers which still believe in the contrary process, in the destruction of the individual and the increase of the fiction we call the State. The psychologist believes firmly in the individual as the sole carrier of mind and life. Society and the State derive their quality from the individual’s mental condition, for they are made up of individuals and the way they are organized. Obvious as this fact is, it has still not permeated collective opinion sufficiently for people to refrain from using the word “State” as if it referred to a sort of super-individual endowed with inexhaustible power and resourcefulness. The State is expected nowadays to accomplish what nobody would expect from an individual. The dangerous slope leading down to mass psychology begins with this plausible thinking in large numbers, in terms of powerful organizations where the individual dwindles to a mere cipher. Everything that exceeds a certain human size evokes equally inhuman powers in man’s

unconscious. Totalitarian demons are called forth, instead of the realization that all that can really be accomplished is an infinitesimal step forward in the moral nature of the individual. The destructive power of our weapons has increased beyond all measure, and this forces a psychological question on mankind: Is the mental and moral condition of the men who decide on the use of these weapons equal to the enormity of the possible consequences?

EPILOGUE TO "ESSAYS ON CONTEMPORARY EVENTS"[1]

[458] Germany has set the world a tremendous problem, a problem that has to be considered from many angles. The psychological aspect is only one of its many facets. As a psychologist, I am naturally inclined to think it an important facet, but I must leave it to my reader to form his own opinion on this point. My professional concern with the psychology of the unconscious often brings to light things which are still hidden from consciousness but exist in embryonic form; and these contents are ready to break through into consciousness long before the individual has any idea of what his psyche holds in store for him. I had an inkling of what was brewing in the unconscious nearly thirty years ago, for I had Germans among my patients. As early as 1918 I wrote:

> As the Christian view of the world loses its authority, the more menacingly will the "blond beast" be heard prowling about in its underground prison, ready at any moment to burst out with devastating consequences.[2]

[459] It hardly requires an Oedipus to guess what is meant by the "blond beast." I had an idea, however, that this "blond beast" was not restricted to Germany, but stood for the primitive European in general, who was gradually coming to the surface as a result of ever-increasing mass organization. In the same article I went on to say:

> Even the primitive's distrust of the neighbouring tribe, which we thought we had long ago outgrown thanks to our global organizations, has come back again in this war, swollen to gigantic proportions. It is no longer a matter of burning down the neighbouring village, or of making a few heads roll: whole countries are devastated, millions are slaughtered. The enemy nation is stripped of every shred of decency, and our own faults appear in others, fantastically magnified. Where are the superior minds, capable of reflection, today? If they exist at all, nobody heeds them: instead there is a general running amok, a universal fatality against whose compelling sway the individual is powerless to defend himself. And yet this collective phenomenon is the fault of the individual as well, for nations are made up of individuals. Therefore the individual must consider by what means he can counter the evil. Our rationalistic attitude leads us to believe that we can work wonders with international organizations, legislation, and other well-meant devices. But in reality only a change in the attitude of the individual can bring about a renewal in the spirit of the nations. Everything begins with the individual. There are well-meaning theologians and

> humanitarians who want to break the power principle—in others. We must begin by breaking it in ourselves. Then the thing becomes credible.[3]

[460] While the first World War was still in progress, I wrote an essay that first appeared in French, which I enlarged and published as a book in Germany in 1928.[4] Dealing among other things with the subject of mass psychology, I said:

> It is a notorious fact that the morality of society as a whole is in inverse ratio to its size; the greater the aggregation of individuals, the more the individual factors are blotted out, and with them morality, which depends entirely on the moral sense of the individual and on the freedom necessary for this. Hence every man is, in a certain sense, unconsciously a worse man when he is in society than when acting alone; for he is carried by society and to that extent relieved of his individual responsibility. Any large company composed of wholly admirable persons has the morality and intelligence of an unwieldy, stupid, and violent animal. The bigger the organization, the more unavoidable is its immorality and blind stupidity. (*Senatus bestia, senatores boni viri.*) Society, by automatically stressing all the collective qualities in its individual representatives, puts a premium on mediocrity, on everything that settles down to vegetate in an easy, irresponsible way. Individuality will inevitably be driven to the wall.… Without freedom there can be no morality. Our admiration for great organizations dwindles when once we become aware of the other side of the wonder: the tremendous piling up and accentuation of all that is primitive in man, and the unavoidable destruction of his individuality in the interests of the monstrosity that every great organization in fact is. The man of today, who resembles more or less the collective ideal, has made his heart into a den of murderers, as can easily be proved by the analysis of his unconscious, even though he himself is not in the least disturbed by this fact. And in so far as he is normally adapted to his environment, it is true that the greatest infamy on the part of his group will not disturb him, so long as the majority of his fellows steadfastly believe in the exalted morality of their social organization.[5]

[461] In the same essay I uttered the almost banal truth: “The best, just because it is the best, holds the seed of evil, and there is nothing so bad but good can come of it.”[6] I lay particular stress on this sentence, because it always put me in a mood of caution when I had to judge of any particular manifestation of the unconscious. The contents of the collective unconscious, the archetypes, with which we are concerned in any occurrence of psychic mass-phenomena, are always bipolar: they have both a positive and a negative side. Whenever an archetype appears things become critical, and it is impossible to foresee what turn they will take. As a rule this depends on the way consciousness reacts to the situation. During a collective manifestation of archetypes there is always a great danger of a mass movement, and a catastrophe can be avoided only if the effect of the archetype can be intercepted and assimilated by a

sufficiently large majority of individuals. At the very least there must be a certain number of individuals who are still capable of making their influence felt.

[462] In February 1933, lecturing in Cologne and Essen, I said:

> The decidedly individualistic trend of these latest developments is counterbalanced by a compensatory reversion to the collective man, whose authority at present is the sheer weight of the masses. No wonder that nowadays there is a feeling of catastrophe in the air, as though an avalanche had broken loose which nothing can stop. The collective man threatens to stifle the individual man, on whose sense of responsibility everything valuable in mankind ultimately depends. The mass as such is always anonymous and always irresponsible. So-called leaders are the inevitable symptoms of a mass movement. The true leaders of mankind are always those who are capable of self-reflection, and who relieve the dead weight of the masses at least of their own weight, consciously holding aloof from the blind momentum of the mass in movement.
>
> But who can resist this all-engulfing force of attraction, when each man clings to the next and each drags the other with him? Only one who is firmly rooted not only in the outside world but also in the world within.
>
> Small and hidden is the door that leads inward, and the entrance is barred by countless prejudices, mistaken assumptions, and fears. Always one wishes to hear of grand political and economic schemes, the very things that have landed every nation in a morass. Therefore it sounds grotesque when anyone speaks of hidden doors, dreams, and a world within. What has this vapid idealism got to do with gigantic economic programmes, with the so-called problems of reality?
>
> But I speak not to nations, only to the individual few, for whom it goes without saying that cultural values do not drop down like manna from heaven, but are created by the hands of individuals. If things go wrong in the world, this is because something is wrong with the individual, because something is wrong with me. Therefore, if I am sensible, I shall put myself right first. For this I need—because outside authority no longer means anything to me—a knowledge of the innermost foundations of my being, in order that I may base myself firmly on the eternal facts of the human psyche.[7]

[463] In the Terry Lectures, which I gave at Yale University in 1937, I said:

> We can never be sure that a new idea will not seize either upon ourselves or upon our neighbours. We know from modern as well as from ancient history that such ideas are often so strange, indeed so bizarre, that they fly in the face of reason. The fascination which is almost invariably connected with ideas of this sort produces a fanatical obsession, with the result that all dissenters, no matter how well-meaning or reasonable they are, get burnt alive or have their heads cut off or are disposed of in masses by the more modern machine-gun. We cannot even console ourselves with the thought that such things belong to the remote past. Unfortunately they seem to belong not only to the present, but, quite particularly, to the future. *Homo homini lupus* is a sad yet eternal truism. There is indeed reason enough for man to be afraid of the impersonal forces lurking in his unconscious. We are blissfully unconscious of these forces because they never, or almost never, appear in our personal relations or under ordinary circumstances. But if people crowd together and form a mob, then the dynamisms of the collective man are let loose—beasts or demons that lie dormant in every person until he is part of a mob. Man in the mass sinks unconsciously to an

> inferior moral and intellectual level, to that level which is always there, below the threshold of consciousness, ready to break forth as soon as it is activated by the formation of a mass.…
>
> The change of character brought about by the uprush of collective forces is amazing. A gentle and reasonable being can be transformed into a maniac or a savage beast. One is always inclined to lay the blame on external circumstances, but nothing could explode in us if it had not been already there. As a matter of fact, we are constantly living on the edge of a volcano, and there is, so far as we know, no way of protecting ourselves from a possible outburst that will destroy everybody within reach. It is certainly a good thing to preach reason and common sense, but what if you have a lunatic asylum for an audience or a crowd in a collective frenzy? There is not much difference between them because the madman and the mob are both moved by impersonal, overwhelming forces.…[8]
>
> Now we behold the amazing spectacle of states taking over the age-old totalitarian claims of theocracy, which are inevitably accompanied by the suppression of free opinion. Once more we see people cutting each other's throats in support of childish theories of how to create paradise on earth. It is not very difficult to see that the powers of the underworld—not to say of hell—which in former times were more or less successfully chained up in a gigantic spiritual edifice where they could be of some use, are now creating, or trying to create, a State slavery and a State prison devoid of any mental or spiritual charm. There are not a few people nowadays who are convinced that mere human reason is not entirely up to the enormous task of putting a lid on the volcano.…
>
> Look at all the incredible savagery going on in our so-called civilized world: it all comes from human beings and their mental condition! Look at the devilish engines of destruction! They are invented by completely innocuous gentlemen, reasonable, respectable citizens who are everything we could wish. And when the whole thing blows up and an indescribable hell of devastation is let loose, nobody seems to be responsible. It simply happens, and yet it is all man-made. But since everybody is blindly convinced that he is nothing more than his own extremely unassuming and insignificant conscious self, which performs its duties decently and earns a moderate living, nobody is aware that this whole rationalistically organized conglomeration we call a state or a nation is driven on by a seemingly impersonal but terrifying power which nobody and nothing can check. This ghastly power is mostly explained as fear of the neighbouring nation, which is supposed to be possessed by a malevolent fiend. Since nobody is capable of recognizing just where and how much he himself is possessed and unconscious, he simply projects his own condition upon his neighbour, and thus it becomes a sacred duty to have the biggest guns and the most poisonous gas. The worst of it is that he is quite right. All one's neighbours are in the grip of some uncontrollable fear, just like oneself. In lunatic asylums it is a well-known fact that patients are far more dangerous when suffering from fear than when moved by rage or hatred.[9]

[464] During the "phoney war," early in 1940, I published a German translation of these lectures. The book was published just in time to reach Germany, but was soon suppressed on account of the passages just quoted, and I myself figured on the Nazi black list. I was a "marked man." After the invasion of France the Gestapo destroyed all the French editions of my books they were able to lay their hands on.

[465] I have been blamed in many quarters for allowing myself to speak of German “psychopathy.” I am—and always was—of the opinion that the political mass movements of our time are psychic epidemics, in other words, *mass psychoses.* They are, as their inhuman concomitants show, abnormal mental phenomena, and I refuse to regard such things as normal, to say nothing of whitewashing them as excusable blunders. Murder is murder, and the fact that the whole German nation threw itself with all its might into the most infamous war of aggression in history is a crime that nothing can ever wipe out. It is true that very many individuals stood out against it, but they were a small minority. The behaviour of the Germans in general is abnormal; were it not so, we should long since have been accustomed to look upon this form of war as the normal state of things.

[466] Naturally there were plenty of reasons—political, social, economic, and historical—to drive the Germans to war, just as there are in the case of common murder. Every murderer has motives enough to spur him on, or the crime would never be committed. But, in addition to all this, a special psychic disposition is needed to bring matters to such a point. That is why there is such a thing as criminal psychology. Germany was suffering from a mass psychosis which was bound to lead to crime. But no psychosis ever appears out of the blue, it is always the result of a long-standing predisposition which we call a psychopathic inferiority. Nations have their own peculiar psychology, and in the same way they also have their own particular kind of psychopathology. It consists in the accumulation of a large number of abnormal features, the most striking of which is a suggestibility affecting the entire nation. No doubt there are special reasons for this too, otherwise it would not exist. But the existence of reasons does not do away either with the deed or its character. There are plenty of reasons for both crime and madness, but we do not on that account send our criminals and lunatics to recuperate at the seaside.

[467] I should like to point out that the idea of speaking of mass psychoses did not suddenly occur to me after May 1945; I had done that long before and had given warnings of this tremendous danger, not once but many

times. As early as 1916, before the United States entered the first World War, I wrote:

> Is the present war supposed to be a war of economics? That is a neutral American "business-like" standpoint, that does not take the blood, tears, unprecedented deeds of infamy and great distress into account, and which completely ignores the fact that this war is really an *epidemic of madness.*[10]
>
> Once this function [of the irrational] finds itself in the unconscious, it works unceasing havoc, like an incurable disease whose focus cannot be eradicated because it is invisible. Individual and nation alike are then compelled to live the irrational in their own lives, even devoting their loftiest ideals and their best wits to expresing its madness in the most perfect form.[11]

[468] In a lecture given at the British Society for Psychical Research in 1919, I said:

> If this animation [of the collective unconscious] is due to a complete breakdown of all conscious hopes and expectations, the danger arises that the unconscious may take the place of conscious reality. Such a state is morbid. We actually see something of this kind in the present Russian and German mentality. An outbreak of violent desires and impossible fantasies among the lower strata of the population is analogous to an outburst from the lower strata of the unconscious in an individual.[12]

[469] In 1927 I expressed myself as follows:

> The old religions with their sublime and ridiculous, their friendly and fiendish symbols did not drop from the blue, but were born of this human soul that dwells within us at this moment. All those things, in their primal forms, live on in us and may at any time burst in upon us with annihilating force, in the guise of mass-suggestions against which the individual is defenceless. Our fearsome gods have only changed their names: they now rhyme with -*ism.* Or has anyone the nerve to claim that the World War or Bolshevism was an ingenious discovery? Just as outwardly we live in a world where a whole continent may be submerged at any *moment,* or a pole be shifted, or a new pestilence break out, so inwardly we live in a world where at any moment something similar may occur, albeit in the form of an idea, but no less dangerous and untrustworthy for that. Failure to adapt to this inner world is a negligence entailing just as serious consequences as ignorance and ineptitude in the outer world. It is after all only a tiny fraction of humanity, living mainly on that thickly populated peninsula of Asia which juts out into the Atlantic Ocean, and calling themselves "cultured," who, because they lack all contact with nature, have hit upon the idea that religion is a peculiar kind of mental disturbance of undiscoverable purport. Viewed from a safe distance, say from central Africa or Tibet, it would certainly look as if this fraction had projected its own unconscious mental derangements upon peoples still possessed of healthy instincts.[13]

[470] In 1928 I wrote that "the normal person … acts out his psychic disturbances socially and politically, in the form of mass psychoses like

wars and revolutions.” [14] A year later, in a book which I published in collaboration with Richard Wilhelm, I remarked:

> In this way the fragmentary system is projected and a dangerous situation created, because the disturbing effects are now attributed to an evil will outside ourselves, which is naturally to be found nowhere else than with our neighbour *de l’autre côté de la rivière.* This leads to collective delusions, incitements to war and revolution, in a word, to destructive mass psychoses.[15]

[471] In November 1932, the year in which Germany’s fate was decided, I gave a lecture at the Austrian *Kulturbund* in Vienna, from which I should like to quote the following passage:

> The gigantic catastrophes that threaten us today are not elemental happenings of a physical or biological order, but psychic events. To a quite terrifying degree we are threatened by wars and revolutions which are nothing other than psychic epidemics. At any moment several millions of human beings may be smitten with a new madness, and then we shall have another world war or devastating revolution. Instead of being at the mercy of wild beasts, earthquakes, landslides, and inundations, modern man is battered by the elemental forces of his own psyche. This is the World Power that vastly exceeds all other powers on earth. The Age of Enlightenment, which stripped nature and human institutions of gods, overlooked the God of Terror who dwells in the human soul. If anywhere, fear of God is justified in face of the overwhelming supremacy of the psychic.
>
> But all this is so much abstraction. Everyone knows that the intellect, that clever jackanapes, can put it this way or any other way he pleases. It is a very different thing when the psyche, as an objective fact, hard as granite and heavy as lead, confronts a man as an inner experience and addresses him in an audible voice, saying, “This is what will and must be.” Then he feels himself called, just as the group does when there’s a war on, or a revolution, or any other madness. It is not for nothing that our age cries out for the redeemer personality, for the one who can emancipate himself from the grip of the collective and save at least his own soul, who lights a beacon of hope for others, proclaiming that here is at least *one* man who has succeeded in extricating himself from that fatal identity with the group psyche. For the group, because of its unconsciousness, has no freedom of choice, and so psychic activity runs on in it like an uncontrolled force of nature. There is thus set going a chain reaction that comes to a stop only in catastrophe. The people always long for a hero, a slayer of dragons, when they feel the danger of psychic forces; hence the cry for personality.[16]

[472] There is no need to burden the reader with further quotations. Of course I never imagined that such observations would have an effect on any large scale, but it certainly never occurred to me that a time would come when I should be reproached for having said absolutely nothing about these things before 1945, that is, before my article “After the Catastrophe.” When Hitler seized power it became quite evident to me that a mass psychosis was boiling up in Germany. But I could not help telling myself that this was after all Germany, a civilized European nation

with a sense of morality and discipline. Hence the ultimate outcome of this unmistakable mass movement still seemed to me uncertain, just as the figure of the Führer at first struck me as being merely ambivalent. It is true that in July 1933, when I gave a series of lectures in Berlin, I received an extremely unfavourable impression both of the behaviour of the Party and of the person of Goebbels. But I did not wish to assume from the start that these symptoms were decisive, for I knew other people of unquestionable idealism who sought to prove to me that these things were unavoidable abuses such as are customary in any great revolution. It was indeed not at all easy for a foreigner to form a clear judgment at that time. Like many of my contemporaries, I had my doubts.

[473] As a psychiatrist, accustomed to dealing with patients who are in danger of being overwhelmed by unconscious contents, I knew that it is of the utmost importance, from the therapeutic point of view, to strengthen as far as possible their conscious position and powers of understanding, so that something is there to intercept and integrate the contents that are breaking through into consciousness. These contents are not necessarily destructive in themselves, but are ambivalent, and it depends entirely on the constitution of the intercepting consciousness whether they will turn out to be a curse or a blessing.

[474] National Socialism was one of those psychological mass phenomena, one of those outbreaks of the collective unconscious, about which I had been speaking for nearly twenty years. The driving forces of a psychological mass movement are essentially archetypal. Every archetype contains the lowest and the highest, evil and good, and is therefore capable of producing diametrically opposite results. Hence it is impossible to make out at the start whether it will prove to be positive or negative. My medical attitude towards such things counselled me to wait, for it is an attitude that allows no hasty judgments, does not always know from the start what is better, and is willing to give things “a fair trial.” Far from wishing to give the beleaguered consciousness its death-blow, it tries to strengthen its powers of resistance through insight, so that the evil that is hidden in every archetype shall not seize hold of the individual and drag him to destruction. The therapist’s aim is to bring the positive, valuable, and living quality of the archetype—which will sooner or later

be integrated into consciousness in any case—into reality, and at the same time to obstruct as far as possible its damaging and pernicious tendencies. It is part of the doctor's professional equipment to be able to summon up a certain amount of optimism even in the most unlikely circumstances, with a view to saving everything that it is still possible to save. He cannot afford to let himself be too much impressed by the real or apparent hopelessness of a situation, even if this means exposing himself to danger. Moreover, it should not be forgotten that Germany, up till the National Socialist era, was one of the most differentiated and highly civilized countries on earth, besides being, for us Swiss, a spiritual background to which we were bound by ties of blood, language, and friendship. I wanted to do everything within my feeble powers to prevent this cultural bond from being broken, for culture is our only weapon against the fearful danger of mass-mindedness.

[475] If an archetype is not brought into reality consciously, there is no guarantee whatever that it will be realized in its favourable form; on the contrary, there is all the more danger of a destructive regression. It seems as if the psyche were endowed with consciousness for the very purpose of preventing such destructive possibilities from happening.

[476] Coming back to the question of "German psychopathy," I am as convinced as ever that National Socialism was the mass psychosis of which I have been speaking for so long. What happened in Germany can be explained, in my view, only by the existence of an abnormal state of mind. But I am open to conviction if anyone can prove to me that the phenomenology of National Socialism belongs to the normal inventory of the psyche. In Italy the mass psychosis took a somewhat milder form. Russia can plead, by way of excuse, the low level of popular education before the Revolution. But Germany was supposed to be a highly civilized country, and yet the horrors there exceeded anything the world has ever known. I therefore maintain that there are peculiar depths in the Germans which present the most violent contrast to their former high achievements. Such a condition is known in psychopathology as a dissociation, and a habitual dissociation is one of the signs of a psychopathic disposition.[17]

[477] I am aware that the word “psychopathic” strikes harshly on the layman’s ear, and that it conjures up all manner of horrors, such as lunatic asylums and the like. By way of explanation I should like to state that only a very small fraction of so-called psychopaths land in the asylum. The overwhelming majority of them constitute that part of the population which is alleged to be “normal.” The concept of “normality” is an ideal construction. In psychology we speak of the “scope of the normal,” thus implicitly admitting that the concept of normality swings between certain limits and cannot therefore be sharply defined. A rather bigger swing, and the psychic process has already entered the sphere of the abnormal. These deviations from the “norm”—and they are very common—pass unnoticed so long as they do not lead to actual signs of disease. But if definite and unmistakable symptoms occur, such as are obvious even to the layman, then the case is clearly “psychopathic” (i.e., a “suffering”—πάσχειν of the psyche). The milder forms of psychopathy are the commonest and severe cases are rare. There are countless people who go a little bit beyond the scope of the normal, in one way or another, either temporarily or chronically. If they get together in large numbers—which is what happens in any crowd—abnormal phenomena appear. One need only read what Le Bon[18] has to say on the “psychology of crowds” to understand what I mean: man as a particle in the mass is psychically abnormal. Ignorance of this fact is no protection against it.

[478] So anyone whose ears are offended by the word “psychopathic” is at liberty to suggest a soft, soothing, comforting substitute which correctly reflects the state of mind that gave birth to National Socialism. Far from wishing to insult the German people, my object, as I have said, is to diagnose the suffering that has its roots in their psyche and is the cause of their downfall. Nothing will ever persuade me that Nazism was forced on the German people by the Freemasons, the Jews, or the wicked English—that is really too childish. I have heard that sort of thing too often in the asylum.

[479] Anyone who wishes to get a vivid picture of the workings of psychopathic inferiority has only to study the way in which responsible Germans—i.e., the educated classes—react to the notorious *faits et gestes.* There is no doubt that a very large number of Germans are chiefly

annoyed at having lost the war. A large proportion of them are shocked that the regime of the occupying forces is, in places, harsh, unjust, and even brutal—"after all, the war's over now." They refuse to listen to the accounts of Germany's unspeakable behaviour in Bohemia, Poland, Russia, Greece, Holland, Belgium, Norway, and France. "All kinds of regrettable things did happen, of course, but that was during the war." A slightly larger number admit the concentration camps and the "bad behaviour" in Poland and elsewhere, but in the same breath begin to enumerate the outrages committed by the English, from the Boer War on, without of course mentioning the war launched by their other psychopath, Wilhelm II. It never seems to occur to them that someone else's sin in no way excuses their own, and that their habit of accusing others merely shows up their own lack of insight.

[480] Finally we come to a smaller number—the better men of the nation—who confess: *Pater, peccavi in caelum et coram te*, "we have our share of guilt in the desolation that has spread over the world. We know that we must bear the consequences of a war begun in a spirit of wantonness and criminality, and we would not think of trying to escape our hard fate, *not even by complaints and accusations."*[19] Such a confession can only be answered in the words of the evangelist: "Bring forth the best robe, and put it on him; and put a ring on his hand, and shoes on his feet; and bring hither the fatted calf, and kill it; and let us eat, and be merry: For this my son was dead, and is alive again." [20] It makes us feel something of the joy that reigned in heaven over the repentant sinner, and of the discomfiture of the ninety and nine just persons.

[481] Yet what meets our eye in the very next sentence? "Nevertheless, as people who have declared themselves openly and with honest conviction, as Evangelical Christians, we should and must … point out with due emphasis that, according to the Gospel, no one is in greater danger than he who, *secure in the consciousness of his own innocence, judges and condemns another*.… We cannot, indeed we should not pass over in silence the fact that foreign statesmen and their governments also played a decisive part in that first European catastrophe, through their politics both before and after 1918, *which were likewise power-politics based on injustice*, and that, consequently, they contributed their share to the

inflation and the economic crisis, to the impoverishment of the German nation, *and thus prepared the ground for the dragon's teeth from which National Socialism sprang up."*

[482] In the first passage we read that no one has any intention of accusing anybody, and in the second comes the accusation. The contradiction passes unnoticed. When confession and repentance are followed by an aggressive defence, the genuineness of the repentance becomes doubtful. As it is hardly credible that the authors of this document consciously set out to sabotage the effect of their confession, we can only conclude—as is unfortunately only too true in innumerable instances where similar arguments are put forward—that there is an astounding unconsciousness of the fatal impression that such an attitude is bound to create.

[483] Furthermore we must ask: Has Germany openly admitted that she is conscious of her guilt, if she now "judges and condemns" others? It seems to have escaped the notice of the authors that there are plenty of people in Europe who are capable of forming their own judgment, and who are not hoodwinked by such unconscious naïvetés. Thus our document turns into a rather indiscreet monologue thoroughly in keeping with the clinical picture. Parents and teachers, judges and psychiatrists, are well acquainted with this mixture of repentance and lust for revenge, this same unconsciousness and indifference to the disastrous impression one makes, this same self-centred disregard of one's fellow men. Such an attitude defeats its object: it sets out to evoke an impression of repentance, and the next minute it defends itself by launching an attack. This manoeuvre simply makes the repentance unreal and the defence ineffectual. It is too unconscious to serve any purpose, quite unadapted and not equal to the demands of reality. There is an old saying that goes: "Sickness is diminished adaptation." The kind of adaptation here illustrated is of no value either morally or intellectually; it is inferior, and psychopathically inferior at that.

[484] In saying this it is not my intention to accuse or condemn. I am obliged to mention it only because my diagnosis has been doubted.[21] A medical diagnosis is not an accusation, and an illness is not a disgrace but a misfortune. As early as 1936 I pleaded for compassion in judging the

German mentality.[22] Even now I adopt the standpoint of the therapist, and therefore, in the interests of the patient, I *must* emphasize the necessity for complete insight without any extenuating provisos. It avails him nothing to cultivate only a half-consciousness of his condition, and to cover up his other half with illusions whose colossal dangers he has just experienced in the most terrible form. My sympathy with the lot of the Germans is great, and I am only too painfully aware that my chances of being able to help are exceedingly small. I can only hope and pray that one of the worst dangers now threatening Germany, besides economic distress, may soon some to an end, and that is her spiritual isolation. National isolation combined with mass psychology and centralization are Germany's bane. The task she has to fulfil is not political but spiritual, and the gifts she possesses for this are practically unique. We should therefore help and support this side of her nature by all the means within our power.

*

[485] I cannot bring this epilogue to a close without saying a few words about the outlook for the future. No nation has ever fallen so low as the Germans and none has ever branded itself with such a stigma, which generations will not be able to wash away. But when a pendulum swings so violently in one direction, it is capable of swinging just as far in the other—if we may apply this analogy to the psyche of a nation. I do not know whether it is justified from the ethnopsychological point of view. I only know that, in the psyche of an individual with a tendency to dissociation, there can be violent oscillations, with the result that one extreme necessarily leads to its opposite. Provided, however, that he remains in full possession of his human qualities and thus has a mean value, I am inclined to think that the minus is balanced by the plus. In other words, I believe there is a faculty for regeneration in the Germans that might be able to find the right answer to the terrific tension between the opposites which has been so evident during the past twelve years. In this endeavour Germany would not be isolated, for all the positive spiritual forces which are at work throughout the civilized world would stand by her and sustain her effort. The struggle between light and

darkness has broken out everywhere. The rift runs through the whole globe, and the fire that set Germany ablaze is smouldering and glowing wherever we look. The conflagration that broke out in Germany was the outcome of psychic conditions that are universal. The real danger signal is not the fiery sign that hung over Germany, but the unleashing of atomic energy, which has given the human race the power to annihilate itself completely. The situation is about the same as if a small boy of six had been given a bag of dynamite for a birthday present. We are not one hundred per cent convinced by his assurances that no calamity will happen. Will man be able to give up toying with the idea of another war? Can we at last get it into our heads that any government of impassioned patriots which signs the order for mobilization should immediately be executed *en bloc?*

[486] How can we save the child from the dynamite which no one can take away from him? The good spirit of humanity is challenged as never before. The facts can no longer be hushed up or painted in rosy colours. Will this knowledge inspire us to a great inner transformation of mind, to a higher, maturer consciousness and sense of responsibility?

[487] It is time, high time, that civilized man turned his mind to fundamental things. It is now a question of existence or nonexistence, and surely this should be subjected to the most searching investigation and discussion. For the danger that threatens us now is of such dimensions as to make this last European catastrophe seem like a curtain-raiser.

IV

THE UNDISCOVERED SELF
(Present and Future)

[Written in spring 1956 and first published as *Gegenwart und Zukunft*, supplement to *Schweizer Monatshefte* (Zurich), March 1957; issued as a book (paperback) later in 1957 (Zurich). Translated from the original ms. by R. F. C. Hull. A section of the translation was published as “God, The Devil, and the Human Soul,” *The Atlantic Monthly* (Boston), CC:5 (Nov., 1957; Centennial Issue); the entire translation, with revisions by the American editors, was published in book form as *The Undiscovered Self* (Boston and London, 1958), carrying the note: “This book was prompted by conversations between Dr. Jung and Dr. Carleton Smith, director of the National Arts Foundation, which brought it to the attention of the editors of the Atlantic Monthly Press,” and a dedication: “To my friend Fowler McCormick.” The present text is a further revision of the original translation.—EDITORS.]

1. THE PLIGHT OF THE INDIVIDUAL IN MODERN SOCIETY

[488] What will the future bring? From time immemorial this question has occupied men's minds, though not always to the same degree. Historically, it is chiefly in times of physical, political, economic, and spiritual distress that men's eyes turn with anxious hope to the future, and when anticipations, utopias, and apocalyptic visions multiply. One thinks, for instance, of the chiliastic expectations of the Augustan age at the beginning of the Christian era, or of the spiritual changes in the West which accompanied the end of the first millennium. Today, as the end of the second millennium draws near, we are again living in an age filled with apocalyptic images of universal destruction. What is the significance of that split, symbolized by the "Iron Curtain," which divides humanity into two halves? What will become of our civilization, and of man himself, if the hydrogen bombs begin to go off, or if the spiritual and moral darkness of State absolutism should spread over Europe?

[489] We have no reason to take this threat lightly. Everywhere in the West there are subversive minorities who, sheltered by our humanitarianism and our sense of justice, hold the incendiary torches ready, with nothing to stop the spread of their ideas except the critical reason of a single, fairly intelligent, mentally stable stratum of the population. One should not overestimate the thickness of this stratum. It varies from country to country in accordance with national temperament. Also, it is regionally dependent on public education and is subject to the influence of acutely disturbing factors of a political and economic nature. Taking plebiscites as a criterion, one could on an optimistic estimate put its upper limit at about forty per cent of the electorate. A rather more pessimistic view would not be unjustified either, since the gift of reason and critical reflection is not one of man's outstanding peculiarities, and even where it exists it proves to be wavering and inconstant, the more so, as a rule, the bigger the political groups are. The mass crushes out the insight and

reflection that are still possible with the individual, and this necessarily leads to doctrinaire and authoritarian tyranny if ever the constitutional State should succumb to a fit of weakness.

[490] Rational argument can be conducted with some prospect of success only so long as the emotionality of a given situation does not exceed a certain critical degree. If the affective temperature rises above this level, the possibility of reason's having any effect ceases and its place is taken by slogans and chimerical wish-fantasies. That is to say, a sort of collective possession results which rapidly develops into a psychic epidemic. Under these conditions all those elements whose existence is merely tolerated as asocial under the rule of reason come to the top. Such individuals are by no means rare curiosities to be met with only in prisons and lunatic asylums. For every manifest case of insanity there are, in my estimation, at least ten latent cases who seldom get to the point of breaking out openly but whose views and behaviour, for all their appearance of normality, are influenced unconsciously by pathological and perverse factors. There are, of course, no medical statistics on the frequency of latent psychoses—for understandable reasons. But even if their number should amount to less than ten times that of the manifest psychoses and of manifest criminality, the relatively small percentage of the population figures they represent is more than compensated for by the peculiar dangerousness of these people. Their mental state is that of a collectively excited group ruled by affective judgments and wish-fantasies. In a milieu of this kind they are the adapted ones, and consequently they feel quite at home in it. They know from their own experience the language of these conditions, and they know how to handle them. Their chimerical ideas, sustained by fanatical resentment, appeal to the collective irrationality and find fruitful soil there; they express all those motives and resentments which lurk in more normal people under the cloak of reason and insight. They are, therefore, despite their small number in comparison with the population as a whole, dangerous as sources of infection precisely because the so-called normal person possesses only a limited degree of self-knowledge.

[491] Most people confuse "self-knowledge" with knowledge of their conscious ego-personalities. Anyone who has any ego-consciousness at

all takes it for granted that he knows himself. But the ego knows only its own contents, not the unconscious and its contents. People measure their self-knowledge by what the average person in their social environment knows of himself, but not by the real psychic facts which are for the most part hidden from them. In this respect the psyche behaves like the body, of whose physiological and anatomical structure the average person knows very little too. Although he lives in it and with it, most of it is totally unknown to the layman, and special scientific knowledge is needed to acquaint consciousness with what is known of the body, not to speak of all that is *not* known, which also exists.

[492] What is commonly called "self-knowledge" is therefore a very limited knowledge, most of it dependent on social factors, of what goes on in the human psyche. Hence one is always coming up against the prejudice that such and such a thing does not happen "with us" or "in our family" or among our friends and acquaintances. On the other hand, one meets with equally illusory assumptions about the alleged presence of qualities which merely serve to cover up the true facts of the case.

[493] In this broad belt of unconsciousness, which is immune to conscious criticism and control, we stand defenceless, open to all kinds of influences and psychic infections. As with all dangers, we can guard against the risk of psychic infection only when we know what is attacking us, and how, where and when the attack will come. Since self-knowledge is a matter of getting to know the individual facts, theories are of very little help. For the more a theory lays claim to universal validity, the less capable it is of doing justice to the individual facts. Any theory based on experience is necessarily *statistical;* it formulates an *ideal average* which abolishes all exceptions at either end of the scale and replaces them by an abstract mean. This mean is quite valid, though it need not necessarily occur in reality. Despite this it figures in the theory as an unassailable fundamental fact. The exceptions at either extreme, though equally factual, do not appear in the final result at all, since they cancel each other out. If, for instance, I determine the weight of each stone in a bed of pebbles and get an average weight of five ounces, this tells me very little about the real nature of the pebbles. Anyone who thought, on the basis of these findings, that he could pick up a pebble of

five ounces at the first try would be in for a serious disappointment. Indeed, it might well happen that however long he searched he would not find a single pebble weighing exactly five ounces.

[494] The statistical method shows the facts in the light of the ideal average but does not give us a picture of their empirical reality. While reflecting an indisputable aspect of reality, it can falsify the actual truth in a most misleading way. This is particularly true of theories which are based on statistics. The distinctive thing about real facts, however, is their individuality. Not to put too fine a point on it, one could say that the real picture consists of nothing but exceptions to the rule, and that, in consequence, absolute reality has predominantly the character of *irregularity.*

[495] These considerations must be borne in mind whenever there is talk of a theory serving as a guide to self-knowledge. There is and can be no self-knowledge based on theoretical assumptions, for the object of this knowledge is an individual—a relative exception and an irregular phenomenon. Hence it is not the universal and the regular that characterize the individual, but rather the unique. He is not to be understood as a recurrent unit but as something unique and singular which in the last analysis can be neither known nor compared with anything else. At the same time man, as member of a species, can and must be described as a statistical unit; otherwise nothing general could be said about him. For this purpose he has to be regarded as a comparative unit. This results in a universally valid anthropology or psychology, as the case may be, with an abstract picture of man as an average unit from which all individual features have been removed. But it is precisely these features which are of paramount importance for *understanding* man. If I want to understand an individual human being, I must lay aside all scientific knowledge of the average man and discard all theories in order to adopt a completely new and unprejudiced attitude. I can only approach the task of *understanding* with a free and open mind, whereas *knowledge* of man, or insight into human character, presupposes all sorts of knowledge about mankind in general.

[496] Now whether it is a question of understanding a fellow human being or of self-knowledge, I must in both cases leave all theoretical assumptions behind me. Since scientific knowledge not only enjoys universal esteem but, in the eyes of modern man, counts as the only intellectual and spiritual authority, understanding the individual obliges me to commit the *lèse majesté*, so to speak, of turning a blind eye to scientific knowledge. This is a sacrifice not lightly made, for the scientific attitude cannot rid itself so easily of its sense of responsibility. And if the psychologist happens to be a doctor who wants not only to classify his patient scientifically but also to understand him as a human being, he is threatened with a conflict of duties between the two diametrically opposed and mutually exclusive attitudes of knowledge on the one hand and understanding on the other. This conflict cannot be solved by an either/or but only by a kind of two-way thinking: doing one thing while not losing sight of the other.

[497] In view of the fact that, in principle, the positive advantages of *knowledge* work specifically to the disadvantage of *understanding*, the judgment resulting therefrom is likely to be something of a paradox. Judged scientifically, the individual is nothing but a unit which repeats itself *ad infinitum* and could just as well be designated with a letter of the alphabet. For understanding, on the other hand, it is just the unique individual human being who, when stripped of all those conformities and regularities so dear to the heart of the scientist, is the supreme and only real object of investigation. The doctor, above all, should be aware of this contradiction. On the one hand, he is equipped with the statistical truths of his scientific training, and on the other, he is faced with the task of treating a sick person who, especially in the case of psychic suffering, requires *individual understanding.* The more schematic the treatment is, the more resistances it—quite rightly—calls up in the patient, and the more the cure is jeopardized. The psychotherapist sees himself compelled, willy-nilly, to regard the individuality of a patient as an essential fact in the picture and to arrange his methods of treatment accordingly. Today, over the whole field of medicine, it is recognized that the task of the doctor consists in treating the sick person, not an abstract illness.

[498] This illustration from the realm of medicine is only a special instance of the problem of education and training in general. Scientific education is based in the main on statistical truths and abstract knowledge and therefore imparts an unrealistic, rational picture of the world, in which the individual, as a merely marginal phenomenon, plays no role. The individual, however, as an irrational datum, is the true and authentic carrier of reality, the *concrete* man as opposed to the unreal ideal or "normal" man to whom the scientific statements refer. What is more, most of the natural sciences try to represent the results of their investigations as though these had come into existence without man's intervention, in such a way that the collaboration of the psyche—an indispensable factor—remains invisible. (An exception to this is modern physics, which recognizes that the observed is not independent of the observer.) So, in this respect as well, science conveys a picture of the world from which a real human psyche appears to be excluded—the very antithesis of the "humanities."

[499] Under the influence of scientific assumptions, not only the psyche but the individual man and, indeed, all individual events whatsoever suffer a levelling down and a process of blurring that distorts the picture of reality into a conceptual average. We ought not to underestimate the psychological effect of the statistical world-picture: it thrusts aside the individual in favour of anonymous units that pile up into mass formations. Instead of the concrete individual, you have the names of organizations and, at the highest point, the abstract idea of the State as the principle of political reality. The moral responsibility of the individual is then inevitably replaced by the policy of the State (*raison d'état*). Instead of moral and mental differentiation of the individual, you have public welfare and the raising of the living standard. The goal and meaning of individual life (which is the only *real* life) no longer lie in individual development but in the policy of the State, which is thrust upon the individual from outside and consists in the execution of an abstract idea which ultimately tends to attract all life to itself. The individual is increasingly deprived of the moral decision as to how he should live his own life, and instead is ruled, fed, clothed, and educated as a social unit, accommodated in the appropriate housing unit, and

amused in accordance with the standards that give pleasure and satisfaction to the masses. The rulers, in their turn, are just as much social units as the ruled, and are distinguished only by the fact that they are specialized mouthpieces of the State doctrine. They do not need to be personalities capable of judgment, but thoroughgoing specialists who are unusable outside their line of business. State policy decides what shall be taught and studied.

[500] The seemingly omnipotent State doctrine is for its part manipulated in the name of State policy by those occupying the highest positions in the government, where all the power is concentrated. Whoever, by election or caprice, gets into one of these positions is subject to no higher authority; he is the State policy itself and within the limits of the situation can proceed at his own discretion. With Louis XIV he can say, “L’état c’est moi.” He is thus the only individual or, at any rate, one of the few individuals who could make use of their individuality if only they knew how to differentiate themselves from the State doctrine. They are more likely, however, to be the slaves of their own fictions. Such one-sidedness is always compensated psychologically by unconscious subversive tendencies. Slavery and rebellion are inseparable correlates. Hence, rivalry for power and exaggerated distrust pervade the entire organism from top to bottom. Furthermore, in order to compensate for its chaotic formlessness, a mass always produces a “Leader,” who infallibly becomes the victim of his own inflated ego-consciousness, as numerous examples in history show.

[501] This development becomes logically unavoidable the moment the individual combines with the mass and thus renders himself obsolete. Apart from the agglomeration of huge masses in which the individual disappears anyway, one of the chief factors responsible for psychological mass-mindedness is scientific rationalism, which robs the individual of his foundations and his dignity. As a social unit he has lost his individuality and become a mere abstract number in the bureau of statistics. He can only play the role of an interchangeable unit of infinitesimal importance. Looked at rationally and from outside, that is exactly what he is, and from this point of view it seems positively absurd to go on talking about the value or meaning of the individual. Indeed, one

can hardly imagine how one ever came to endow individual human life with so much dignity when the truth to the contrary is as plain as the palm of your hand.

[502] Seen from this standpoint, the individual really is of diminishing importance and anyone who wished to dispute this would soon find himself at a loss for arguments. The fact that the individual feels himself or the members of his family or the esteemed friends in his circle to be important merely underlines the slightly comic subjectivity of his feeling. For what are the few compared with ten thousand or a hundred thousand, let alone a million? This recalls the argument of a thoughtful friend with whom I once got caught up in a huge crowd of people. Suddenly he exclaimed, “Here you have the most convincing reason for not believing in immortality: all *that lot* wants to be immortal!”

[503] The bigger the crowd the more negligible the individual becomes. But if the individual, overwhelmed by the sense of his own puniness and impotence, should feel that his life has lost its meaning—which, after all, is not identical with public welfare and higher standards of living—then he is already on the road to State slavery and, without knowing or wanting it, has become its proselyte. The man who looks only outside and quails before the big battalions has nothing with which to combat the evidence of his senses and his reason. But that is just what is happening today: we are all fascinated and overawed by statistical truths and large numbers and are daily apprised of the nullity and futility of the individual personality, since it is not represented and personified by any mass organization. Conversely, those personages who strut about on the world stage and whose voices are heard far and wide seem, to the uncritical public, to be borne along on some mass movement or on the tide of public opinion and for this reason are either applauded or execrated. Since mass suggestion plays the predominant role here, it remains a moot point whether their message is their own, for which they are personally responsible, or whether they merely function as a megaphone for collective opinion.

[504] Under these circumstances it is small wonder that individual judgment grows increasingly uncertain of itself and that responsibility is

collectivized as much as possible, i.e., is shuffled off by the individual and delegated to a corporate body. In this way the individual becomes more and more a function of society, which in its turn usurps the function of the real life carrier, whereas, in actual fact, society is nothing more than an abstract idea like the State. Both are hypostatized, that is, have become autonomous. The State in particular is turned into a quasi-animate personality from whom everything is expected. In reality it is only a camouflage for those individuals who know how to manipulate it. Thus the constitutional State drifts into the situation of a primitive form of society—the communism of a primitive tribe where everybody is subject to the autocratic rule of a chief or an oligarchy.

2. RELIGION AS THE COUNTERBALANCE TO MASS-MINDEDNESS

[505] In order to free the fiction of the sovereign State—in other words, the whims of the chieftains who manipulate it—from every wholesome restriction, all socio-political movements tending in this direction invariably try to cut the ground from under *religion*. For, in order to turn the individual into a function of the State, his dependence on anything else must be taken from him. Religion means dependence on and submission to the irrational facts of experience. These do not refer directly to social and physical conditions; they concern far more the individual's psychic attitude.

[506] But it is possible to have an attitude to the external conditions of life only when there is a point of reference outside them. Religion gives, or claims to give, such a standpoint, thereby enabling the individual to exercise his judgment and his power of decision. It builds up a reserve, as it were, against the obvious and inevitable force of circumstances to which everyone is exposed who lives only in the outer world and has no other ground under his feet except the pavement. If statistical reality is the only one, then that is the sole authority. There is then only *one* condition, and since no contrary condition exists, judgment and decision are not only superfluous but impossible. Then the individual is bound to be a function of statistics and hence a function of the State or whatever the abstract principle of order may be called.

[507] Religion, however, teaches another authority opposed to that of the "world." The doctrine of the individual's dependence on God makes just as high a claim upon him as the world does. It may even happen that the absoluteness of this claim estranges him from the world in the same way as he is estranged from himself when he succumbs to the collective mentality. He can forfeit his judgment and power of decision in the former case (for the sake of religious doctrine) quite as much as in the latter. This is the goal which religion openly aspires to unless it

compromises with the State. When it does so, I prefer to call it not "religion" but a "creed." A creed gives expression to a definite collective belief, whereas the word *religion* expresses a subjective relationship to certain metaphysical, extramundane factors. A creed is a confession of faith intended chiefly for the world at large and is thus an intramundane affair, while the meaning and purpose of religion lie in the relationship of the individual to God (Christianity, Judaism, Islam) or to the path of salvation and liberation (Buddhism). From this basic fact all ethics is derived, which without the individual's responsibility before God can be called nothing more than conventional morality.

[508] Since they are compromises with mundane reality, the creeds have accordingly seen themselves obliged to undertake a progressive codification of their views, doctrines, and customs, and in so doing have externalized themselves to such an extent that the authentic religious element in them—the living relationship to and direct confrontation with their extramundane point of reference—has been thrust into the background. The denominational standpoint measures the worth and importance of the subjective religious relationship by the yardstick of traditional doctrine, and where this is not so frequent, as in Protestantism, one immediately hears talk of pietism, sectarianism, eccentricity, and so forth, as soon as anyone claims to be guided by God's will. A creed coincides with the established Church or, at any rate, forms a public institution whose members include not only true believers but vast numbers of people who can only be described as "indifferent" in matters of religion and who belong to it simply by force of habit. Here the difference between a creed and a religion becomes palpable.

[509] To be the adherent of a creed, therefore, is not always a religious matter but more often a social one and, as such, it does nothing to give the individual any foundation. For this he has to depend exclusively on his relation to an authority which is not of this world. The criterion here is not lip service to a creed but the psychological fact that the life of the individual is not determined solely by the ego and its opinions or by social factors, but quite as much, if not more, by a transcendent authority. It is not ethical principles, however lofty, or creeds, however orthodox, that lay the foundations for the freedom and autonomy of the individual,

but simply and solely the empirical awareness, the incontrovertible experience of an intensely personal, reciprocal relationship between man and an extramundane authority which acts as a counterpoise to the "world" and its "reason."

[510] This formulation will not please either the mass man or the collective believer. For the former the policy of the State is the supreme principle of thought and action. Indeed, this was the purpose for which he was enlightened, and accordingly the mass man grants the individual a right to exist only in so far as he is a function of the State. The believer, on the other hand, while admitting that the State has a moral and factual claim on him, confesses to the belief that not only man but the State that rules him is subject to the overlordship of "God," and that, in case of doubt, the supreme decision will be made by God and not by the State. Since I do not presume to any metaphysical judgments, I must leave it an open question whether the "world," i.e., the phenomenal world of man, and hence nature in general, is the "opposite" of God or not. I can only point to the fact that the psychological opposition between these two realms of experience is not only vouched for in the New Testament but is still exemplified very plainly today in the negative attitude of the dictator States to religion and of the Church to atheism and materialism.

[511] Just as man, as a social being, cannot in the long run exist without a tie to the community, so the individual will never find the real justification for his existence and his own spiritual and moral autonomy anywhere except in an extramundane principle capable of relativizing the overpowering influence of external factors. The individual who is not anchored in God can offer no resistance on his own resources to the physical and moral blandishments of the world. For this he needs the evidence of inner, transcendent experience which alone can protect him from the otherwise inevitable submersion in the mass. Merely intellectual or even moral insight into the stultification and moral irresponsibility of the mass man is a negative recognition only and amounts to not much more than a wavering on the road to the atomization of the individual. It lacks the driving force of religious conviction, since it is merely rational. The dictator State has one great advantage over bourgeois reason: along with the individual it swallows up his religious forces. The State takes the

place of God; that is why, seen from this angle, the socialist dictatorships are religions and State slavery is a form of worship. But the religious function cannot be dislocated and falsified in this way without giving rise to secret doubts, which are immediately repressed so as to avoid conflict with the prevailing trend towards mass-mindedness. The result, as always in such cases, is overcompensation in the form of *fanaticism*, which in its turn is used as a weapon for stamping out the least flicker of opposition. Free opinion is stifled and moral decision ruthlessly suppressed, on the plea that the end justifies the means, even the vilest. The policy of the State is exalted to a creed, the leader or party boss becomes a demigod beyond good and evil, and his votaries are honoured as heroes, martyrs, apostles, missionaries. There is only *one* truth and beside it no other. It is sacrosanct and above criticism. Anyone who thinks differently is a heretic, who, as we know from history, is threatened with all manner of unpleasant things. Only the party boss, who holds the political power in his hands, can interpret the State doctrine authentically, and he does so just as suits him.

[512] When, through mass rule, the individual becomes social unit No. so-and-so and the State is elevated to the supreme principle, it is only to be expected that the religious function too will be sucked into the maelstrom. Religion, as the careful observation and taking account of certain invisible and uncontrollable factors, is an *instinctive* attitude peculiar to man, and its manifestations can be followed all through human history. Its evident purpose is to maintain the psychic balance, for the natural man has an equally natural "knowledge" of the fact that his conscious functions may at any time be thwarted by uncontrollable happenings coming from inside as well as from outside. For this reason he has always taken care that any difficult decision likely to have consequences for himself and others shall be rendered safe by suitable measures of a religious nature. Offerings are made to the invisible powers, formidable blessings are pronounced, and all kinds of solemn rites are performed. Everywhere and at all times there have been *rites d'entrée et de sortie* whose efficacy is impugned as magic and superstition by rationalists incapable of psychological insight. But magic has above all a psychological effect whose importance should not be

underestimated. The performance of a “magical” action gives the person concerned a feeling of security which is absolutely essential for carrying out a decision, because a decision is inevitably somewhat one-sided and is therefore rightly felt to be a risk. Even a dictator thinks it necessary not only to accompany his acts of State with threats but to stage them with all manner of solemnities. Brass bands, flags, banners, parades, and monster demonstrations are no different in principle from ecclesiastical processions, cannonades, and fireworks to scare off demons. Only, the suggestive parade of State power engenders a collective feeling of security which, unlike religious demonstrations, gives the individual no protection against his inner demonism. Hence he will cling all the more to the power of the State, i.e., to the mass, thus delivering himself up to it psychically as well as morally and putting the finishing touch to his social depotentiation. The State, like the Church, demands enthusiasm, selfsacrifice, and love, and if religion requires or presupposes the “fear of God,” then the dictator State takes good care to provide the necessary terror.

[513] When the rationalist directs the main force of his attack against the miraculous effect of the rite as asserted by tradition, he has in reality completely missed the mark. The essential point, the *psychological* effect, is overlooked, although both parties make use of it for directly opposite purposes. A similar situation prevails with regard to their respective conceptions of the goal. The goals of religion—deliverance from evil, reconciliation with God, rewards in the hereafter, and so on—turn into worldly promises about freedom from care for one’s daily bread, the just distribution of material goods, universal prosperity in the future, and shorter working hours. That the fulfilment of these promises is as far off as Paradise only furnishes yet another analogy and underlines the fact that the masses have been converted from an extramundane goal to a purely worldly belief, which is extolled with exactly the same religious fervour and exclusiveness that the creeds display in the other direction.

[514] In order not to repeat myself unnecessarily, I shall not enumerate all the parallels between worldly and otherworldly beliefs, but shall content myself with emphasizing the fact that a natural function which has

existed from the beginning, like the religious function, cannot be disposed of with rationalistic and so-called enlightened criticism. You can, of course, represent the doctrinal contents of the creeds as impossible and subject them to ridicule, but such methods miss the point and do not affect the religious function which forms the basis of the creeds. Religion, in the sense of conscientious regard for the irrational factors of the psyche and individual fate, reappears—evilly distorted—in the deification of the State and the dictator: *Naturam expellas furca tamen usque recurret* (You can throw out Nature with a pitchfork, but she'll always turn up again). The leaders and dictators, having weighed up the situation correctly, are therefore doing their best to gloss over the all too obvious parallel with the deification of Caesar and to hide their real power behind the fiction of the State, though this, of course, alters nothing.[1]

[515] As I have already pointed out, the dictator State, besides robbing the individual of his rights, has also cut the ground from under his feet psychically by depriving him of the metaphysical foundations of his existence. The ethical decision of the individual human being no longer counts—what alone matters is the blind movement of the masses, and the *lie* thus becomes the operative principle of political action. The State has drawn the logical conclusions from this, as the existence of many millions of State slaves completely deprived of all rights mutely testifies.

[516] Both the dictator State and denominational religion lay quite particular emphasis on the idea of *community.* This is the basic ideal of "communism," and it is thrust down the throats of the people so much that it has the exact opposite of the desired effect: it inspires divisive mistrust. The Church, which is no less emphatic, appears on its side as a communal ideal, and where the Church is notoriously weak, as in Protestantism, the hope of or belief in a "communal experience" makes up for the painful lack of cohesion. As can easily be seen, "community" is an indispensable aid in the organization of masses and is therefore a two-edged weapon. Just as the addition of however many zeros will never make a unit, so the value of a community depends on the spiritual and moral stature of the individuals composing it. For this reason one cannot expect from the community any effect that would outweigh the

suggestive influence of the environment—that is, a real and fundamental change in individuals, whether for good or for bad. Such changes can come only from the personal encounter between man and man, but not from communistic or Christian baptisms *en masse*, which do not touch the inner man. How superficial the effect of communal propaganda actually is can be seen from recent events in Eastern Europe.[2] The communal ideal reckons without its host, overlooking the individual human being, who in the end will assert his claims.

3. THE POSITION OF THE WEST ON THE QUESTION OF RELIGION

[517] Confronting this development in the twentieth century of our Christian era, the Western world stands with its heritage of Roman law, the treasures of Judaeo-Christian ethics grounded on metaphysics, and its ideal of the inalienable rights of man. Anxiously it asks itself the question: How can this development be brought to a standstill or put into reverse? It is useless to pillory the socialist dictatorship as utopian and to condemn its economic principles as unreasonable, because, in the first place, the criticizing West has only itself to talk to, its arguments being heard only on this side of the Iron Curtain, and, in the second place, any economic principles you like can be put into practice so long as you are prepared to accept the sacrifices they entail. You can carry through any social and economic reforms you please if, like Stalin, you let three million peasants starve to death and have a few million unpaid labourers at your disposal. A State of this kind has no social or economic crises to fear. So long as its power is intact—that is to say, so long as there is a well-disciplined and well-fed police army in the offing—it can maintain its existence for an indefinitely long period and can go on increasing its power to an indefinite extent. Thanks to its excess birth-rate, it can multiply the number of its unpaid workers almost at will in order to compete with its rivals, regardless of the world market, which is to a large measure dependent on wages. A real danger can come to it only from outside, through the threat of military attack. But this risk grows less every year, firstly because the war potential of the dictator States is steadily increasing, and secondly because the West cannot afford to arouse latent Russian or Chinese nationalism and chauvinism by an attack which would have exactly the opposite effect to the one intended.

[518] So far as one can see, only one possibility remains, and that is a break-down of power from within, which must, however, be left to follow its own inner development. Any support from outside at present

would have little effect, in view of the existing security measures and the danger of nationalistic reactions. The absolute State has an army of fanatical missionaries to do its bidding in matters of foreign policy, and these in their turn can count on a fifth column who are guaranteed asylum under the laws and constitutions of the Western States. In addition the communes of believers, very strong in places, considerably weaken Western governments' powers of decision, whereas the West has no opportunity to exert a similar influence on the other side, though we are probably not wrong in surmising that there is a certain amount of opposition among the masses in the East. There are always upright and truth-loving people to whom lying and tyranny are hateful, but one cannot judge whether they exert any decisive influence on the masses under the police régimes.[1]

[519] In view of this uncomfortable situation the question is heard again and again in the West: What can we do to counter this threat from the East? Even though the West has considerable industrial power and a sizable defence potential at its command, we cannot rest content with this, for we know that even the biggest armaments and the heaviest industry coupled with a relatively high living standard are not enough to check the psychic infection spread by religious fanaticism.

[520] The West has unfortunately not yet woken up to the fact that our appeal to idealism and reason and other desirable virtues, delivered with so much enthusiasm, is mere bombination in the void. It is a puff of wind swept away in the storm of religious faith, however twisted this faith may appear to us. We are faced, not with a situation that can be overcome by rational or moral arguments, but with an unleashing of emotional forces and ideas engendered by the spirit of the times; and these, as we know from experience, are not much influenced by rational reflection and still less by moral exhortation. It has been correctly realized in many quarters that the alexipharmic, the antidote, should in this case be an equally potent faith of a different and non-materialistic kind, and that the religious attitude grounded upon it would be the only effective defence against the danger of psychic infection. Unhappily, the little word "should," which never fails to appear in this connection, points to a certain weakness, if not the absence, of this desideratum. Not only does

the West lack a uniform faith that could block the progress of a fanatical ideology, but, as the father of Marxist philosophy, it makes use of exactly the same intellectual assumptions, the same arguments and aims. Although the Churches in the West enjoy full freedom, they are not less full or empty than in the East. Yet they exercise no noticeable influence on the broad course of politics. The disadvantage of a creed as a public institution is that it serves two masters: on the one hand, it derives its existence from the relationship of man to God, and on the other hand, it owes a duty to the State, i.e., to the world, in which connection it can appeal to the saying "Render unto Caesar …" and various other admonitions in the New Testament.

[521] In early times and until comparatively recently there was, therefore, talk of "powers ordained by God" (Romans 13:1). Today this conception is antiquated. The Churches stand for traditional and collective convictions which in the case of many of their adherents are no longer based on their own inner experience but on *unreflecting belief*, which is notoriously apt to disappear as soon as one begins thinking about it. The content of belief then comes into collision with knowledge, and it often turns out that the irrationality of the former is no match for the ratiocinations of the latter. Belief is no adequate substitute for inner experience, and where this is absent even a strong faith which came miraculously as a gift of grace may depart equally miraculously. People call faith the true religious experience, but they do not stop to consider that actually it is a secondary phenomenon arising from the fact that something happened to us in the first place which instilled πίστις into us—that is, trust and loyalty. This experience has a definite content that can be interpreted in terms of one or other of the denominational creeds. But the more this is so, the more the possibilities of these conflicts with knowledge mount up, which in themselves are quite pointless. That is to say, the standpoint of the creeds is archaic; they are full of impressive mythological symbolism which, if taken literally, comes into insufferable conflict with knowledge. But if, for instance, the statement that Christ rose from the dead is to be understood not literally but symbolically, then it is capable of various interpretations that do not conflict with knowledge and do not impair the meaning of the statement. The

objection that understanding it symbolically puts an end to the Christian's hope of immortality is invalid, because long before the coming of Christianity mankind believed in a life after death and therefore had no need of the Easter event as a guarantee of immortality. The danger that a mythology understood too literally, and as taught by the Church, will suddenly be repudiated lock, stock and barrel is today greater than ever. Is it not time that the Christian mythology, instead of being wiped out, was understood symbolically for once?

[522] It is still too early to say what might be the consequences of a general recognition of the fatal parallelism between the State religion of the Marxists and the State religion of the Church. The absolutist claim of a *Civitas Dei* that is represented by man bears an unfortunate resemblance to the "divinity" of the State, and the moral conclusion drawn by Ignatius Loyola from the authority of the Church ("the end sanctifies the means") anticipates the lie as a political instrument in an exceedingly dangerous way. Both demand unqualified submission to faith and thus curtail man's freedom, the one his freedom before God and the other his freedom before the State, thereby digging the grave for the individual. The fragile existence of this—so far as we know—unique carrier of life is threatened on both sides, despite their respective promises of spiritual and material idylls to come—and how many of us can in the long run fight against the proverbial wisdom of "a bird in the hand is worth two in the bush"? Besides which, the West cherishes the same "scientific" and rationalistic *Weltanschauung* with its statistical levelling-down tendency and materialistic aims as the State religion of the Eastern bloc, as I have explained above.

[523] What, then, has the West, with its political and denominational schisms, to offer to modern man in his need? Nothing, unfortunately, except a variety of paths all leading to one goal which is practically indistinguishable from the Marxist ideal. It requires no special effort of understanding to see where the Communist ideology gets the certainty of its belief that time is on its side, and that the world is ripe for conversion. The facts speak a language that is all too plain in this respect. It will not help us in the West to shut our eyes to this and not recognize our fatal vulnerability. Anyone who has once learned to submit absolutely to a

collective belief and to renounce his eternal right to freedom and the equally eternal duty of individual responsibility will persist in this attitude, and will be able to march with the same credulity and the same lack of criticism in the reverse direction, if another and manifestly “better” belief is foisted upon his alleged idealism. What happened not so long ago to a civilized European nation? We accuse the Germans of having forgotten it all again already, but the truth is that we don’t know for certain whether something similar might not happen elsewhere. It would not be surprising if it did and if another civilized nation succumbed to the infection of a uniform and one-sided idea. We permit ourselves the question: which countries have the biggest Communist parties? America, which—*O quae mutatio rerum!*—forms the real political backbone of Western Europe, seems to be immune because of the outspoken counterposition she has adopted, but in point of fact she is perhaps even more vulnerable than Europe, since her educational system is the most influenced by the scientific *Weltanschauung* with its statistical truths, and her mixed population finds it difficult to strike roots in a soil that is practically without history. The historical and humanistic type of education so sorely needed in such circumstances leads, on the contrary, a Cinderella existence. Though Europe possesses this latter requirement, she uses it to her own undoing in the form of nationalistic egoisms and paralysing scepticism. Common to both is the materialistic and collectivist goal, and both lack the very thing that expresses and grips the whole man, namely, an idea which puts the individual human being in the centre as the measure of all things.

[524] This idea alone is enough to arouse the most violent doubts and resistances on all sides, and one could almost go so far as to assert that the valuelessness of the individual in comparison with large numbers is the one belief that meets with universal and unanimous assent. To be sure, we all say that this is the century of the common man, that he is the lord of the earth, the air, and the water, and that on his decision hangs the historical fate of the nations. This proud picture of human grandeur is unfortunately an illusion and is counterbalanced by a reality that is very different. In this reality man is the slave and victim of the machines that have conquered space and time for him; he is intimidated and endangered

by the might of the military technology which is supposed to safeguard his physical existence; his spiritual and moral freedom, though guaranteed within limits in one half of his world, is threatened with chaotic disorientation, and in the other half is abolished altogether. Finally, to add comedy to tragedy, this lord of the elements, this universal arbiter, hugs to his bosom notions which stamp his dignity as worthless and turn his autonomy into an absurdity. All his achievements and possessions do not make him bigger; on the contrary, they diminish him, as the fate of the factory-worker under the rule of a “just” distribution of goods clearly demonstrates. He pays for his share of the factory with the loss of personal property, he exchanges his freedom of movement for the doubtful pleasure of being tied to his place of employment, he forfeits all means of improving his position if he jibs against being ground down by exhausting piece-work, and if he shows any signs of intelligence, political precepts are thrust down his throat—with a bit of technical knowledge thrown in, if he is lucky. However, a roof over one’s head and a daily feed for the useful animal are not to be sneezed at when the bare necessities of life may be cut off from one day to the next.

4. THE INDIVIDUAL'S UNDERSTANDING OF HIMSELF

[525] It is astounding that man, the instigator, inventor and vehicle of all these developments, the originator of all judgments and decisions and the planner of the future, must make himself such a *quantité négligeable*. The contradiction, the paradoxical evaluation of humanity by man himself, is in truth a matter for wonder, and one can only explain it as springing from an extraordinary uncertainty of judgment—in other words, man is an enigma to himself. This is understandable, seeing that he lacks the means of comparison necessary for self-knowledge. He knows how to distinguish himself from the other animals in point of anatomy and physiology, but as a conscious, reflecting being, gifted with speech, he lacks all criteria for self-judgment. He is on this planet a unique phenomenon which he cannot compare with anything else. The possibility of comparison and hence of self-knowledge would arise only if he could establish relations with quasi-human mammals inhabiting other stars.

[526] Until then man must continue to resemble a hermit who knows that in respect of comparative anatomy he has affinities with the anthropoids but, to judge by appearances, is extraordinarily different from his cousins in respect of his psyche. It is just in this most important characteristic of his species that he cannot know himself and therefore remains a mystery to himself. The differing degrees of self-knowledge within his own species are of little significance compared with the possibilities which would be opened out by an encounter with a creature of similar structure but different origin. Our psyche, which is primarily responsible for all the historical changes wrought by the hand of man on the face of this planet, remains an insoluble puzzle and an incomprehensible wonder, an object of abiding perplexity—a feature it shares with all Nature's secrets. In regard to the latter we still have hope of making more discoveries and finding answers to the most difficult questions. But in regard to the psyche and psychology there seems to be a curious hesitancy. Not only is

it the youngest of the empirical sciences, but it has great difficulty in getting anywhere near its proper object.

[527] In the same way that our picture of the world had to be freed by Copernicus from the prejudice of geocentricity, the most strenuous efforts of a well-nigh revolutionary nature were needed to free psychology, first from the spell of mythological ideas, and then from the prejudice that the psyche is, on the one hand, a mere epiphenomenon of a biochemical process in the brain and, on the other hand, a purely personal matter. The connection with the brain does not in itself prove that the psyche is an epiphenomenon, a secondary function causally dependent on biochemical processes in the physical substrate. Nevertheless, we know only too well how much the psychic function can be disturbed by verifiable processes in the brain, and this fact is so impressive that the subsidiary nature of the psyche seems an almost unavoidable inference. The phenomena of parapsychology, however, warn us to be careful, for they point to a relativization of space and time through psychic factors which casts doubt on our naïve and overhasty explanation in terms of psychophysical parallelism. For the sake of this explanation people deny the findings of parapsychology outright, either for philosophical reasons or from intellectual laziness. This can hardly be considered a scientifically responsible attitude, even though it is a popular way out of a quite extraordinary intellectual difficulty. To assess the psychic phenomenon, we have to take account of all the other phenomena that go with it, and accordingly we can no longer practise any psychology that ignores the existence of the unconscious or of parapsychology.

[528] The structure and physiology of the brain furnish no explanation of the psychic process. The psyche has a peculiar nature which cannot be reduced to anything else. Like physiology, it presents a relatively self-contained field of experience, to which we must attribute a quite special importance because it includes one of the two indispensable conditions for existence as such, namely, the phenomenon of consciousness. Without consciousness there would, practically speaking, be no world, for the world exists for us only in so far as it is consciously reflected by a psyche. *Consciousness is a precondition of being.* Thus the psyche is endowed with the dignity of a cosmic principle, which philosophically

and in fact gives it a position co-equal with the principle of physical being. The carrier of this consciousness is the individual, who does not produce the psyche of his own volition but is, on the contrary, preformed by it and nourished by the gradual awakening of consciousness during childhood. If therefore the psyche is of overriding empirical importance, so also is the individual, who is the only immediate manifestation of the psyche.

[529] This fact must be expressly emphasized for two reasons. Firstly, the individual psyche, just because of its individuality, is an exception to the statistical rule and is therefore robbed of one of its main characteristics when subjected to the levelling influence of statistical evaluation. Secondly, the Churches grant it validity only in so far as it acknowledges their dogmas—in other words, when it submits to a collective category. In both cases the will to individuality is regarded as egotistic obstinacy. Science devalues this as subjectivism, and the Churches condemn it morally as heresy and spiritual pride. As to the latter charge, it should not be forgotten that, unlike other religions, Christianity holds up before us a symbol whose content is the individual way of life of a man, the Son of Man, and that it even regards this individuation process as the incarnation and revelation of God himself. Hence the development of man into a self acquires a significance whose full implications have hardly begun to be appreciated, because too much attention to externals blocks the way to immediate inner experience. Were not the autonomy of the individual the secret longing of many people it would scarcely be able to survive the collective suppression either morally or spiritually.

[530] All these obstacles make it more difficult to arrive at a correct appreciation of the human psyche, but they count for very little beside one other remarkable fact that deserves mentioning. This is the common psychiatric experience that the devaluation of the psyche and other resistances to psychological enlightenment are based in large measure on fear—on panic fear of the discoveries that might be made in the realm of the unconscious. These fears are found not only among persons who are frightened by the picture Freud painted of the unconscious; they also troubled the originator of psychoanalysis himself, who confessed to me that it was necessary to make a dogma of his sexual theory because this

was the sole bulwark of reason against a possible "eruption of the black flood of occultism." In these words Freud was expressing his conviction that the unconscious still harboured many things that might lend themselves to "occult" interpretation, as is in fact the case. These "archaic vestiges," or archetypal forms grounded on the instincts and giving expression to them, have a numinous quality that sometimes arouses fear. They are ineradicable, for they represent the ultimate foundations of the psyche itself. They cannot be grasped intellectually, and when one has destroyed one manifestation of them, they reappear in altered form. It is this fear of the unconscious psyche which not only impedes self-knowledge but is the gravest obstacle to a wider understanding and knowledge of psychology. Often the fear is so great that one dares not admit it even to oneself. This is a question which every religious person should consider very seriously; he might get an illuminating answer.

[531] A scientifically oriented psychology is bound to proceed abstractly; that is, it removes itself just sufficiently far from its object not to lose sight of it altogether. That is why the findings of laboratory psychology are, for all practical purposes, often so remarkably unenlightening and devoid of interest. The more the individual object dominates the field of vision, the more practical, detailed, and alive will be the knowledge derived from it. This means that the objects of investigation, too, become more and more complicated and that the uncertainty of the individual factors grows in proportion to their number, thus increasing the possibility of error. Understandably enough, academic psychology is scared of this risk and prefers to avoid complex situations by asking ever simpler questions, which it can do with impunity. It has full freedom in the choice of questions it will put to Nature.

[532] Medical psychology, on the other hand, is very far from being in this more or less enviable position. Here the object puts the question and not the experimenter. The analyst is confronted with facts which are not of his choosing and which he probably never *would* choose if he were a free agent. It is the sickness or the patient himself that puts the crucial questions—in other words, Nature experiments with the doctor in expecting an answer from him. The uniqueness of the individual and of

his situation stares the analyst in the face and demands an answer. His duty as a physician forces him to cope with a situation swarming with uncertainty factors. At first he will apply principles based on general experience, but he will soon realize that principles of this kind do not adequately express the facts and fail to meet the nature of the case. The deeper his understanding penetrates, the more the general principles lose their meaning. But these principles are the foundation of objective knowledge and the yardstick by which it is measured. With the growth of what both patient and doctor feel to be "understanding," the situation becomes increasingly subjectivized. What was an advantage to begin with threatens to turn into a dangerous disadvantage. Subjectivation (in technical terms, transference and countertransference) creates isolation from the environment, a social limitation which neither party wishes for but which invariably sets in when understanding predominates and is no longer balanced by knowledge. As understanding deepens, the further removed it becomes from knowledge. An ideal understanding would ultimately result in each party's unthinkingly going along with the other's experience—a state of uncritical passivity coupled with the most complete subjectivity and lack of social responsibility. Understanding carried to such lengths is in any case impossible, for it would require the virtual identification of two different individuals. Sooner or later the relationship reaches a point where one partner feels he is being forced to sacrifice his own individuality so that it may be assimilated by that of the other. This inevitable consequence breaks the understanding, for understanding also presupposes the integral preservation of the individuality of both partners. It is therefore advisable to carry understanding only to the point where the balance between understanding and knowledge is reached, for understanding at all costs is injurious to both partners.

[533] This problem arises whenever complex, individual situations have to be known and understood. It is the specific task of the medical psychologist to provide just this knowledge and understanding. It would also be the task of the "director of conscience" zealous in the cure of souls, were it not that his office inevitably obliges him to apply the yardstick of his denominational bias at the critical moment. As a result,

the individual’s right to exist as such is cut short by a collective prejudice and often curtailed in the most sensitive area. The only time this does not happen is when the dogmatic symbol, for instance the model life of Christ, is understood concretely and felt by the individual to be adequate. How far this is the case today I would prefer to leave to the judgment of others. At all events, the analyst very often has to treat patients to whom denominational limitations mean little or nothing. His profession therefore compels him to have as few preconceptions as possible. Similarly, while respecting metaphysical (i.e., nonverifiable) convictions and assertions, he will take care not to credit them with universal validity. This caution is called for because the individual traits of the patient’s personality ought not to be twisted out of shape by arbitrary interventions from outside. The analyst must leave this to environmental influences, to the patient’s own inner development, and—in the widest sense—to fate with its wise or unwise decrees.

[534] Many people will perhaps find this heightened caution exaggerated. In view of the fact, however, that there is in any case such a multitude of reciprocal influences at work in the dialectical process between two individuals, even if it is conducted with the most tactful reserve, the responsible analyst will refrain from adding unnecessarily to the collective factors to which his patient has already succumbed. Moreover, he knows very well that the preaching of even the worthiest precepts only provokes the patient into open hostility or secret resistance and thus needlessly endangers the aim of the treatment. The psychic situation of the individual is so menaced nowadays by advertising, propaganda, and other more or less well-meant advice and suggestions that for once in his life the patient might be offered a relationship that does not repeat the nauseating “you should,” “you must” and similar confessions of impotence. Against the onslaught from outside no less than against its repercussions in the psyche of the individual the analyst sees himself obliged to play the role of counsel for the defence. Fear that anarchic instincts will thereby be let loose is a possibility that is greatly exaggerated, seeing that obvious safeguards exist within and without. Above all, there is the natural cowardice of most men to be reckoned with, not to mention morality, good taste and—last but not least—the

penal code. This fear is nothing compared with the enormous effort it usually costs people to help the first stirrings of individuality into consciousness, let alone put them into effect. And where these individual impulses have broken through too boldly and unthinkingly, the analyst must protect them from the patient's own clumsy recourse to shortsightedness, ruthlessness, and cynicism.

[535] As the dialectical discussion proceeds, a point is reached when an evaluation of these individual impulses becomes necessary. By that time the patient should have acquired enough certainty of judgment to enable him to act on his own insight and decision and not from the mere wish to copy convention—even if he happens to agree with collective opinion. Unless he stands firmly on his own feet, the so-called objective values profit him nothing, since they then only serve as a substitute for character and so help to suppress his individuality. Naturally, society has an indisputable right to protect itself against arrant subjectivisms, but, in so far as society is itself composed of de-individualized human beings, it is completely at the mercy of ruthless individualists. Let it band together into groups and organizations as much as it likes—it is just this banding together and the resultant extinction of the individual personality that makes it succumb so readily to a dictator. A million zeros joined together do not, unfortunately, add up to one. Ultimately everything depends on the quality of the individual, but our fatally shortsighted age thinks only in terms of large numbers and mass organizations, though one would think that the world had seen more than enough of what a well-disciplined mob can do in the hands of a single madman. Unfortunately, this realization does not seem to have penetrated very far—and our blindness is extremely dangerous. People go on blithely organizing and believing in the sovereign remedy of mass action, without the least consciousness of the fact that the most powerful organizations can be maintained only by the greatest ruthlessness of their leaders and the cheapest of slogans.

[536] Curiously enough, the Churches too want to avail themselves of mass action in order to cast out the devil with Beelzebub—the very Churches whose care is the salvation of the *individual* soul. They do not appear to have heard of the elementary axiom of mass psychology that the

individual becomes morally and spiritually inferior in the mass, and for this reason they do not bother themselves overmuch with their real task of helping the individual to achieve a *metanoia*, a rebirth of the spirit—*Deo concedente.* It is, unfortunately, only too clear that if the individual is not truly regenerated in spirit, society cannot be either, for society is the sum total of individuals in need of redemption. I can therefore see it only as a delusion when the Churches try—as they apparently do—to rope the individual into some social organization and reduce him to a condition of diminished responsibility, instead of raising him out of the torpid, mindless mass and making clear to him that *he* is the one important factor and that the salvation of the world consists in the salvation of the individual soul. It is true that mass meetings parade these ideas before him and seek to impress them on his mind by dint of mass suggestion, with the melancholy result that once the intoxication has worn off the mass man promptly succumbs to another even more obvious and still louder slogan. His individual relation to God would be an effective shield against these pernicious influences. Did Christ, perchance, call his disciples to him at a mass meeting? Did the feeding of the five thousand bring him any followers who did not afterwards cry with the rest, “Crucify him!” when even the rock named Peter showed signs of wavering? And are not Jesus and Paul prototypes of those who, trusting their inner experience, have gone their individual ways in defiance of the world?

[537] This argument should certainly not cause us to overlook the reality of the situation confronting the Church. When the Church tries to give shape to the amorphous mass by uniting individuals into a community of believers and to hold such an organization together with the help of suggestion, it is not only performing a great *social* service, but it also secures for the individual the inestimable boon of a meaningful form of life. These, however, are gifts which as a rule only confirm certain tendencies and do not change them. As experience unfortunately shows, the inner man remains unchanged however much community he has. His environment cannot give him as a gift something which he can win for himself only with effort and suffering. On the contrary, a favourable environment merely strengthens the dangerous tendency to expect

everything from outside—even that metamorphosis which external reality cannot provide. By this I mean a far-reaching change of the inner man, which is all the more urgent in view of the mass phenomena of today and the still greater problems of overpopulation looming in the future. It is time we asked ourselves exactly what we are lumping together in mass organizations and what constitutes the nature of the individual human being, i.e., of the real man and not the statistical man. This is hardly possible except by a new process of self-reflection.

[538] All mass movements, as one might expect, slip with the greatest ease down an inclined plane made up of large numbers. Where the many are, there is security; what the many believe must of course be true; what the many want must be worth striving for, and necessary, and therefore good. In the clamour of the many resides the power to snatch wish-fulfilments by force; sweetest of all, however, is that gentle and painless slipping back into the kingdom of childhood, into the paradise of parental care, into happy-go-luckiness and irresponsibility. All the thinking and looking after are done from the top; to all questions there is an answer, and for all needs the necessary provision is made. The infantile dream-state of the mass man is so unrealistic that he never thinks to ask who is paying for this paradise. The balancing of accounts is left to a higher political or social authority, which welcomes the task, for its power is thereby increased; and the more power it has, the weaker and more helpless the individual becomes.

[539] Whenever social conditions of this type develop on a large scale, the road to tyranny lies open and the freedom of the individual turns into spiritual and physical slavery. Since every tyranny is *ipso facto* immoral and ruthless, it has much more freedom in the choice of its methods than an institution which still takes account of the individual. Should such an institution come into conflict with the organized State, it is soon made aware of the very real disadvantage of its morality and therefore feels compelled to avail itself of the same methods as its opponent. In this way the evil spreads almost of necessity, even when direct infection might be avoided. The danger of infection is greater when decisive importance is attached to large numbers and to statistical values, as is everywhere the case in our Western world. The suffocating power of the masses is

paraded before our eyes in one form or another every day in the newspapers, and the insignificance of the individual is rubbed into him so thoroughly that he loses all hope of making himself heard. The outworn ideals of *liberté, égalité, fraternité* help him not at all, as he can direct this appeal only to his executioners, the spokesmen of the masses.

[540] *Resistance to the organized mass can be effected only by the man who is as well organized in his individuality as the mass itself*, I fully realize that this proposition must sound well-nigh unintelligible to the man of today. The helpful medieval view that man is a microcosm, a reflection of the great cosmos in miniature, has long since dropped away from him, although the very existence of his world-embracing and world-conditioning psyche might have taught him better. Not only is the image of the macrocosm imprinted upon his psychic nature, but he also creates this image for himself on an ever-widening scale. He bears this cosmic "correspondence" within him by virtue of his reflecting consciousness on the one hand, and, on the other, thanks to the hereditary, archetypal nature of his instincts, which bind him to his environment. But his instincts not only attach him to the macrocosm, they also, in a sense, tear him apart, because his desires pull him in different directions. In this way he falls into continual conflict with himself and only very rarely succeeds in giving his life an undivided goal—for which, as a rule, he must pay very dearly by repressing other sides of his nature. One often has to ask oneself whether this kind of single-mindedness is worth forcing at all, seeing that the natural state of the human psyche consists in a jostling together of its components and in their contradictory behaviour—that is, in a certain degree of dissociation. The Buddhist name for this is attachment to the "ten thousand things." Such a condition cries out for order and synthesis.

[541] Just as the chaotic movements of the crowd, all ending in mutual frustration, are impelled in a definite direction by a dictatorial will, so the individual in his dissociated state needs a directing and ordering principle. Ego-consciousness would like to let its own will play this role, but overlooks the existence of powerful unconscious factors which thwart its intentions. If it wants to reach the goal of synthesis, it must first get to know the nature of these factors. It must *experience* them, or else it must

possess a numinous *symbol* that expresses them and leads to their synthesis. A religious symbol that comprehended and visibly represented what is seeking expression in modern man might possibly do this; but our conception of the Christian symbol to date has certainly not been able to do so. On the contrary, that frightful world split runs right through the domains of the "Christian" white man, and our Christian outlook on life has proved powerless to prevent the recrudescence of an archaic social order like Communism.

[542] This is not to say that Christianity is finished. I am, on the contrary, convinced that it is not Christianity, but our conception and interpretation of it, that has become antiquated in face of the present world situation. The Christian symbol is a living thing that carries in itself the seeds of further development. It can go on developing; it depends only on us, whether we can make up our minds to meditate again, and more thoroughly, on the Christian premises. This requires a very different attitude towards the individual, towards the microcosm of the self, from the one we have adopted hitherto. That is why nobody knows what ways of approach are open to man, what inner experiences he could still pass through and what psychic facts underlie the religious myth. Over all this hangs so universal a darkness that no one can see why he should be interested or to what end he should commit himself. Before this problem we stand helpless.

[543] This is not surprising, since practically all the trump cards are in the hands of our opponents. They can appeal to the big battalions and their crushing power. Politics, science, and technology stand ranged on their side. The imposing arguments of science represent the highest degree of intellectual certainty yet achieved by the mind of man. So at least it seems to the man of today, who has received hundred-fold enlightenment concerning the backwardness and darkness of past ages and their superstitions. That his teachers have themselves gone seriously astray by making false comparisons between incommensurable factors never enters his head. All the more so as the intellectual *élite* to whom he puts his questions are almost unanimously agreed that what science regards as impossible today was impossible at all other times as well. Above all, the facts of faith, which might give him the chance of an extramundane

standpoint, are treated in the same context as the facts of science. Thus, when the individual questions the Churches and their spokesmen, to whom is entrusted the cure of souls, he is informed that to belong to a church—a decidedly worldly institution—is more or less *de rigueur;* that the facts of faith which have become questionable for him were concrete historical events; that certain ritual actions produce miraculous effects; and that the sufferings of Christ have vicariously saved him from sin and its consequences (i.e., eternal damnation). If, with the limited means at his disposal, he begins to reflect on these things, he will have to confess that he does not understand them at all and that only two possibilities remain open to him: either to believe implicitly, or to reject such statements because they are flatly incomprehensible.

[544] Whereas the man of today can easily think about and understand all the “truths” dished out to him by the State, his understanding of religion is made considerably more difficult owing to the lack of explanations. (“Do you understand what you are reading?” And he said, “How can I, unless someone guides me?” Acts 8:30.) If, despite this, he has still not discarded all his religious convictions, this is because the religious impulse rests on an instinctive basis and is therefore a specifically human function. You can take away a man’s gods, but only to give him others in return. The leaders of the mass State could not help being deified, and wherever crudities of this kind have not yet been put over by force, obsessive factors arise in their stead, charged with demonic energy—money, work, political influence, and so forth. When any natural human function gets lost, i.e., is denied conscious and intentional expression, a general disturbance results. Hence, it is quite natural that with the triumph of the Goddess of Reason a general neuroticizing of modern man should set in, a dissociation of personality analogous to the splitting of the world today by the Iron Curtain. This boundary line bristling with barbed wire runs through the psyche of modern man, no matter on which side he lives. And just as the typical neurotic is unconscious of his *shadow side*, so the normal individual, like the neurotic, sees his shadow in his neighbour or in the man beyond the great divide. It has even become a political and social duty to apostrophize the capitalism of the one and the communism of the other as the very devil, so as to fascinate

the outward eye and prevent it from looking within. But just as the neurotic, despite unconsciousness of his other side, has a dim premonition that all is not well with his psychic economy, so Western man has developed an instinctive interest in his psyche and in "psychology."

[545] Thus it is that the psychiatrist is summoned willy-nilly to appear on the world stage, and questions are addressed to him which primarily concern the most intimate and hidden life of the individual, but which in the last analysis are the direct effects of the *Zeitgeist.* Because of its personal symptomatology this material is usually considered to be "neurotic"—and rightly so, since it is made up of infantile fantasies which ill accord with the contents of an adult psyche and are therefore repressed by our moral judgment, in so far as they reach consciousness at all. Most fantasies of this kind do not, in the nature of things, come to consciousness in any form, and it is very improbable, to say the least of it, that they were ever conscious and were consciously repressed. Rather, they seem to have been present from the beginning or, at any rate, to have arisen unconsciously and to have persisted in that state until the psychologist's intervention enabled them to cross the threshold of consciousness. The activation of unconscious fantasies is a process that occurs when consciousness finds itself in a situation of distress. Were that not so, the fantasies would be produced normally and would then bring no neurotic disturbances in their train. In reality, fantasies of this kind belong to the world of childhood and give rise to disturbances only when prematurely strengthened by abnormal conditions of conscious life. This is particularly likely to happen when unfavourable influences emanate from the parents, poisoning the atmosphere and producing conflicts which upset the psychic balance of the child.

[546] When a neurosis breaks out in an adult, the fantasy world of childhood reappears, and one is tempted to explain the onset of the neurosis causally, as due to the presence of infantile fantasies. But that does not explain why the fantasies did not develop any pathological effects during the interim period. These effects develop only when the individual is faced with a situation which he cannot overcome by conscious means. The resultant standstill in the development of

personality opens a sluice for infantile fantasies, which, of course, are latent in everybody but do not display any activity so long as the conscious personality can continue on its way unimpeded. When the fantasies reach a certain level of intensity, they begin to break through into consciousness and create a conflict situation that becomes perceptible to the patient himself, splitting him into two personalities with different characters. The dissociation, however, had been prepared long before in the unconscious, when the energy flowing off from consciousness (because unused) reinforced the negative qualities of the unconscious and particularly the infantile traits of the personality.

[547] Since the normal fantasies of a child are nothing other, at bottom, than the *imagination of the instincts*, and may thus be regarded as preliminary exercises in the use of future conscious activities, it follows that the fantasies of the neurotic, even though pathologically altered and perhaps perverted by the regression of energy, contain a core of normal instinct, the hallmark of which is adaptedness. A neurotic illness always implies an unadapted alteration and distortion of normal dynamisms and of the "imagination" proper to them. Instincts, however, are highly conservative and of extreme antiquity as regards both their dynamism and their form. Their form, when represented to the mind, appears as an *image* which expresses the nature of the instinctive impulse visually and concretely, like a picture. If we could look into the psyche of the yucca moth,[1] for instance, we would find in it a pattern of ideas, of a numinous or fascinating character, which not only compels the moth to carry out its fertilizing activity on the yucca plant but helps it to "recognize" the total situation. Instinct is anything but a blind and indefinite impulse, since it proves to be attuned and adapted to a definite external situation. This latter circumstance gives it its specific and irreducible form. Just as instinct is original and hereditary, so, too, its form is age-old, that is to say, *archetypal.* It is even older and more conservative than the body's form.

[548] These biological considerations naturally apply also to *Homo sapiens*, who still remains within the framework of general biology despite the possession of consciousness, will, and reason. The fact that our conscious activity is rooted in instinct and derives from it its

dynamism as well as the basic features of its ideational forms has the same significance for human psychology as for all other members of the animal kingdom. Human knowledge consists essentially in the constant adaptation of the primordial patterns of ideas that were given us *a priori*. These need certain modifications, because, in their original form, they are suited to an archaic mode of life but not to the demands of a specifically differentiated environment. If the flow of instinctive dynamism into our life is to be maintained, as is absolutely necessary for our existence, then it is imperative that we should remould these archetypal forms into ideas which are adequate to the challenge of the present.

5. THE PHILOSOPHICAL AND THE PSYCHOLOGICAL APPROACH TO LIFE
